The Nation.

NEW YORK, THURSDAY, JANUARY 1, 1885.

The Week.

An unpleasant rumor has found currency that the sum of $250,000 asked for by the State Department last year, for the purpose of carrying on negotiations with the Nicaraguan Government, was wanted for the purpose of smoothing the way of the Canal treaty among the impecunious X Y Z's of that Republic. We do not believe that any such use was intended to be made of the fund, or that Secretary Frelinghuysen would take part in any transaction which contemplated the bribery of public officials, even in a country where bribery is a customary means of attaining important public ends. It is said that no other conceivable use for the money can be thought of; that the ordinary channels of diplomatic intercourse had been provided for; that our Minister to Central America was not so overburdened with work that he required the assistance implied in the disbursement of a quarter of a million of dollars; that no purchase of lands or vested rights antecedent to the ratification of the treaty was contemplated, and that nevertheless this large sum of money was asked for. It must be said, on the other hand, that the money was not voted, and yet the negotiation was carried through successfully without it. The suspicion of intended bribery lacks the support which it would have had if the negotiation had failed. Unless, therefore, the *Times* can produce some evidence that Secretary Frelinghuysen "admitted to members of the Committee that the money was to be used, if he should obtain it, in getting several Nicaraguan officials out of the way," we shall not believe that he consented to do, or even contemplated doing, an act which was so scornfully rejected when the X Y Z's of the French Directory offered themselves as subjects of pecuniary persuasion to the Administration of John Adams.

Rejecting this rumor as highly improbable, the fact remains that the treaty is largely a question of money—money to be lent to Nicaragua, money to buy lands for right of way, money to be spent in canal building. The amount required is estimated at $150,000,000. This sum, the *Tribune* tells us, is of no consequence because the people of this country do not feel the taxes which they pay. If this be true, it is another proof that we are a race of superior beings. People who do not feel what they pay, and are, therefore, indifferent how much their rulers spend, are a variety of taxpayers whom the finance ministers of all countries have been looking for from the earliest times. We should advise Congress not to act blindly upon this theory or push it to extremes. We can recall a great slaughter of politicians grounded upon so small a consideration as the "back-pay grab," which involved only a mere fraction of the sum which the Nicaragua canal calls for. We observe every now and then stirrings of public opinion whenever the suspicion gets abroad—an unfounded suspicion, indeed—that the Pacific Railroads are to be let off with the payment of something less than what they owe to the Government. We cannot be blind to the fact that every river-and-harbor bill that passes Congress excites passionate opposition and that every steamship-subsidy bill that has been brought forward during the past ten years, although backed by powerful lobby influence, has been defeated with all the marks of popular reprobation. The only appropriation of public money which the people contemplate with unmixed satisfaction, is that which goes to the extinguishment of the public debt.

The cable reports that the Spanish Minister at Washington has been authorized to make modifications in the commercial treaty, to meet certain objections which have been raised against it, and which are pretty certain to insure its defeat in the Senate. In other words, a new treaty is to be made if the present one does not suit. It is to be made and ratified and put in force between the 1st of January and the 4th of March, in order that an Administration and a Congress which have two months of life left in them may bequeath a policy, unchangeable for years, upon their successors in office. That the treaty was a failure commercially—that it gave too much for too little—is shown by the readiness of the other side to offer more liberal terms as soon as it is learned that it cannot be ratified. That it was an indecorum politically is not open to doubt. If Mr. Blaine had been elected President, it would have been so considered by him and his friends. Much more so is it under present circumstances, when another political party has been appointed to take charge of both foreign and domestic policy sixty days hence. The truth is that Cuba is bankrupt. She has ceased to be a source of net revenue to Spain. She is no longer taxable. She has been squeezed dry. Anything which she gets from us in the way of bounties to her sugar planters will be clear gain. If she cannot get two cents a pound, she will take one cent, or half a cent, or any fraction of a cent. The present treaty will be modified as much as you please and as many times as the remaining days of Mr. Arthur's Administration will permit, provided, always, that Cuban sugar is to have an advantage over other sugar at our custom-houses.

We call the attention of our esteemed Blaine contemporaries who are so agitated about solid Southern designs upon President Cleveland, to the action which the Legislature of South Carolina has just taken on civil-service reform. In 1880 both branches of the Legislature concurred in a resolution requesting the State's Senators and Representatives at Washington to "take such measures as may be expedient for the reformation of the civil service, so that the tenure of office under the General Government may no longer be dependent upon party success, nor subject to levy by means of forced pecuniary contributions to any political party, and so that capacity and character shall be the test of fitness for office, and the sole but certain guarantee of its tenure." Week before last a new resolution was introduced in both houses, reciting the declarations made four years ago, reaffirming and reiterating them, and adding the assurance that South Carolina "tenders to the administration of the President-elect the approval and support of the people of this State in carrying out the provisions of the law in regard to civil-service reform." This new resolution was passed unanimously by the Senate, and by an overwhelming majority in the Assembly.

A correspondent of the *Tribune* inquires in a breezy way whether a certain showman residing in Bridgeport, Conn., is still willing to sell all his property in the reckless manner that he proposed to do in case Cleveland were elected. The *Tribune* answers that before going to Bridgeport to find out, the writer would do well to inquire whether business has been better or worse since the election; whether manufacturers are opening new works or closing old ones; whether operatives are finding plenty of work at good wages; whether real estate is advancing or declining, and whether capitalists feel safe in making investments at the present time. The answer to these engaging conundrums is that things are now very much as they were before the election, although the trade journals think they can discern a slight improvement. The only marked economical change that we perceive is a great increase in the travel toward Albany, which must, one would think, have a bearing on the dividends of the Central Railroad. If Mr. Blaine had been elected, the travel would of course have been toward Augusta, and would have helped the railways of Maine. A social phenomenon has presented itself, however, which ought to have attracted more attention than has been bestowed upon it. A male child born in the city of Detroit since the election was named by its parents Cleveland, and was presented for christening to a Catholic priest of the Blaine persuasion, who refused to baptize the infant under that name, and rebuked the besotted father at the altar and afterward in the newspapers. The negro Cisco, who murdered Abraham Gurnee last week, also maintains in his confession that he did it in support of the thesis that Cleveland's election was causing hard times, which the murdered man disputed in an unseemly manner. These are the only striking occurrences of recent date which seem to have any connection with the election, although if pressed we should have to admit that there has been a considerable run of influenza, and perhaps a slight increase in the number of divorces. Whether the consumption of tobacco has fallen off we cannot say. The marked increase in the use of cider is due rather to the large apple crop than to the election of Cleveland.

The sale of his newspaper, the *Star*, probably marks the final disappearance of John Kelly as a boss in local politics. He staked everything on the November election and lost. A fortnight before election he was confident of his ability to achieve two momentous ends—

the defeat of Cleveland for the Presidency, and the practically complete possession of the government of this city for himself by the election of his straight Tammany ticket. His plans were so well laid, and the "deal" with the Blaine Republicans was so perfect in all its details, that both they and he had not a fear of defeat. So confident were the Blaine managers that they abandoned all work in the State outside the city, and depended absolutely and undoubtingly upon Tammany's treachery for victory. And they would have won but for the nomination of Mr. Grace for Mayor. His candidacy weakened the "deal" most disastrously in two ways. In the first place it undermined the solidity of Kelly's column by presenting an honored Catholic for the office. In the second place, it drew thousands of Republican votes, because of Mr. Grace's admirable record as a faithful and honest Mayor. The nomination of no other man could have done this, and from the moment the County Democracy yielded to the Citizens' Committee's demands and accepted Mr. Grace's candidacy, the doom of Kelly and also of Blaine was sealed. So complete was the overthrow of Kelly that even his stolid temperament was affected by it, and the man whose face, figure, and conduct have for so long a time constituted the very personification of obstinacy in this city, was confined to his house for several weeks by an attack of nervous depression.

We doubt if the city will ever again be afflicted with a boss who will be Kelly's equal in ability and power. There will, of course, be other bosses, but they will be of a different kind. They must possess qualities which will enable them to rule under the new conditions which will prevail after the 1st of January next. Kelly succeeded Tweed, and for a time was almost his equal in power, but he was a different boss from Tweed. He was never personally corrupt. He arranged "fat things for the boys," and put into our local offices and into the Legislature about the worst succession of political speculators and strikers that the city has ever been called upon to endure. He stole nothing himself, but he enabled others to steal with great freedom. His power rested mainly upon his standing as a good Catholic. Connected by marriage with the very head of the Church in this country, he was able to command that blind obedience of his followers which exists only within the pale of the Church. He cultivated this power with great assiduity. He had a lecture upon some topic of Church interest which he delivered in aid of all kinds of the Church's charities, and he posed everywhere as a devout Catholic. This, together with his undoubted ability as an organizer, constituted his claims to leadership. His loss will be a serious one to the Republican "boys" who were his faithful allies during his entire career, and to those Republican newspapers which always secretly aided his "deals" in return for the corporation advertising which his influence secured for them. He succeeded almost always by betraying his own party, and his Republican sympathizers enabled him to win by secretly betraying their party in turn. He sold out his party's State or national ticket, and his Republican friends returned the service by delivering the city over to him and his plunderers. It was a shameless conspiracy against good government, and it has ended fitly in the joint overthrow of Kelly and Blaine.

The efforts of Mr. Cyrus W. Field and General Sherman to relieve General Grant of his financial embarrassment are very creditable, and we hope that they will be successful. We observe with much interest that the members of the Grant family are speaking with increasing bitterness of Ward, as their deceiver and the cause of all their woes. Ward, in the meantime, is still shut up in Ludlow Street Jail, and has as yet made no full statement of the firm's business and the extraordinary methods by which it was able to induce people to invest in its "contracts." He is the only man who can explain his own system of accounts, and until he does explain it the truth will not be known. It is in the interest of the public and of honest business everywhere to have the whole story told, and the real culprits exposed without mercy. That Ward was the only scoundrel in the swindling, few people have ever believed. That he was able to deceive General Grant and his sons is possible; but that the experienced financial operators who "invested" with the firm and drew out their fabulous profits, were so innocent as they would have us believe, is altogether incredible. If Ward can be goaded into telling the exact facts about these people, it will be an interesting and valuable revelation.

Senator Logan's prospects of reëlection appear to be very poor. The Republicans have only a majority of one on joint ballot in the Illinois Legislature, and there is one Republican member who was elected as an avowed anti-Logan man, and who declares that he will not vote for Logan even if he receives the caucus nomination, as he probably will. The rebellious member's grievance is that he was a promising candidate for a Federal office a few years ago, and would have received it but for Logan's opposition. He says his turn has come now, and that nothing will induce him to forego the delights of revenge. The contest is likely to be a prolonged one, with the final outcome much in doubt. Logan himself is said to have abandoned hope of success, and to be preparing to return to the practice of law. The friends of Congressman Morrison profess to have great hope of electing him to Logan's seat, and base it on the expectation that the anti-Logan Republican member will absent himself, thus giving the Democrats a majority. The prospects for a deadlock are very promising.

A morning journal publishes opinions of some of the Knights of Labor on the present depression in trade, with their suggestions for a remedy, some of which are striking. One labor advocate is reported as saying in relation to the present state of trade, that "it is a shame that such a state of things should exist with abundant harvests, low prices for commodities, and the *vast sums of money locked up in the Government Treasury.*" But the Knights of Labor have taken steps to dispose of the difficulty about the Treasury, and to improve things generally, if Congress will help them. The following is given as a brief statement of the proposed plan:

> "The remedy lies in the new organization. It is to embrace all classes and grades of society. Memorials are to be drawn up and sent to Congress, and resolutions passed in every State throughout the Union, demanding that Congress make liberal appropriations for the improvement of our coast cities and rivers, erection of post-offices, and do such other work, which will not only enrich the nation, but give employment to idle iron and steel mills and other manufactures, and through them to the coal interests, employing thousands of miners now idle."

In other words, the labor advocates consider the money in the Treasury as a ripe melon to be cut into for their benefit and distributed around over the country. What labor and trade want from Congress is good laws, to assure freedom and security. To turn the Treasury over to Congress for use in revivifying industry is a design the folly and inutility of which ought to be apparent even to a professional labor advocate.

A sense of their ignorance concerning industrial arts and sciences, developed in great measure by the recent agitation of the question whether technical schools should be established in North Carolina, has led the young business men of Raleigh to organize a club whose purpose will be to consider economic questions of practical concern, whether pertaining to the state or nation, and to disseminate such information among the people. In their prospectus they say: "Our methods of work will be mutual conference and deliberation, the study and dissemination of the best literature within the scope of our purpose, communication with other clubs organized for the same or a similar purpose, the sending of delegates to such conventions as may be held within the Union to forward our general object, and the inviting of eminent economists to address us upon such subjects as we may select." This is one of the most significant steps taken by the new South in the path of material advancement. Accurate practical information is necessarily rare in all Southern communities, because under the old system of education it was neglected or despised; and though there has been a change of late years, no organized effort has been made to enlighten the masses concerning such economic questions as are continually agitating the public mind elsewhere. It is very probable, indeed, that industrial schools would exist at present in both North Carolina and Georgia if organizations extended throughout those States similar to the one just established in Raleigh, containing men able to give definite information concerning, not the utility of such schools, for that is generally admitted, but how they should be conducted, and how much they cost.

The Charleston, S. C., *News and Courier*, commenting upon the *Herald's* published list of 700 divorce cases pending in the courts of Chicago, and of more than that number on the dockets of the Philadelphia courts, calls attention again to the fact that South Carolina is the only State in the Union in which it is impossible to obtain a judicial divorce for any cause. This is very true. "South Carolina, to her undying honor be it spoken," to use the language of a Georgia judge, "has never granted a divorce since the Revolution." South Carolinians are as proud of this record as the Georgia judge could have desired them

to be. An attempt was made in the State Legislature, we believe, last winter to pass a bill permitting a judicial divorce for the cause of adultery, but it was overwhelmingly defeated. But it must not be inferred that South Carolinians consider marriage an irrevocable step. "Separation," says the *News and Courier*, "is allowable when one has so sinned against the other that forgiveness is absolutely impossible; but neither should be permitted to marry again." It would be interesting to know how many husbands and wives are "separated" in South Carolina every year. Such "separated" persons, not being permitted to marry again, constitute, Mr. Bishop, in his work on 'Marriage and Divorce' maintains, a most injurious class. We are informed that many divorces are obtained by South Carolinians in the courts of Georgia and other States. Indeed, it is safe to infer that all who wish both to be "separated" from their present consorts and to be permitted to marry again, have very little trouble in obtaining judicial divorces in other States. Others who have not the means to procure such a decree, or who fear the loss of social standing which such a proceeding involves in South Carolina, have "articles" quickly drawn up, or continue to bear their burdens, which in some cases it must be admitted are too grievous to be borne.

Colonel "Bob" Ingersoll's reputation as a public man has received some heavy blows during the last few years, but he has thus far retained the glory of having first dubbed Blaine a "plumed knight." While this cannot be taken from him, it now appears that he was not the first to apply the term to a Presidential candidate. In vol. iv., p. 682, of William H. Seward's Works, there is a quotation from John A. Andrew's speech at the Chicago Convention in 1860, in nominating Lincoln, in which he said of Seward, "that in the thickest and the hottest of every battle there would be the white plume of the gallant leader of New York." Here the application was most suitable. Seward really was "a plumed knight," who fought for great ideas and led men in defence of great causes, and who, in seeking "channels in which he could be useful," had no more thought of making money than Henry of Navarre when he charged at Ivry.

Episcopal circles in this city are somewhat agitated by Assistant Bishop Potter's having formally received the three monastic vows of poverty, chastity, and obedience the other day from two young ministers who wish to devote themselves to what is technically called a "religious life." The Low Churchmen are apparently somewhat scandalized, as they look on it as a sort of recognition by Bishop Potter of the fitness or value of monastic vows, while the Churchmen with "legal minds" are troubled by the absence of canonical authority for the proceeding. There are, however, already several Protestant sisterhoods maintained by vows of some kind, which have done a world of good, and have given spheres of usefulness to many able women who could have accomplished nothing if they stood alone, or were not clothed with some sort of official garb. Most Protestants, nevertheless, are disposed to look askance at a man who cannot lead a religious life without making a public declaration of his intention to do so, or who cannot keep vows or promises made to himself alone, or at all events made only in his own presence. But, after all, there cannot be much danger to Church or State in witnessing the pledges of a man who thinks public promises more binding than private ones, and needs the help of public censorship to enable him to be self-denying. A man who secretly determines to be poor and chaste and obedient as a means of self-discipline, is not a dangerous person, and he does not become dangerous by calling everybody's attention to the fact.

The celebration of Mr. Gladstone's seventy-fifth birthday on Monday in England was probably the greatest honor any statesman has ever received. There has, perhaps, been more enthusiasm over some soldiers, but Gladstone's triumphs have all been the triumphs of peace. If statesmen are to be judged by their legislation, he is by far the greatest England has ever had. The only predecessors who can approach him are Pitt and Peel. But Pitt's period of beneficence lasted only nine years. The rest of his official life was spent in carrying on a bloody war and piling up a monstrous debt. Peel's one exploit was the repeal of the Corn laws, to which he came slowly and somewhat reluctantly. But Gladstone in his fifty years of public life has either initiated or participated in a series of measures which have transformed England, and his last and crowning work, by admitting every man to the franchise who has an established home, hands the country over, for weal or woe, to a triumphant democracy. What is most marvellous in the "grand old man's" make-up is that in him there is an unprecedented combination of skill in construction with skill in persuasion. No hand so cunning as his has in England ever drafted a bill to solve an intricate problem, and nobody has ever displayed in the House of Commons the same power in exposition and advocacy. In fact, of late years his sole authority has been sufficient to pass any measure, however novel or startling. He is a wonderful product of the old college-bred school of English statesmen, the greatest and perhaps the last; a remarkable illustration, too, of the efficiency of the sifting process by which the House of Commons evolves both legislators and administrators.

The Suez Canal question, which made so much commotion in England last year, and which at one time threatened to upset the Gladstone Government, has been settled, apparently, by the decision of the company to enlarge the existing canal to twice its present capacity instead of digging a new one. In this way they will avoid the necessity of asking a new grant of land from the Egyptian Government, whatever that may now be. The Paris correspondent of the *Economist* says, that "one great advantage of the plan is that the work can be executed gradually, and each partial enlargement can be immediately available for navigation, while a second canal could only be utilized when entirely completed. The outlay may also be spread over a longer period, and will be accompanied by increased receipts as the works advance." It is a much greater advantage that a work so necessary to the world's progress can be undertaken without endangering the friendly relations of two great countries, and without the need of bribing the Khedival Government, if there be any such government to bribe.

Lord Wolseley has now arrived at the critical point in his advance—that is, he has reached the first great bend in the Nile at Ambukol, where the river, after flowing nearly south for a considerable distance, turns again northward. From Ambukol, or Korti, the bend may be cut off by taking a direct caravan route across to Shendy, which is about one hundred miles below Khartum, on the river. This march across the desert from Korti, where the troops are concentrating after their arrival in boats, is the serious part of the enterprise. It is about one hundred and twenty miles long, and has to be made in such force and such order that a battle may be successfully fought on again approaching Shendy, where a number of Gordon's steamers are waiting. It is hardly likely that the Mahdi will permit a second concentration at that place without opposition. That a brigade is to be sent up to the most northerly point of the bend at Abu Hamed, punishing the murderers of Colonel Stewart on the way, is not unlikely, but that it is then going to "open the desert route to Korosko," a little way above the first cataract—the route being 200 miles long through a difficult country—and make Korosko a base of supplies, is very unlikely.

The London military critics, who are generally hostile to Wolseley, in the meantime are pegging away at him and prophesying his destruction freely. They have been all agreed of late that he ought to have started from Suakim and gone across the desert 250 miles through a mountainous country to Berber. When it was pointed out to them that there was only water enough on this route for an advance in very small parties, they said there might be a railroad built over it in three months. It was, however, discovered by careful examination that no railroad of any kind could be built in less than eleven months, and that in fact the expedition was clearly shut up to the Nile route. In no other way can the army get near Khartum in good condition. Moreover, while very little is known of the country between Suakim and Berber, there exist careful and minute surveys of the route between Shendy and Korti. The main difficulty is, as in all African warfare, the water difficulty, and the seizure of the wells which lie half way across is, of course, the first work to be done. Wolseley has now been employed on three expeditions—the Red River, the Ashantee, and the Egyptian—in which the fighting was comparatively a small matter, and the means of reaching the enemy the real problem. In all three he has, by an extraordinary capacity for details and by taking his time, attained complete success. But the very delay incident to such undertakings gives the prophets and critics a grand chance for spreading "disquieting rumors." This, it must be admitted, however, is, "the greatest effort of his life," because failure in the Sudan would mean the destruction of the entire force and the fall of Khartum.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 24, to TUESDAY, Dec. 30, 1884, inclusive.]

DOMESTIC.

GOVERNOR CLEVELAND recently received a letter from the National Civil-Service Reform League, of which George William Curtis is President, commending the cause to his patriotic care in the exercise of the great power with which the American people have intrusted him. A reply from Governor Cleveland was published on Monday, which has attracted wide attention and much favorable comment. The following are some of the most significant sentences of this admirable document: "I regard myself pledged to this [Civil-Service Law] because my conception of true Democratic faith and public duty requires that this and all other statutes should be in good faith and without evasion enforced, and because in many utterances made prior to my election as President, approved by the party to which I belong, and which I have no disposition to disclaim, I have in effect promised the people that this should be done. . . . There is a class of Government positions which are not within the letter of the civil-service statute, but which are so disconnected with the policy of an administration that the removal therefrom of present incumbents, in my opinion, should not be made during the terms for which they were appointed, solely on partisan grounds, and for the purpose of putting in their places those who are in political accord with the appointing power." The Governor then calls attention to the fact that many now holding such positions have "proved themselves offensive partisans," and adds: "Such officials, as well as their successors, should be taught that efficiency, fitness, and devotion to public duty are the conditions of their continuance in public place." He concludes by reminding his party friends that "a due regard for the people's interest does not permit faithful party work to be always rewarded by appointment to office," and that "selections for office not embraced within the civil-service rules will be based upon sufficient inquiry as to fitness, instituted by those charged with that duty, rather than upon persistent importunity or self-solicited recommendations on behalf of candidates for appointment."

Secretary Frelinghuysen has written a letter in defence of the commercial treaties to Senator Miller, Chairman of the Committee on Foreign Relations. In answer to some of the objections raised he says: "It is said that we thereby give up a revenue on sugar, from $25,000,000 to $35,000,000, in return for a reduction of duties upon our products exported into Cuba and Porto Rico, estimated on the basis of the existing traffic at from $3,000,000 to $5,000,000. The relinquishment of revenue, when for the public good, is in the line of the national policy hitherto. It was done in the case of tea and coffee, which, by the act of May 1, 1872, were placed upon the free list without attempt to obtain therefor any equivalent whatever, and solely in obedience to the popular demand for a 'free breakfast table.' By this measure the Treasury of the United States has lost during the last twelve years a revenue of some $144,000,000 on coffee alone. Again, the privileged introduction of tobacco at reduced duties has been objected to as reducing the revenue and removing protection from the American product and manufactures. As to this, it seems enough to say that the convention leaves a discrimination against the imported article of from four to five times the internal-revenue duties on the American product, and secures a market hitherto denied for the special manufactures of tobacco in which we excel, and which command a profitable market wherever their importation is permitted. Again, it is urged that the increased exportation which these treaties may secure will not equal the loss of revenue on the imported articles. But these articles of import are produced within our territory sparingly, or not at all, or of different grades, not satisfying the public demand, and it is of the essence of wise protection to forego duties upon these, and to impose them upon those manufactures which may be profitably fostered by impeding foreign competition."

In the House of Representatives the strongest opposition to the Nicaraguan treaty comes from members of the Appropriations and the Foreign Affairs Committees, before which Secretary Frelinghuysen last session made his arguments in behalf of the $250,000 appropriation then asked for as necessary to negotiate the treaty. One of these members has made this extraordinary statement: "In the presence of Mr. Randall—I mention him as one of the prominent men present—Secretary Frelinghuysen stated, in language plain though diplomatic, that the $250,000 was wanted to corrupt the Nicaraguan Government."

Señor Valera, the Spanish Minister in Washington, says that the despatch from Madrid announcing that the Spanish Government had authorized him to assent to modifications of the Spanish treaty, and particularly with regard to the provision relating to sugar, is true. He had been instructed, he said, to assent to a change which will admit free into America only sugars up to class 13, Dutch standard, instead of class 16, as the original text of the treaty provides. The Minister said he had not yet received any explicit instructions to assent to a modification of the tobacco provisions of the treaty, but, from the nature of advices already received, he felt quite sure these would follow. Secretary McCulloch regards changes as inexpedient, though perhaps necessary to secure confirmation of the treaty.

The President's private secretary stated on Saturday with the greatest positiveness that the nomination of Mr. Wm. E. Curtis as Secretary of the South American Commission will not be withdrawn unless Mr. Curtis so desires, and there is no reason to believe that he will make such a request.

The House of Representatives met on Wednesday, and, without transacting any business, adjourned until January 5, 1885, and the Senate did the same.

Congressman Samuel J. Randall arrived at Louisville, Ky., on Monday, on his protection crusade through the South. Mr. Watterson has been making violent attacks upon him in the Louisville *Courier-Journal*.

Friends of ex-President Grant are preparing a subscription list for a fund to defray his debt to William H. Vanderbilt. Executions have been taken out, it is announced, under the judgment against General Grant which was recently filed by consent. The amount called for is nearly $160,000, the principal and interest of the $150,000 advanced by Mr. Vanderbilt last May to help General Grant endeavor to prevent the collapse of Grant & Ward. The movement for his relief was started at the suggestion of General Sherman. It is reported that Mr. Vanderbilt has said that he would waive his claim to $60,000 of the $160,000 debt.

It is asserted that four regular companies of Socialists have been organized in Chicago, and at least two of them are equipped with breech-loading rifles.

The car-drivers at New Orleans struck on Saturday afternoon, leaving the visitors at the Exhibition in a rain storm, six miles from the centre of the city. Almost every vehicle in the city was turned to use as a cab, and so the people got home.

After a meeting of the General Committee on the Bartholdi Statue, held on Saturday evening, it was announced that the Committee had pledged itself for $25,000 to continue the work of the quarrymen during the winter.

In the celebrated Hill-Sharon suit at San Francisco, Judge Sullivan has decided that under the laws of California the plaintiff is the legal wife of ex-Senator Sharon, and as such, on the ground of wilful desertion, is entitled to a divorce and a division of the common property. Sharon is estimated to be worth $10,000,000. He will appeal.

In the Supreme Court at Cambridge, Mass., on Saturday, the jury in the noted Stone will case returned a verdict to the effect that the will was drawn in proper shape, and that Mrs. Stone was of sound mind. On the question of undue influence over Mrs. Stone on the part of the Rev. Dr. Willcox, one of the executors, the jury disagreed, standing six to six. Mrs. Valeria Stone was the widow of Daniel P. Stone, a money broker, who left an estate of nearly $2,000,000. She gave much to educational institutions during her life, and in her will left all her property to Dr. Willcox to be given by him to educational purposes.

Henry A. Burr died on Thursday at his home in this city, aged seventy-four years. He was a grandnephew of Jonathan Edwards, and a cousin, once removed, of Aaron Burr. Coming to this city in 1831, he engaged in the hat trade, and, in connection with Henry A. Welles, invented a hat-making machine which greatly reduced the cost of manufacture. He made a fortune of several million dollars, and retired from business in 1872. Afterward he became interested in some patents for type-setting and distributing machines.

Dr. William Darling, Professor of Anatomy in the University Medical College in this city, died at his rooms in the College on Thursday, aged eighty-two years. He was a native of Scotland. Coming to this city in 1822, he became associated with Dr. Valentine Mott, and was graduated from the University Medical College in 1842. He spent ten years in travel and study in Europe and became a fellow of the Royal College of Surgeons in England. On returning to this city he renewed his connection with the University Medical College. His reputation as an anatomist was very high.

FOREIGN.

In the Spanish Cortes, which opened on Saturday, the Government was asked whether it was aware that the text of the pending Hispano-American treaty had been cabled to a New York newspaper; whether it ought not to have kept the treaty secret until it had been approved by the American Senate, and whether it knew who the person was that sold the copy for $2,000. To all these queries the Government made evasive replies.

Several earthquake shocks were felt in Spain on Thursday. The consequent loss of life is much greater than at first reported, some estimates placing it at 2,000. Official returns show that 526 persons were killed in the province of Granada, and 100 in Malaga. At Alhama over 350 bodies have already been recovered. At Periana, a village in Andalusia, about thirty miles from Malaga, great damage was done, and many lives were lost. Sixty bodies have so far been recovered. Many persons died of fright. A fatal landslip occurred in the mountain near Periana. This destroyed many houses which stood in its path, and buried forty-eight persons. Of these, eighteen were rescued alive. It is reported that 900 persons were buried beneath the ruins of the buildings of Albuñuelas. A severe earthquake shock was experienced in Carinthia, Austria-Hungary, on Monday. Many buildings were considerably damaged. A similar shock was also felt in Wales, where many houses were injured.

The London *Times*, in an article on the Nicaragua treaty, admits that the treaty should be judged in America without reference to English interests, but England, it says, holds a position of almost impregnable strength, and will protest against a policy which violates rights covered by the Clayton-Bulwer treaty. It believes that the better class of Americans will not favor the scheme, but thinks it rash to predict the result in Congress.

The London *Daily Telegraph* on Tuesday, in an article on the proposed Nicaraguan Canal, says: "The canal will be of untold advantage to mankind. There cannot be two opinions as to the advisability of England seeking peace and harmony with America in preference to

any other Power. It can hardly be Earl Granville's desire to quarrel with America over the long-forgotten Clayton-Bulwer treaty, to which few Englishmen attach very great importance. England has no interest in forcibly opposing a canal across the Isthmus of Panama, by whomsoever constructed, with proper provisions. A wise English Government will perceive that its interests lie in just the opposite direction."

Mr. Gladstone celebrated his seventy-fifth birthday at Hawarden on Monday. Birthday greetings reached the great leader from all parts of the empire. The Prince of Wales sent cordial congratulations.

The *St. James's Gazette* on Wednesday printed an interview had in Paris with a dynamiter. He said that the headquarters of the conspirators was in Paris, but that the funds came from America. The explosion at London Bridge was arranged in Paris three months ago by a man who is now in America. Two men were sent to London to execute the plot in September, but a delay occurred. They returned to Paris after the explosion, and are now there.

The British annexation of St. Lucia Bay, on the coast of Zululand, will probably increase the friction already existing between Germany and England in regard to colonial matters.

The Governments of Tasmania and Queensland have joined with that of Victoria in the protest against the annexation by Germany of a part of New Guinea and neighboring islands, but the authorities of New South Wales and South Australia have refused to join in the protest. The Australian press generally express indignation at the action of Germany.

The Berlin correspondent of the London *Morning Post* says that there is a secret convention between France and Germany, in accordance with which France is allowed unlimited colonization in Morocco and Tonquin, and Germany, while respecting the French possessions in Africa, is at liberty to annex territory anywhere not affecting French interests.

The German convention with the African International Association has been signed at Berlin, and Russia is also arranging a convention with the Association.

An *entente cordiale* has been arranged between France and Germany for the neutralization of the territory of the African International Association. Prince Bismarck has undertaken to present a declaration to the Conference favoring an international protectorate over the Association's territory.

The Berlin *North German Gazette* (Bismarck's organ), replying to the recent article in the London *Daily News* on the decision of the Powers to ignore the proposals of England relative to Egyptian finances, and attributing this decision to the attitude of Prince Bismarck, says: "European peace is more important than the settlement of the Egyptian question. Each Power is obliged to consider whether the acceptance of the English proposals would jeopardize its relations with the other Powers. Germany is too much interested in retaining th[illegible] will of France to snatch the Anglo-Egyptian chestnuts from the French fire, and attaches too great a value to England's good will wantonly to disoblige her through ill-feeling. But she will not allow this to interfere with the policy of peace with France observed since the war."

M. Waddington, the French Ambassador, returned to London on Friday from France. He was instructed to advise Earl Granville to accede to the demand of Germany and Russia for membership in the Egyptian Debt Commission, and also to withdraw the proposal to reduce the interest on the debt. Failing an agreement between France and England, all the Powers except Italy will reject the English proposals. It is reported that the British Government has invited the military coöperation of Italy in the Sudan, offering as an inducement the cession of territory near the Italian colony of Assab.

Advices from Korti on Monday gave the following particulars of the plan of the British advance. General Earle, it is stated, will collect an infantry brigade at Hamdab, above the fourth cataract, and punish the Monaseers, and will afterward push forward to Abu-Hamed and open the desert route to Korosko, whence stores will be forwarded to General Stewart. Gen. Herbert Stewart, on Tuesday, started from Korti to Gakdul (ninety miles distant) with 1,100 men and 1,800 camels, with a large convoy of stores. The following was the order of march: A detachment of Hussars formed the van, followed by the Engineer Corps; the field hospital and water convoy and baggage train came next; after them the light and heavy camel corps, and then the artillery and transport train. Mounted infantry and Hussars brought up the rear. A strong garrison remained at Korti.

The rebels are now making daily and nightly attacks on the outposts at Suakim. The garrison of Kassala made a sortie on Friday, and succeeded in killing many of the rebels.

Marquis Tseng, Chinese Minister to England, has warned Earl Granville that the sale to France of seven vessels of the Castle and Monarch Lines, now trading between England and the Cape of Good Hope, for the purpose of transporting French troops to China, is a breach of neutrality. The English Government has advised the owners of the vessels that no evasion of the Foreign Enlistment Act will be permitted. The semi-official denial of the purchase by the French Government is not believed in London.

Advices from Tonquin report that daily encounters occur between the French and Chinese outposts. China continues to pour troops into Tonquin and Formosa.

The Catholic missionaries in Tonquin complain that the court at Hué, capital of Anam, has not fulfilled its promise to make reparation for the massacre of Christians, which occurred some months ago. The correspondent of the Paris *Temps* at Hanoi says the court is strongly hostile to France, and he advocates a clean sweep of officials at Hué.

King Norodom, of Cambodia, has again signed the treaty of peace with France, placing his kingdom under French protection.

The French Senate adopted on Saturday the entire budget by a vote of 174 to 34. It includes a clause establishing the principle of the taxation of religious bodies.

The French Senate on Monday, by 192 to 3, rejected a motion by M. Buffet to vote a credit for the first quarter of 1885 without detaching the revenue estimates from the general budget, the Government desiring to have the revenue estimates discussed first and separately. The Government then asked a credit of 1,000,000,000 francs for the first half of 1885. The Senate has adopted the clause of the budget establishing the principle of the taxation of religious bodies. In the French Chamber of Deputies on Friday the Minister of Agriculture promised to ask priority for the Corn and Cattle Duties Bill next session. This caused a sensation.

The Senate's session then closed. In the Chamber of Deputies the sum of 1,000,000,000 francs on account of expenses for 1885 was granted by a vote of 351 to 127, and the budget receipts were unanimously adopted.

It is said that the French Government has found evidence that Anarchism is spreading among the soldiers.

Three thousand Socialists held a meeting at the Salle Levis, Paris, on Sunday. A number of Anarchists tried to control the election of a chairman, and a hand-to-hand fight ensued.

It has been found that the emeralds in the diadem of the Empress Eugénie, recently sold, were bogus. An English nobleman bought them for $200,000. The money has been refunded. Paris *Figaro* asserts that the Empress knew that part of the stones in the diadem were false.

Sardou's new drama, "Théodora," was produced in Paris on Friday night before a distinguished audience. Bernhardt's acting and the intense dramatic nature of the situations are warmly praised.

The Berlin *North German Gazette* (Bismarck's organ) on Thursday printed an official note advising the abandonment of the scheme to raise a public fund to pay for an assistant for Prince Bismarck. It says the factions in the Reichstag that are united by a common hatred of the Chancellor, dare not again refuse the credit solicited by the Government.

The fourth volume of Prince Bismark's letters, which is about to be published in Berlin, contains the private diplomatic despatches written to General von Manteuffel during the years from 1851 to 1858, while Bismarck was the Prussian representative at Frankfort. The letters discuss matters with remarkable frankness. In one place the future Chancellor says: "I do not see why we should link our seaworthy ship with the worm-eaten bark Austria. Everybody courts our alliance. Great storms suit us best. We can use troubled times fearlessly, without consideration of others. If we desire to become greater with 400,000 men, we must not be afraid of standing alone and leaving others to fight. We had better isolate ourselves. The greater the difficulties of Europe the more valuable our alliance, and the greater price we shall get for it."

The Constitution of Portugal is to be so modified that the Chamber of Peers shall consist of 100 life peers, to be appointed by the King, and 50 peers to be elected by an indirect process.

Important frauds have been discovered in the Russian Treasury Department, and several of the officers have committed suicide to escape disgrace.

The well-known Paris correspondent of the London *Times*, in a recent despatch, said, in a long review of the present condition of Russia: "Count Tolstoi, the Russian Minister of the Interior, is chiefly engaged in the discovery and prosecution of Nihilists. No sooner has one society of Nihilists been suppressed than another springs up. While Nihilism is more dangerous than ever, the persecution of the Jews is as fierce as it was a few years ago, when the European press boiled with indignation at the anti-Semitic outrages which disgraced Russia. The great bankers, especially those of German nationality, who were previously interested in giving wide publicity to the outrages with a view to preventing the investment of capital in Russia, are now inclined to subsidize the press to preserve silence. They take this course for the purpose of preventing the impairment of European confidence in Russian finance, the condition of which at present is not brilliant. It is suffering from the difficulty experienced at present in collecting the revenue, from the persistent American competition in the grain trade, and from the ruinous expense of the Russian advance to Merv. Despotism is increasing and the press is coerced into silence. Russia is more and more ignoring liberal ideas, and is paving the way to a tremendous explosion."

The uneasy feeling in Viennese financial circles continues unabated.

Recent developments have proved that Jauner, the late Director of the Lower Austrian Discount Bank, of Vienna, was completely under the power of the rich and unscrupulous adventurer, Heinrich Kuffler, now under arrest for complicity in the robbery of the bank's securities. Kuffler is a Hungarian, who had been for years so successful in bold speculations, and had so frequently placed powerful men under financial obligations to himself, that he had secured a most desirable social distinction in Vienna. This he used for all it was worth commercially, and by its exercise obtained mastery over Jauner.

The revolution in Ecuador continues, and the panic in Government circles is increasing.

GOVERNOR CLEVELAND'S LETTER.

DURING the recent campaign the *Nation* held the opinion that civil-service reform could never be well rooted, either in national policy or in the public opinion which constitutes and enforces national policy, until it should have stood the test of a party change in the national administration. We believed that the time and the man had come to subject the reform to this crucial and necessary test. Grover Cleveland had proved to most of those who had concerned themselves in endeavors to uproot the spoils system in this State, that he was thoroughly in accord with them, that he believed what they believed, and that he had all the firmness which so great and beneficent a change required in a chief Executive in order to carry it into execution. In supporting Governor Cleveland, therefore, we had entire confidence that we were not merely promoting the cause of civil-service reform, but promoting it in the only way that could give it the binding force of a precedent which must needs be followed by succeeding administrations, irrespective of future political changes. If a Democratic Administration should come into power and should refraim from making "a clean sweep"; should solemnly abjure and renounce the doctrine that "to the victors belong the spoils of the vanquished"; and should establish the opposing doctrine—namely, that public office is a public trust, and that the routine business of government is, like any other business, to be administered by those whose fitness has been proved either by experience or other convincing tests—then the reform might be deemed effectively established. It could not be considered either effective or permanent so long as it was not subjected to such a strain. A change from one Republican administration to another would prove nothing. A change from Republican to Democratic administration would prove everything, provided the principles of the reform were faithfully adhered to.

To become the leader and chief instrument in establishing such a reform is a greater distinction than to be President of the United States. Without ostentation and without offensive comment upon persons or parties, Governor Cleveland has announced his purpose to execute the Civil-Service Act in the spirit as well as in the letter, and to apply its principles to the public service generally, having regard to the character and conduct of those who now hold non-political offices under Republican appointment. He says distinctly that he shall not remove any man from any non-political office, during the time for which he was appointed, who has not made himself notorious as a partisan and used his office for partisan purposes. His language implies that he will remove those, whether of his own party or any other party, who have employed or shall employ the time belonging to the Government, and paid for by the Government, in "running the Machine," or in promoting partisan interests. As to the great body of underlings who are embraced in the Civil-Service Act, they have nothing to fear so long as they behave themselves. They will be shielded from assessments from terrorism, and every sort of persecution, on the single condition that they faithfully and diligently perform their duties, and restrict their political action to the modest exercise of the political rights which appertain to American citizens. Such a declaration has a profound significance. It implies little less than a revolution in our political methods. It commits the Democratic party to civil-service reform *nolens volens*.

But we are bound to say that the Democratic party has shown no unwillingness to be thus committed. The speeches of its leaders and the outgivings of its press since the election have been remarkably free from the taint of spoils-hunting. The only outward sign of its prevalence is to be found in the columns of Republican papers, which will evidently be much disappointed if we do not have a herd of old-fashioned Jacksonian hogs around the public trough as soon as Mr. Cleveland is inaugurated. As we write this article the Chicago *Tribune* comes upon our table, filled with loud lamentations over the untimely fate of the "one hundred thousand trained and experienced employees who constitute the rank and file of the civil service," who are to be thrust out of their places on the 4th of March, to make room for "partisan workers and ward strikers who have done the caucus and campaign work for the Democratic leaders." The business community, it says, will feel the blow grievously, because the "strikers and heelers" who are to come in will be ignorant of their duties, and will of course plunge all departments of the service into confusion. Especially will they disorganize the magnificent system of railway mail service, which has been so long perfecting, and which has at last reached almost the stage of an exact science. "These specially skilled men," it says, "are to be turned out at once, and their places must be filled with raw hands, ignorant of their duties, and drawn from a class of partisan vagabonds." All this cruelty to individuals and all this disorganization of public business it ascribes to the perfidious action of the temperance fanatics, and the hypocritical behavior of the Mugwumps, "who gratified their spite by voting for Cleveland."

If none of the misery which it foreshadows should come to pass, there will be two kinds of "soreheads" in the country, one consisting of Democratic office-seekers who want to ravage the civil service, and the other of Republican newspapers, disappointed because the ravaging does not take place. The latter are not slow to perceive, that a conscientious adherence to the principles of civil-service reform by the incoming Administration will strengthen the Democratic party as nothing else could strengthen it, and that the party will thus enter the next campaign with much brighter prospects than it entered the last one.

MR. JONES'S DIFFICULTIES.

THE friends of Mr. B. F. Jones, the Chairman of the Republican National Committee, have been so wounded by the attacks made on his management by Mr. William E. Chandler, that they have replied to them in a long letter in the New York *Tribune*. The letter contains a glowing account of Mr. Jones's business career, and then describes the difficulties he had to contend with during the late canvass, as follows:

"In spite of the alarming Independent defection, with newspapers, hitherto Republican, furnishing, by their daily attacks on the head of the ticket, ammunition for their adversaries; in spite of lukewarmness if not treachery in quarters where they should have found hearty coöperation; in spite of the strength drawn from the Republican party by the Prohibitionists; and last but not least, in spite of the ill-concealed indifference of the Administration at Washington, Mr. Blaine was at last defeated by an accident which could not have been foreseen."

That the canvass was not judiciously conducted by Mr. Jones, some of the most ardent Republican papers, the *Tribune* among the number, have already affirmed, in saying that there was too much noise and torchlight and not enough "education of the people" through documents. One stanch Republican paper, the Troy *Times*, touching on this point a few days after the election, said:

"The Committee, too, appeared indifferent to success in the State of New York. It seemed to have adopted the idea that Mr. Blaine could be elected without the vote of this great State; and half the effort expended in West Virginia and some other States, with half the money wasted in circulating what was little better than obscene literature, would have given us New York and elected Mr. Blaine. There was enough incompetency in the National Committee to have defeated half a dozen candidates. And here we stop—at least for the present."

This diffusion of "obscene literature" was, in fact, one "new feature," as the publishers say, which Mr. Jones's Committee introduced into the business of electioneering. Nothing like it was ever seen in American politics or the politics of any civilized country before. The glory of this, whatever it amounts to, is theirs beyond dispute. Mr. Jones's proclamation, too, some time in September, that any new stories about Blaine which might appear on the following Saturday, would certainly be lies, showed that the chairman had in him some of the qualities of a good farce-writer, and greatly amused the town.

But the truth is, nevertheless, that Mr. Jones is being badly treated by the Republicans, as unsuccessful men so often are. His "obscene-literature" idea, it is true, did not win the day, but it unquestionably cut down the Cleveland vote in this State as well as in several others. Moreover, his Committee hit on another thing which unquestionably gave the Republican managers a confidence they have never before had in any campaign, and came very near giving them the victory, and caused large numbers of Republicans, who had inside views, to bet on Blaine as they have never betted on any candidate before—in that they secured the Irish Catholic vote in this State. This vote has for forty years been the one constant element in Democratic strength in New York, the one which no appeals, discussions, or documents on the part of their opponents could take away from the party. Now the Republican managers did finally take it away, and it was a great feat, and an unprecedented one, and it is no wonder that it made Jones and his Committee cock-sure, and set them to boasting and vaporing during the count. They could not bring themselves to believe that the Independent and Stalwart defection was great enough to overcome it. That it was overcome by even 1,100 majority was in fact a very remarkable proof of the extent to which this defection had gone. The Catho-

lic clergy almost universally worked against Cleveland in their quiet way, owing to their belief that, in spite of his explanations, his veto of the Catholic Protectory Bill did indicate hostility or indifference to the interests of the Catholic Church. A large body of the Irish were induced to desert the Democratic party in this way, and the remainder deserted it in the belief that Blaine was more likely than his rival to get up some sort of trouble with England if he secured the Presidency. It is hardly a secret, too, that the blatant dynamitic Irish press was freely subsidized with Republican funds during the canvass. The result appeared in the furious Blaine boom they kept agoing in their columns from the first day to the last.

One of poor Mr. Jones's misfortunes is that he cannot boast of this great feat, because, though the Republicans were very willing to win through it, they did not generally care to have it known that they owed anything to it. The party had for twenty years been proud of not having the Irish Catholic vote, and Republican newspapers had all gloried in it. When they denounced the "vice and ignorance" of the Democratic party it was the Irish Catholic vote they had in mind, and when they boasted that the Republican party contained "the virtue and intelligence" of the North, what they really meant was that the Irish did not vote its tickets. They have, since 1857, it is true, made several attempts to win them over, but they were made by the same appeals to the reason by which the Republican party was built up, and were wholly unsuccessful. In fact, it was, until the unfortunate Jones took charge of the affairs of the party, almost an axiom of Republican management that there was no use in spending either documents or speakers on the Irish. The Jones Committee broke up this tradition, and bagged the Irish vote in this State; and now, simply because they fell 551 votes short in New York, the Chairman feels the serpent's fang of ingratitude in his very vitals.

Calm observers must admit, however, that, like the Roman Emperors who prepared the fall of the Empire by the admission of barbarians to the Imperial armies, Jones in enlisting the Irish has given the Republican party the deadliest blow it ever received, and has perhaps unfitted it ever again to take the field in a Presidential campaign. For if it is now to exist as an organization in the national arena, it must keep the Irish as a substitute for the tens of thousands of Mugwumps whom it temporarily alienated by its devotion to the fortunes of a corrupt adventurer, and whom, with the fatuity which is a sure sign of decay, it is now actually trying to exclude permanently from its ranks. But it cannot keep the Irish without making platforms and advocating policies which the kind of people at the North who built up the party and constitute still its main strength can in no wise accept. Dr. Burchard's talk about "rum, Romanism, and rebellion" was ill-advised simply for its effect on the Irish ally. But he probably blurted out the feelings of a body of Blaine's supporters far more numerous than the Irish, whose loyalty to the party is absolutely necessary to prevent its dying at an early day the death of a degraded old Rump. That they can be held by candidates or platforms satisfactory both to Cardinal McClosky's clergy and the terrible British rebels of the Irish *World* and the *United Irishman*, no man of intelligence will believe. If the Democrats are wise, and wish to be the party of the future, they will take no pains to win back what they have lost. They have long been ruinously weighted by their dependence here on a body of voters dominated by foreign ideas and foreign aims, and who are sure to ruin any party which makes a point of conciliating them, and who cannot be reached in critical times by the art by which all permanent party success must be achieved in a country like this—the art of open persuasion.

THE CLERGY IN POLITICS.

MR. BEECHER'S address to his congregation on Sunday, touching the hostility to him, on the part of some members of the church, arising out of his support of Cleveland in the late canvass, is an interesting illustration of the nature of the political crisis through which the country is now passing. His case has one peculiar feature in that he has had to defend himself not only for advocating Cleveland's election, but also for the manner in which he advocated it. Mr. Beecher's oratory has the defects of its qualities. It is very impetuous, as well as humorous and witty, and no orator can be impetuous without committing indiscretions of greater or less gravity—that is, without often saying more than he meant to say, or something different from what he meant to say. Mr. Beecher did this on one occasion during the canvass, in New Jersey—that is, he used a humorous illustration which had undoubtedly the effect of seeming to make light of offences against purity. This fell on Republican ears when the party, as Bishop Huntington has pointed out in his amusing article in the *North American Review*, had committed itself with such fury to the cause of chastity that even its most licentious members became ardent and noisy defenders of the home and family. For this, Mr. Beecher had on Sunday to apologize, and perhaps it is well that he should have had an opportunity of doing so.

Of course, however, this is only a small part of his offence in the eyes of his critics. Deacon H. L. Pratt confessed to the *Tribune* reporter after the service, that the explanation was not sufficient—that "the feeling against Mr. Beecher was largely because he opposed Mr. Blaine, and he didn't say one word about that." Deacon Ropes was also of opinion that Mr. Beecher had not touched the real issue, while a prominent member predicted that the "rentals of the pews would now decline greatly," and Mr. Beecher "was only preparing for the inevitable." In fact, his punishment for supporting Cleveland is evidently to come through a "decline in rentals," which, to a true disciple of Blaine, is the worst thing that can happen to any human being. Loss of honor or reputation, sacrifice of conscience or of self-respect, are things he can make up his mind to; but to have his income reduced, or the bonds he sold returned on him, is a "personal hardship, bitter and burning and humiliating to the last degree." We believe the number of churches in which persecution of the pastor for "opposing Blaine" has developed itself, since the election, in a greater or less degree, is considerable, even where the opposition to Blaine went no further than casting a silent vote for Cleveland. This is in part the result of what we have heretofore called the "malignant superstition" which has gradually taken hold of the Republican party, that it alone is entitled or fit to administer the Government, and that people who do not vote its ticket are not real Americans, but a sort of second-class citizens, who may be safely allowed to vote as long as they are in a minority, but who ought not to be allowed to become a majority, and who cannot be intrusted with the management of public affairs without putting all social and political interests in peril.

This state of mind, on the part of a party in power, with regard to a large body of their countrymen, constitutes a real danger to the State. It prepares a considerable number of men, otherwise intelligent and conscientious, to wink at or participate in any political methods, however foul or illegal, which will prevent their adversaries getting into power. One meets every day estimable men whom it has unfitted for any political trust, and, indeed, from whose heads it has driven the fundamental principles of American government. When such men are gainsaid in politics by their pastor, whom they pay, and to whom they look for an example of morality as they understand it, they are naturally very fierce and bitter. To them, voting against a Republican candidate is an offence in any man, and an aggravated offence in a clergyman. We have heard of a case where it was taken so much to heart by a prominent member of a church that he insulted his pastor—one of the purest and most devoted men in the profession—in the grossest manner, simply because he had, in obedience to one of the tenderest consciences in America, silently voted for Cleveland.

These attacks on the liberty of the clergy are perhaps not wholly due to the superstitious worship of the party which the Claytons, Dorseys, Bradys, Chandlers, Elkinses, and Blaines have now for years directed. They are also in some degree the result of the decline in the influence of the ministers which has, during the past forty years been, so marked a feature of American life. Among the sharp, bustling business men, whose multiplication during that period has been so great, respect for the opinions of the scholarly class to which the clergy belong on the affairs of the world has long been diminishing. It has reached such a point that in many churches it is now considered a gross piece of presumption, if not an indirect breach of contract, for a clergyman to vote at political elections in opposition to the bulk of the members. They think he ought to get his ticket from the deacons, who know what will be best for pew rents, and deposit it under their eyes. Bigotry of this kind cannot be and never has been cured by argument. It has to be cured by experiment. When missionaries kick the idols over, or split them up for firewood, without falling down dead, or being struck with blindness, it does more to shake the confidence of the heathen in their ancient gods than a thousand sermons. In like manner, the confidence of those Republicans who cannot yet reconcile themselves to their late defeat, in the

normal working of party government, and in the fitness of the majority to rule the country, and in liberty of conscience in political matters, will only be restored by actually seeing the Government carried on for four years by Democrats without injury to any great national interest or institution.

ENGLISH AND GERMAN COLONIES.

THE disquieting telegrams which come from the Old World, implying that Prince Bismarck is watching and improving opportunities to irritate England, and especially to bring discredit upon Mr. Gladstone, must be taken with a great deal of reserve. If Bismarck were a new and untried statesman, or if he were in the habit of inviting fresh difficulties, seeking new adventures, tilting with windmills, and making himself generally odious, it might be conceived that the annexation of Angra Pequena and the northern part of New Guinea, and the obstacles interposed in the way of the English plan of finance in Egypt, were intended to add Great Britain to the list of enemies of Germany in the next great European war, whenever that may chance to come. If he were solicitous to add to Mr. Gladstone's power and prestige, and to insure his ascendancy among the English constituencies, he could do nothing so certain to accomplish those ends as to single him out for public discourtesy. Gladstone and Bismarck represent opposing systems of government, and their feelings toward each other are probably chilled by this antagonism. Mr. Gladstone stands for representative government, Prince Bismarck for personal government. The British Empire rests upon institutions, the German Empire upon individuals. The former does not depend upon Mr. Gladstone, the latter does depend upon Prince Bismarck, for unless another Bismarck is found when the present one dies, the governing power will pass inevitably into the hands of the Reichstag, and the German system will be assimilated to that of England. This change would have taken place in spite of Bismarck if the Austrian armies had conquered at Sadowa. It might take place at any time but for the reasons that Germany is surrounded by powerful nations which have unsatisfied grudges against her, and that Bismarck is believed to be, and probably is, the one man who can prevent them from satisfying those grudges by arms. It is inconceivable that a man whose whole aim, since the close of the wars which created and consolidated the Empire, has been to soften the asperities which the wars left behind them, should now seek trouble with the only country in Europe which is able to strike blows that he could not possibly return.

What mostly gives color to the belief that Germany and England are coming into antagonism is the fact that Bismarck is hoisting the German flag over certain tracts of unoccupied territory in Africa and Polynesia adjacent to English territory. The British colonies are so numerous and extensive in all parts of the uncivilized world that any occupation by Germany must necessarily be more or less contiguous to some of them. The new-born zeal of Germany for colonial possessions finds England dominated by a feeling (in official circles at least) strenuously opposed to the policy of making new acquisitions. Mr. Gladstone came into power expressly on the "platform" of opposition to new responsibilities. The war in Afghanistan, and the war in Zululand, and the annexation of Cyprus, furnished him the text for his most powerful attacks on the Beaconsfield Government. The British Empire, he said, already embraced more territory than could be wisely administered and more people than could be well governed. The attention of Parliament was so engrossed by foreign affairs and foreign embroilments that the most crying evils of home politics could not get remedied. He drew so powerful a picture of the misdirected energy of the nation and the waste of the public resources, that he overthrew the Jingo party at the moment when they fancied they had earned immortal glory by the display of their prowess on three continents.

But Mr. Gladstone's intentions have not been fulfilled. Circumstances have been too strong for him. The wheels of the Empire set rolling centuries ago would not stop at any man's bidding. Since he came into power, territory has been added to the responsibilities if not to the actual domain of Great Britain as large as France and Germany taken together, and this without counting Egypt as a permanent responsibility. An area six hundred miles square adjacent to the mouth of the Niger has been put under her protectorate. The southern half of New Guinea has been annexed in obedience to the wishes of the Australian colonies, after an obstinate but futile resistance on the part of the home Government. It would seem that the end of British annexation would come, not when the Government should cry, Enough, but only when there is no more territory to annex.

The recent German acquisitions are trivial as compared with recent English ones if the Niger country is to be counted as an acquisition. The *Economist* fears that it must be regarded as such, and finds no satisfaction in the prospect of increased army and navy expenditures to guard and police so extensive a territory—expenditures estimated at no less than a million sterling per annum, and without any possible returns except what may be shared equally by all nations through the medium of free trade. If the importance of a country is to be measured by its outlying dependencies, Great Britain is more important than all other European countries together, since India alone is greater than all non-British colonies. If England should deliver to Germany a quitclaim to all parts of the globe which may be fairly considered open to European colonization, and if Germany should reduce them to possession, she would still be as far inferior to her rival in this sort of distinction as New Guinea is inferior to Australia. It is difficult, therefore, to understand the shrillness of the London *Times's* comments on the German occupation of northern New Guinea. The gloomy forebodings of the *Tribune's* London correspondent must be ascribed to the deepening tinge of Toryism which has so often grieved us, for it is the rump of the Tory party, the *disjecta membra* of the Beaconsfield government, that look upon foreign domination as the sign of England's power and the seal of her importance in the world's councils.

A STRANGE PROCEEDING.

THE Congo Conference the other day settled the limits of the Basin of the Congo, which is to belong to the "International Association of the Congo." It is an enormous region, extending, roughly speaking, north and south through about fifteen degrees, and east and west through about twenty degrees. It literally includes the heart of Africa. It extends from the Atlantic Ocean to the basin of the Nile and the great Lake of Tanganyika, and has the Zambesi River for its southern boundary. Again, roughly speaking, it is about the size of all the States of the Union east of the Mississippi. It is said to be of wonderful fertility, and enjoys a considerable amount of inland navigation besides what is afforded by the Congo, one of the great rivers of the world. As soon as the Conference had settled the boundaries of the Basin, it united in a dedication of this vast region — the American representatives, of course, joining—to free trade! The Declaration provides that the region described shall be perfectly free to the commerce of all nations; that "all flags, without distinction of nationality, shall have free access to the seashore of the territory; to the rivers which flow through it to the sea; to the Congo and all its affluents, including the lakes; to all ports on these lakes, and to all canals which may be hereafter dug in order to connect the lakes or water courses." It provides, also, that all citizens of all countries may undertake every species of transportation within the territory, as well as maritime and river shipping and boating.

The third article of the Declaration is a strange one for the representatives of a Republican Administration to sign. It provides that "no merchandise from any quarter imported into the territory, no matter under what flag, whether by sea, river, or land, shall have to pay any duties or taxes, except such as shall be necessary to meet expenses incurred in the interest of trade," and these shall be equal for all. All discrimination in favor of ships sailing under any flag is also forbidden.

Now the Basin of the Congo is inhabited in greater part—thinly, it is true, but not more thinly than some of our States and Territories—by a population which has attained in some places considerable proficiency in many of the civilized arts. Many of them are, for instance, expert iron workers. They raise almost every kind of crops. They are good carpenters and wood-carvers. With security against the raids of the slave-dealers and against internecine wars, they will undoubtedly make rapid progress as producers. They have, in fact, already scores of "infant industries," which probably need only about fifty years of protection to be able to hold their own against foreign competition. They are, moreover, excellent boatmen, and on board the European ships which frequent the coast make no mean sailors. With proper protection against foreign boats and ships, they would probably, in half a century or so, become expert navigators, and carry on a large internal and coastwise carrying trade. Consequently, the very first thing the Conference ought to have done after fixing the boundary of the basin, was to frame a good tariff, so as to have stimulated the industry of the people, and infused diversity into it in the manner prescribed by the American eco-

nomist Henry C. Carey. Instead of which it has (Messrs. Kasson and Sanford, the American representatives, concurring) covered the whole of this vast region with the deadly upas tree of British free trade. The whole country will, under this régime, be speedily flooded with the products of the pauper labor of Europe. Such factories and workshops as now exist on the Congo will be closed, everybody will supply himself with foreign manufactures in so far as his needs go, and all the gold will leave the country. The Cobden Club, too, will distribute its poisonous literature far and wide.

A worse beginning for an infant State, a worse introduction of a barbarous people to the civilized world, we think has never been heard of, and the mere contemplation of it ought to bring a blush to the cheek or a tear to the eye of every Blaine editor in the country. Our participation in these enormous divisions of territory in the Old World is of itself a little odd, considering that we are so jealous of European interference on this continent that we will not even allow Great Britain to promise to let the Isthmus of Panama alone. But think of our helping to shut out so vast a region from the blessings of a tariff and navigation laws. Think of our agreeing that there shall be no custom-houses, no collectors, appraisers, or inspectors, or informers, or smugglers, in a region so blessed by nature. Think of throwing open such a magnificent system of inland navigation to foreign-built vessels, and agreeing that no subsidies shall ever be paid to enable a Congo man to carry on the shipping business at a loss. One does not need to expatiate on these topics. Everybody's imagination can picture the situation in which this leaves us. It is in all ways unbecoming, and we repeat that Congress ought to overhaul the Kasson-Sanford mission a little. What are Americans doing in that galley?

THE FRENCH MILITARY POWER.

PARIS, December 4, 1884.

I HAVE before me a volume entitled 'The French Power (La Puissance française), by an Old Officer,' which, in a small compass, contains much matter, and treats with boldness a vital problem for France. This "old officer" belongs to a military family of Besançon. His name (I give it, though he has not placed it on the book, for it is well known to everybody in Paris) is Jeannerod. He was educated at Saint-Cyr, and remained in the regular army till he became, a short time before the war of 1870, the military writer of the *Temps*. When the war broke out he took service again, and Gambetta used him in his last struggles and made him a general. Jeannerod returned to the *Temps* after the war, and wrote very important articles on the reorganization of the French army, which took place in consequence of our defeats. He gives us now what might be called his "military testament," and his book is well worth reading, for it is inspired by a pure patriotism and rises above the quarrels of parties.

I well remember the effect which was produced in 1871 by the publication of a work of Renan's on the moral reorganization of France. Renan represented France placed like Hercules between vice and virtue, obliged to choose between two systems: either she must lead a Spartan life, become austere, severe, establish a strong discipline, a solid hierarchy, become the slave of a reasoned duty; or else she must abandon all idea of revenge by force, and revenge herself by the contagion of frivolity and vice: she must bring all the countries of Europe to her feet by the fascination of her own corruption. Well, France did neither of the two things. She has not become entirely Spartan nor entirely Athenian, taking the word in the sense of artistic, frivolous, and corrupt. In the first hour of our humiliation the Spartan feeling was uppermost, and to this feeling must be attributed the law which at present governs the French army. It was thought in 1871 that everything must be changed in the organization of our army, since our army had been defeated; and where could we look for a better model than to Prussia, since the Prussian system had triumphed at Woerth, at Sedan, at Metz, and before Paris?

The confusion which was made in this transitory period of 1871 and 1872 in political ideas was made also in military theories. M. Thiers and his friends had, during the last years of the Empire, established a belief in the independence of the political institutions upon the form of government. The theory of this doctrine, which would have seemed absurd to Montesquieu, is found in the 'France Nouvelle' of Prévost-Paradol, a book which may be considered as the résumé made by a most brilliant writer of the evening conversations of the Place Saint-Georges. Prévost-Paradol maintains in it that if you establish parliamentary government, with all its machinery of chambers and of guarantees, it is indifferent whether you put at the head of the executive power a president or a king; you can, by the turn of a key, transform a liberal monarchy into a republic, a republic into a liberal monarchy. The Constitution made at Versailles after the war was inspired by these ideas: it was a Constitution *à deux fins*, which could serve as well for a republic as for a monarchy.

I will not dwell here on the character of this Constitution. I only allude to it in order to show why the persons who reorganized our military laws at that same time did not examine the problem of a connection between the military laws of a country and its political and social state. The definitive form of government was not yet found, when it was agreed that France must adopt the system of universal military service. It seemed to be a natural consequence of the universal right of suffrage: each man was a citizen, each man must be a soldier from twenty to forty. Each man was to remain five years in the active army, five years in the reserve, ten years in what was called the territorial army. The Prussians had their "einjährige"; we decided that we ought to have our "volunteers of one year"—young men who were to serve but one year in the active army, after having passed an examination, and who paid a certain sum of money for this exemption. The young men of twenty were too numerous every year for the service of five years in the active army; they were permitted to draw lots, and those who took good numbers only remained six months with the regiment. Every year a class of the reserve was called for twenty-eight days, and a class of the territorial army for thirteen days. This system has now been at work for a number of years, and we can judge its effects.

The results are not considered satisfactory for the "einjährige." This aristocratic institution has not found favor in the army; the officers and non-commissioned officers do not, as a rule, look with favor on young men who come to the regiment with too much money. They treat them with much severity—so much so that none of these young men remain in the army. As a rule, they all return to their families after their term of one year, and they do not conceal their abhorrence of the military service. In the active army there are, as I have said, men who serve five years and others six months. The term of six months is too short—the six-months' men cannot be considered as effective soldiers; and in time of war they would be a weakening element. The men of the reserve are excellent: they are very exact, very well disciplined, they serve their term of twenty-eight days in a very praiseworthy manner. They are men between twenty-five and thirty years of age, strong, more serious than the young men of the active army; but it may be asked if they would be so willing, if, instead of a limited term of twenty-eight days of service in time of peace, they had to leave their families and their business for a long war. However, they are looked upon by our generals as a very good element of the army, perhaps the best.

So far the nation has not murmured under this terrible load; but it is impossible to think without some alarm of a state of things which subjects all the valid part of a population to the military life. The first attack was made against the privilege of one year's service, and the Chamber contemplates the substitution of a general three years' service instead of the present system, which imposes on many men five years' service. The law has not yet received the sanction of the Senate. Three years of service from which not a single young man would be exempt, which would interrupt all the studies of those who devote themselves to law, or medicine, or science, is a terrible drag on high civilization and culture. The radical school attacks vehemently the whole system of compulsory service, and talks of having merely a defensive army, an army of volunteers in time of war, and no permanent army. It is doubtful whether a strong military law can be long imposed on a democratic community:

"When," says M. Jeannerod, "M. Thiers resigned himself to see, as he said, France crossing the Atlantic, in order to find in the United States the type of its new incarnation, why did he not foresee that France would also take thence, on the constitution of an army, ideas which are inapplicable to Europe, and full of danger for the future of a country surrounded by powerful neighbors? If he had had such foresight, he would probably not have helped so much the establishment of a republic; for his ambition, natural as it was, would never have made him sacrifice to the satisfaction of founding a new era the passion for France which filled his heart."

M. Thiers was not favorable to the Prussian system. He did not like the short service; he preferred the old-fashioned armies, small in numbers, but well-disciplined and composed of veterans, even of mercenaries, to the modern masses of young soldiers. But the current was so strong that he could not stem it. He found a powerful adversary in General Trochu, who was the eloquent advocate of the three-years' universal service:

"Trochu," says M. Jeannerod, "dreamed for his country a sort of a Republic of Plato, rising under his own device 'Ense et aratro,' and preparing the future as Prussia had done after Jena. He committed a double error; for the new generation, devoted more than ever to the agitations of politics and to the struggle for wealth and comfort, is not disposed to be contented with the sword and the plough, and France is not in the condition in which was Prussia, a comparatively recent Power in 1806, without any great capacity for expansion, and free to concentrate herself and to devote herself to her hope of revenge."

The present effort has its origin in a patriotic idea; but one of these two things will happen—either this idea will become extinguished and die out of lassitude, or else it will determine a crisis, an end, which will replace us in a normal situation. M. Jeannerod looks forward and tries to imagine what this normal condition will be, and how it will affect the recruiting and the organization of the French army. He says boldly: "We regret the composition, the manners, the spirit of the old army." He believes that the present state of things in Europe cannot last:

"Before the end of this century, perhaps before a few years, the world, democratized or not,

will become again what it always was, an assemblage of forces directed by passions more than by sentiments, by circumstances more than by affinities, and set in action by men more than by nations. Then the law of numbers will cease to predominate, and the best army will be, as in the past, the army founded on the highest military spirit."

Is the military spirit dying out in France? M. Jeannerod thinks it is. He believes that "this spirit, already wounded by the increasing triumph of materialism, abused in the name of humanitarian rhetoric, discredited by our defeats, has received a new blow from the very laws which were intended to restore it, and from the derangement in social life." He regrets the suppression of the substitutes, who were a solid nucleus in the old regiments, as the substitutes were voluntary soldiers. He regrets the reduction of the term of service. He believes that a very advanced civilization is incompatible with any other army than a solid army of men of long service, and that the whole nation must only be called to arms to defend the national soil. "The existing organization would only serve in the particular cases in which the national independence might be threatened; but if the ideal of a great country cannot remain stationary, and if we assign no other object to our ambition than our security, then we shall, perhaps, be in danger of losing our security for ever." In other words, a purely defensive army cannot be sufficient for a country like France, surrounded by powerful monarchies. There are times when the offensive is the only useful defence: there are occasions when it becomes necessary for a country to unite in action with other countries for some distant object. Alliances are impossible between countries which have no liberty of action; and the notion of a purely defensive army is a constant limitation of this liberty. With a million of men *on paper*, France is liable to witness the development of all sorts of European events, without being able to interfere with it; and when the time comes to fight for defence, this million of men, suddenly called to arms, unused to war, may prove unable to cope with smaller armies, better organized and better disciplined.

The work on 'The French Power' deserves the attention not only of all military men, but of all those who take some interest in the fate of a country which, notwithstanding its faults and its misfortunes, will always remain one of the most eminent factors of civilization.

EXCAVATIONS AT CARTHAGE.

PARIS, December 4, 1884.

THE first idea that occurs to an educated traveller on landing at Goletta, the harbor of Tunis, is to visit the neighboring site where stood the mighty rival of ancient Rome. The railway from Goletta to Tunis will take him, in about five minutes time, to the station called Carthagenna near the little Arab village of Doar Schott (the camp of the lake), so called from the Lake of Tunis, whose shallow waters extend over several square miles to his left. Once at Carthagenna, he distinctly perceives, on his right, two little lakes near the sea shore, and before him a conspicuous hill crowned by a chapel and a newly created convent. The lakes are all that remain of Carthage's harbors, the celebrated Cothon, and the hill is Byrsa, the once powerful citadel where Asdrubal and the last defenders of Punic independence defied during six days the advance of the younger Scipio, master of the harbors, and of the surrounding plain.* The traveller must now take his course due north, passing between the lakes and the hill. On his road he will perceive a few ruins of the late Roman period, which have sometimes and most absurdly been called the "House of Hannibal" and the "Temple of Baal." The last named of these ruins, half way between the path and the southern angle of Byrsa, is nothing more than a piece of a wall, about fifteen feet high, exhibiting the characteristic features of late masonry. Beyond Byrsa, you perceive on the sea-side a small eminence crowned by a Turkish fort, called Bordj Djedeed (the little fort), which Dr. Davis gratuitously asserted to be ancient Byrsa—a ridiculous mistake, which has been too often repeated by uncritical compilers. At the foot of Bordj Djedeed, quite near to the sea, where remnants of ancient quays may still be traced, rises the largest ruins of Carthage. Although used during several centuries as a stone-quarry, they still exhibit a wild complex of walls, ruined vaults, huge blocks of masonry, and cement. They are generally considered as identical with the ancient gymnasium, but this is a mere hypothesis, which could only be tested by excavations, particularly difficult on that spot where heavy materials are piled up as if by an earthquake.

Your next walk must lead you up to the summit of Byrsa, where you enjoy a magnificent prospect, extending beyond the gulf of Tunis to the mountains of Zaghouan and Bou-Korneïn. At the foot of the little chapel built on the hill of Byrsa by Louis Philippe, and supposed to mark the place where King Louis IX. expired during his second crusade, Beulé's excavations, in 1860, brought to light a number of semicircular rooms, which he accepted as having belonged to the palace of the Roman proconsul. The convent erected behind the chapel contains a museum of antiquities collected by the French monks under the superintendence of Cardinal Lavigerie, and intrusted to the able care of the Carthaginian antiquarian *par excellence*, Father Delattre. Roman and Christian lamps, with varied inscriptions and symbols, are here about a thousand in number. There are also many Roman and Punic inscriptions, together with some remarkable mosaics, the largest of which, evidently of Christian workmanship, represents a nude female figure standing beside an altar with a branch of laurel in her hand, and crushing a serpent under her feet. A nude figure in Christian art is very rare, if not an unexampled occurrence. The subject of the mosaic is Saint Perpetua, who became a martyr at Carthage in the year 203. On the eve of her martyrdom, she dreamed she was an athlete, wrestling against the evil spirit of worldly temptation. This legend accounts for her having been represented, at some later epoch, in the attitude and attire of a triumphant athlete.

As you stand on the summit of Byrsa and look toward the sea, you perceive the harbors of Carthage, now partly blocked up by sand, to your right, and to your left the abandoned fort of Bordj Djedeed. These two spots and your standing point form a triangle which was formerly occupied by the busiest and richest town of the ancient world, and where a few meaningless and shapeless ruins now stand alone, in the midst of barley-fields, to recall the splendor, the decline, and the fall of Carthage. Many a traveller, led to the very spot where Hannibal addressed his citizens, on the now deserted and silent forum, has asked ingenuously: "But where is Carthage?" The answer was given centuries ago by the Italian poet:

> "Giace l'alta Cartago; appena i segni
> Dell' alte sue ruine il lido serba."

But I should venture to propose another answer to the same inquiry: "If you wish to see where Carthage *is*, do not look around, but under your feet; and if you wish to see Carthage itself, take hold of a spade and dig until you find it."

Nearly half a century ago, in 1837, a small number of scholars and distinguished amateurs, MM. Dureau de la Malle, Raoul-Rochette, Count Pourtalès, Sir Grenville Temple, and Falbe, an officer in the Danish navy, formed a private association with the object of excavating ancient sites in northern Africa. The capital brought together amounted to about £1,000. Sir Grenville Temple and Falbe started for Constantine, the ancient Cirta, in 1838, and subsequently excavated at Carthage on a hill next to Byrsa, where the temple of the goddess Cælestis is supposed to have stood. They discovered some mosaics and a fragment of mural painting, which were immediately published by the society. It seems, however, that further contributions were requested in vain, for there is no mention made of the society after 1839. Twenty years later, a celebrated French scholar, M. Beulé, the historian of the Acropolis at Athens, cleared up at his own expense the rooms of the proconsular palace at Byrsa, mentioned above. About the same time the English chaplain at Tunis, Doctor Davis, undertook excavations on various spots of the plain between the harbors and Byrsa; he discovered some very beautiful mosaics, which are now in the British Museum and were published by M. Franks in *Archæologia* (vol. xxxviii, 1860, p. 202). Fifteen years once more went by before any new researches were undertaken at public expense. The Arabs had, in the meantime, dug up a large number of antiquities, mosaics, and Punic inscriptions, which were beginning to fetch high prices on the Tunis market. A minister of the Bey, the *Khasnadar*, had contrived, by obliging the Arabs to give him everything they discovered, to gather a large collection—including much rubbish—which was purchased in 1874 by the Museum at Vienna. That very same year an interpreter of the French Consulate at Tunis, M. de Sainte-Marie, began excavations on a spot half-way between the harbors and Bordj Djedeed. He had the good fortune to find about 2,000 Punic inscriptions, votive offerings to the great Punic goddess Tanit, generally containing a short dedicatory inscription surmounted by *graffiti* representing animals, plants, and various religious symbols. The collection thus obtained, together with some Greek dedications to Serapis and a life-size statue of the Empress Sabina, was loaded on the French man-of-war *Magenta*, and carried to Toulon. Unfortunately, while lying in the harbor, the ironclad was blown up by an explosion, and the inscriptions were only partly recovered through the exertions of divers. All that could be rescued has been deposited in the Cabinet des Médailles at the National Library in Paris.*

I have thought it necessary to enter into some detail about the former excavations on the site of Carthage in order to give the reader a general idea of the very little which has been done as yet in the way of clearing it. The site of the town, when compared to that of Rome or of Athens, will be found peculiarly suited to archæological purposes, no modern town having been built on the place occupied by the ancient one, and the buying up of barley crops being the only preliminary expense to be borne by any one undertaking to dig in the vast area of the Punic city. But digging itself is very expensive on account of the huge mass of rubbish accumulated for centuries above the primitive soil. The town was destroyed and then rebuilt by the Romans; the Roman houses and temples were in their turn superseded by new buildings at the beginning of the Christian period; still later, the Christian

* A description, however accurate it may be, can only be well understood by the help of a map. There exists now a very good plan of Carthage in Tissot's 'Géographie de la Province Romaine d'Afrique,' vol. i., Paris, Hachette, 1884.

* M. de Sainte-Marie has just published a minute report on his discoveries ('Mission à Carthage,' Paris, Leroux, 1884.)

town was levelled to the ground and Arab villages established on the same spot. Now that all these vestiges of past civilizations have disappeared, the foundations of the Punic town—the recovery of which would be of so great interest to archæology—are buried under twenty to twenty-four feet of ruins belonging to the Arab, the Byzantine, and the first Roman periods. When I was sent to Carthage, in the beginning of 1884, to resume the long-interrupted and long-expected excavations, the chief object of my study was to obtain an exact estimation of the depth at which fragments of Punic architecture appeared beneath the superstructions of Roman times. I had been directed to dig in different places until I should reach the virgin soil, and it was reasonable to expect that on my way to the *terra vergine* I should meet with some interesting specimens of Roman and Punic art.

Having visited, in company with my friend M. Babelon, three important sites in the southern part of the Regency, we commenced digging at Carthage in the first days of March, between the Acropolis of Byrsa and the harbors. Appian had taught us that this part of the town was the most thickly peopled and contained many houses six stories high, which were burnt and destroyed by the Roman invaders, B. C. 145. We accordingly discovered, at the depth of about five yards, evident marks of an extensive conflagration; in some places the layer of ashes is two feet deep, and contains many small fragments of melted metal. Under that layer of ashes we began to find the foundations of the numerous cisterns annexed to every Punic house. Roman Carthage derived its water supply from Mount Zaghouan, by means of an extensive aqueduct, the greater part of which is still to be seen; but at the previous period, as nowadays in the greater number of African towns, rain-water had to be collected in cisterns, which were built in a peculiar and very practical style. Some of them—including the very large ones close to Bordj Djedeed—seem to have been respected by the successive invaders, and might still be used if the site of Carthage were inhabited.

Before reaching the virgin soil, which lies about twenty feet beneath the level of the present ground, we encountered a complex of masonry, where, in spite of its ruined character, we could clearly trace and record on our ground-plan the direction of four parallel streets ascending in the direction of Byrsa. Near the edge of a well built with large blocks of limestone fitted together without any mortar, we discovered three interesting specimens of ancient Punic art and industry. The first one is a terracotta mask, about five inches high, very well preserved to the top of the forehead. It represents a female head with a smiling and yet coarse expression, recalling the types engraved on ancient Carthaginian and Sicilian coins, and also terracotta heads of Etruscan workmanship. The eyes, very large and placed somewhat obliquely, as in archaic Greek sculpture, were painted with slight touches of black and blue. This fragment bears witness to the influence of ancient Sicilian art on the rude artists of Carthage, an influence which had already been ascertained to some extent by the study of early Sicilian and Punic coinage.

The next object of interest we found was a small ivory basso-relievo, about six inches high, exhibiting a female figure, draped in a long robe and holding in her hands a globe. The tablet is pierced with two holes at the upper corners, and was undoubtedly affixed to some domestic utensil, such as a casket. The style of the workmanship is very rough, and seems exclusively Punic. As regards the subject represented, it is difficult to express a quite satisfactory opinion, but we venture to think that this figure is the great goddess Tanit, carrying in her arms the cosmic sphere as a symbol of her power over the universe. Our third discovery was that of a terracotta tablet bearing a neo-Punic inscription—probably some commercial contract—written with black ink after the fashion of the Egyptian *ostraka*. The decipherment of the inscriptions has been intrusted to M. Ernest Renan, and the result will shortly be published in the forthcoming volume of the 'Corpus Inscriptionum Semiticarum.'

Besides these three objects, every one of which is as yet unique in Punic archæology, we dug up a very great number of Christian and Roman lamps, small terracotta heads of Roman and Punic style, a quantity of *glandes missiles* in terracotta, and about fifty little disks in ivory or in horn, pierced with a large hole in the middle, the use of which still remains a mystery to us, and has not, as far as I know, been explained by any archæologist. Similar ones are to be found in the collection of the convent of Byrsa which I mentioned at the beginning of this paper.

We next betook ourselves to the western quarter of Carthage, in the neighborhood of the circus and of the village of Doar Schott. Our excavations at that point led us to the discovery of a huge marble column, the remnant of some large Roman temple, and of a draped marble statue more than life size, which must have represented a Roman emperor. Unfortunately, the head of the statue could not be found. In that part of the city, we saw no ashes whatever, and this leads me to suppose that the great fire kindled by the Roman conquerors only extended to a small area between the harbors, Bordj Djedeed, and Byrsa. The place where the village of Doar Schott now stands was taken by Scipio before the final assault which resulted in the storming of Byrsa, after six days' hard fighting in the labyrinth of the ascending streets.

We next began digging on the very spot where M. de Sainte-Marie, ten years before, had discovered the vast number of Punic inscriptions now in the National Library in Paris. Our intention was to clear up the place completely, instead of pushing mines through the rubbish, as had been done previously for the sake of economy. We soon discovered that M. de Sainte-Marie had by no means exhausted this privileged corner, where votive offerings to the goddess Tanit, carried out of some neighboring temple, had been piled up together with other fragments at some unknown epoch, but probably during the rebuilding of the city after the Roman conquest. More than five hundred slabs, adorned with inscriptions or figures, were brought to light in the space of about a fortnight. The inscriptions, unfortunately, are very monotonous; the following translation of one of them may give an idea of the whole series to which it belongs: "To our Lady Tanit face of Baal and to our Lord Baal-Ammon, vow made by Bodmelkarth, son of Hannibal, son of Bodmelkarth, in acknowledgment of their having listened to his prayer! May they bless him!" The names vary naturally from one inscription to another, but much less than might be expected; we generally meet with the very names familiar to us by the study of ancient history, and it is truly puzzling to imagine how so many Hamilcars, Hannos, Hannibals, and Bomilcars could be distinguished from each other in such a populous city as Carthage.

The language and writing of the inscriptions are the ancient Punic—that is, a variety of Phœnician closely connected with Hebrew; indeed, a scholar acquainted with the elements of the Hebrew vocabulary is sure easily to understand the majority of Punic inscriptions, and what he does not understand remains as yet unintelligible to the most distinguished specialists. As we have not preserved a line of Phœnician literature, but only a certain number of inscriptions, we can do no better than to explain these inscriptions through the help of a cognate language which we are well acquainted with, ancient Hebrew. But the task gets somewhat difficult when we meet with new expressions different from the ordinary formulary of votive inscriptions. Suppose the Spanish language were unknown to us except by a few lapidary records inscribed on tombstones; it would be very easy, by means of Italian forms, to understand the general meaning of Spanish epitaphs; but as soon as we came across a word borrowed from the Arabic or lacking a parallel in Italian, much ink would be spent in vain before we could ascertain its meaning. This comparison, suggested by M. Renan, is a good one, and bears even a closer scrutiny than my space allows me to indulge in.

The slabs or *stelæ* are surmounted by a small pediment whereon the symbol of the Punic Trinity—a triangle crowned by a circle—and other *graffiti* (such as an open hand, a palm-tree, the moon, a lotos-flower, a dolphin, a ram, an anchor, a caduceus, and various implements and animals) are generally to be found. The style of these *graffiti* is very rough and *handwerksmässig*, as the Germans say; nevertheless, they afford a curious insight into local manners and customs, and are particularly suggestive to the historian of the as yet little known Punic religion. The lower part of the slabs is not polished, and it is highly probable that they were planted in the earth, just like tomb-stones in Oriental cemeteries, and placed close to each other in the courtyard or the outer precincts of a temple.

The smaller objects we found on that very spot cannot be described accurately without the help of engravings; one of them is of peculiar interest, and may be mentioned here as being the largest statuette in terracotta yet discovered at Carthage. It represents a man—probably the author of some offering—holding a purse in one hand and a lambkin in the other. The type exhibits great affinity with that of the Greek Hermes Criophorus. Our statuette is made of very heavy and thick clay, and bears, like the terracottas of Tanagra, a vivid coloring. It is certainly not a work of pure Punic art, but a local copy from some Greek or Sicilian model.

The excavations brought to light a number of cisterns and well-preserved walls, exhibiting a very original style of masonry. Large square stones are put up vertically at certain distances, and the intermediate space is filled up with a mixture of smaller stones and of mortar. We as yet possess but a very scanty knowledge of Punic architecture, and, judging from the few specimens discovered, may confidently assert that it was of a very inferior style. The practical-minded Carthaginians only cared for solidity, and beauty must have been beyond the scope of their intellect, exclusively devoted, as it would seem, to commercial purposes. Hannibal himself, however admirable he may appear to us, was only the instrument and the victim of a commercial policy.

Quite near to the place where we discovered the Punic inscriptions we found, at a depth of twenty-five feet under the actual surface, a magnificent tomb or shrine built with huge blocks of limestone. The entrance is to the east, and consists of two oblique stones supporting each other, the length of these posts exceeding two yards. The interior of this monument is covered with a well-preserved layer of clay; unfortunately, it had been plundered by the Roman conquerors, and we discovered nothing worth notice in clearing it out. Similar tombs were discovered some years ago in Byrsa and the neighboring hills; they probably belong to a period of Carthaginian history long preceding the Punic wars, for at that epoch the necropolis of Carthage was on

Mount Gamart, a hill forming the northern boundary of the town, where many subterranean tombs, all visited and pillaged by the Romans and the Arabs, are still to be seen.

The fruits of our excavations were divided between three public collections, the Convent of Byrsa, the National Library, and the Louvre in Paris. They will be made known to the public by means of photographs which are to appear next year in the *Archives des Missions*. I must add that the expense of our work, which lasted about two months, did not exceed 9,000 francs, and was contributed by the French Department of Public Instruction and Fine Arts.

Before ending this article, I must apologize for having devoted so much of your precious space to an account of personal discoveries and exertions. These are but the starting-point of a series of excavations to be conducted on a larger scale, and which are expected to throw a new light on the topography and antiquities of the great Punic metropolis. The chief result of what has been done is the certainty that the ruins of Punic Carthage have not entirely perished, and may be again brought to light by systematic and protracted work, for the benefit of coming generations. SALOMON REINACH.

Correspondence.

PREMATURE CRITICISM.

TO THE EDITOR OF THE NATION:

SIR: Some years ago a well-known French painter *intended* to exhibit a picture at the Salon, but was prevented, by some cause, from sending his work in time, so that it did not appear. This did not prevent a learned critic of the fine arts from descanting on the faults of the performance just as if he had seen it. A parallel case has recently occurred in American journalism. A writer in the *Union* of Brooklyn, describing my new work on Landscape, says:

"Mr. Hamerton himself tries his hand again at the needle, with as little success, it must be confessed, as usual. Though Mr. Hamerton knows so much and writes so delightfully upon art matters, and particularly on etching, he is one of the worst etchers we have ever known."

You see, the critic pretends that he has seen the book and disapproves of my plate. Will you allow me to remark that he cannot have seen the book, as a copy of it is not yet in existence, and that there is not a plate by me among the illustrations? I had some thoughts of contributing one that was mentioned by the publishers in an advertisement from which the critic got the little he knows about the book, but instead of one etching it so happens that I have contributed twelve illustrations of another kind. As these were not mentioned in the advertisement, they have, of course, escaped the censure of my critic.—Sincerely yours,

P. G. HAMERTON.

AUTUN, December 13, 1884.

THE SPANISH TREATY ONCE MORE.

TO THE EDITOR OF THE NATION:

SIR: I have to express my thanks for your clear explanation of your view that the ratification of the reciprocity treaty with Spain would not affect the price of sugar in this country so long as we continued to import any sugar at all from non-Spanish ports. Cuba, you say, would send us more, but the non-Spanish ports would send just as much less, that trade being diverted to England, etc., to replace the falling off in Cuban sugar there.

But I now object that a great volume of trade will not spontaneously divert itself from one market to another, without any motive. Such an event can only be due either to a fall of price in the first market or to a rise in the second. The sugar which is now sent here is sent because, in the existing state of prices, the owner has found it more advantageous to send here than elsewhere; and here it will continue to come, unless prices change sufficiently to overcome the excess of advantage. If, therefore, the price of sugar were not to fall here on the ratification of the treaty, in England it would have to go up. But an advance in price implies diminished sales—diminished production—somebody forced out of the sugar-growing business. Yet nobody could be forced out of that business if the price had nowhere fallen. How can you escape this dilemma?

You say that the price here would be kept up by the duties that would have to be paid on some of the imported sugar (*i. e.*, by the cost of getting it to market), and that when this sugar, thus sent at a disadvantage, ceased to come, then and only then would the price fall. The principle of this seems to me quite sound—only too sound for your conclusion. For the non-Spanish sugar which we now import comes from various countries very differently situated. Upon some of it there is a considerable profit, while some barely pays the cost of production; upon a part of it there is considerably more profit than if it were sent to England, while for a part it is almost a matter of indifference to which market it is sent. If now the treaty should cause less of this non-Spanish sugar to be sent to this country, that which would be diverted would clearly be that which there is now scarce any inducement to send here. It would follow, I think, according to your own principle, that the price here, being no longer kept up by that very unadvantageously sent sugar, must fall when that should cease to come. C. S. PEIRCE.

WASHINGTON, December 22, 1884.

[We "escape this dilemma" by the use of infinitesimals. One-thirty-second of a cent per pound or even less would be a sufficient reduction in price to secure the American market to the Cuban planter for all the sugar he could produce. It would give him all the advantage he needs. One-thirty-second of a cent per pound would, therefore, be the maximum gain to the American consumer from the treaty, until (if ever) the Cuban supply could overtake and exceed the American demand. Mr. Peirce's second paragraph, he will permit us to say, carries us into the region of the differential calculus beyond our depth.—ED. NATION.]

A BAD ADVISER.

TO THE EDITOR OF THE NATION:

SIR: In your issue of last week you say that, in the work of constructing a Cabinet for President Cleveland, "the greatest activity is displayed . . . by the few Democratic journals which did all they could to defeat Cleveland during the campaign"; that in these journals "we find the liveliest activity about the new President's attitude upon civil-service reform"; that "they are sure that if he enforces the present law, and especially if he attempts to enlarge its scope, there will be trouble in the party."

One of these so-called Democratic journals is certainly the Cincinnati *Enquirer*. Any one who will take the trouble to examine its files can see for himself—

1. That it was most prompt to publish in great detail all the vile stories against Cleveland.

2. That where it said one good word for Cleveland, it said ten for Blaine.

3. That its praise for Cleveland was of the kind that damns.

4. That it has always ridiculed civil-service reform, and has always been an ardent advocate of the spoils system.

5. That the whole tone of the paper was such as to make more votes for Blaine than Cleveland.

The editor and proprietor of this "Democratic paper" has knifed Thurman, Pendleton, Ward, and other honest and able Democrats; he has no use for such men. But he is "solid" with the vicious and corruptible element of the party here; hence his influence in local politics, which is not small, but is thoroughly demoralizing and baneful to this community.

At Chicago this pretended Democrat supported Cleveland, not because of any devotion to him, but because he was thus most likely to accomplish Thurman's defeat, and perhaps secure for his tool the nomination for the Vice-Presidency. It is now going the rounds of the papers out here that this spoilsman and treacherous "editor" has actually been so far recognized by Cleveland as to receive an invitation to assist him (by advice) in his preparations for assumption of his high duties. If this be true, does it not even now show that all friends of good government, who all along have been so hopeful that Cleveland would prove a great blessing to our country, are doomed to bitter disappointment?

The writer has no acquaintance with any of the persons above alluded to, has no *personal* feeling for or against any of them, and is no politician, but is one among the thousands of Cincinnati Democrats who do *not* want the wicked to flourish at the expense—moral and pecuniary—of the people. CITIZEN.

CINCINNATI, December 23, 1884.

Notes.

A. C. ARMSTRONG & SON will publish shortly, by arrangement with Macmillan & Co., Professor Gosse's forthcoming edition of the works of Thomas Gray.

A definitive edition of the poetical works of Lord Byron has been undertaken by Mr. Buxton Forman, with Mr. Murray for publisher.

Ernest Hartley Coleridge is preparing for publication, through Kegan Paul, Trench & Co., a biographical memoir of his grandfather, S. T. Coleridge.

E. P. Dutton & Co. have ready for immediate issue 'Sermons for the Church Year,' by the Rev. W. Benham, in two volumes; 'The Preacher's Promptuary of Anecdote,' by the Rev. W. Frank Shaw; and Benham's 'History of the Episcopal Church in America.'

A list of Government publications on the subject of interoceanic communication by way of the American isthmus has been issued by James Anglim & Co., Washington.

Hudson's Army and Navy List, begun in December, 1884, and published at 1420 Pennsylvania Avenue, Washington, is to appear monthly, containing an alphabetical list of officers with their addresses. Its utility speaks for itself.

The *United Service*, recently transferred to this city (T. H. S. Hamersly), and hitherto devoted to the interests of the Military and Naval Service, now embraces those of the Civil Service as well—a perfectly just association, and a blow, in its way, to the popular notion of the applicability of the spoils system to one branch rather than to another of the public service. Moreover, a preference in appointments in the civil service is given to those who have been in the army or navy between 1861 and 1865. In the January number Lieutenant Shufeldt, U. S. N.,

begins an interesting narrative of his journey to and across Madagascar.

A *Journal of Mycology*, which will be practically a manual of North American fungi, is to be published monthly at Manhattan, Kansas, by Prof. W. A. Kellerman, of the State Agricultural College. His colleague in editing this periodical will be Prof. J. B. Ellis, of Newark, N. J.

With its January issue *Scandinavia*, that excellent organ of the cultivated portion of our Scandinavian fellow-citizens, enters upon its second volume. It is well edited and well printed. Its place of publication is Chicago.

Much the most curious article in the *Magazine of American History* for January is that relating to the first balloon trip across the Channel from England to France. Dr. John Jeffries, jr., an American Loyalist living in London, and a Frenchman named Blanchard, achieved this exploit at no little risk on January 7, 1785. The details of the voyage are soon given, but much greater interest attaches to the extracts from Dr. Jeffries's Diary, showing the extraordinary attentions and compliments bestowed upon him by the nobility and royal family—such as the discoverer of a remedy for the phylloxera could not nowadays receive. His social observations at this short distance from the great political upheaval of '89 are very striking. The Duchesse de Polignac received him at her toilet, "like a Venus in white muslin, and surrounded by five ladies all in white, who were attiring her—a most engaging, lovely, affable woman." He saw the Princesse de Lamballe presented—"most lovely, and the most brilliant and rich dress I had ever seen." He dined at Passy with Franklin, and went with him to the Comédie Française, where *all* the parts were well played, and not otherwise as in England. At the Hôtel de Dieu he was "conducted through all the female wards—some very low and dark; three, four, and five sick adults in the same bed, lying heads and points."

By a happy thought, *Science* for December 26, 1884, has been turned into an almanac for the new year, with a scientific collaboration which may be still further extended another year. The frontispiece is very properly the sun, depicted with its fiery coruscations by the Harvard College Observatory. Professor Young discourses of sun spots and the earth; Prof. Winslow Upton on weather forecasts; W. M. Davis on temperature in the United States and its changes, and on earthquakes; Prof. C. G. Rockwood, jr., on tornadoes and how to escape them; Dr. C. V. Riley on the insects of the year; Dr. C. Hart Merriam on the coming of the robin and other early birds; Prof. William Trelease on blooming times for flowers, with a floral calendar; while Prof. I. P. Roberts furnishes "a few pertinent hints to farmers." Besides solar, meteorological, and celestial maps in great variety, there is a chart of standard time. The almanac proper will be found extremely rich in information.

Nature for December 4, 1884, contains a striking woodcut after a photograph of a Dakota tornado (August 28, 1884). Prof. E. S. Holden, of the Washburn Observatory, Madison, Wis., furnished this unique meteorological portrait, which was taken by Mr. F. N. Robinson, of Howard, D. T.

To the December number of *Longman's*, Mr. R. L. Stevenson contributes "A Humble Remonstrance" against certain of the statements made in Mr. Walter Besant's lecture on the "Art of Fiction," and in Mr. Henry James's criticism thereof. Especially interesting is his characterization of three classes of novels—the novel of adventure, the novel of character, and the dramatic novel. In the same number is contained the first half of "Sir Jocelyn's Cap," a latter-day fairy tale, setting forth the deeds and misdeeds of a veritable wishing-cap, which has been in the family of the owner for five hundred years. It is full of absurd fantasy and delightful humor. Although it appears anonymously, we incline to the belief that this is the tale in which Mr. Walter Besant, Mr. Walter Herries Pollock, and Mr. Charles Brookfield have collaborated.

The one hundred and fiftieth anniversary of the founding of the town of Leicester, Mass., was celebrated a baker's dozen of years ago, and last September, the Academy having fulfilled its century of usefulness, another celebration became necessary; another pamphlet of proceedings also—'The Centenary of Leicester Academy'—with all the speeches, letters, and versifying of the occasion; with lists of teachers, views of the several Academy buildings (the first the storehouse of a Portuguese Jew driven from Newport by the British occupation). This institution has had its share of distinguished men as pupils and instructors, and has been liberally endowed by townsfolk and alumni. It has had alumnæ, by the way, from the start—a special distinction; but no female teacher before 1835. The pride and interest felt in it, and its vigorous continuance, are among the hopeful signs of the times in Massachusetts, like the revival of the yet more venerable Dummer Academy a few years ago. Such events, and the constant founding of rural public libraries, show that the old saving Puritan leaven is still at work in the Bay State.

Edward P. Call, Boston, publishes an 'A-B-C Spanish Phrase Book, for American Travellers in Mexico, etc.' The frank notice on the title page, "Published under contract with the Mexican Central, the Mexican National, and the Atchison, Topeka and Santa Fé Railroad Companies," gives a fair intimation of the *motif* of the little pamphlet. Everything is reduced to the actual needs of the light-armed tourist. The arrangement is novel and convenient—alphabetical, with the key-word in full-faced type. Aside from several misprints, the matter is accurate if not elegant. Those who wish to learn Spanish in this way could no doubt acquire enough to pick their way along the American railways in Mexico, with only a little more difficulty and misunderstanding than they would encounter if they were to rely upon their English.

Just so far as Kingsley's 'Water Babies' was written with an eye to the amusement of parents it was, in theory and in fact, unsuitable for children, who should be dealt with frankly, and be, as well as seem, the audience addressed. It has just been admitted to Ginn & Heath's "Classics for Children," by simple abridgment made on the above principle by J. H. Stickney. "Not a word has been needed with which to close the seams, and nothing of Tom's history is lost to the reader."

James Johonnot and Eugene Bouton have prepared, in 'How We Live' (D. Appleton & Co.), an elementary treatise on physiology and the kindred sciences which is very good of its kind, and well suited for primary scholars.

'Maxims of Public Health' is an attempt "to make gravely important sanitary matters interesting as literature." The dogmata are sound, but their expression is not always felicitous. The nuisance of a cesspool near another's dwelling can be better set forth than by the illustration (p. 40), "Free love, as between you and your neighbor's wife, may be very agreeable to you, but, as between your neighbor and your wife, is sure to be disagreeable to you." There is no reason for trash like that (to which a special heading, "Free-love and Cesspools," is given in the index) as a substitute for "Do as you would be done by." The author, Dr. O. W. Wight, Health Officer of Detroit, has brought to bear his official experience in preparing these brief essays, which in another edition may receive the polish better suited to their intrinsic value.

Dr. Frank H. Hamilton, in 'Conversations upon Medical Ethics' (Bermingham & Co.), puts forth in rather labored style the arguments for and against the recent medical action in New York that has opened physicians' consultations to those who are not "regular." He does not think it a public good.

William Wood & Co. publish Dr. Douglas Graham's 'Practical Treatise on Massage.' This is a valuable professional book for which, and for the subject to which it is devoted, we venture to predict distinguished success. But it will come slowly.

Francis & Loutrel send us their pocket diary for the current year. From Marcus Ward comes a more dainty "Concise Diary" in Russia-leather covers, the diary being divided into four little volumes, each of which in turn is inserted in the covers. The "Daily Memoranda" sheets published by Slote & Janes will be found very convenient. For the thirty-fourth year P. Blakiston, Son & Co., Philadelphia, bring out their handy 'Physician's Visiting-list.'

We have received from B. Westermann & Co. the 'Almanach de Gotha' for 1885, the one hundred and twenty-second year of this ever-welcome annual. Rich in information to date—the latest pages were printed after the middle of November—this volume brings less that is both new and important than any of its recent predecessors, comparing their contents with those of the closely preceding years. The reason is that few years in our time have been so barren of territorial or dynastic changes, and so unproductive of new censuses, as the year 1884. The death of the Duke of Brunswick is the only fairly important event in the dynastic necrology of the twelvemonth, the decease of the crown-prince of the Netherlands having wrought no practical change as yet. The substitution, by the Porte, of M. Khrestovitch for Aleko Pasha, as Governor-General of Eastern Rumelia, is mentioned only in the brief chronology of the almanac; that "autonomous," but not even semi-independent, province of the Ottoman Empire being unrepresented, not only under its own head, but even under the title "Turquie," though Samos and Bulgaria form subdivisions. Of Asiatic countries, the editors have extinguished the independence of Anam, considering it a dependency of France, and have acknowledged Corea, by giving it a separate division, as an independent state. For editorial purposes this may do, but the real status of these two countries can hardly have been affected by such an undiplomatic decision. Of the four portraits attached to the volume, that of the French premier, Jules Ferry, is the most significant.

A phototype of the fine marble bust of Ernst Curtius, lately executed by means of an international fund, accompanies a pamphlet report of the festive proceedings on his seventieth birthday, September 2, 1884 (Berlin). A list of the subscribers to the fund is followed by some grateful elegiacs from Curtius's own pen, acknowledging the quickening which the testimonial has given him:

"Fragte mich still, Wie lang' wirst du dein Feld noch bestellen,
Bis auch dir vom Pflug sinkt die ermattende Hand?
Da kam Euer Geschenk. . . . ."

A correspondent of the *Academy*, writing from Leipzig, reports a glaring instance of ignorance and arrogance in a German literary critic, and of editorial mismanagement in the control of a journal once highly esteemed. A Herr Leo, of Bonn, in the *Magazin für die Literatur des In- und Auslandes*—a weekly founded more than half a century ago by Joseph Lehmann, but in his lifetime devoted, under a shorter title, to "foreign literature" alone—reviews in a recent number Laurence Oliphant's 'Altiora Peto,' and the title of the book appers thus: "*Altiora*, von [by] Peto Laurence Pliphant." Then follow remarks on the

peculiarity of the title and on the name of the author, the reviewer reaching the conclusions that the name is a pseudonym and the author a lady, probably an American woman, with "some knowledge of English life." The correspondent adds: "I have waited for the following number before sending you this, thinking the blunders would be rectified in it. But no such thing happened." This tends to show that the reading public of the *Magazin* is, in some respects, worthy of its present editorship. The journal has been gradually sinking under its last two editors.

London, which is said to contain more of several nations than are to be found in the proper home of the nation, is now to have a colony of Japanese in an entirely Japanese village to be built at Albert Gate. We suppose, the Japanese natives are brought over to give the English a sort of object lesson in geography, in continuation of the supposed educational work of the Zoölogical Gardens. The Japanese will be visited and stared at as the Zulus were at the Jardin des Plantes two or three years ago; and as they are a pleasanter and more imitable people, a little craze will no doubt spring up in fashionable London—a Japanomania. If it furnishes Gilbert and Sullivan with the *motif* for a new "Patience," the Japanese village will have justified its existence.

Romeike & Curtice's (London) Artistic and Literary Correspondence has added an advertising branch, which serves to bring together employers and unemployed, architects and public jobs, caterers and weddings and banquets, buyers and auctions, etc., etc.

M. Salomon Reinach has presented to the Academy of Inscriptions an ingenious conjecture to explain an obscure word in a Phœnician inscription at Citium. In the accounts of a Phœnician temple a list of the persons under salary is given—servants, scribes, masons, etc., and finally dogs. Renan and Derenbourg explain this as referring to the consecrated young men attached to the temple. Halévy believes it rather means watch-dogs. But M. Reinach pointed out that in two Greek inscriptions lately found in a temple in Epidauros, mention is made of dogs who cured the sick by licking their wounds. He called attention also to other texts in which the same curative rôle is assigned to serpents. There are many indications, he declared, of the important rôle which both animals played in the worship of Æsculapius, and reason to think that the god himself was originally worshipped under the forms of those animals. Indeed, as his colleagues, MM. Ravaisson and Perrot, remarked, there is much to show that the anthropomorphism which we admire in Greek art is comparatively modern, and took the place of a complete system of zoömorphism, such as we find surviving to a greater extent in the religions of Egypt and Assyria.

M. Edmond Le Blant, in making the researches for his 'Les Sarcophages Chrétiens de la Gaule,' has satisfied himself that the monumental sculptors of France kept Pagan models in their workrooms during the Christian period of the Roman Empire, and even under the Merovingian Kings. Pagan and Christian subjects are continually seen on the same monument, and led the antiquaries of the last century into error. As they could not understand how Christians could use Pagan symbols and depict mythologic .l scenes, they referred the whole monument in such cases to ante-Christian times, and tried to explain the Christian part in accordance with Greek and Roman mythology—the resurrection of Lazarus, for instance, as a ceremony of the worship of Isis.

By an error in transcribing, of which the genesis is not far to seek, we wrote 'Friends in Council,' in the *Nation* of December 18, when announcing the separate reprint of Mrs. A. M. Gummere's 'Friends in Burlington [N. J.],' just issued by J. B. Lippincott & Co., Philadelphia. At Burlington was one of the earliest Friends' settlements in America.

—One of the greatest finds yet made in England for the elucidation of early Puritan history is that which we now owe to Mr. Henry Fitz-Gilbert Waters, whose antiquarian mission in London we have frequently commended to our readers. When Winthrop and his company arrived at the future Bay settlement, they fell in not only with Blackstone but with Samuel Maverick, the latter already settled on the island which we know as East Boston. Maverick became, under Charles II., a very active enemy of the Bay Government, and the document just discovered by Mr. Waters is "a briefe description of New England and the severall townes therein, together with the present government thereof," prepared by Maverick, perhaps for the use of Hyde, the future Earl of Clarendon. This important manuscript is printed in the January issue of the *New England Historical and Genealogical Register*. We cannot expatiate upon it, but will say that it begins at Pemaquid, on the coast of Maine, and, in a very orderly and minute manner, follows the settlements southward to Long Island and Hudson's River; from the "Island Mahatas" up to "Fort Oranja," in one direction, and to the Swedes' colony at the mouth of the Delaware in another—"the utmost southwest bounds of New England." The crops, the natural resources, the industries, the Old Country derivation of the several towns and plantations, the patents under which they were founded, are among the particulars of this well-informed and accurate observer, who reveals for the first time the date of his own colonizing, as 1624. He does not spare the earth-greed or the intolerant spirit of the Bay Government. He records Thomas Morton's being "apprehended and keept in the Common Goale a whole winter, nothing laid to his Charge but the writeing of a Booke entituled New Canaan, which indeed was the truest discription of New England as then it was that euer I saw." "And very cruelly handled," he continues, *pace* Mr. Dexter, "by whipping and imprisonment was Mr. Clark, Obadiah Holmes, and others for teaching and praying in a private house on the Lord's day," though their persecutors "went over thither to enjoy liberty of Conscience." "And for hanging the three Quakers last yeare [1659] I think few approved of it." Rhode Island is quaintly described as "full of people, haveing been a receptacle for people of severall Sorts and Opinions." Hartford "is a galant Towne, and many rich men in it." In short, we have here the first New England gazetteer, with valuable historical excursuses.

—A document possessing such universal interest for New England ought to bring a proper reward to its discoverer, by an immediate enlargement of contributors to the fund which maintains him abroad. Meantime Mr. Waters's "Genealogical Gleanings in England" are steadily forwarded to the *Register*. Pemberton, Cotton, Usher, Hoar, Mason (of Pequot fame), Peck, Appleton, Derby, Moody, Faulkner, Nicholson, are some of the familiar names involved in the latest batch of testaments, etc. Among the book notices of this number of the *Register*, by the way, we see mentioned a 'Genealogical Cross Index to the Four Volumes of the Genealogical Dictionary of James Savage,' containing all the surnames in the four volumes of that monumental work which are not found in their alphabetical places. The compiler and publisher is O. P. Dexter, Box 193, New York.

—The *Century* has for some time past been noticeable for the attention it has given to matters of philanthropy in a wide sense—practical questions regarding the diffusion of morals, to speak broadly, and in particular regarding the duty of the citizen to the public in other than political relations. Mr. Cable's article, in the January number, upon the real status of the freedmen, their wrongs, and the duty of all Southerners who love the South toward the negro, is a contribution of this kind. It was wisely deferred until after the campaign; now it will be easier for all to see that he has entered on the subject from social and not from political motives, and has laid bare the facts as they look in the light of civilization the world over, and has pointed out the remedy in a quickening of the conscience, justice, and enlightened self-interest of the Southern communities themselves. He writes frankly, fearlessly, and decisively as to the fact that the freedman is "not a free man" except within limits that, in the case of any but a race used to the tradition of bondage, would involve instant and bloody revolution. He scouts the idea that there is any danger in this situation, and makes his argument solely to the moral and civic sense of what Mr. Arnold would call "the remnant" (for such a body, and not an inconsiderable or uninfluential one, Mr. Cable affirms there is, though it is made ineffective by political bugbears). So far as politics is concerned, he says, "let it clear the track or get run over." The article, though it is really an open letter to the South, is especially instructive to Northerners in regard to the temper of the situation, and its author will receive the thanks of disinterested patriotic men of all parties, North and South. Another contribution that is more obviously of a philanthropic character, is Washington Gladden's discussion of the duty of citizens in affecting the public amusements in which the laboring and non-church-going classes spend their leisure. For the theory he expresses we do not particularly care, but the account of "the four-fold intellectual treat" which the Cleveland Educational Bureau provides especially for the poorer classes of that city, is of much interest as an experiment, and deserves the careful attention of social "workers," whether Christian or other. In the sketch of travel in the Kalispel country of Montana there is, too, by accident, a pathetic glimpse of the Italian Jesuit, Father Ravalli, as he lay dying in the midst of the Indians for whose civilization by the plough as well as the Gospel he had spent his long life. Articles of this sort are not secondary in use or credit to those of literary interest.

—The *Century's* military and naval articles this month cover the operations of the Western flotilla under Admiral Foote in the campaigns of Fort Henry, Fort Donelson, and Island No. 10. Admiral Walke does not find occasion to depart in any essential particular from the historical account presented in the Scribners' series, but adds details which give the reader a good idea of what life in the "gunboat" service really was. Mr. Eads states in his little article the facts relating to his own rapid work as naval contractor, by which a comparatively efficient fleet was constructed in a few weeks. The illustrations are mostly from sketches made by Admiral Walke, though the engraving of one of the gunboats after a photograph shows the immense superiority as a realistic means of information which this method has. The portraits are good, but, except the fine full-page one of Admiral Foote, are not equal in interest to those which have before been given.

—*Harper's* does not show the exhaustion usually consequent on a great effort such as was their last number, but the present issue is nevertheless one of those "all-round" ones which have nothing distinctive. John Fiske's history of the town-meeting is not fresh, but it could hardly be expected to do more than popularize a group of

facts not very likely in any case to take root in the people's knowledge; and Mr. Ward's admirable study of Wiclif is likewise almost too historic. The American article is one on the manufacture of shoes, and is a thorough account of that industry, beginning with pictures of the old shoemaker's bench, and ending with statistics of the modern trade. There is, however, an Englishy flavor in the number as a whole, very pronounced and not to be commended; a considerable portion of the contents look to the foreign market, as is naturally to be expected, perhaps, with an assistant English editor. At present all our three leading magazines occasionally issue a number that reads as if some sheets of the *Cornhill* or *Macmillan's* had got bound up by mistake with the home product. It is evident already that the two popular audiences to which our publishers appeal are by no means homogeneous.

—The illustrations of the *Century* for January present a novelty of the highest interest in reference to that kind of illustration which demands especially the exact reproduction of works in the round or relief—scientific work, etc.—in the process blocks for the Indian legends of John Vance Cheney, which in delicacy and subtlety of rendering of the modelling of the subject are unapproached by any process work we know of. In *Harper's* the facile and rather mannered drawings of Mr. Paget show that he has not yet hit the qualities of the American school of engraving: the results are weak and flat. The artist may take a lesson from the brilliant full-page engraving from Mr. Abbey's scene from "She Stoops to Conquer." The reproductions of Mr. Seymour Haden's mezzotints are most remarkable as process work, but make no case for Haden, either as artist or as engraver, beyond the possession of dexterous mediocrity. Is it not quite possible that the engraver-etcher has mistaken his position in the arts? Public taste in America is not led so far by mere reputation as in England, and it is clear that Seymour Haden has gone a long way back from the popularity he once enjoyed here. He seems to us, indeed, only a clever engraver spoiled by the want of early training and sound methods.

—It is not often that a more interested and enthusiastic audience assembles in an opera-house than that which on Monday evening listened to Auber's "Masaniello," an opera which has not been heard in New York for more than a decade. It is said that Auber's masterwork has never been a special favorite in New York. If this is true, the fault must lie entirely with the inadequate performances, as in the case of "Tannhäuser" and some other works which are this year produced for the first time in a worthy manner. No one can have witnessed the performance on Monday evening without being stirred by emotions of various kinds, and without feeling anxious to hear the opera again at the earliest possible opportunity. "Masaniello" was one of the first operas—if not the first—in which the chorus was made to take a part in the action, instead of standing around like blasé spectators and commentators of the action. This was an epoch-making innovation, for in the modern music-drama the chorus only appears on the stage to play a real part, leaving the function of the old Greek chorus—that of commentator—to the orchestra. This new, or at least, enlarged function of the orchestra was also anticipated by Auber, in those wonderfully eloquent orchestral measures which help to interpret the gestures of the mute *Fenella*. It is well known that the oddity of assigning the leading rôle in an opera to a dumb performer was not premeditated by Auber and Scribe, but the result of an accident, there being at the time no good dramatic singer at the Paris Opéra, so that a happy thought induced the authors to modify their plot in such a way as to utilize the powers of a contemporary ballet dancer, famous for her mimetic powers. To this accident the world owes one of the most interesting operatic experiments; and without it Auber would never have been able to reveal the depth of his genius, and show the world how an orchestra can be made to speak. If the mannerisms in the closing bars of many numbers in "Masaniello" show the influence of Rossini, Auber's genius in turn had not a little to do with Rossini's "Tell," which followed a year after "Masaniello" (in 1829), and Meyerbeer's "Robert," which came three years later (1831). The finest thing in Meyerbeer's operas is generally conceded to be the duo in the fourth act of the "Huguenots"; yet if any one will listen carefully to the orchestra during *Masaniello's* song at the opening of Act IV. he will discover where Meyerbeer got the motive of his duo bodily. In the attention paid in it to the action and scenic effects, "Masaniello" had a still greater influence on the development of grand opera in France and elsewhere. And it must be said that the manner in which these scenic effects are presented at the Metropolitan is unprecedented in our operatic history.

—Like all real works of genius, "Masaniello" has preserved the freshness of its youth, and is almost as enjoyable to a lover of good music today as it was half a century ago. Its influence on Meyerbeer and Rossini has been referred to; but it left its mark on a much greater master, Richard Wagner, whose enthusiam for "Masaniello" was unbounded. It may be said, indeed, that next to Weber's "Euryanthe" no opera had so great an influence in shaping Wagner's genius as this. Not that he cared to imitate the vivacious, champagne-like melody of Auber; but the direction of his aims was made clearer to him by Auber's treatment of the chorus, the orchestra, the action, and the scenery. "Masaniello" (or "La Muette de Portici") is in some of its details as Wagnerian as the "Flying Dutchman," and more so than "Rienzi." In one of his earliest essays, published in the first volume of his literary works, Wagner says: "French dramatic music culminated in Auber's 'La Muette de Portici'—a national work such as every nation can show only once at most. This tempestuous vigor, this ocean of sentiment and passion, painted in the most vivid colors, mixed with the most original melodies, a combination of grace and energy, elegance and heroism—is not all this the very embodiment of the recent history of the French nation?" That this was not the effusive enthusiasm of youth is shown by the fact that in the ninth volume of his works are contained his reminiscences of Auber, in which "Masaniello" is referred to in similar terms, and the promise is made of writing a special essay on this opera, which, however, death prevented him from fulfilling.

McCARTHY'S FOUR GEORGES.

A History of the Four Georges. By Justin McCarthy, M. P. In four volumes. Vol. I. Harpers. 1884.

MR. MCCARTHY'S first volume suggests several reflections on the art of writing history—an art which has come to be recognized as such almost within a generation. Macaulay, Buckle, Green, McMaster have all been inspired by one guiding idea: that the external form which history takes in the rise and fall of dynasties, kingdoms, empires, or republics, in the wars, treaties, and edicts of Princes and Presidents, in the legislation of Parliaments and Congresses, is but the formal record which the real living organism, the people or nation, leaves behind it as its annals; that the historian who would understand the past and make it intelligible to others must reconstruct the latter. Buckle, it is true, went much further, and thought that he had discovered the very laws which regulate the production of the organism; but if he was wrong in this, he was certainly right in believing this to be the proper aim of the historian who has once adopted the new view of history. Without this philosophical goal, the utmost the historian can do for us is to make the past alive again as we may see it at the theatre in an historical play, or in the pages of an historical novel. The new school of historical writing has accordingly produced a host of writers, able in their various ways, but often stopping short at picturesque or merely "interesting" writing. Carlyle studied chiefly picturesqueness and the biographical rehabilitation of his heroes; Mr. McCarthy, on the other hand, rather endeavors to be interesting. To say of a history that it is "as readable as a novel" is, in the present condition of the art of fiction, rather doubtful praise; but the idea that history might be made over into a series of novels is one that works like Mr. McCarthy's distinctly suggest. George the First is not very promising as a hero of romance, and Walpole hardly answers better; but many of the secondary characters of his reign, Bolingbroke, Oxford, Swift, are decidedly like men "out of a book." Then there is the King's advent from Hanover to his turbulent Jacobite kingdom, in which the old spirit of personal allegiance was just beginning to die out, his rival "over the water"; the plots and intrigues to restore the latter; the banishments and executions—all the incidents of a period of great intellectual and political excitement—a brilliant literary epoch as well. All this furnishes materials for a sketch of George I. and his times of which Mr. McCarthy has made good use. The titles of his chapters, "More, Alas, than the Queen's Life!" "The King Comes," "The White Cockade," "The Earth hath Bubbles," "After the Storm," etc., etc., suggest weekly fiction of the "to-be-continued-in-our-next" order rather than history; but it is only just to say that, as a whole, the volume gives a fair picture of the period.

Mr. McCarthy's great stumbling-block is the facility with which he writes, and the ease with which he falls into a pseudo-philosophic vein. There is absolutely no reflection of any great value to be found in the volume. It is more valuable as a collection of individual portraits than anything else; but even here it is very superficial. He devotes most attention to Walpole, and a great deal to Bolingbroke and Marlborough. But portraits of great historical characters, to be worth much, must be preceded by long and minute study, and this is the quality which Mr. McCarthy hardly gives evidence of having brought to his task. Of the profligacy and corruption of the period, we get, of course, a vivid idea, of the immense appetite for wine and women which distinguished its leading men, and of the unblushing way in which votes were bought and sold, and the most solemn oaths violated; but all this we have had often and often before, and Mr. McCarthy throws little new light on it. Contemporary European politics he occasionally brings in, but not in an instructive way. He is at points overwhelmed with his subject.

The accession of George I. marks the close of the period of divine right and personal sovereignty, and the rise of the modern Parliamentary system, which is gradually democratizing the English Constitution. Walpole was the first great minister in the modern sense of the word, as he governed the country by the aid not of the House of Lords, but of the House of Commons. It is at this point that the philosophy of history might perhaps throw more light on his career than the method of Mr. McCarthy. The history of Parliamentary corruption has been so tho

roughly written that the facts are beyond dispute. Whether Walpole said, "Each of *these* men has his price" or "Every man has his price" cannot make much difference, for we know that he regarded corruption as a necessary and legitimate weapon of government. Even in our own time, as Mr. McCarthy points out, though bribery of members of Parliament by a minister is looked upon as criminal, the wholesale bribery of constituencies for the purpose of procuring seats in Parliament has been regarded as a trifling matter; and to this day, no matter what the law may say on the subject, enlightened Christian men and women regard the person who bribes for a good object with a very different eye from that with which they regard the person bribed. We have no desire to whitewash Walpole, but we know that the greatest corruptionist of his day was not himself avaricious; he had a large fortune which he spent freely. When he died he left behind him what may fairly be called a new system of government, which, if not that in existence in England now, paved the way for it. His policy Mr. McCarthy says was "noble," yet his means were "the vilest." Surely, we need some more careful analysis of the matter than this. Surely, Walpole could not transfer the centre of authority from the House of Lords to the Commons by sheer force of corrupting the latter body. It would require too much space to consider the question of the true key to the politics of the period. But what we feel curious about is whether the causes of the general corruption of the times, social and political, would not throw more light on Walpole than Walpole does on them. Assuming that Walpole's unscrupulousness was a product as well as a cause, what is the explanation of the apparent connection between the corruption of the times and the transfer of power to the House of Commons? This is a question which Mr. McCarthy's superficial volume suggests, but does not answer.

Mr. McCarthy is at his best in his historical portraits and pictures of by-gone times and manners. He is open to the criticism of being an imitator of Macaulay—a dangerous model, because the peculiarities of the latter's style are so marked. He is at his worst when he endeavors to let a ray of romance into his story, as witness the following desperate effort, apropos of the story that George, in dying, promised the Duchess of Kendal to revisit her after death:

"When the Duchess of Kendal returned to her home near Twickenham, she was in constant expectation of a visit in some form from her lost adorer. One day, while the windows of her house were open, a large black raven, or bird of some kind—raven would seem to be the more becoming and appropriate form for such a visitor—flew into her presence from the outer air. The lamenting lady assumed at once that in this shape the soul of King George had come back to earth. She cherished and petted the bird, it is said, and lavished all fondness and tenderness upon it. What became of it in the end, history does not allow us to know. Whether it still is sitting, like the more famous raven of poetry, it is not for us to guess. Probably when the Duchess herself expired, in 1743, the ghastly, grim, and ancient raven disappeared with her. Why George the First, if he had the power of returning in any shape to see his mistress, did not come in his own proper form, it is not for us to explain. One might be disposed to imagine that in such a case it would be the first step which would involve the cost, and that there would be no greater difficulty for the departed soul to come back in the likeness of its old vestment of clay than to put on the unfamiliar and somewhat inconvenient form of a fowl. Perhaps the story is not true. Possibly there was no raven or other bird in the case at all. It may be that, if a black raven did fly in at the Duchess of Kendal's window, the bird was not the embodied spirit of King George. For ourselves, we should be sorry to lose the story," etc., etc.

If Mr. McCarthy will take our advice, he will greatly improve his remaining three volumes by devoting more time and labor to them than can have been devoted to this one. Thackeray's 'Four Georges' gave us a good while ago a picture of the Georgian epoch viewed through the moral spectacles of a later time; what we need now is sufficient amount of research and pains to make us understand how the race and its politics could have been in the condition they then were, and out of that corruption have produced later incorruption. The picturesque and interesting way of writing has been pushed to the point of filling our minds with brilliant pictures and images and extraordinary psychological puzzles. What we need now is a deeper philosophy, which will make use of the immense treasure-house of modern research not merely to make history readable—that desideratum is attained—but to make it, if possible, more intelligible.

ROBERT SCHUMANN.

Schumann. By J. A. Fuller Maitland. [Great Musicians Series.] Scribner & Welford. 1884. Pp. 150.

Robert Schumann and His School. An Essay, by Louis Ehlert. Translated by Mrs. H. D. Tretbar. C. F. Tretbar. Pp. 25.

ALTHOUGH Mr. Maitland does not profess to have written an exhaustive biography of Schumann, or brought forward any new facts of importance, his little sketch is one of the most satisfactory and entertaining of the useful series which Doctor Hueffer is editing. Some of the English critics, we observe, have censured Mr. Maitland for committing the indiscretion of devoting a chapter to the grotesque opinions on Schumann advanced thirty years ago in London journals. These criticisms were, it is declared, "perfectly honest, and they only prove that Schumann, like most composers of genius, was in advance of his age." This may be true, but Mr. Maitland's object in quoting such monstrous criticisms probably was to teach a lesson in humility and caution to contemporary critics and amateurs. Only a few weeks ago, when the music of "Parsifal" was performed in London, the editor of the *Standard* allowed his critic to remark that "it is Wagner at his worst, and a sheer denial of melody from the start to the end. . . . No more unvocal writer ever lived than Wagner, and 'Parsifal' is a thing whose principal value lies in the warning it conveys for other composers not to do likewise." As long as such things are allowed to escape the expurgatorial eye of the managing editor of a leading London newspaper, Mr. Maitland's proceeding cannot be too much commended. The sentence quoted from the *Standard*, however, has its use, for it is quite above the average joke in *Punch*, and its value as a joke will, like good wine, improve with age. As for Schumann, no one can preserve the gravity of his countenance on reading the critical extracts given by Mr. Maitland. One authority, speaking of the now famous quintet, op. 44, says that "in three of the four movements the ideas are worn and stale, not to say frivolous," and, "on the whole, unpleasing pretension hiding real poverty occurs to us as the general character of this quintet." Another critic writes, in 1853, that "an affectation, a superficial knowledge of art, an absence of true expression, and an infelicitous disdain of form have characterized every work of Robert Schumann hitherto introduced into this country." And once more, and still better, "Robert Schumann has had his innings, and has been bowled out, like Richard Wagner. 'Paradise and the Peri' has gone to the tomb of the 'Lohengrins.'"

Mr. Maitland attributes the bitterness of these attacks to the desire to sweep away all suspected rivals from before the feet of the adored Mendelssohn; and to Sterndale Bennett (who at first also failed to appreciate Schumann), to John Ella, and, above all, to Mr. Manns and Sir George Grove, he assigns the merit of having taught the English to understand and love Schumann. The quintet, for instance, "has outlived the howls of execration with which it was at first greeted by the sapient critics, and at the present time no more generally popular piece of concerted music can be found, unless it be the 'Kreutzer' Sonata of Beethoven." His symphonies, it seems, have not yet secured the same popularity in England as his chamber music, songs, and piano pieces, and Mr. Maitland attributes this, in part, to the constant doubling of the string parts by the winds, and of one-half of the wind band by the other, which produces an effect of thickness, and somewhat interferes with the clearness and brilliancy of the composition. Perhaps a weightier reason is the exuberant wealth of Schumann's ideas, the epigrammatic condensation of which makes them seem opaque to those who are accustomed to Mendelssohn's way of never offering a lump of precious metal, but only gold leaf spread out so thin as to become transparent. In New York, we are pleased to add, these symphonies are played as often (relatively to their number) and applauded as warmly as those of Beethoven.

Schumann's songs, on the other hand, are not so often heard in our concert halls as could be wished, the principal reason being that so few are able to sing them properly. This may seem to lend countenance to the complaint that his style often is "unvocal," but it does not. The late Herr Ehlert has some interesting remarks on this subject in his essay on Schumann placed at the head of this article:

"All technique has but one aim—can have but one aim—to further the reproduction of the works of creative genius. The object is not to write as conveniently as possible for the voice, but to express a poetic thought musically, restricted only in so far as this must be accomplished without violating all the considerations of singing. That art of singing which abides with the *bel canto* and is unable to sing Bach, Beethoven, and Schumann, has not attained to the height of their period. It becomes its task to adapt itself to these new circumstances, to renounce the comfortable solfeggios, and acquire the poetic expression that they exact. And that this is possible we all know. I will only recall Stockhausen. Pianoforte technique at one time suffered a similar fate. When Chopin, Schumann, and Liszt arose with their increased requirements, the Hummel school lifted up its voice. To-day one would be apt to smile at a pianist who should refer to the impossibility of playing Schumann. And just as he may be played, so may he also be sung."

From the Italian *bel canto* Schumann's songs differ in being free from inappropriate clap-trap ornaments, and in adding to a beautiful melody an expressive accompaniment of equal value, whereas Italian accompaniments are rarely worth listening to. A still greater difference lies in this, that Schumann's style allows the singer to pronounce the words distinctly, even if they do contain consonants that are not liquids. Those who understand by music nothing but a smooth succession of sweet sounds may be satisfied with the â, ĕ, ĭ, ŏ, ū, l, m, n, r, and their combinations, which constitute the Italian singer's stock in trade; but those who believe that music can and should give utterance to the various emotions which excite us, will prefer a vocal style that does not ignore the poetry, but allows the hearer to enjoy that as well as the music. This is the case in the modern *Lied* of Schumann, Franz, Liszt, and others, as well as in the music dramas of Wagner; and this is the only true vocal style: for the one great advantage vocal music has over instrumental is the power of uniting speech with song, and therefore poetry with music. The highest modern art has come back to the method of nature as shown in the song of the peasant, to whom the melody is of value only in so far as it emphasizes and intensifies the meaning of the

words. The intermediate stage of ornamental *bel canto*, as developed in Italian opera, is a morbid phenomenon in the history of music, owing its existence to the undeveloped taste and laziness of "fashionable" opera-goers. To a refined ear the meaningless trills and runs and staccati of Donizetti, Rossini, and Meyerbeer are distasteful and wearisome, even when executed with the flawless technic and brilliancy of Patti. This feeling of weariness is gradually extending, and when it becomes more general we shall more frequently hear Schumann and the German *Lied* in our concert-halls.

There were many odd things in Schumann's life and manner of working, but the oddest of all was his habit of devoting himself for a year or so almost exclusively to one style of composition. Thus, Mr. Maitland remarks that "nothing but songs were composed in the year of Schumann's marriage, and none of the greatest and most famous songs date from any other year." Schumann, as is well known, encountered the opposition of Clara Wieck's father, and had to wait four years before his wooing was rewarded with success and marriage, after a protracted lawsuit had compelled the "old man" to come to terms, whereas he had hoped for a more advantageous match for his gifted daughter. It is less generally known that Schumann had three or four transient love affairs before he met Clara, which is not surprising in one who in his songs has given expression to all the moods of love with a truthfulness and intensity not surpassed by his favorite poet Heine. Yet Schumann was not social in disposition. An amusing anecdote is told of an interview between him and Wagner, at which Wagner did all the talking and Schumann all the listening. A companion piece has just been made public in a work on Hebbel by L. A. Frankl. Hebbel relates that Schumann was, like Uhland, quite unable to express himself:

"I visited him in Leipzig. We were in the habit of exchanging letters, and among other things he asked my permission to let Reinik make use of my 'Genoveva' as an opera text. After a curt, almost dumb greeting, I sat by him a quarter of an hour. He did not speak, but only stared at me. I, too, remained silent, in order to test how long the thing would last. He didn't open his mouth. Then I jumped up in despair. Schumann, too, seized his hat and accompanied me to my hotel half an hour distant. He walked beside me dumb, and I, angrily, followed his example. Having arrived at the hotel, I took leave of him abruptly without asking him up to my room."

The Water Birds of North America. By S. F. Baird, T. M. Brewer, and R. Ridgway. Issued in continuation of the publications of the Geological Survey of California, J. D. Whitney, State Geologist. Boston: Little, Brown & Co. 1884. 2 vols., 4to. Vol. i, pp. ix, 537; vol. ii, pp. vi, 552. Numerous illustrations in the text.

In 1870 was published a quarto volume of nearly 600 pages on the 'Land Birds' of California, "edited by S. F. Baird, from the manuscript and notes of J. G. Cooper," forming vol. i of the intended zoölogical reports of the State Geological Survey of California. This volume gave an account of all the species of land birds inhabiting North America, north of Mexico and west of the Rocky Mountains. Besides being the first systematic treatise on the birds of the region with which it dealt, it was especially noteworthy for the number and excellence of its illustrations, which were inserted in the text, and nearly all prepared expressly for the work. Copies with the figures carefully colored from nature were placed at the disposition of the public, in which the coloring has rarely if ever been equalled in respect to truthfulness and delicacy of execution. The introduction to this volume stated that a second volume would be issued, containing the water birds of the whole continent north of Mexico. After an unavoidable delay of fourteen years the concluding portion of the work is now published, forming two volumes, however, instead of one—a consummation long and impatiently awaited by American ornithologists. By agreement between the State Geologist of California, Prof. J. D. Whitney, and Professor Baird, the illustrations of the 'Land Birds' of the California Survey were used later in the well-known work entitled 'A History of North American Birds: Land Birds,' by Messrs. Baird, Brewer, and Ridgway, published in 1874. Owing to cost of publication, both works were for a long time suspended. The 'Water Birds of North America,' now under notice, "issued in continuation of the publications of the Geological Survey of California," not only completes the work projected by the State Geologist of California, but is complementary to the 'Land Birds' of Baird, Brewer, and Ridgway's 'A History of North American Birds.' The volumes on the water birds owe their final appearance to the combined liberality of Mr. A. Agassiz and Professor Whitney, and therefore very properly form also volumes xii and xiii of the 'Memoirs' of the Museum of Comparative Zoölogy. To the enterprise of the last-named gentleman, therefore, ornithologists are indebted for this great boon of an elaborate and thoroughly scientific general treatise on the long-neglected water birds of North America—aside from Doctor Coues's useful and well-known 'Key to North American Birds,' the only general treatise on even the technical aspect of the subject since 1858, and the first combining both the technical and biographical since the great work of Audubon, published forty years ago.

In execution, the 'Water Birds' is uniform as regards illustration with the 'Land Birds' of the California Survey, the figures being all inserted in the text; but as regards the text itself, it is not only uniform in plan and character with that of the 'Land Birds' of the 'History of North American Birds,' but is by the same authors. The technical portion of the work—the classification, diagnoses, analyses of groups, and the descriptive matter—although originally prepared some years since, is brought down to the date of the actual stereotyping of the plates, and being the work mainly of Mr. Ridgway, is, as might be expected, almost beyond criticism. Especially noteworthy are the detailed descriptions of the sexual and immature phases of plumage, the attention given to individual variations from the normal phase of the species, and the contrasting diagnoses among closely allied forms. In respect to nomenclature, the departures from the latest standard 'Check Lists' are grievously numerous, but in nearly all cases are such as the recent rapid progress of the science has rendered inevitable, the actual innovations being comparatively few, and of late foreseen as impending. For the designation of sub-species the trinominal system of nomenclature is systematically adopted, as is also the tenth edition of the 'Systema Naturæ' of Linnæus as the starting point of the binominal nomenclature—in conformity with the weight of authority in these matters among American ornithologists.

The biographical portion of the work is, unfortunately, less satisfactory, four years having passed since the lamented death of its author—years of unprecedented progress in our knowledge of the habits and distribution of our birds—and his manuscript having been printed in the more or less incomplete state in which he left it. While it evinces extended and careful research, the presentation of the gleanings from a wide field of literature is not always lucid and methodical, and would doubtless have been more careful had the author lived to give his work further revision and to have carried it through the press. Under the circumstances, however, no other method seemed open than to print the biographical portion of the work as left, and while it is to be regretted that it is to some extent already antiquated, it forms an invaluable addition to the literature of the subject, containing as it does a large amount of hitherto unpublished information, and a great deal more that was before practically inaccessible, even to specialists. As a whole, the work will therefore mark an era in the literature of American ornithology; to the specialist it will form for many years a *vade-mecum* of the subject, and to the general reader and the amateur a boon the value of which cannot be easily overestimated.

The illustrations, as already intimated, are nearly all drawn from nature, expressly for the work. Nearly every genus is illustrated by a full-length figure of one of its species, and each species by a figure of the head (life-size when the species is not too large to admit of it), and sometimes by two, for the purpose of showing the winter and summer phases of plumage. Frequently other figures are given to show details of structure, particularly of the bill and feet. The figures, drawn on wood by Mr. Edwin L. Sheppard, of Philadelphia, and engraved by Mr. H. H. Nichols, of Washington, are admirably executed, especially the head-pieces. These have also (in a portion of the copies) been very successfully colored, under the supervision of Mrs. F. H. Russell, of Brookline, Mass., after patterns prepared by Mr. Ridgway. In respect to typographical execution, it is sufficient to say that the work is from the Cambridge University Press.

In conclusion it may be said that the want of no work on North American birds has been for many years so sorely felt, or has been awaited with more impatience, than the present long-promised treatise on the Water Birds; nor has any appeared which reflects greater credit on its authors and promoters.

The Story of My Life. By J. Marion Sims, M.D., LL.D. D. Appleton & Co.

Marion Sims, by himself and through others, has restored to society and to happiness an ever-increasing multitude of sufferers, condemned, before he opened the way of escape, to life-long wretchedness. For himself, he achieved such renown that his name is a household word in medical circles the world over. To draw out of herself one of his sick friends he permitted such catechism and cross-examination as has given this rehearsal of personal incident from infancy to the age of fifty years. With characteristic simplicity and generosity he poured himself out into this unique "story" for her amusement and the instruction of the world. Of his life he says: "Mine has been a real romance, full of incident, anxiety, hope, and care; some disappointments, and many successes, with much sickness and sorrow; but it has also been full of joy, contentment, and real happiness." That is very true, and all may read the romance. It requires a very clear conscience and perfect guilelessness to expose one's self as he has done; but having done it the reader sees an earnest man, of complete purity, discharging his daily duty with singleness of purpose, and reaching fame by conscientious and intelligent exercise of brain and hand.

But the story is more than an autobiography: it not merely illustrates the evolution of a South Carolina country lad into one of the most useful and conspicuous of modern benefactors; it is local history interpreting rural life in that section fifty years ago. The brutal schoolmasters, with daily flogging of little boys and great; the child's bugbears of "mad dogs and runaway niggers";

the duel as an institution; the Creek war as a frolic; the restless, migratory life of all not fastened by pecuniary bonds; the medical practice that had not yet mastered the common diseases of the region—these, and many other features of the interior cotton belt of that time, stand out with distinctness under the side lights that he casts in passing. Sims's career was full of fate or Providence. He was driven into medicine without fondness for it, because he had been the unwilling recipient of a collegiate education. After five years' successful practice he was on the point of abandoning it to be a dealer in ready-made clothing. For ten years he systematically avoided the special class of cases that ultimately gave him fame, and by whose study he has eliminated the crowning misery from women's lives. These were forced upon him against his protest. He fell by accident upon the key to one of his great discoveries, but then, for four years baffled in the details, he followed up with undying and intelligent patience the indications thus presented. His first professional writing was done under moral compulsion. He was driven to New York by ill-health, by a malady that more than once seemed about to kill him prematurely. The lines of his life were laid out for him by destiny. But he did with all his might what his hand found to do.

The story-teller's style is that of one unbosoming to an appreciative friend without concealment and with little adornment. The frankness with which he exposes his personal feelings and his remarks upon men and affairs, while entertaining to strangers, may not be acceptable to all concerned; and his very serious trials while seeking to gain a foothold in New York, which he rehearses with particularity, do not give a pleasant impression of metropolitan, not to say professional, altruism. A man of the purest life, and a welcome guest in the most refined circles, Dr. Sims has so written his fascinating story that it cannot be read in mixed company. However science may correct them, all details of real life are not achromatic, and the minutiæ, as here, are sometimes colored, with natural tints it is true, so as to raise a reflected blush. It is a pity that a volume as full as this of important lessons attractively recited may not be read everywhere and at any time. The story proper is supplemented by letters of the most genuinely domestic type, and that of October 18, 1861, for example, is a charming exhibition of constant love. Sudden death caught away the story-teller with the tale of his last twenty years untold.

A Naturalist's Rambles about Home. By Charles C. Abbott. D. Appleton & Co. 8vo, pp. 485. 1884.

Doctor Abbott is a very enthusiastic naturalist. Evidence of this appears on every page of his work. In the main his material has been gathered, during a number of years, on and about his farm in New Jersey. Here, within an area that has been longer under the eyes of naturalists and more closely looked over than almost any other portion of the continent, he has got together a great deal of matter that adds to our knowledge of natural history, not alone in facts concerning the known species, but even concerning new ones. His style is that of the story-teller—that which gives science its most attractive form for the general reader. The word "Rambles" in the title suggests a prominent feature in the structure of the volume. Complete or closely connected histories of the tenants of the farm are not attempted. Records of what the author saw at various times have been brought together in chapters devoted to particular mammals, birds, reptiles, or fishes, merely as stories or notes.

A critic who examines these chapters carefully will find much to commend and comparatively little to criticise. Occasionally the author is misled by his fondness for generalizations, for which, naturally enough, the facts collected in such a manner and on such an area are often insufficient. For instance, he gives in his story of the skunk a very imperfect idea of this most faithful of insect destroyers. There is no mention of the main feature in its diet. "Skunks are very partial to snakes as an article of food. In fact, these, with frogs and birds' eggs, seem to be their main support. Were they under all circumstances odorless and quite harmless, their eager search for these latter articles is sufficient to condemn them. . . . Better, surely, a nest of thrushes or song-sparrows then a litter of skunks. An animal that destroys birds' nests is always a nuisance, though I do not object to any other, however wicked." "More than once I have seen skunks rooting in newly-ploughed ground, and at the time it occurred to me that they were probably searching for turtles' or snakes' eggs." A post-mortem dissection would have left no doubt as to the articles of food. Recently the fact of a liking for insect food has been peculiarly confirmed. A leading bee-keeper was annoyed morning after morning by finding the lighting boards of certain hives smeared with mud. Keeping watch one evening, the skunk was seen in front of a hive, his forepaws on the board, tapping and scratching, and, as the bees came out, knocking them off to the ground and pawing them about till fit to be eaten. When too many came out, the marauder moved to another box. The fondness of skunks for grasshoppers is well known.

Some space is taken up by discussion of "prophetic power," ability to foretell seasons of plenty, etc., by birds. The author ignores the fact that selection or desertion of a locality depends greatly on the abundance of the preceding year, or upon the amount of food remaining available through the winter. That "batrachians as a class, although higher in the scale of life than fishes, are inferior to them in intelligence," does not accord with the conclusions of others, and needs more evidence. Unsubstantiated, too, is the statement that the tails of salamanders are of no use to them. The experiments by which possession of "a sense of direction" by fishes is said to be established are insufficient. That a fish carried a thousand feet up or down stream from its nest was able to return, is better accounted for by possession of memory and recognition of localities seen one or more times. The phenomena which led to the conclusion that fishes "are so intimately associated as to act promptly as one body," also result from experience and memory.

A few of the stories might have been omitted, such as that of the skunk which in two hours descended two and tunnelled forty feet under ground; or of the black snake which strangled a skunk; or of another black snake which sprang upon a rattlesnake, "twisted itself tightly around its neck and then its body, and glided off, and there lay the rattlesnake, dead"; or that of the fish, twelve inches long, which in four minutes ate twelve others of three inches each. "If I err in my estimate, it is on the safe side, as it may have been fifteen that were devoured in that length of time. Subsequently I captured a dozen of these exquisite minnows, and found that I could not squeeze them into a mass of the size of a rockfish a foot in length; and yet the fish did not appear to be distended," etc. What grounds there are for crediting the black snake with such power of constriction do not appear in its shape or muscles. There are valuable observations on the food of fishes. Some of these are not in line exactly with those of Forbes, but in both cases it is well to remember that observations made at a particular place and time are insufficient to enable one to say positively what a fish will not eat at some other place or time.

This book is one of the best popular works on the natural history of the United States, and is to be welcomed by all lovers of nature. Boys especially will find the Doctor to be a very instructive and entertaining companion in his rambles. Accurate identifications and a list of the species give the volume a considerable scientific value.

Census Reports. Vol. viii. Government Printing Office. 1884.

The report on Alaska, by Ivan Petroff, covers 177 pages, and is chiefly remarkable for the paucity of statistics of recent date, except in regard to population, and for the fact that the reporter, who went on a sort of voyage of discovery, made no attempt, so far as appears from the report, to visit and investigate the most populous and accessible portion of the Territory, including the vicinity of Sitka, Juneau, Wrangell, and the Alexander Archipelago in general. It is also to be noted that, as with most frontier regions, development progresses rapidly, and in the four years which have passed since the material for the report was gathered, very important changes have taken place in southeastern Alaska. Not the least of these is the initiation of a Government.

Mr. Petroff is of Russo-Alaskan extraction, and his knowledge of the language has been turned to good account in numerous compilations from Russian sources which appear in various parts of this description of the Territory, and form in reality its most valuable contribution to our knowledge. His natural bias toward material derived from the Russians has in some cases led him (as in regard to the Tebienkoff atlas) to overrate both its value and its accuracy, and to neglect later work of a better sort. The valuable unpublished observations of Nelson have been freely drawn upon for information. For those parts of northwestern Alaska which were visited by Mr. Petroff, his description seems accurate and his conclusions just. Where he leans upon Zagoskin, however, he partakes of the errors of that lazy and mendacious traveller, whose custom, according to his Russian companions, was to catechize the natives, and from his notes to construct a journal and map of a journey which he never made. These errors, which are chiefly ethnological and geographical, do not materially affect the value of Mr. Petroff's report on the Yukon region, the general conclusions on which—that it is chiefly valuable for its furs and fisheries of salmon—are little likely to be modified hereafter.

The population of Alaska is estimated at about 33,500, of which about half have been actually enumerated—a result in harmony with the independent estimates of Veniaminoff in 1839, Kostlivtsoff in 1863, and Dall in 1870, but based on better data. Nearly two-thirds are referred to the Eskimo stock, and one-third to the Athabaskan and Tlinket Indian races. Of these about five thousand might be considered civilized as distinguished from the independent and unmodified barbarians. A useful summary of various, chiefly Russian, censuses of Alaska has been compiled from several sources.

The report on the resources of the Territory is on the whole very just, with a decided leaning to caution in claiming what is but imperfectly known. The history of the fur trade, though not monographic, is very full as regards the Russian trade, and the compilation of statistics made in it will be of permanent value. The statistics of the annual product since the purchase are confessedly inadequate, on account of the disinclination of dealers to admit outsiders to a knowledge

of the details of their business. It is known that the product of continental furs is much greater than before the purchase; the figures given probably represent only a small part of the real trade either in number of skins or their valuation. For the sea-otter and fur-seal alone are reliable statistics available. The maps showing distribution of fur animals are at most but tolerable approximations: the fact that a skin is bought in a district is by no means evidence that the species lives there, owing to the wide inter-tribal traffic in skins. The map on the distribution of timber, tundra, and glaciers is perhaps the most hazardous of any. Much of the detail upon it there is no evidence on record to sustain, and it is at best founded in great part on guesswork.

The contributions to geography in the report are chiefly those of Nelson, which have appeared elsewhere. On the other hand, several errors have been reintroduced from imperfect Russian maps, and the course of the Yukon changed to conform to certain alleged observations by traders, which have already been shown by Schwatka to be erroneous. The map has been superseded by better ones, as is the fate of maps in a country under exploration. Geographical names are misspelled throughout the report in a very irregular and puzzling way, Mr. Petroff evidently not fully realizing the values of the English alphabet. An historical account of Alaska is a very useful compilation from Russian sources and from the Russian point of view. The portion of it since 1867 hardly rises above good-natured gossip, and is sometimes inaccurate, but the preceding matter will be very welcome to those interested in the Territory.

The ethnological portion of the report is the weakest, owing to the fact that the author has undertaken a task for which he was not suitably prepared either by experience or education. It teems with interesting facts, but interspersed with assumptions and conclusions which require revision. Much has been quoted from other works, and for those people actually seen by Mr. Petroff his accuracy need not be questioned; but his classification includes several errors of a fundamental nature, and, in general, the work is deficient in scientific precision either of statement or orthography. The maps of the report are well executed, but there are a few chromos which had better have been omitted.

The report on the fur-seal fisheries by Mr. H. W. Elliott has already been noticed in these columns. It is without doubt the best general account of the Alaskan fur seal and his haunts, and is copiously illustrated by the author. As treating of the chief source of Alaska's wealth, it not unnaturally covers a space about equal to the preceding report of Petroff, but a good deal of this is devoted to more or less irrelevant topics.

A Dictionary of Urdû, Classical Hindî, and English. By John T. Platts, M.A., Persian Teacher at the University of Oxford; late Inspector of Schools, Central Provinces, India. London: W. H. Allen & Co. 1884. (Pp. 6 and 1,259, royal 8vo.)

Among the various living languages of India, the Urdû, or Hindûstânî, from its greater or less currency in every part of the country, is invested with an importance which can hardly be overrated. In strict truth, it is, as it is often called, the *lingua franca* of the land. To Muhammadans, a few of the most illiterate in Lower Bengal well-nigh alone excepted, it is, in its pure form, or with dialectal modifications, the mother-tongue; and large numbers of Hindus, in nearly all quarters of India, are at the pains to acquire a conversancy with it almost equal to that which they possess with their vernaculars. This being the case, it is not surprising that steps were promptly taken by Englishmen, their foothold in the country once assured, to provide facilities, lexicographical, grammatical, and in the way of text-books, contributory towards an intelligent acquaintance with it.

The earliest guide to the language, at all noticeable for its fulness or scholarly execution, was an elaborate work by Dr. John Gilchrist, in four quarto volumes, of which the first was issued from the press in 1787, and the last in 1798. Along with other matter, it embraces a dictionary and a grammar. Though all but a pioneer in his special department of research, Gilchrist left very little to be added regarding the Urdû as developed down to his day; and what he accomplished still deserves, as an exemplification of enthusiastic and thorough craftsmanship, to be spoken of in terms of unqualified respect.

Until very recently, the most creditable of Dr. Gilchrist's successors in the province of Urdû lexicography were Captain Joseph Taylor and Dr. W. Hunter, whose dictionary bears the date of 1808. Like Gilchrist's, it was published at Calcutta. Next, and avowedly based on it, followed, in 1817, the excellent compilation of Mr. John Shakespear. Of the three revised and enlarged editions of it which its author was encouraged to produce, each was a great advance on its predecessor, as was to be expected from Shakespear's indefatigable industry of research and solidity of judgment. The latest of them appeared in 1847. The dictionary of Dr. Duncan Forbes, which came out a year after, is mentionable mainly for its reversed vocabulary, English-Hindûstânî, which is considerably ampler than Shakespear's. Its cheapness was, however, its chief recommendation to students. Together with these Urdû dictionaries of the old school may be named, but not because entitled to approval, a recent dictionary by the late Mr. F. Fallon. If its objectionable features were eliminated, there would, indeed, be ground to speak well of it, at least for its copiousness as concerns Urdû of the past and that of the present time alike. A strange phenomenon is its author's perpetual predilection for fatuity, and likewise for what is even more repulsive than fatuity, foulness. Besides this, he was in no sense or degree a philologist; and his book is very high-priced. But its antiquation is already imminent. In competition with what has since been effected by Mr. Platts, it has no chance; and, if we dismiss it without further comment, we do so with no fear of being chargeable with injustice.

The labors of Mr. Platts have created a veritable epoch in Urdû philology. His 'Grammar of the Hindûstânî or Urdû Language,' which has now been ten years before the public, at once and for ever superseded its forerunners, not one of them excepted. Nor is there any hazard in venturing the forecast that, in like manner, his 'Dictionary' will speedily obsolete all those which preceded it. Not only did he work long at it in India, with free command of learned natives as assistants, but he is the only general lexicographer of Urdû that has made a study of the language in the multifarious host of books exhibiting the many changes in it, and the prodigious expansion of its vocabulary, to which the last forty or fifty years have given birth. His, too, is the merit of having first treated it, as an etymologist, in a manner aiming to satisfy others than the superficial and the incurious. That he should leave liberal gleanings for those who follow him was, of course, inevitable.

The nature of a large mass of his imperfections which require to be redressed may be gathered from the two instances subjoined. *Angusht-numâ*, 'notorious,' he duly records; but he omits *angusht-numâî*, 'notoriety.' Again, while he gives *dhanvânatâ*, an exceptional derivative, we consult his pages in vain for the classical *dhanvattâ*, its equivalent in signification. An author lies before us who, having used the former in the first edition of one of his works, substitutes for it, in his second edition, the latter. Slight defects like the two just specified, and others of a miscellaneous character, might be adduced in a profusion that would make up a list suggestive of serious shortcomings, if account were not taken of the enormous body of particulars, wholly proof to unfavorable criticism, which the new dictionary comprehends. In concluding our notice of a literary achievement which challenges emphatic commendation, we would express the hope that the Hindî, in view of its daily increasing importance, its opulence of verbal expression, and its independence, to a great extent, of the Urdû, may soon find a lexicographer equipped to do much more for it, and that by itself, than has been done by Mr. Platts, who, like Shakespear and the rest, has treated the two languages as if they were, which they are very far from being, integrant constituents of one whole.

Das deutsche Volksthum und seine Nationale Zukunft. Von Karl Theodor Reinhold. Minden: J. C. C. Bruns. 1884.

In the book above named a German who for a wonder is a judge and not a professor, has attempted to analyze the character of his own countrymen. The purpose of the work is avowedly patriotic. It aims to show the German people the error of their psychological ways, and to point out what they must do in order to become a great nation. Herr Reinhold cannot be credited with possessing a judicial mind. He is too evidently a man with a hobby, or rather with several hobbies, and astride of one or the other of these he is perpetually running a tilt against alleged vices of the German character, which turn out upon examination to be nothing but vices of poor weak human nature. As to the hobbies: Reinhold is in the first place a member of the "party Bismarck *sans phrase*"; secondly, he is an uncompromising admirer of England; and finally, he is an almost rabid hater of metaphysic in all its forms. Thus he becomes a very censorious critic of his countrymen. We do not remember to have seen a more scathing account of the German character. Had the book been written by a foreigner, Germans would laugh at it as the product of prejudice and hypochondria. As it is, the patriotism of the author being after all so undeniable, they have been compelled to take him seriously.

The long preface sufficiently sets forth Reinhold's political attitude. The first thing needful for Germans, he contends, is a strong imperial government, and the second is increased loyalty to that government. Everything is to be approved which will in any way strengthen the hands of the central power, and the greatest of political sins is in any way to oppose or embarrass Prince Bismarck in his battle for solidarity and strength. It is with a view of "showing up" the opposition to the Chancellor as springing from deep-seated vices of the national character, that our author undertakes his analysis. He first proceeds to show that the Germans are still, what they have been historically, low-spirited and devoid of national pride. Everywhere they try to forget as soon as possible that they are Germans, and learn to speak sneeringly of the fatherland. In North and South America they take pride in becoming denationalized. In Austria-Hungary they meekly accept the domination of Magyars, in Poland that of Slavs. When a Frenchman thinks himself maltreated, say by a policeman, he says: "Est-ce qu'on me prend pour un Allemand?"

This deficient sense of national pride shows itself in the Reichstag, according to our author, in

a multiplicity of parties and separate party interests, and in puerile opposition to the Government, because it *is* the Government. And when it comes to political discussion, either in Parliament or out of it, then a whole catalogue of vices show themselves to prevent the transaction of business or the reaching of sane and definite conclusions. Foremost among these vices is the tendency to abstraction and metaphysic. This means in politics an emotional interest in that which might be, instead of a practical interest in that which is. In spite of the mighty changes brought about in recent times by Bismarck and the railroads and modern industrialism, the Germans are still, so our author contends, too much given to idealism and dreams. Professors and doctrinaires have inoculated the people with the disease of philosophic deduction, and this disease can best be got rid of by going for instruction to England, "the greatest nation in history." The almost universal dislike of England in Germany is absurd and wrong. For Germans have to learn that politics deals with policy and not with eternal justice, and accordingly the two masters from whom they have most to learn are Burke and—Machiavelli. "The uplifting of the soul," says Reinhold, "to purely spiritual issues, is something noble, and, in its proper sphere, is the grandest part of our nature. But for the hard battle of life upon earth, and above all in the remorseless struggle for national existence, this transcendental trait of the German character is the most ruinous dowry which fate could have given us."

The other vices to which he gives most attention are pedantry and "formalism," which last is said to show itself in an undue emphasis of form at the expense of substance, and in a tendency to judge hastily from false analogies. But it is the tendency to abstraction which forms Reinhold's chief solicitude. Again and again he returns to the subject, and finally proposes, as preliminary to his own discussion of certain political questions, the motto: Down with Ratiocination and up with Experience. Of the chapters which follow, the most interesting are those upon Church and State, "Deutscher Parlamentarismus," "Militarismus," the Imperial Revenue Policy, and Socialism. With regard to this last, the author tries to show that its importance as an enemy of the Empire is overestimated, and is in reality very slight. As the enemy of professors and theorists, Reinhold is, of course, a protectionist; but here the customary recourse to English wisdom fails him, and he is compelled to point to the examples of France and the United States as affording a complete practical refutation of visionary free-trade doctrines. An American reader finds here a painfully familiar acquaintance in the syllogism: Is not the American Union great and prosperous? Has not the American Union a high protective tariff? Ergo, etc. As to the burden imposed upon Germany in the maintenance of its army, Reinhold is clear and positive. The German people must learn to bear far more than they now bear. An invincible army is the only condition of national existence, and the nation must be willing to give everything for its life. Hence they must take as their watchword *Rücksichtslosigkeit*—remorselessness toward themselves and toward others. All talk of arbitration as a means of settling national disputes should be left with the professors. The cry for reduction of burdens is the foolish cry of children who do not know what is good for them. Our author does not hide his contempt for those who look forward to the disarming of Europe as the great problem of future statesmanship. The German programme must be: Better artillery, larger armies, and conscience avaunt!

We have thought it better, for the purposes of this review, to state Reinhold's views than to criticise them, else our task had been a long one indeed. The German people are not so unlovely, so unpatriotic, or so stupid as he thinks them; but one shudders to imagine what they would be like if the above-described programme were to be carried out.

French Orthoëpy.—The Modern French Method. By J. D. Gaillard, Officier d'Académie. D. Appleton & Co.

THE author claims to have discovered a new means of overcoming the difficulties of French pronunciation. He starts from the principle that pronunciation is simply a "mechanical action, performed by certain organs which are normally possessed by all alike," and concludes therefrom that any one may acquire a correct pronunciation if he is taught to place his organs of speech "in the same relative position as natives do in speaking their own language." This, if we mistake not, is the principle upon which the deaf and dumb are taught to speak. Nor is the philosophical view taken of the importance of studying the action of the vocal organs on sound so very new; what reader of Molière can forget the amusing scene in "Le Bourgeois Gentilhomme," when the Master of Philosophy expounds the principles of pronunciation to the admiring Monsieur Jourdain, who exclaims, "Ah! la belle chose que de savoir quelque chose!" Yet, Mr. Gaillard's adaptation of those principles to the study of French by foreigners is not without merit. He divides the French sounds into the "Buccal, Laryngeal, and Pharyngeal," and illustrates the mechanical action required to produce them by anatomical designs and a musical gamut, the latter adapted specially to the laryngeal and pharyngeal sounds, and running from C sharp to A sharp. No comparison is instituted between the English and French sounds; the learner must study the mechanical action until he can produce original French sounds.

Mr. Gaillard's 'Modern French Method' is based on the same philosophical idea. It is a mental drill, compelling the student to think, and helping him by means of suggestive words to express his thoughts. It holds the golden mean between the old system of learning disconnected sentences with their English meaning, and the new system, which discards English and relies on an expressive pantomime to help the understanding. The conversations between teacher and pupil are upon a connected subject, which is followed up through the book, forming a continuous story replete with adventure and very interesting. The idea is ingenious, and the student who has been true to the course of pronunciation and has besides learned the rudiments of grammar and acquired some knowledge of the verbs, may take up this method with reasonable hopes of becoming a thorough French scholar. Mr. Gaillard does not encourage the fallacious notion, entertained by some educators, that knowledge can be gained without hard study.

BOOKS OF THE WEEK.

Almanach de Gotha. 1885. B. Westermann & Co.
Bastian, A. Religions-Philosophische Probleme auf dem Forschungsfelde Buddhistischer Psychologie und der vergleichenden Mythologie. Berlin: A. Asher & Co.
Bayne, G, M. Galaski. John W. Lovell Co. 20 cents.
Blackburn, H. English Art in 1884. D. Appleton & Co.
Cooke, Mrs. Rose Terry. The Deacon's Week. Illustrated. G. P. Putnam's Sons. 25 cents.
Curtis, G. H. A Prima Donna, and Scenes from Real Life. Thomas Kelley. $2.
Ebers, G. Serapis: Historischer Roman. B. Westermann & Co.
Farrar, Dr. F. W. The Messages of the Books; being Discourses and Notes on the Books of the New Testament. E. P. Dutton & Co. $3.50.
Gardner, Mary Russell. English History in Rhyme. New Haven: The Stafford Printing Co.
Giesy, Dr. S. H. The I Ams of Christ; a Contribution to Christological Thought. A. D. F. Randolph & Co. $1.25.
Hale, E. E. Christmas in Narragansett. Funk & Wagnalls. $1.
Hawthorne, Julian. Prince Saroni's Wife and the Pearl-Shell Necklace. Funk & Wagnalls. 75 cents.
Heilprin, L. Historical Reference Book. D. Appleton & Co.
Hundred Greatest Men. D. Appleton & Co.
Hunt, Mrs. Mary H. A Temperance Physiology for Intermediate Classes and Common Schools. A. S. Barnes & Co.
Ker, D. The Lost City; or, The Boy Explorers of Central Asia. Harper & Brothers.
Kingsley, Rev. C. The Water Babies. A Fairy Tale for a Land Baby. Boston: Ginn, Heath & Co. 40 cents.
Kingsley, Rev. C. Poems. In two volumes. Macmillan & Co, $3.50.
Lambert, Rev. L. A. Notes on Ingersoll. Buffalo: Catholic Publication Society. 25 cents.
Little Arthur's History of France, from the Earliest Times to the Fall of the Second Empire. Illustrated. Thomas Y. Crowell & Co. $1.25.
Marshall, Emma. In the East Country with Sir Thomas Browne, Kt. E. P. Dutton & Co. $1.25.
Marshall, Emma. Mrs. Willoughby's Octave. E. P. Dutton & Co. $1.25.

GOODHOLME'S DOMESTIC CYCLOpædia for Housekeepers. $2.50.
HENRY HOLT & CO., New York.

Lady Brassey's Sumptuous New Book.

In the Trades, the Tropics, and the Roaring Forties.

Beautifully illustrated with nearly 300 Woodcuts from Drawings made by artists engaged especially for the last voyage of the "Sunbeam," and containing ten maps and charts. Price, $5.

HENRY HOLT & CO.,
Publishers.

TWO CHOICE NOVELS.

Farneli's Folly.

By J. T. Trowbridge, author of 'Cudjo's Cave,' 'The Three Scouts,' 'Neighbor Jackwood,' 'Neighbor's Wives,' 'The Drummer Boy,' 'Martin Merivale,' and 'Coupon Bonds' (of which new editions are ready). Price $1.50.

"This story, by the always popular Trowbridge, is very bright and entertaining. It is written in his quaint and humorous style, and is one of the best, if not the best of any of his novels."—*Worcester Spy.*

Out of the Wreck;

or, Was It a Victory? By Amanda M. Douglas. Price $1.50. Uniform with 'Floyd Grandon's Honor,' 'The Old Woman that Lived in a Shoe,' 'Whom Kathie Married,' 'Lost in a Great City,' 'Hope Mills,' 'Home Nook,' 'In Trust,' 'Nelly Kinnard's Kingdom,' 'From Hand to Mouth,' 'Stephen Dane,' 'Claudia,' 'Sydnie Adriance,' 'Seven Daughters.'

"'Out of the Wreck' will increase the reputation of the author, and is sure to give much pleasure to the wide circle for which she writes."—*The Beacon, Boston.*

*** Sold by all booksellers, or mailed on receipt of price by the publishers.

LEE & SHEPARD, Boston.

Tales of the Pathfinders

The Boston *Advertiser* says of Arthur Gilman's 'Tales of the Pathfinders': "If there is any book fitted to give people a taste for historical reading, it is the little volume of sketches in which Mr. Gilman so delightfully pictures some of the salient facts illustrative of the history of this country from its first settlement to the time of the War of the Revolution." It adds that the book "is entertaining from beginning to end."

For sale by all Booksellers. Price $1.

D. LOTHROP & CO., Boston.

34 Park Row, New York City.

The Nation.

NEW YORK, THURSDAY, JANUARY 8, 1885.

The Week.

THE question whether Secretary Frelinghuysen has taken any steps to abrogate, in a friendly and becoming way, the Clayton-Bulwer treaty with Great Britain, as a preliminary to the negotiation of the Nicaragua treaty, is yet without any official answer at Washington. We have looked accordingly to foreign sources for information, but without any satisfactory result. The latest advices by mail reveal nothing except a mild state of surprise that so important a proceeding as an inter-oceanic canal should be undertaken by one government without any attempt to prepare the way for it, by consultation with another government which we had agreed to consult on that subject if we should ever seriously contemplate such a work. The *Economist*, for instance, takes occasion to say that the respect for treaties among the people of the United States is considerable, and that they are not likely to cancel violently any obligation which they have once voluntarily assumed. In other words, it is believed that public opinion in this country is more regardful of international agreements than its official organ, the Department of State. But if the Clayton-Bulwer treaty is to be ignored, and arrangements entered into in direct contravention of it, then Great Britain will have to take such measures as may be necessary to protect her commercial interests. She cannot allow differential tolls to be established on a new highway between the Atlantic and the Pacific to the prejudice of her shipping and her trade. She cannot be placed at the mercy of a rival in this regard. She will be compelled to lend her aid to the enterprise of M. De Lesseps at Panama in order to secure the rights which the Clayton-Bulwer treaty was intended to secure. The Panama Canal will be put in jeopardy financially by the Nicaraguan Canal. The former, being a private enterprise merely, cannot withstand the competition of a rival backed by the unlimited fiscal resources of the United States. It is quite certainly doomed to failure if the Nicaraguan treaty goes in force. The money to complete it cannot be obtained by individual subscription. But England will be compelled to furnish the funds if another canal is to be opened, in which her right of transit on equal terms is not guaranteed beyond peradventure.

This is the mild but decided opinion of the principal organ of British commercial interests. Can we gainsay it or offer any opposition to it? If we violate the Clayton-Bulwer treaty, we certainly release Great Britain from any obligations to observe it. If we put her commerce in jeopardy by opening an inter-oceanic canal in which she has no share, we cannot forbid her the same privilege. The Monroe doctrine does not stand in her way. The Monroe doctrine is political merely. It affirms that the American Continent cannot be made the subject of further European domination; that the free institutions which exist here are not to be interfered with by European conquests or colonization. It interposes no objection to railways, canals, public loans, or other peaceful and non-political movements. In fact, there is nothing to prevent England from furnishing M. De Lesseps all the money needed to put the Panama Canal through in the shortest possible time, and obtaining from him such rights as he chooses to give her in return for indispensable aid.

It not surprising to find the officially inspired *Neue Preussische Zeitung* declaring that

"The day is now near at hand when the Panama and Nicaragua questions, which are essentially of international interest, should be regulated by an international conference like that now regulating the Congo. In all that concerns Panama and Nicaragua, Germany has quite as important interests at stake as England or France."

Our performances at the Berlin Conference of course turn the European mind in this direction. The *Mémorial Diplomatique* of December 20 complains bitterly—and says it is in this expressing the feelings of most of the European delegates—of the delays caused by the persistent efforts of the American delegates to obtain the neutralization of the Basin of the Congo and of the railroad from Vivi to Stanley Pool, the very thing England contends for or is likely to contend for with regard to the Isthmus of Panama and the canals. Says the correspondent of the *Mémorial Diplomatique:*

"I have never concealed from you the surprise caused by the invitation addressed to the United States to assist at the Conference.

"Have these adepts of the Monroe doctrine really come to participate in deliberations concerning questions in no way American? Having been admitted to do so, is it proper for them to try to play a preponderating part, to raise incident on incident, question on question, and to impose on themselves and on their colleagues a prolonged sojourn at Berlin? They and they only have forced the Conference to adjourn till January. Beaten and repulsed in the sub-committee and the Committee, they always come back to the charge, promising to modify or attenuate their motions, but paying no attention to the objections made to them. The Conference, as the protocols show, has manifested a real desire for concord and harmony; it is only the American motions which have caused a sort of grouping looking very like a division."

Some curious light is thrown on the above by the position Mr. Kasson took with regard to the neutralization. He introduced a resolution providing that when two or more Powers, members of the Conference, went to war, they should treat the Congo Basin and its rivers as neutral territory in the ordinary manner, and that no contraband of war should be permitted to leave its ports for any belligerent. Now this would have been, if adopted, and was so considered by the Conference, an ordinary joint guarantee of neutrality. But Mr. Kasson explained that his object was not to place the neutrality of the Basin of the Congo under the joint guarantee of the Powers, this being, he said, "opposed to the principles of political law which prevail in the United States," but "simply to reserve to each Power the right of interfering, if it pleased, in any case in which the neutrality might seem to be compromised." In other words, he wanted to substitute for a guarantee which all would respect and which would be thoroughly effective, a guarantee which would be worthless, because it would consist simply in the right of any Power to take part single-handed in the war in which the neutrality was violated, as if this right did not exist already. This absurdity was, of course, intended to cover our position with regard to the Nicaragua Canal, which is, that we cannot even allow a foreign Power to promise publicly not to meddle with it. The final touch is given to the *Mémorial's* account of the American proceedings by the statement that the Conference took no action on the Kasson-Sanford proposals for the neutralization of the Vivi-Stanley Pool Railroad, from the "painful" suspicion that these gentlemen or somebody behind them had a pecuniary interest in the enterprise, and were fighting for it, as Blaine fought for the Landreau claim, because "there was millions in it." If they should hear the talk there is here now about the Nicaragua Canal, these suspicions would probably be strengthened when the Conference meets again.

The failure of the House to fix a day for the discussion of the Lowell Bankruptcy Bill means probably its defeat in the present Congress. This is all the more regrettable because it appears that it was due in the main to the absence of representatives from New England and New York, or, in other words, from the very States which are most interested in the passage of the bill. The opposition came mainly from the West and South. Mr. Randall, with the narrowness which has always been one of his striking characteristics, was very active in instigating it. In the present state of the country the measure is almost essential to a clearing of the ground for the revival of business on an honest and healthy basis, and there is but little opposition to it which does not spring out of sympathy with some form of dishonesty. The failure of the measure is one more illustration of the small extent to which the purely mercantile interests of the country are represented or cared for in Congress.

The decisive vote by which the House has rejected the scandalous amendment which the Senate, on the eve of the Presidential campaign, attached to the Mexican Pension Bill, probably disposes of it for ever. Before another Presidential campaign comes round, we trust that the folly of angling for the "soldier vote" by means of more pensions, without any regard for justice or public decency, will be abandoned. It will be remembered that this amendment passed the Senate only after it was protested against as outrageous by such eminent Republicans as Senator Sherman. Logan was its chief advocate, and his zeal was possibly rewarded by his vote on election day. Various estimates have been made of the amount of money which the amendment would take from the Treasury, the lowest being $17,000,000, and the highest $2,500,000,000. Nobody could tell how much it would take. There were never any adequate reasons given in support of it, and none were found on Monday.

There is a bill pending in Congress to create a Department of Agriculture with a Cabinet officer at its head. The *American*, of Philadelphia, thinks that it ought to pass, and that there ought to be a Department of Manufactures also, if not one of Mines, one of Forests, and one of Commerce. We are not sure about the need of the latter, seeing that the Treasury Department is largely a Department of Commerce, but there is no doubt that there ought to be a Department of Plumbing. There is a great deal to be said in favor of such a department that cannot be said for a Department of Manufactures or even of Agriculture. The Government has nothing to do with either agriculture or manufactures, except to compile statistics and distribute information regarding them, whereas it has a great deal to do with plumbing. The bills which it has to pay on this score for all the public buildings in the United States must be enormous. Moreover, the plumbers have recently attempted to form a guild, or close corporation, by agreeing to buy lead pipe only from dealers who will promise to sell only to licensed members of the guild. This is an attack upon our liberties which the Government might well inquire into through a Cabinet officer. Of course, plumbing has not yet attained the dignity of agriculture or of manufactures, but the Government departments are not established out of compliment to the several vocations of life. The Post-office Department does not exist because of the dignity of letter-carrying, but because the Government carries letters. The Department of Justice does not exist out of compliment to the lawyers, but because the Government has a great deal of law business to be attended to. "Seats of this kind," says the *American*, "exist in all the Continental cabinets." Quite true, and they also have a Department of Public Worship, sometimes presided over by an infidel.

Governor Cleveland's letter defining his civil-service policy has been before the country for nearly a week, and has been discussed by all the newspapers. We have yet to see a Democratic newspaper which does not commend it heartily, and does not accept it as meaning precisely what it says. The whole Democratic press accepts it as a declaration that the "spoils system" has passed out of national politics forever. This most gratifying attitude of the Democratic journals finds a practically unanimous echo in the comments of Democratic politicians. A few of these have dissented from Mr. Cleveland's position, but in all cases they are found to be men who have had no sympathy with his course as Governor, and who did not exert themselves to secure either his nomination or election as President. Among Republican journals, the letter has been received with widely conflicting comments. The rabid Blaine organs are able to see in it nothing either sincere or encouraging. They insist that the Governor does not mean what he says, and that if he did mean it he would not be able to accomplish it. Many other Republican journals, however, which are able to realize that the campaign is over, and that there will not be another one for four years, admit frankly that the letter is an admirably frank, honest, and courageous document, which deserves to be accepted in good faith, and which entitles its author to the cordial support and encouragement of every patriotic man.

Anything more blindly partisan than the efforts of the Blaine and Butler organs to belittle the letter and prevent the new President from carrying out the promises of it, this country has seldom seen. Mr. Cleveland is President-elect of the United States, and will, if he lives, hold and administer the office for four years. If he carry out the policy which he has outlined—and we have not the slightest doubt that he will—he will bring to his support every honest and patriotic man in the country. If he gives the country a plain, honest, business-like Administration—as we have perfect faith that he will—the old partisan cries will grow fainter and fainter as time goes on, and when the end of his term is reached we shall be well launched into a new era, with new party lines and new issues. The editor who thinks that while this change is going on he can hold the country back by tugging at its tail, and shouting over and over again the old campaign cries, is simply walking to his own destruction. He greatly underestimates the common sense as well as the patriotism of his fellow-citizens.

It was a curious and significant coincidence that the *Sun* and *Tribune* should both have tried to suppress Governor Cleveland's letter on the civil service. It was, however, more significant still that they should have both begun on the same day to ridicule it by asking why, since he had written a letter on civil-service reform, he should not also write letters on the subjects which he had avoided and been praised for avoiding in his letter of acceptance, on the ground that his office was "essentially executive"? The *Tribune* sapiently declared that it took it for granted that "this absurdity had been abandoned," and that he would now answer letters in like manner from "the Tariff Reform League, or the National Temperance Reform League, or the National Anti-Monopoly League," and so on. It is very difficult to deal with talk of this sort, for reasons which courtesy forbids our revealing. The reason why Governor Cleveland writes freely about the civil service is that it is the one thing which the Constitution places in his control. He is charged with the execution of the laws, but he executes them by appointment and dismissal. In fact, appointment and dismissal and pardoning may be said to constitute the chief work of his office. Nothing he can say, therefore, is so interesting to the country as a statement of the policy he will pursue in making appointments and dismissals. When he talks about the tariff, or temperance, or monopolies, on the other hand, what he says is hardly more interesting than what any other man says who can get all the newspapers to print his views. These are things which lie within the domain of legislation, and the President does not legislate. He recommends legislation, but so does the editor of the *Tribune*, and as a general rule his recommendations are not heeded by Congress. An attempt was made by the Blaine papers to persuade people during the late canvass that if Blaine was elected he would order the tariff raised and direct a cessation of the existing business depression; while if Cleveland were elected he would lower the tariff, let in the low-priced British goods, and order the closing of the chief American factories. Nobody really believed this, however, except perhaps the recently arrived Hungarian and Italian laborers.

No better illustration of the Blaine theory of civil-service requirements could be given than is frankly revealed by Congressman Reed, of Maine, who says that Governor Cleveland's letter is "an assurance to all the sneaks in our (the Republican) party that they are to be kept in office, if they are in office, while honest Republicans are notified that they are to be turned out." Mr. Reed is a thoroughgoing Blaine man, and owes his prominence in political life to the influence of the Blaine machine in Maine. His idea is, that every office-holder who in the late campaign did not devote all his energies to help Blaine into the Presidency, is a "sneak," while all those who did use their positions for the accomplishment of that end are "honest Republicans." The "sneak" is the office-holder or clerk who attended quietly to his duties, refused to make a campaign contribution, and faithfully did his work as a servant of the public. The "honest Republican" is the office-holder or clerk who neglected his public duties in order to "whoop 'er up" for Blaine. This is the view of all the Blaine advocates, both before and since election. The criticisms upon the "President's lukewarmness" are based upon it just as were the disgraceful operations of the Clapp Contribution Committee in Washington. Nobody can doubt that if Blaine had been elected, all the "sneaks" would have been turned out, while all the "honest Republicans" like Dudley would have been handsomely rewarded for their zeal in the campaign. Civil-service reform would have had about as much chance for life as it had when, as Speaker of the House, Blaine turned it over to the fatherly care of General Butler.

In the Southern States the appointing power of the Governor, once quite extensive, has been, since the war, year by year abridged. In South Carolina, such county officers as treasurers, auditors, jury commissioners, and trial justices, are still, however, selected by the Governor. It has been customary to violate the spirit of the statute requiring these officers to be selected by the Governor, by appointing only such persons as may have received the recommendation of their representatives in the State Legislature, or of county conventions. In some counties of the State it has been the rule for candidates for offices filled by the Executive to submit their claims to a vote of their party (cast in "primaries"), and to bind themselves not to apply if defeated. When Governor Thompson came into office, he not only disregarded the pressure exerted upon him by friends and party workers, as we mentioned at the time, but he adopted a rule to retain in every instance an incumbent who had proved efficient and who desired reappointment, though such person should

not be recommended. The recent confirmation by the Senate of South Carolina of 600 officers appointed by the Governor, a number of whom were not recommended by county conventions or county delegations, must be considered as a proof that it also agrees with this principle of civil-service reform, and that it is beginning to abolish "Senatorial courtesy." That the people of the State heartily approve the Governor's policy is shown by his recent reëlection without any opposition whatever. In view of this, the resolution of the Legislature of South Carolina, in which the support of the people of that State is tendered to the President-elect in carrying out the provisions of the Civil-Service Law, cannot be considered as mere "words, words, words."

At one time on Saturday it was thought that Mr. Evarts's prospects for the Senatorship were improving, but there is little indication that the gain was sufficient to insure his election. His explanation of his letter to Folger does not give entire satisfaction. He says he declined to speak because he "might just as well have addressed a snow-storm with a view to stopping it." This is equivalent to saying that party fidelity is to be gauged by the prospects of victory, and that when your party's candidate has a poor chance of election you are not called upon to stand by him. There are evidences of weakening in that which cannot fail to injure Mr. Evarts's prestige as a party-loyalty man. The standard insisted upon in the late campaign by all the Blaine leaders, including Mr. Evarts, was that you must stand by your party, right or wrong, honest or dishonest; and that if you did not do that you were a mugwump, a dude-and-pharisee, and one of the class whom Mr. Evarts held up to ridicule at the Gould-Field-Blaine banquet as the "very particular and finical set of our people." If Mr. Evarts had made any other claim to the Senatorship than that of unswerving party allegiance, this Folger incident would be a small matter; but as that was his sole claim, any flaw in it must be regarded as damaging. We think he ought to give out the correspondence between himself and the Secretary for publication, in order that the public may judge fairly of his value as a party man.

We find the following interesting admission in our esteemed but somewhat rabid Blaine contemporary, the Utica *Herald*:

"The meeting of ministers which greeted Mr. Blaine on the occasion of his visit to New York, and which elicited the Burchard alliteration, is universally conceded to have been the immediate cause of the Republican defeat. That ministerial demonstration not only defeated Blaine, but it immensely damaged the influence of the Christian pulpit throughout the United States. The storm of ridicule and execration that has since overwhelmed the unfortunate Burchard has had its point and its effect, in the recognized fact that the man had no business to be there at all, and was outside his calling as a Christian minister."

It is very true that Dr. Burchard and his fellow-clergymen "had no business to be there," and were "outside their calling as Christian ministers," but who got them there? They were formally invited by the Blaine managers, and the engraved cards of invitation were sent out, it is understood now, by the minister who was paid a salary and given a desk in the Blaine headquarters for the purpose of keeping the Blaine campaign "in a line with the religious sentiment of the country." They were collected for advertising purposes, the design being to give Blaine a "religious endorsement" on the eve of election. If anybody is to be blamed for the disastrous outcome, it is not the clergymen, but the man who originated the plan of getting them together.

The Rev. Dr. Newman, the well-known Stalwart divine of this city, has covered himself with glory in San Francisco, where he now is, by preaching a $10,000 funeral sermon over a youth of sixteen, named Stanford. The "floral decorations" of the funeral alone cost $20,000. The fee is, we believe, the largest ever paid for an intellectual effort of this kind, and the Doctor tried to give the bereaved parents the worth of their money, and we think he succeeded. No words of ours can do justice to the discourse. We must confine ourselves to one quotation, which shows what a Stalwart theologian can do when put to his trumps. He said of the deceased, who had died in Europe:

"Although so young, he was tall and graceful as some Apollo Belvidere, with classic features some masters would have chosen to chisel in marble or cast in bronze; with eyes soft and gentle as an angel's, yet dreamy as the visions of a seer; with broad, white forehead, home of a radiant soul. He reminds us of the beautiful Joseph, 'a godly person and well favored.' Think of him as a rapt listener to the mature conversations of such men as Sir Joseph Hooker, Sir William Jenner, Baron Rothschild, Dr. Schliemann, and General di Cesnola, etc., asking or answering questions. It was the reproduction of Christ among the doctors at the age of twelve. Our youth should read his biography, which will be more fascinating than romance and more edifying than the creations of the imagination. The public-school scholar and the college student would be entranced by the epic of his life, and the 'Life of Leland Stanford, jr.,' would become as familiar as Fénelon's 'Telemachus' or Richmond's 'Dairyman's Daughter.' His tomb will be the shrine to which our youth will go as on a sacred pilgrimage, and from it they will gather grasses and flowers as mementos of what he was to them."

The Vice-Chancellor of New Jersey, in declaring that President Dodd, of the defunct Newark Savings Institution, committed contempt of court in his reckless use of its funds, has administered a scathing rebuke to both lawyers and laymen. It appears that Mr. Dodd's counsel sought to shield him, by contending that the Chancellor's order under which Mr. Dodd had conducted the institution since 1877 was granted without authority, and that therefore his violation of it could not now be punished. The Chancellor says:

"If it were possible for a party to commit a contempt of court by the inherent insolence of his defence, it would seem to be quite plain, when the circumstances under which the order alleged to have been violated was made are considered, that some of the persons now before the court on a charge of contempt should be adjudged guilty, whether their conduct prior to their appearance in court on the present charge justified a conviction or not."

He expresses indignation at such an open defiance of courts and their orders in the following forcible language:

"With my views of what constitutes propriety, decency, and manliness, it is scarcely possible for me to imagine a course of conduct more disrespectful and insulting than for a suitor to ask a judicial tribunal to give him, by the rightful exercise of its undoubted jurisdiction, aid and protection, convince the court that he is entitled by the law of the land to what he asks, cause the judgment of the court to be entered on its records, and take to himself all the benefit and the advantage that can accrue from the judgment, and then, after he has got all he can get, and when his interests or his caprice or his conceits make it desirable for him to do so, to insult the court by trampling upon its judgment and defying its authority; and when he is called upon to answer for his misconduct, to tell the court that it is without power to punish him, for it had no authority to pronounce the judgment which he convinced it that it had authority to pronounce, and which he has since contemned."

If courts would use more of this kind of reasoning and take every convenient occasion to express it as emphatically as possible, it would have a wholesome influence, both in and out of the profession of the law. It is already a practice much too common for the good of the community, for violators of the law to question its validity without seeking in any way to excuse or defend their own misconduct. And it is only a step further in the same line of defence to defy orders of court on the ground that they were granted without authority, even though such orders were obtained by the party violating them.

The "White-book" presented a few weeks ago to the German Reichstag reveals the extraordinary vigor and promptness with which Prince Bismarck has inaugurated the colonial policy of the Empire. In December, 1883, the Senates of Bremen and Hamburg were informed that, conformably to their recommendations previously solicited for the protection of German settlements and commerce in Africa, the Imperial Government had decided to send out a Consular Commissioner in a war vessel to the west coast of that Continent. Dr. Nachtigal received the appointment and, in May, 1884, the Chancellor's instructions. The objective points were all distinctly stated, and the Commissioner carried out his instructions to the letter. Toward the close of June he had concluded a treaty with the King and chiefs of Togno, or Togo, east of the English domain on the Slave Coast, by which their territories, including Lome, Bageida, and Little Popo, on the Gulf of Benin, were placed under a German protectorate. On July 11 the Commissioner's war vessel, the *Möwe*, landed at the mouth of the Cameroons, in the Bight of Biafra; and, Hamburg merchants having paved the way for Dr. Nachtigal by negotiations with two native Kings, within a few days the German flag was hoisted over all the prominent places from Bimbia to beyond Batanga (between 4° and 2° N. latitude). The same Kings had some time before offered to place their lands under an English protectorate, but delays had taken place, and the protests of a British consul who arrived on July 19 proved vain. Angra Pequena, with all the "Lüderitz Settlement" (now extending from the mouth of the Orange River, which forms the northern boundary of Cape Colony, to 26° south latitude), and the coasts of Namaqua and Damara Lands, as far north as Cape Frio, with the exception of Walfish Bay, had some time before been taken possession of with the necessary formalities, and on October 13 a communication was despatched to all the maritime Powers announcing the sum of the *faits accomplis*. None of the Powers raised any objection, and all readily accepted the subsequent invitation to attend a conference at Berlin on West African affairs, at which the German Chancellor was to preside and lead.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 31, 1884, to TUESDAY, January 6, 1885, inclusive.]

DOMESTIC.

CONGRESS reassembled on Monday. In the House of Representatives, Mr. Hiscock moved to pass, under a suspension of the rules, his bill for the reduction of internal taxes by about $40,000,000. The motion was lost, yeas 77, nays 128. A resolution was introduced in the House by Mr. Herbert (Dem., Ala.), calling on the President for his reasons in appointing American delegates to the Congo Conference. A motion to fix January 22 for the consideration of the National Bankruptcy Bill was lost, yeas 136, nays 76—not the necessary two-thirds in the affirmative. The Mexican War Pension Bill with the Senate amendments also failed of a two-thirds vote—the vote being 129 to 85.

In the Senate, Mr. Beck introduced a bill to create a Revenue Commission. It is to consist of members of the House and three Senators whose terms extend beyond the present Congress. The Secretary of the Treasury is to be ex-officio a member. The bill makes it the duty of the Commission to inquire as to what changes should be made in the existing tariff laws. It is authorized to appoint sub-committees, and to hold meetings at such places in the country as can furnish the information wanted. It is also provided that each house may select the members of the Commission from its body respectively in such manner as it may see fit. The bill was referred to the Finance Committee.

The Senate on Tuesday passed the bill forfeiting the unearned land-grants of the Oregon Central Railway. The House passed the Pension Appropriation Bill. It appropriates within $24,000 of the $60,000,000 asked for, which is $29,000,000 less than last year's appropriation.

The canvass for the United States Senatorship and the Speakership of the Assembly, in this State, was the most interesting political feature of the week. It increased in intensity as the time for the meeting of the Legislature, January 6, approached. Messrs. Evarts, Morton, and President Arthur were the leading candidates for Senator. The Morton men apparently formed a combination with those supporting Mr. Erwin, of St. Lawrence County, for Speaker. This combination developed great strength on Saturday. Other candidates for the Speakership were Messrs. Hubbell of Monroe, Howe of this city, O'Neil of Franklin, and Curtis of St. Lawrence. Mr. Hubbell had the support of most of the Arthur men. Curtis and O'Neil were free from Senatorial alliances.

In the caucus on Monday evening Mr. Erwin was nominated for Speaker by the Republicans without opposition. The Democratic caucus nominated William C. Ely, of Otsego. The Republicans nominated Mr. Chickering for Clerk. There was a late conference of anti-Morton men on the Senatorship at the Delavan House. It was decided to communicate with Mr. Evarts and Mr. Depew, and to make one of them the candidate of the opposition. On Tuesday evening Mr. Evarts was decided upon as the candidate of the anti-Morton faction.

It was announced on Saturday evening that President Arthur did not consider himself a candidate for the United States Senate. The anti-Erwin men united on Mr. Hubbell as their candidate for Speaker, all the others withdrawing. During Monday afternoon it became evident that Erwin had the canvass in his own hands, and at 4 P. M. Mr. Hubbell formally withdrew from the contest.

One of the incidents of the Senatorial canvass was a charge brought that Mr. Evarts refused to make speeches for Secretary Folger when the latter was running for Governor of this State. Frank H. Sperry, who was Mr. Folger's private secretary, said: "Since my name has been used in this connection, I have stated, as a matter of fact within my recollection, that in the fall of 1882 Mr. Evarts declined to make a speech at a public meeting in favor of the Republican State ticket, after being requested so to do by the candidate for Governor. Mr. Evarts will, without doubt, admit the truth of this statement."

Mr. Evarts said on Saturday, in reference to this letter: "If there was anything discreditable to me in my answer to Mr. Folger, let this young man, Sperry, whom, by the way, I do not know at all, publish the letter; I am not afraid of it; and until he does I think that the public will be suspicious of his story. Among other things Mr. Folger asked me to give him my opinion as to his chances. I did so, and as every one in a position to know knew at that late day, his chances were utterly hopeless. My letter may have been unsatisfactory in the news it gave, but it certainly was a kindly letter, and not intended to hurt in any way. As to my not having gone into that campaign as a speaker, I might just as well have addressed a snow storm with a view to stopping it."

The New York Legislature formally organized on Tuesday at 11 o'clock. Lieutenant Governor Hill called the Senate to order. After some preliminary business it adjourned until 12:30 P. M., when Senator McCarthy, President pro tem., called the meeting to order again. The following message was received from Governor Cleveland: "I hereby resign the office of Governor of the State of New York." A committee was appointed to notify Lieutenant-Governor Hill. They did so, and Mr. Hill replied that under the Constitution he accepted the office. They then proceeded with him to the Executive Chamber, where he assumed the office of Governor. The organization of the House was quickly effected, Mr. Erwin receiving 72 and Mr. Ely 51 votes for Speaker. The former, on taking the chair, made a speech which was heartily received. About 1:20 P. M. Governor Hill's message was received and read in both houses. It is a very long document, reviewing the affairs of the State. One of its notable passages is the following: "With an earnest conviction that the system of civil service which our State has been the first to apply is full of promise for the better administration of public trusts, and a remedy for many evils that have long been regretted, I recommend that the Legislature continue to give such countenance and support to the work of the State Commission as will best promote the system, and give to the people of the State its full benefit." Both houses have adjourned until January 13, to enable the committees to be made up.

President-elect Cleveland will leave Albany for Buffalo on January 8. He will remain in the latter city for a week or more, completely settling up his business of every nature. He will then return to Albany and occupy the house he has rented as a permanent home till he goes to Washington to be inaugurated. During the interval it is probable that he will come to New York, to remain a week or ten days, for the purpose of more conveniently receiving calls from prominent men who may wish to consult him.

Prof. J. M. Gregory, of the Federal Civil-Service Commission, recently said of Governor Cleveland's letter: "It seems to me the honest expression of sincere and settled conviction, with no hidden meaning and no contemplated afterthought. The paragraphs relating to those who 'have used their places for party purposes,' which to some of his critics appear to be a designed loophole for a wide partisan proscription, are altogether too large and plain for such construction. They are so open, frank, and fearless as to forbid all thought of their hiding any sinister and malignant meaning. President Arthur's hearty and magnanimous support of this reform will make his Administration as famous in history as it has made it popular among the best of his living countrymen. But it needs the equally hearty and magnanimous efforts and sacrifices of his successor and of the Democratic party in its turn, to fully extirpate the accursed upas tree of the patronage system. These efforts Governor Cleveland's letter fairly promises; and in this light I accept it in the full breadth of its frank assertion. If it is carried out in its letter and spirit, it will place the name of its author high in the list of the best Presidents of the republic."

Governor Cleveland has publicly denied a statement, attributed to Mr. Frank Hurd, that he was the president of a free-trade club, or had ever been connected with such an organization. Mr. Hurd says that he has been misunderstood.

Mayor Grace succeeded to his office in this city on January 1st at noon. The new Board of Aldermen assumed office on Monday. Between midnight of December 31 and noon of January 1, Mr. Kirk, President of the Board of Aldermen, claimed to be acting Mayor, and as such appointed E. T. Wood Corporation Counsel. Late on the last day of his term Mayor Edson appointed Rollin M. Squire Commissioner of Public Works. Mr. Wood's appointment has led to a complication in city affairs which has not yet been settled.

In the investigation of the appointment of United States Deputy Marshals at Cincinnati on Monday, by Mr. Springer's Congressional Committee, Marshal Wright testified that all the deputies were Republican so far as he knew; they were furnished by him with 44-calibre "bulldog" revolvers; 600 of these came to him by express from New York; he had no information that would justify him in saying that they were furnished by the Republican National Committee, but supposed they were so furnished.

A large number of mills and factories in New England, Pennsylvania, and Ohio announced a reduction of wages, to take effect on Monday, ranging from 5 to 35 per cent.

The guards were driven away on Thursday night, by a mob of strikers, from the Bristol Tunnel, on the Newark and Shawnee Road, in the Hocking Valley, Ohio, a branch of the Baltimore and Ohio Railroad, and the tunnel was set on fire. This is strictly a coal road, thirty-five miles long, over which immense quantities of coal are carried to Newark and thence to the lakes and in all directions. Both combustibles and dynamite were used, the tunnel being filled with hay. It was heavily timbered, with solid walls of coal on each side. It was still burning on Monday.

The representatives of the anthracite coal-producing and carrying companies met in this city on Wednesday afternoon to arrange the details of production during the year 1885. It was decided that the Philadelphia and Reading shall be entitled to mine 38.85 per cent. of the year's output; the Delaware, Lackawanna and Western, 16.05 per cent.; the Delaware and Hudson, 11 per cent.; the Pennsylvania Coal, 5 per cent.; the Pennsylvania Railroad, 8 per cent.; the Lehigh Valley, 19.60 per cent., and the New York, Lake Erie and Western Railroad, 1.50 per cent. The allotment was made upon the basis of a total output for the year of 30,000,000 tons.

The movement of corn from Nebraska, and especially from the Republican Valley, has begun in earnest, and the volume now going to various markets is remarkable. Both the Burlington and Missouri River and the Union Pacific are unable to meet the demands made for cars. The reason assigned is that the farmers can hold on no longer, being compelled to sell to pay taxes and meet current expenses.

East-bound passenger rates from Chicago to New York were cut on Saturday to $11 50 for first-class tickets and $8 50 for second class.

William C. Kingsley resigned on Friday evening as a trustee of the East River Bridge. He has been connected with the bridge since its inception. He was General Superintendent during the construction of the towers up to high-water mark. At the death of President Henry C. Murphy he was elected President.

A number of towns in Frederick County, Maryland, were severely shaken by an earthquake on Friday evening about 9 o'clock.

The Rev. Dr. Noah Hunt Schenck died on Sunday at his house in Brooklyn. For the last sixteen years he had been rector of St. Ann's-on-the-Heights, one of the largest and most fashionable Protestant Episcopal churches in Brooklyn.

FOREIGN.

Earthquake shocks continued to cause great alarm and destruction of property and life in Spain on Wednesday and Thursday. The greatest damage was done in the provinces of Malaga and Granada. There was further loss of life and property at Periana, Riogordo, Viñuela, and elsewhere. A thousand houses at Alhama are in ruins; 192 bodies were recovered. The King subscribed $6,000 for the relief of the sufferers. The shock at Granada on Wednesday night was very severe. Ten thousand people left the city in the panic. Albuñuelas presents an appalling sight. Half of the town is completely ruined. Churches, the convent, and the Town Hall were thrown to the ground. The inhabitants gathered outside the town. Sixty wounded persons are in a temporary hospital. One hundred and ninety-two corpses were taken from the ruins. The Mayor and several wealthy residents are among the victims. Many persons were rescued after being buried alive for twenty-four hours. Similar tales of distress come from Alhama. A fresh shock was felt in that city on Thursday night, and at Granada, Malaga, and Nerja. A national fund has been opened for the relief of the sufferers. The land tax has been omitted in the afflicted districts. Public officials will contribute one day's pay, aggregating $200,000.

Official statistics show that up to the present time 673 corpses have been recovered from the ruins in the province of Granada. Two hundred and sixty-nine bodies have been recovered in Alhama, in which city 1,400 houses were destroyed. At Albuñuelas 160 persons were killed and 260 injured, and at Arenas del Rey 135 were killed. The shocks continued at intervals throughout the week.

The Belgian delegate to the Congo Conference, who was sent to Paris to negotiate with Premier Ferry in regard to the claims of the International Association on the left bank of the Congo, has returned to Berlin. He reports that M. Ferry refused to recognize the Association's rights, and insisted that the port of the Association on the left bank of the Congo be included in the French territory. This dispute threatens to affect the result of the Congo Conference. A three hours' session of the Congo Committee was held in Berlin on Monday. The English project binding the Powers to adopt all possible means to prevent slave traffic in the Congo territory, and the American proposal to prohibit the sale of alcohol (equally on land and water), were unanimously adopted.

Just after a British Cabinet meeting on Saturday it was reported that a peremptory despatch from the Admiralty Department was received at the Portsmouth naval depot, ordering the immediate recall to their ships of all officers and seamen who were absent on leave, and the fitting out of a squadron for foreign service at the earliest possible moment. This caused a sensation. It was believed to indicate that the Cabinet had decided upon a vigorous foreign policy. Where the fleet was to operate was unknown. Among the rumors were the following: one, to the effect that England is going to make a determined resistance to the acquisition of any part of New Guinea by Germany, and thus maintain the rights which are so strenuously urged by Australia; another, that the fleet is to expel the French from the New Hebrides in order to maintain the neutrality of those islands; still another, that the men-of-war are to be sent to the southeast coast of Africa to dispute Germany's claim to St. Lucia Bay, and to assert the validity of Sir H. E. Bulwer's annexation of that region. The Admiralty on Monday denied that any unusual orders had been issued to the Channel fleet. It had previously received orders to sail this week.

Earl Granville declines, it is reported, to give his consent to the proposal to hold a formal conference on the Egyptian question at Paris. He proposes instead that informal meetings be held at the British Embassy at Paris, to be presided over by Lord Lyons, the British Ambassador, at which the other foreign ambassadors accredited to France shall have the privilege of taking part in the discussion, but not of voting. It is reported that Premier Ferry, besides agreeing to Earl Granville's proposals, offers terms for an arrangement which are likely to lead to an *entente* with England, and a general acceptance by the other Powers

Advices from Durban, South Africa, state that a British protectorate has been proclaimed over the whole coast of Pondoland.

It is reported in Vienna that the Khedive of Egypt, encouraged by the advice of the German and Russian Governments, has refused to comply with England's demand to convene the Chamber of Notables for the purpose of voting a reduction of the land tax and pronouncing in favor of the English financial proposals.

General Wolseley received on Thursday a note from General Gordon with the latter's genuine seal on it. The date is December 14, and Gordon says Khartum is all right. A messenger brought it concealed in a seam of his garment. Gordon, who estimates the Mahdi's force at from 20,000 to 80,000, spends the nights at Khartum in a ceaseless watch, visiting the outposts to see that every sentry is on the alert. During the day he sleeps. He is described as cheerful. An Arab from El Mahdi's camp has reached Dongola. He states that the False Prophet's army is a two days' march from Umderman. He recently intended to march against the Mudir of Dongola. The chiefs wanted him to lead the troops and charm off the bullets. The Mahdi thereupon told the chiefs that he had seen in a dream that the Mudir was a saint against whom it was useless to fight. This statement caused great alarm in the Mahdi's camps.

General Stewart and his flying column arrived at Korti on Monday, having successfully accomplished the march to Gakdul (ninety-seven miles) and return in one week. He captured a quantity of spoil on the route; also a Sheikh and his family. The march completely surprised the desert Arabs. A few of the Mahdi's men were captured. General Stewart left guards at Gakdul in an impregnable position, with a plentiful supply of good water and provisions.

London was again startled by a dynamite explosion on the underground railway between Gower Street and King's Cross Station at 9:30 o'clock on Friday evening. Two trains were passing each other at the time of the explosion, and were filled with passengers. In both, the lights were extinguished, windows were shattered, and the framework of several carriage doors was smashed. The passengers were greatly alarmed, and many ladies fainted. The trains resumed their journey after a delay of twenty-five minutes. At the Gower Street Station the shock was very severe. People on the platform were knocked down, the ticket collector was thrown from his box, and the houses in the vicinity were shaken. Two gentlemen and a lady were slightly injured. These are the only casualties reported. At the site of the explosion there is a hole in the solid masonry about four feet from the ground, with a diameter of four feet and a depth of five or six inches. The masonry is more or less damaged for about eight feet around the hole. The effects of this explosion correspond almost exactly with those of the explosion at the Praed Street Station fourteen months ago. As a matter of course, the outrage is ascribed to Fenians.

Colonel Majendie, Chief Inspector of Explosives, after an inspection on Saturday, decided that dynamite had been the agent used. It was probably a percussion bomb, such as was used to assassinate the Czar.

Queen Victoria has announced to the Privy Council the betrothal of Princess Beatrice to Prince Henry of Battenberg. She will, it is reported, ask Parliament for a dowry of $150,000 for her daughter, and an annuity of $30,000 for the young couple after the marriage.

Sir Andrew Clark, M. D., has ordered Mr. Gladstone to take complete rest for the present. He is suffering from sleeplessness, but was somewhat better on Monday.

Prince Bismarck, in a conversation on Thursday, denied that he had any personal enmity toward Mr. Gladstone. He said he viewed with equanimity the party struggles in England. He could have relied upon Lord Beaconsfield to keep England in accord with the rest of Europe, but, whatever Mr. Gladstone's policy might be, it was a matter of little concern to Germany. Bismarck has handed to the Bundesrath six petitions from agricultural associations for the protection of farm produce, demanding that the duties on corn, cattle, and wool be increased fourfold, and that the gold monetary standard be abolished.

General Campenon, on Saturday, resigned the portfolio of French Minister of War because Prime Minister Ferry demanded that more reinforcements should be sent to the French troops at Tonquin. General Campenon refused to accede to this, assigning as a reason that such action would compromise the mobilization of the army.

It was officially announced in Paris on Sunday that General Lewal, of the Conseil Supérieur de le Guerre, would be appointed to succeed General Campenon as French Minister of War. Gen. Lewal is a leading military authority, and his appointment is taken as an indication of vigorous and energetic measures against the Chinese. It is asserted that the management of the Tonquin campaign will now be handed over by the Ministry of Marine to the War Department. Besides reinforcements to the number of 5,000 men, which will leave next week for Tonquin, the Marine Department has been ordered to prepare four more transports to convey a new division of troops to the scene of operations. A new cruiser will be ready in February. Advices from China indicate that active war preparations continue there.

Four French men-of-war have been ordered to the Chinese waters to reinforce Admiral Courbet.

Advices from Hanoi assert, that, after the defeat of the 6,000 Chinese near Chu by General Negrier, 12,000 Chinese returned and resumed hostilities. General Negrier attacked them, penetrated their positions defended by forts and tiers of batteries, and repulsed and routed the Chinese, who after an active resistance abandoned their positions. The Chinese lost 600 killed and large numbers of wounded. The French losses in both battles were three officers wounded, nineteen men killed, and sixty-five wounded.

It is reported that the French Government is negotiating with the Government of the United States of Colombia for the cession or purchase of islets off the northwest coast of Panama, upon which to form a French naval station.

The centennial anniversary of the birth of the brothers Grimm was celebrated at the University of Berlin on Sunday and at Hanau, their birthplace, where a statue to their memory will soon be erected, funds for that purpose having been already subscribed.

The Sultan of Turkey on Friday accepted the resignation of the Grand Vizier. A ministerial crisis is threatened.

GOVERNOR CLEVELAND AND THE "WORKERS."

THERE is no part of Governor Cleveland's letter on civil-service reform more important than the warning to party "workers" now in office, that they must quit the public service when he comes into office. We believe, too, that no part of it meets with more emphatic approval from the public, although the whole of it has met with more approval from all parties than any document which has for many years issued from a President or President-elect. One of the worst features of the spoils system, and one which the Civil-Service Act cannot reach for a long time, is the practice, now old and deeply rooted, of employing more officers than are necessary, as a means of providing party politicians with the means of livelihood, and then allowing them to devote their time, or a considerable part of it, to electioneering work. There is hardly a department at Washington, except the State Department, or a large custom-house or post-office in the country, which does not contain a greater or less number of this class of officials. They cannot be got at by the civil-service reform, because they are already in office, and as they are Republicans, no Republican President has yet had the courage to dismiss them. They hold their places solely by virtue of the theory that the public offices belong not to the nation but to the party in power, and that their "bread and butter," as they call it, comes not from the national Treasury, but from the private till of the Republican party. Or, to put it a little differently, they retain their places on the theory that the national Treasury becomes for the time being, to a certain extent, the private fund of the party in power, and may be used, within certain limits, to reward purely party services.

The natural result of this is, that they are not only absent, we will not say from their official duties, for they cannot be said to have any, but from their nominal posts, a good deal of the time. They are absent weeks together during the preparation for and sitting of conventions and the election of Senators, and during hotly contested State and Federal canvasses, pulling wires, and laying pipe, and negotiating "deals" and compromises. Sometimes, as in Commissioner Dudley's case, they are absent for whole months, during which they draw and consume the money of the taxpayers with unfailing regularity, while denouncing one-half of them as thieves, cheats, and traitors. When at home they are very irregular even in the routine attendance at their offices, and give but little attention even to such light work as is assigned to them, having their minds wholly occupied with what is called "local manipulation," such as "fixing primaries," and looking after the captains of fifties and captains of tens who work under them. They are generally, too, bullies and spies towards their brother officers who are the real servants of the Government. They report those who are suspected of "disloyalty" to the party, keep them in terror of arbitrary dismissal, and see that they pay up their "assessments" to the party committees. They are, in fact, the vermin of the body politic, and the first work of any reformed Administration is to clean them out. Luckily their activity makes the process of cleaning them out a very easy one. It will hardly be possible for President Cleveland to make a mistake about them. The very pains they have taken to be noted as active party workers make their identification a very simple matter.

Their removal is necessary, too, on other grounds than the fraud they commit on the Government in drawing their salaries. It is necessary in the interest of discipline. Nothing else will convince the quiet, hard-working officers who really do the Government business, that close attention to their duties is the best policy for a Government clerk, as well as for a man in any other reputable calling. Nothing else will fortify them against the party leeches who extort money from them in campaigns, or break down the doctrine that they are under pecuniary obligations of any kind to the party in power. The state of things which reform in the civil service aims at, and which Governor Cleveland's policy will greatly hasten, is one in which Government employees will be no more excited about politics than grocers or dry-goods men, and no more expected to pay the expenses of party canvasses.

Another reason is, that, as campaigns are now carried on, there is something utterly unsuitable and unseemly in the participation of subordinate public officers, who are not expected to change with the Administration, in the usual attacks on party candidates, under one or other of whom they are sure to have to serve afterwards. It is asking too much of human nature to ask a President to tolerate in the service of which he is the head, the presence of men who have passed two or three months of the previous year in spreading charges against his moral character, and describing him as a political humbug or charlatan. We ought not to expect a Blaine to keep in office a man who has been freely denouncing him as a liar and jobber, or a Cleveland a man who has been proclaiming to the world that he is a profligate, and drunkard, and ignoramus. In short, there is no hardship in the world in requiring permanent office-holders to keep off the stump, to take none of the time they owe to the Government for "politics," in any sense of the term, and to imitate the example of the bulk of the American people during political campaigns, in attending to their own business, and in keeping their tongues from lying, evil speaking, and slandering. They are no better judges of candidates or parties than any other class of the community, and have no lessons in government to teach anybody.

THE MOURNFUL PAST.

THE controversy between the Republican managers as to who is to blame for the late defeat, continues, and becomes more acrimonious. The Jones party are defending themselves by accusing the Arthur party of lukewarmness or covert hostility toward the ticket. The Arthur party deny this, and produce Senator Hawley as a witness, and retort that the Committee conducted the campaign from the beginning on the theory that New York was not needed to elect Blaine, and was grossly incompetent besides. Then there is a side attack on Mr. Evarts, as a candidate for Senator, arising out of his refusal to make a speech for Judge Folger in 1882, and Mr. Blaine has indicated that he bears a grudge to the President and Secretary Frelinghuysen by failing to call on either of these gentlemen on New Year's Day, while calling on Secretary Teller and Secretary Lincoln, who have apparently dealt handsomely with him. Finally, Mrs. Blaine has curtly refused to be present at a reception in the White House because of President Arthur's treatment of her husband. All this, too, is over and above the steady warfare against the Mugwumps, which now rages all over the country. Some of the organs have even turned their batteries on the Blaine clergy, whom they courted so much during the campaign, and now boldly declare that even the divines who assembled to pay their respects to Blaine in this city, in obedience to the Jones advertisement, were a discredit to their cloth, and that ministers ought to keep out of politics. In fact, whichever way one looks in the Republican camp, one sees parties of greater or less size engaged in fisticuffs over the late election.

What is the object of all this it is impossible to say. Usually it is only hopeless people who quarrel over what might have been. The hopeful and practical are generally too much occupied about the future to care much about the past. Practical politicians especially, in all countries, who do not consider their career closed, are generally so busy about the next election that they care no more about the last one than about any other historical event. When the Republican party was last defeated, in 1856, not one word of recrimination was heard. On the contrary, the managers filled the whole country with the sounds of preparation for the mighty and decisive struggle of 1860. The speakers swarmed in all the halls and lecture-rooms, preaching the principles of the party and trying to make converts. The party newspapers were wholly devoted to the work of conversion—that is, the work of getting more votes for the next election. The sapient plan of abusing and insulting everybody who voted for Buchanan was never thought of; on the contrary, all the energies of the party leaders were devoted to getting those who voted wrong in 1856, to vote right in 1860, and particularly the "Americans" who voted for Fremont and Johnston. This, in fact, is the way parties are built up and win victories. A party in a minority can only become majority by getting people who did not vote their ticket last time to vote it next time. In short, the next election is every good politician's sole concern. The last election concerns him only as showing in what quarters he needs to be more persuasive and conciliatory than he has been. Using it to show him in what quarters to be abusive and repelling, and whom he can most surely discourage from ever voting his ticket, is a distinctly Republican invention. No contrivance in the remotest degree resembling it is to be found in any political patent office or museum.

Some people try to account for it by ascribing it to the delusion that the last election is to be held over again in 1888, like a "new trial" ordered by the courts, with Blaine again as the candidate, he in the meantime acting as "the leader" of the party in Washington. But this only makes the matter worse, because a

majority will still be needed in order to elect him, and he can only get a majority by making more friends. At present he and his disciples seem to be busy making more enemies. The first time he opened his lips after his defeat he hurled defiance at the whole South. His next utterance was a letter accusing the people of Indiana of such corruption that an honest jury could not be found in the State to try the question whether he had been legally married at a certain date. He is now apparently trying to alienate and disgust permanently all those Republicans who belong to what is called the "Arthur crowd" in this State. His partisans are everywhere busy, too, discouraging everybody who did not vote the Republican ticket in November, but would be likely to vote it again, from doing so. Nothing like all this, we believe, has ever been seen in politics before. It most resembles the efforts of a ball committee to watch over the invitations so as to make the company select. That it is a policy which can result in any way but disaster, it is impossible to suppose. To make it succeed we should have to change the form of the government, besides making some slight modifications in human nature. Blaine's defeat was not decisive enough—that is, the majority against him was perhaps not large enough—to insure his prompt disappearance from the arena. He and his disciples are now, however, doing the work in the way of his political extinction which the election left undone.

MORE ABOUT THE CONGO CONFERENCE.

A RESOLUTION has, we are glad to see, been introduced in the House of Representatives, calling for information about the appearance of two American diplomatists at the Congo Conference, to assist in disposing of a piece of the African Continent as large as the United States east of the Mississippi. The small amount of attention which this has attracted, considering the position we are taking up with regard to the Nicaraguan Canal, is very extraordinary. Mr. Frelinghuysen, we believe, when his attention was called to the inconsistency of it the other day, excused it on the ground that the territory the Conference was cutting up was occupied only by barbarous tribes; but what this had to do with the matter it is hard to see. The Monroe Doctrine does not say that no European Power shall meddle with any portion of this continent now inhabited by civilized men. It says that "the European system" shall not be extended to any part of this continent, no matter what kind of people live on it. Moreover, there are very extensive portions of this continent which are either not peopled at all, or peopled only by Indians but little, if at all, above the inhabitants of the Congo Basin in point of civilization. This is, in fact, true of a considerable part of Central America. It appears, also, that the Congo Basin is much more densely peopled than any portion of this continent. Calculations as to population in such a region must of course be very vague, but the estimate on which the explorers who are best acquainted with it have agreed, puts the number of its inhabitants at 80,000,000, or 30,000,000 more than we have ourselves.

However, we are not concerned now on behalf of the people of the Congo Basin. We have no doubt the proceedings of the Conference will do them a world of good. What we are concerned about is the participation of this Government in a European Congress, engaged in the division of territory on a continent beyond the ocean, in which we have not a sing lecolony, factory, or market. The appearance of our agents in such a Congress indicates nothing, therefore, but our willingness to become part of the "European system," to share in its deliberations and votes, and abide by its decisions. That this position can be successfully defended while insisting on the absolute exclusion of Europe from all political influence on this continent, is impossible. We must be worsted in any discussion which may arise out of it. We cannot maintain that our interest in the spread of civilization justifies us in joining Europe in settling the fate of Africa, when we deny that any interest in civilization would warrant Europe in settling the fate of Central and South America. Surely, if we admit that England, France, Germany, Italy, Austria, Russia, Belgium, and Portugal are not enough to manage the affairs of Central Africa, we cannot decently hold that the United States alone are competent to take charge of the American Continent from the Rio Grande to Cape Horn, covered as it is in great part either by pure savagery, or by "rum, Romanism, and rebellion."

We have called attention already to the fact that our representatives have not only joined in providing this vast African territory with a government, but in dedicating it to British free trade, and in forbidding its infant industries to be nourished by a tariff, or its shipping to be built up by bounties or navigation laws. Its present Government is what is called the "International Association," in which Belgium plays the principal part, but which is thus far organized somewhat like a mercantile corporation. It is now proposed, however, to convert it into a monarchy for some of the impecunious European princes, and this work must also be done by the Conference which called the new State into existence. Are our representatives to take part in this proceeding also? If not, why not?

There is another consideration arising out of the matter which applies also to the Nicaragua Canal project. Participation in a European Congress for distribution or redistribution of territory in any part of the world always implies willingness to contribute to whatever physical force may be necessary to carry out its decrees. Generally the employment of the necessary force is left to the Power most interested in the result, but sometimes several Powers are called on to contribute something, and most is expected from those whose resources are greatest. In fact, it is an unwritten law of these combinations that poor Powers, which have an empty treasury and a small army and navy, shall take back seats in the deliberations.

This is of course a somewhat humiliating position, but small States, like poor men, have to put up with a good deal of humiliation. It is certainly a position which no American would like to see the United States occupy. Nevertheless, we have got into it on this African business. Nobody can tell what complications may arise out of the scramble for colonies in which the leading Powers of Europe are now engaged, or what effect they may have on the new Congo state. We may yet be called on for the physical assistance in supporting the decisions of the Conference which our participation in it tacitly promises. Can we give it? Certainly not. We have neither army nor navy to take part in transatlantic warfare, were we never so desirous of doing so. Our men-of-war dare not approach the African coast if warned off by either England, France, Germany, or Italy. Time was when ships of war fit to cope with almost anything afloat could be created by taking large merchant vessels, putting portholes in them, arming them with heavy guns, and putting good crews and commanders aboard of them. But that time is gone as completely as the time when men fought battles with bows and arrows. A man-of-war now is one of the most costly, complicated, and specialized works of human ingenuity, and takes twice as long to construct as any European war of this century since Waterloo has lasted.

We again ask, therefore, and hope Congress will find out, what led to Mr. Sanford's appointment, and why Mr. Kasson was allowed to help him, and whether the effect of their appearance at the Conference on our own position with regard to the Isthmus was duly considered when the step was taken.

THE ENGLISH REDISTRIBUTION BILL.

THE English Parliament having adjourned till the 19th of February, the country is left to think over the great change to which it has so suddenly and unexpectedly pledged itself. True it is, that the Redistribution Bill has many discussions to pass through before it can become an act, and that many attempts from different quarters will be made to alter it in committee. The general belief, however, is that it will not be materially changed from its present shape, and in particular that the two chief points which make it important will be preserved—the transference of seats from small boroughs to the large cities and populous counties, and the general establishment of one-membered constituencies. The second of these features excites much uneasiness; but as it is approved by the Tory leaders, no opposition that can be raised to it is likely to prevail against them allied with the Ministry; nor can the Ministry, who have allowed it to be part of the compact which produced the bill, recede from it with honor. It is this union of the chiefs of the two parties that makes probable the passing of a measure which under other circumstances would have run the greatest risks of failure, because the temptation to disaffected Ministerialists to join the Tories on some critical division would have been almost irresistible, and those who think it important that the reallotment of seats should be carried out at the earliest possible moment, find in this a justification of the unprecedented combination of the heads of hostile parties which has produced the scheme.

Assuming, therefore, as nearly everybody in England, whether rightly or wrongly, does assume, that the bill will pass much in its present

shape, the question is, how it will affect the balance of English politics. Will it check or accelerate English progress towards complete democracy? Will it make the ebbs and floods of popular opinion, such as were witnessed in 1874 and 1880, more or less sudden and violent? Will it strengthen or weaken the Crown and the House of Lords?

That these questions are obscure, and will be answered in different ways by different persons, is evident from the fact that both the great parties support the bill, which neither would do did it expect serious evil from it. Nearly all Liberals think it will strengthen the Liberal party, and say so openly. The Tories are less demonstrative, but one must suppose that Lord Salisbury and his colleagues believe it will not damage them, else why should they have consented to it when they might easily have forced a dissolution of Parliament and kept it off for several years? Any one who tries to predict the result of the bill must therefore do so with diffidence, aware that nothing more than a fair conjecture can be made as to a problem depending on many factors, some of them most imperfectly known. What are these factors?

The first and the most obscure is the disposition of the agricultural laborers. The Franchise Bill (now an act) gives them votes, the Redistribution Bill gives them a representation in Parliament proportioned to their numbers. They will be numerous enough, if they act together, to return any member they like in those purely agricultural counties which have hitherto been the stronghold of the Tory party. Wonderfully little is known about them, for they have been hitherto inarticulate, neglected by the classes above, except by the clergyman and his wife, whose benevolent but often officious patronage they do not always appreciate. The most probable opinion is that they will vote with the Squire, the parson, and their employer, the farmer—that is to say, vote Tory. But there are districts where they have formed trade-unions to obtain a rise of wages, where political agitators have obtained a hearing from them, where the bolder spirits are disposed to revolt against the domination of the farmer. To what extent the elements of revolt prevail is quite uncertain. Some years may be needed to let them develop themselves. On the whole, one may conclude that in most counties the laborers will at first follow the lead of the Squire, who has been a sort of local deity to them, but that where the unions are strong, and where the spread of Nonconformity has shaken the hold of the Established Church, independence will begin to show itself, and will in course of time extend further. It would thus appear that the best which the Tories can hope for is to retain for the present their hold on the agricultural district—that is to say, to return a somewhat but not greatly larger number of agricultural Tory members than they do now. We say "not greatly larger," because the population of the agricultural counties is comparatively thin, and the increase to their representation will not therefore be large. The counties, however, are not wholly agricultural. In the mining districts, such as Northumberland and Durham; in the manufacturing districts, such as Lancashire and Yorkshire; in the neighborhood of London and other great cities, there is a population substantially urban and not rural in its character—a population where the influence of farmers and squires counts for little. Hitherto it has been only the richer part of this population that has enjoyed the suffrage, but now the whole of the humbler class will have it, just as in the towns. In the towns this class is mainly Liberal; it will presumably be so in the counties also. Now these urban counties, as one may call them, will command fully one-half of the whole county representation over England and Scotland. They have hitherto given more members to the Tories than to the Liberals; in future they will probably give more to the Liberals than to the Tories. Here, therefore, there seems a prospect of a Liberal gain which can hardly be less than fifteen seats and may be considerably more, and which will equal or outbalance such gain as the most sanguine Tories can look for from the additional seats given to agricultural counties.

There remain the new seats given to the great cities. The seven cities of London, Liverpool, Manchester (with Salford), Birmingham, Leeds, Sheffield, and Bristol, now return forty members, and will in future return one hundred members. These members will be returned not by the cities as a whole, but by divisions, each being cut up into three, four, five, or more divisions (according to its size), each of which will have one member. The Tory chiefs are understood to have stipulated for this system in the hope that the residential districts, as they are called, the districts inhabited by the wealthier people, such as parts of Marylebone, Westminster, and Chelsea, in London, and some of the suburban parts of Birmingham and Manchester, will return Tory candidates who would have little chance if the city voted for all its members in one large list. This will probably happen, but to no very large extent. The seven cities above mentioned now return thirteen Tory and twenty-seven Liberal members. So far as one can predict, they will in future return about twenty-four Tories and seventy-three Liberals, the odd three being probably Parnellites. Here, therefore, there is a prospect of a further and more serious loss for the Tory party. Their greater security in the residential quarters will be ill compensated by their losses in the poorer districts, where, both in London and in the manufacturing cities, the Radicals have every prospect of obtaining decided majorities in the new divisions. The smaller cities are in general untouched by the bill, though a few of them receive an additional member; but in these cities the Liberals have a considerable majority already. The case therefore stands thus: In the agricultural county divisions the Tories will probably gain something, though how long they may hold that gain is hard to predict. In the manufacturing, mining, and suburban county divisions they will lose something. In the large cities they will lose a good deal. In the smaller cities they are in a minority already. It is true that by the extinction of the small boroughs the Liberals suffer rather more than do the Tories, but the difference is not great, and certainly much less than the Liberal gain which may be expected to follow from the new allotment.

What we have said hitherto refers to England only. Let us now see how the changes in Scotland and Ireland affect the prospects of parties. Scotland receives twelve new seats, of which it is hardly possible that more than three can be won by Tories, so strongly does the current run in favor of Mr. Gladstone in that country; while the extension of the county franchise will take away from them three which they now hold. Here there is a further gain of twelve seats to the Liberals. It is more difficult to forecast the result in Ireland, where the extinction of small boroughs is great, and where the lowering of the franchise, which was previously fixed at a higher point both in boroughs and in counties than in England or Scotland, changes more largely than in those countries the character of the constituencies. But the probabilities are that out of the one hundred and three members which Ireland is to keep, more than seventy will fall to the extreme Nationalists, the remainder being divided, probably nearly equally, between Tories and Liberals. The Liberal loss will be larger here than the Tory loss, but the Liberal loss will mean a gain not to the Tories, but to a third section equally hostile to both the British parties.

It appears, therefore, if the foregoing considerations be well founded, that the general result over the three kingdoms will be to increase the strength of the Government, which already commands a good majority, and to diminish that of the Opposition. In England the Liberals stand to gain something in the counties and more in the cities. In Scotland they must gain from ten to twelve seats. In Ireland they suffer, some fifteen, twenty, or even twenty-five seats passing over from them to the Nationalists; but this loss does not counterbalance their probable English and Scottish gains, and does not enure to the benefit of the Tories. Mr. Gladstone will, therefore, apparently obtain as large a majority of the whole House of Commons as he has now, and a larger one as against the regular Tory Opposition.

Nor is this the only result to be expected. It is generally believed that the Liberal majority will be not only, so far as England and Scotland are concerned, increased in quantity, but altered in quality. That majority has hitherto included a considerable number of members whom it is the fashion to call Whigs, for the sake of implying that they represent the Liberalism rather of forty years ago than of our own time, but who may be more correctly described as moderate Liberals. They call themselves "cautious or conservative Liberals"; their enemies call them "weak-kneed Liberals." They are usually either the scions of some land-holding and titled family, or else rich men whom wealth has made conservative; and they represent either a county or a comparatively small town. The extinction of the small boroughs will hit them pretty hard, and the changes in the counties may also damage them, because such seats as the Tories gain there, will probably be gained at their expense. That they will disappear as individuals is hardly likely, because the landed aristocracy and the possessors of wealth acquired in commerce are both such important classes in England that persons belonging to them are likely to succeed as candidates under any system. But they will in future have to sit for county divisions in which the poorer class will furnish the immense majority of

voters, or for city divisions in which the Radical element is already strong, and will tend to become stronger. Hence, to retain their seats, they will have to alter, if not their principles, at least their professions and attitude, and to become more pronouncedly Liberal than they have heretofore been. Those who refuse to be so modified may have to retire and see their places filled by politicians of a more aggressive type. Moreover, all members will, according to present appearances, be more closely watched by and dependent on their constituents than has hitherto been the case. Now the constituencies are generally more Radical than the members; hence this closer dependence will tend to radicalize all Liberal members, and deepen the line of their politics.

Against this view it is urged that on the system of one-membered divisions a merely local candidate will have greater chances of success than he has now; that such a local candidate will be, in the counties, a landlord, in the cities a large employer of labor; that such persons are usually moderate in their Liberalism, and that therefore, through them, moderate Liberalism will hold its ground. There is some force in this, though how much, only experience can show. But it must be remembered that although such a local candidate may himself be Whiggish rather than Radical in his tendencies, his constituents will, in the towns and in the so-called urban counties, be chiefly Radicals; and their tendencies may well overbear his personal inclinations. On the whole, the most probable conclusion is that the House of Commons will be more Radical than heretofore, more in sympathy with the masses of the people, more disposed to drastic legislation.

Although most Liberals welcome this prospect, and exult over that extinction of the Whigs which they deem near at hand, there are some who discern a bad side to it. In their view the cautious Liberals acted as a useful check on the vehemence of the more advanced men, and formed a sort of link between the Liberal party and the more progressive and moderate wing of the Tory party, preventing party strife from becoming too bitter. They fear that if the Liberal party grows too Radical, moderate men may go over to the Tories; they fear that if it becomes too numerous in the House of Commons, it may break up into sections, or may, by ill-considered violence, provoke a reaction similar to that which followed the Reform Act of 1832. There is ground for these apprehensions, but it is hard to estimate their validity apart from the presence and conduct of individual leaders. If Mr. Gladstone continues at the head of the Ministry after the next general election, he will probably be able to restrain the impetuosity of the extreme section and to keep his whole party together. If he retires, the task will prove a more difficult one to any successor. The advance of popular power does not in England, or perhaps in any country, eliminate the personal element from politics, although it obliges the leader to adapt himself more and more to the wishes and emotions of his followers.

GERMAN OPERA IN NEW YORK.

It is well known that the plan of giving German opera here was seized upon as a last expedient when it was found impossible to organize another Italian company without risking a repetition of last year's disasters. When the first steps had been taken to secure a German company, many expressed their misgivings, and we ourselves gave reasons in October why it was "quite possible that this winter the verdict will seem unfavorable to German opera in New York." The management betrayed its apprehensions by dodging the frank advertisement "German Opera," and calling it "Opera in German" or simply "Grand Opera." The results of the first two weeks sufficed to sweep away these doubts, and "German Opera" may now be printed in the boldest type without fear of frightening anybody.

Eight weeks ago the season opened at the Metropolitan, and we are now able to sum up the results of the first two months. They include 33 performances of 10 different operas. Wagner leads with 13 performances ("Tannhäuser" 7, "Lohengrin" 6); Meyerbeer follows with 7 ("Prophète" 4, "Huguenots" 3); Beethoven and Rossini have 3 each; Mozart, Weber, Auber 2; Verdi 1. That Wagner should have almost double the number of any other composer is not strange, as the same is the case at the leading opera-houses in Germany. Wagner's operas have the great advantage over others of giving satisfaction to all classes of opera-goers. For those who desire a good drama or a feast for the eyes only, they offer more entertainment even than Meyerbeer's, and Wagner's scenic effects have the advantage over Meyerbeer's of being the necessary outcome of the situation, and not dragged on the stage for their own sake; so that, for those who are able to appreciate good music, Wagner's operas offer an abundance of entertainment not remotely approached by those of any other composer. Three other works of his are down for performance this year, "Rienzi," "Flying Dutchman," and "Walküre"; and now that Materna, the greatest living interpreter of these operas, has arrived, a fresh interest will be added to the gala nights at the Metropolitan.

The results achieved so far are important from several points of view, and by far the most important is that they have struck a deadly blow at the star system. The large audiences at the Metropolitan have borne witness to the fact that *good* operas prove attractive, even without the presence of an operatic Jumbo. Several of the singers in Dr. Damrosch's company are indeed famous artists, but they were comparatively unknown in New York when they arrived, and they did not fill the house by the mere magic of their names. But they gave first-class operas with a good ensemble and succeeded. From this, managers may learn a lesson that will enable them in future to make courageous resistance to the exorbitant demands of fashionable *prime donne*. These supercilious singers have been often warned that they were killing the goose that lays the golden eggs; and now, it seems, they have actually done so. No doubt the directors of the Metropolitan would have been glad to engage the services of Mme. Nilsson at $1,000 or $1,500 an evening, but she demanded $2,500, and this absurd demand was very properly refused. Then she organized a concert company and made a provincial tour in England, which ended in a financial deficit. In this case, instead of pocketing her $2,000 a night, she suffered the losses which are commonly borne by those victims of the star system, the managers. Next season the offer of $1,000 an evening will probably be renewed, and should she again refuse, the directors of the Metropolitan would be very foolish if they did not persevere in the policy inaugurated this year. After all, Nilsson's repertory is limited to half a dozen familiar operas, and in some of these—as "Lohengrin"—she is no better than several German singers whose demands are much more modest. Among them are Sucher, Malten, and Lehmann, all of whom are equal to Nilsson, although they have not that operatic nimbus about them which the fetish-loving public has bestowed on Nilsson and Patti.

As for Patti, and all other light soprani, they are of course out of the question, because they could never be heard to advantage in the vast Metropolitan. When the architect planned the dimensions of that house he unconsciously decreed that it must be forever devoted to grand opera—that is, to German opera, for most grand operas are the works of German composers. And it must be admitted that, with such acoustic improvements as have been made, and with the strong voices of German singers and a large orchestra, such as Dr. Damrosch leads, German opera sounds well in the new house. For concert purposes the Metropolitan stage is useless, as was shown at the Wagner concerts. But in the place built for the orchestra, below the level of the parquet, the music sounds well; and it is but fair to the architect to give him credit for this circumstance. The immense proportions of the stage are also of great advantage in giving due emphasis to scenic display, in which the Metropolitan is so immeasurably superior to the Academy under Mr. Mapleson's régime.

Next to the blow struck at the star system, the most important lesson taught by the success of German opera is that American audiences are not so far behind those of European capitals in musical culture as the character of our operatic entertainments heretofore has implied. The antiquated Bellini, for example, who was completely ignored in London, Vienna, and Berlin last year, continued to hold the place of honor in Mr. Mapleson's repertory. And there seemed to be a reason for this preference inasmuch as the Academy was full on Bellini nights, and not full on Meyerbeer, Wagner, and Mozart nights. But the German opera at the Metropolitan has exposed the fallacy implied in this reasoning. It was not Bellini that attracted people to the Academy, but Patti. For on "off-nights" not a soul seemed to care for "Sonnambula." Mr. Mapleson organized a company especially adapted to the style of Bellini; when they attempted Meyerbeer or Wagner they failed; consequently people who had been "sold" once refused to go again, and the result was the notion that Meyerbeer and Wagner did not "draw." How they do draw when they are properly performed by a company specially adapted for their styles, is shown by the Metropolitan statistics we have just given. Even with the assistance of a temporary craze for the joint appearance of Patti and Scalchi, Mr. Mapleson's greatest success

in his season just ended was four performances of "Semiramide"; whereas in the same space of time, at the other house, "Lohengrin" was given six and "Tannhäuser" five times. Too much emphasis cannot be placed on this comparison, in vindication of the musical taste and predilection of New York audiences.

Another straw shows the direction of the wind. The so-called Milan Grand Opera Company was dissolved a fortnight ago with a deficit of $60,000. This company gave performances of old-fashioned operas, with a very fair ensemble, and at the moderate price of $1 50 for the best seats. But they found no hearers, and everybody seems to be at a loss to account for this phenomenon. The explanation is very simple. The lyric operas they gave are "played out," and no one goes to hear them for their own sake, but only to see (rather than hear) a famous "star." But the Milan company had no "star"; hence they found no favor, notwithstanding their low prices.

THE REVISION OF THE FRENCH CONSTITUTION.

PARIS, December 18, 1884.

IT may be said not inappropriately of a constitution, as of Cæsar's wife, that it should be above suspicion. This has not been the case with our new republican Constitution, framed in 1871 and 1872; it has always been denounced by the republicans as the work of the monarchical party, and this year it has been partly revised. The republic has now lived fourteen years, and the republicans might have been contented with this great fact; the defects of the Constitution, if it had any defects, have not been such as to endanger the vitality of the republic—its organic parts—or such as to make the working of parliamentary institutions impossible. It is quite true that the majority at Versailles which framed the present Constitution had no passion for the republican form of government. The republic was accepted as a necessity, and was organized in such a way that it could be altered in the easiest manner possible—that it could even be transformed into a monarchy. This transformation was in the minds of the "Constituants" of Versailles. They said to themselves: We will give to France all the machinery of parliamentary government—two legislative Chambers, a Chamber of Deputies elected by universal suffrage, an Upper Chamber with very definite powers. As for the executive, since it cannot be a king [for the Comte de Chambord had been pronounced impossible], we will call him a president, and we will allow him the power of dissolving the popular Chamber with the consent of the Senate; we will also give him the power to choose his ministers and to form cabinets.

This Constitution was not embodied in a single law—it was made piecemeal, and is to be found in several laws which are called constitutional laws. The result of this has been good and bad at the same time. It has been good in that our present Constitution is not an ideal and theoretical work, but organic, having grown out of the necessities felt first by M. Thiers, afterward by Marshal MacMahon: it has been experimental. But this organic development has had one bad result, which is that in reality there is no such thing as a Constitution, as the word was once understood. If you enter a bookseller's shop and ask for a copy of the French Constitution, the bookseller will tell you that he has none and that there is no such thing. The Constitution cannot be read to the children in the schools, and it is no exaggeration to say that the revision of the Constitution was made before the majority of Frenchmen fairly knew and understood its character.

A constitution ought not to be treated as roughly as an ordinary law; it ought to have something almost sacred in its character. In the absence of a dynasty, of a visible form of authority, of a living incarnation of power, it ought to be regarded as placed above everything, as uniting the past with the present, and as being destined to unite the present with the future. It ought to be guarded against the caprice, the violence, the passions of the multitude. The great men who framed the American Constitution well understood this necessity, and they succeeded in creating in the American people a feeling of respect and of regard for the higher constitutional law which is one of the great conservative forces that maintain the Union. The revision of the American Constitution is no joke; something more than a chance majority in Congress is necessary to alter it. It is not so in France; it was decided at Versailles that if there be a majority even of one vote in each of the two Chambers in favor of a revision, the two Chambers unite themselves at once and form *de facto* a new Constitutional Congress. Great discussions have taken place this year on the way in which the revision is introduced in such a Congress. The Cabinet brought in a programme of revision, and this programme was accepted in both Chambers. But clearly such a programme is not necessary; there is no limitation whatever to the right of revision, and consequently a programme, whatever it may be, can offer no real limitation to the work of the Congress. It is not difficult to imagine circumstances of national emotion or peril, which may lead the two Chambers to form a Congress; a majority of one is enough in the House of Deputies and in the Senate, and by this small majority a Congress may be formed, and then, without taking the sense of the people, without consulting the President, or even against the will of the President, without allowing a Cabinet to trace limits to its powers, the Congress can act in a truly sovereign manner, and completely undo what former Congresses have done. The destiny of France can thus be placed at the mercy of an unscrupulous majority.

The necessity for a revision of the existing Constitution was not felt in the country: there was no agitation in favor of it; the movement was totally artificial. How could the people think of revising what they had hardly had time to know and to understand? The politicians, however, wished for a revision, and their object was twofold. In the first place, they wished to place the form of government beyond question, out of the reach of a Congress. In the second place, they desired to give a more democratic character to the Senate. I will not enter into the details of the controversy which took place on the various articles of the revision, and will only dwell on the main points. The two Chambers, united in Congress, have decided that the form of government ceases to be a matter subject to revision; it has decided that while future Congresses may still be free to change everything, they cannot touch the principle of the Republic—they cannot make an Empire or a Monarchy. How much value can we attach to such a limitation? It is inscribed in an article of the present Constitutional law, but this article can be repealed by a Congress. It is difficult to imagine what could stand in the way of a Congress, determined on a change in the form of government, if ever the people should give its confidence to such a Congress and persist in electing Deputies and Senators in view of such a change. That popular sovereignty cannot abdicate is one of the mottoes of the old republican school; a Congress can do everything except to make a King. These formulas may satisfy the most absolute minds, but their satisfaction is, perforce, of a platonic character. Nations as well as individuals may sometimes find it to their advantage to renounce a certain portion of freedom, in view of some distinct and positive advantage.

I must mention, in the same order of ideas, an article which has been inserted in the Constituant law, and in virtue of which no person belonging to any of the families which have once reigned in France can be elected to the post of President. I said that this prohibition belongs to the same order of ideas as the interdiction to discuss or change the form of government, since it shows in the republican party an exaggerated fear of monarchy; in other respects, it is a contradiction of these ideas. If the sovereignty of the people must be placed above all changes, this sovereignty ought not to be chained, and the nation ought to be allowed to choose any President it likes to have. The ostracism of all the members of royal or imperial families is in reality a limitation of the popular sovereignty.

Little practical importance must be attached to the changes which I have just mentioned: they will have no influence on the wishes, the hopes, the aspirations of parties, or on the government of the country. The same cannot be said of the important change which concerns the Senate. Congress has erased from the Constitutional law all the articles which concerned the election of the Senate, and has decided that there must be a special law on this question, having the same character as any other law, and therefore alterable by the two Chambers, without the necessity of a Constitutional Congress. This seemed logical enough, as there exists such a law for the election of the House of Deputies. Let us now examine the new law on the Senate, which was the corollary of the change made in the Constitution.

The Constituants of Versailles gave a double origin to the Senators: seventy-five of them were elected by the Constituant Assembly for life, and it was decided that when one of these "inamovibles" died, another one should be elected in his place by the Senate itself. The great majority of the Senators, those who were not irremovable, were to be elected not by universal suffrage, but in each department by an electoral college composed of the councillors-general (the *Conseil-Général* is the board which controls the finances, roads, prisons, asylums of the department) and of the representatives of the *communes* or townships. Each commune was to have one delegate or senatorial elector, whatever its population. It was on account of this origin that Gambetta once called the Senate the "Great Council of the Communes." This system of representation was quite novel. In the absence of an hereditary aristocracy, in a centralized country in which there is no federation of States, it will always be difficult to constitute a High Chamber. The privilege given to each township, even to the smallest, in the nomination of the Senators was intended to counteract the brute force of numbers, which alone is felt in the election of the Deputies. It was thought that by increasing the political power of the villages, a conservative force would be created, and it must be admitted, in fact, that the system has worked well, and that the Senators chosen according to the system which I have just described are a superior class of men, more enlightened, more independent. They have ties with the departments, they represent landed, industrial, or commercial wealth and interests. As a rule, they have not their fortunes to make, and they don't take out letters of marque on the fortune of the country. The Deputies profess to be the true representatives of the people; but they seem to represent especially the lowest instincts of the population. Some of them have been

brought before the courts of justice, some have been obliged to leave France in order to escape prison; we have heard of few such scandals in connection with the members of the Senate.

The new electoral law which will now be applied to the Senate does away with the "inamovibles," who are replaced by Senators elected not for life, but only for nine years. The institution of Senators for life has been condemned as too aristocratic; and if the Chamber of Deputies had had its will completely, there would have been no Senators elected by the Senate itself for nine years. It has been agreed, also, that the townships shall have a sort of proportional representation in the College of Senatorial Electors. The arithmetic law of proportion has, however, not been admitted: the townships and cities will have delegates in unequal numbers, but these numbers will always be small. It is needless to give figures here; the principle of the first law was the predominance of the rural element; the new law does not sacrifice the rural element, but it takes something from its strength and adds it to the strength of the larger cities.

On the whole, the work of revision has been done in what is commonly called a democratic spirit. The changes which have been made are some futile and nominal, the others tend to diminish the conservative element in the Senate. But the new Electoral Colleges will probably not be as different from the old as the authors of this revision desired.

THE RIVIERA FOR WINTER LIVING.

ALASSIO, November 29.

IT is now about fifty years since the residence of Lord Brougham at Cannes directed the attention of English people to the charms and advantages of that region as a winter health resort. Nice, Cannes, Hyères were almost the only places well known to the limited public of the days before express trains. Then, some twenty years ago, appeared the clever book of Doctor Bennett, 'Winter and Spring on the Shores of the Mediterranean.' It smacked strongly of the advertisement, but it answered its purpose. Mentone rose rapidly into fame and favor. Little by little it was discovered that the entire Riviera di Genova, both east and west, was full of nooks as sheltered as the famous East Bay of Mentone, and the winter stations soon included San Remo, Bordighera, Alassio, Arenzano, Pegli, Nervi, Rapallo, Santa Margherita. The last addition is Ospedaletti, where a French company has lately built a casino, a grand hotel, and a little village of villas in a situation unequalled perhaps for real invalids, but with little to recommend it to the two principal classes among winter visitors—those who find themselves fairly well as long as they are here, and those who come merely in search of pleasure. Both of these classes, living in the open air, would prefer to Ospedaletti places where there is a greater variety of scenery and occupation.

It may be that to-day the physicians who believe that nothing cures like the remedy in vogue have ceased to talk about the Riviera as much as they did a few years ago. In the course of time the Riviera has abdicated its post as panacea and has taken the surer position of standard remedy. Seconded by prudence and good sense on the part of the patient, it still works its miracles, and it has established as an undisputed fact that for many invalids its climate has no equal in Europe. It is mild and dry, with little rain and much sunshine. Fogs are unknown, snow and frost make but rare appearances—one or two in the course of two or three years, and then for scarcely long enough time to be noted. The temperature is such that the gardens are never without flowers. We begin December with all sorts of roses, passion flowers, geraniums, salvias, heliotropes, and a hundred plants that, in the north, are preserved only under glass. The almond trees blossom in January, in February comes the exquisite bloom of a southern spring. Add to the considerations of climate those of landscape and civilization—that the coast from Marseilles to Spezia offers a succession of beauties such as can nowhere be surpassed, and that every comfort and luxury of the educated man is of easy access from any point along the whole line—it is evident that the fashion among physicians may send patients to high Alpine valleys or to lone islands, but that the Riviera of Genoa will never lack for winter visitors.

Little by little, however, this hibernation has taken on a character that is worth noting, as it has an increasing effect on society in England, Paris, and elsewhere. The dismal table d'hôte, lined chiefly with the gentler sex in some of its sterner types—people who all day long have dotted the hill slopes, hunting out the rare flowers or caricaturing nature in water-colors in their albums; the occasional travelling carriage, putting four days between Nice and Genoa, with three or four horses, valet and maid in the rumble, and the faces inside that one seeks to read and classify in the glimpse one has in passing—these still represent the winter movement to large numbers of travellers, at least in the quieter places. But even this sort of movement has assumed enormous proportions. Mentone has about fifty hotels and pensions; Nice and Cannes an even larger number. On this side of the Pont Saint Louis, San Remo has already more inns than, for instance, Interlaken; Bordighera about as many as Chamounix. The place from which we write begins to show the air and the conveniences of a resort for pleasure-seekers.

Now, it has come to pass of late that most of these hotels are but echoing solitudes during a great part of the winter. The few guests who occupy the space intended for five times their number are the serious visitors, obliged by their state of health to be there, and kept in low spirits by the vast vacant spaces around them. Suddenly a change takes place. For a time the humblest pension puts on a lively aspect, and the favorite houses have to refuse applications for rooms. The season may last two months, more or less, according to the severity or clemency of the winter elsewhere.

This state of things is new, but seems to grow in importance, and is a part of the change hinted at just now. A few years ago, when the visitors to places other than Nice and Cannes were chiefly seekers after health, the tendency was naturally to remain quietly for the winter in whatever spot suited their exigencies as to shelter, medical aid, economy, occupation, etc. Nowadays the majority of visitors are mere pleasure-seekers: they have their winter round as their summer round. In winter they visit the Riviera, Rome, Naples, just as in summer they visit Scarboro', or Trouville, or Switzerland. They have their fixed times for Florence, for Venice, for the Italian lakes, the upper Engadine. Fashion, the new hotels, the Marseilles, Ventimiglia and Genoa Railway have brought the Riviera into the round of what I may call the tramps of pleasure. When Ruffini wrote 'Doctor Antonio,' an Englishman was an object of curious interest at San Remo; now there is no spot on the shore between Cannes and Spezia where he is not, during the winter at least, an every-day sight, and, during a certain period and in certain places, he becomes the dominant feature of the street life. He is not equally prominent in all the resorts. Cannes, Nice, Monte Carlo are thoroughly cosmopolitan and polyglot. San Remo, Pegli, and Nervi are above all things German. It is at Mentone, Bordighera, Alassio, Santa Margherita, Spezia that the English type prevails.

It is, however, something aside from the hotel life which is the great new feature of the Riviera winter. The hotels may be full or empty—the foreigners are here just the same. At all the places I have named, perhaps also at others, there have sprung up within a few years a great number of villas, in many cases the property of the families inhabiting them during the winter. In places like Cannes, Nice, Monte Carlo, Mentone the increase in the number of villas is something wonderful. At Nice, for example, a city of 60,000 inhabitants, the winter quarter is by far the larger half of the city. Its occupants, symbolized by swallows on the olive-wood knick-knacks sold at these places, come generally about the beginning of winter and remain from four to six months. The villas, always a more certain source of income to a town than its hotels, have become in these later years also a richer one. The most marked effect is perhaps that on Anglo-Saxon life. Many of the villas are owned by people who in England are accustomed to exercise a large hospitality, and who now leave their great country-houses shut up and desolate. We have heard the fear expressed more than once that an important feature of English life was in a way of diminution that threatened extinction. Without sharing the fear, we must admit that the number of English people living out of England for a large part of the year is rapidly increasing. Among these are many Parliamentary and society leaders, who seek repose after the fatigues they have undergone, or strength for those to be borne in the next season. The greater part are simply well-to-do people, who take to themselves a new comfort. Here in this place, during our first winter, four years ago, there were three or four resident English families. There are not less than ten this year, either owning their villas or holding them upon a lease of several years. There is a pretty English church and rectory, and, in addition, there are other houses let for the winter only. Many of the best building sites on the slopes of the hills and in the sheltered nooks are in the possession of Englishmen, who hold them for sale. And yet Alassio is still one of the less-known, least-visited resorts. "Ex pede Herculem."

Now the English winter exodus is not at all the same thing as the American fashion of hibernating in Florida or Southern California. "Cælum non animum mutant" who go from New York to Tallahassee. They change place, but remain at home, hearing always the same tongue, the same voices, the same ideas, or at least the tongue and ideas of the same family. The Englishman strives, it is true, to carry England with him: he lives as nearly as possible as he used to do at home, makes but few acquaintances among the "natives," and those of the most superficial character, and knows and cares but little about the ways and thoughts of his French or Italian neighbors. Yet his defences are not so perfect that the outside world does not force itself daily and hourly upon his attention. He will, very likely, misunderstand what he sees, but nevertheless the old chain of his notions is broken in upon, and the result of several years of such impressions of Continental life is that the Englishman, for better or for worse, is become another man. Cosmopolitanism may not be an unmixed good, but then no more are railways. It may still be claimed for both that they are goods peculiarly of our time. Provincialism is to-day the reproach, even patriotism has been held to be a virtue of the past—universality is the demand of the present, and, to judge from appearances, will be yet more so of the future The great assemblage that is seen every winter along this coast of English, French, Germans,

Russians, Americans is, no doubt, in the first place the result of increased facilities of travel and of increased wealth, and what is sought is simply a bettering of the conditions of life; but with this is found, unsought, something of the blessing of cosmopolitanism. This is a form of brotherhood. It will not do to claim too much for it: brothers quarrel, and the annexing mood of countries like England and Prussia is not to be curbed by what would be called sentimental considerations. But aside from seasons of tension, the relations of the peoples become pleasanter and more profitable the more they see of each other, and everywhere the number of those whom it is agreeable to meet increases. The world becomes better worth living in as the friction of intercourse is lessened.

There is room for a word to those who think of visiting the Riviera for the first time, either for the purposes of health or pleasure. Not for those who have but a single winter to spend: their physician tells them that they must choose a room to the south, and, if they are really ill, that they must go indoors before sunset. For the rest, they fare as travellers anywhere. But to those who have leisure and wish to find a spot where they can spend several winters agreeably, we would present the claims of the smaller, the less-visited places. Everybody knows what Cannes and Nice and San Remo are, but few know the real advantages of such a place as that from which we write. For the lover of nature these need no statement; for the lover of society they may be summed up, aside from economical considerations, in the facility with which connections are made among Italians. Granted a starting point and some familiarity with the Italian language, nowhere in the world is it easier to make acquaintances, nowhere are strangers received with more friendliness. For as little as one lends one's self to surrounding influences, one is in a short time as much part and parcel of the daily life of these people as those who are born among them. It is hard to understand the judgment of many writers on Italy. Even some who, as novelists, make a trade of knowing human nature, have given us volumes to show that Italian human nature must forever remain an undecipherable puzzle to them. Mr. Henry James, in a recent book, quotes some of these close observers as saying that Italians at bottom despise strangers and regard them as barbarians. Mr. James is himself too good a citizen of the world to accept such a judgment, and his clearer eyes see that Italians have "less national pride than any other people in Europe." Less or more, their inmost feelings do not hinder a warm welcome of the foreigner. He is received in the clubs, in all companies; it is not the fault of the Italians if he does not feel himself speedily at home.

For ourselves, we would counsel anybody with time and taste for such experiments to rent or buy a house at some little-frequented place of the Italian Riviera. If he wishes thoroughly to enjoy the winter, he should choose a site at the foot of a hill that guarantees shelter from north and east winds; the distance of a mile often separates a semi-tropical from a semi-intemperate climate. Let him arrange his life according to his liking; but if his liking include mankind, let him make speedy acquaintance with the little world about him, official, professional, gentle, and simple. He will find plenty of food for criticism: there are even serious defects in the character of these charming people, and, as a rule, they do not remain long hidden; but we are very much mistaken if he does not conclude that, after all and taking all in all, there are few places where life may be better enjoyed than here. S. K.

THE OLD WATER-COLOR SOCIETY'S EXHIBITION.

LONDON, December 19.

THE winter exhibitions of the old water-color society (now officially known as the Royal Society of Painters in Water Colors) are generally composed mainly of studies and sketches, and contain few works which aspire to be historical, or even *genre*. The general impression, on looking over the exhibition, is one of feebleness of color and intention—the dilution of general effect by the white mounts perhaps going for something. One does not look for much finished work with real pictorial intention, and would be disappointed if he did. The only figure pictures of any value, even as drawing, are Henshall's "Is it true?" Sir John Gilbert's "Retreat," and Mrs. Allingham's little studies of figure and landscape combined. Sir John shows, of course, a certain power and knowledge in design, a complete understanding, up to a certain point, of his material; and the "Retreat" is a pell-mell of horsemen in wild flight, full of movement, dash, and executive energy, and up to his standard of general quality. But his second picture, "The Prince and Princess of Wales going to her Majesty's Drawing-room," is, as might be expected from a subject with which no true artist could have any sympathy, a doleful failure, which, for the sake of the artist's reputation, we hope her Majesty may hang in her most private room. It is heavy and spiritless, the horses black and stiff, the Princess a mass of impossible and unluminous white, and the crowd uninterested and uninteresting, with a flimsy wash of a background.

Mr. Henshall's picture deserves the honors of the figure department. A little girl in gray, on a tall stool, her hands clasped round her knees, holds on her lap a book. The tone of the picture is subdued and tender, and the face comes out of the ensemble bright and expressive. It is full of power, knowledge, and sentiment, and is a masterly contrast to the general figure-work. Mrs. Allingham's pictures are in another way luminous points on the walls—almost points, in fact, as their extremely small size makes them notable. The chief among them is a delightful study of an old English cottage, from the door of which an old lady is watching a little boy riding a broom down a path bordered with marigolds, sweet-williams, and other flowers, while rows of cabbages fill up the foreground. An old cottager in white blouse is working among the cabbages. Since Fred Walker died I have never seen a garden so daintily painted on so diminutive a scale. "The Apple-tree Seat" is another charming study of children, who are reading a story book on a bench under an apple tree in full blossom. There is in the bloom and the plants around just the true measure of detail—not so much as to interfere with the figures, and enough for characterization—and the children are delightfully put in—so like children, and country children at that; not like the dressed dolls of Kate Greenaway's, as the *Nation* has characterized them, and which are, with their numerous imitations, becoming a nuisance in our pictorial world, but true and well understood, without affectation or pose. "At Sandhills" is an admirable study of gorse, that most delightful of all English shrubs, so fascinating a problem to the painter. The other drawings by Mrs. Allingham are not so good—a larger portrait of a child being especially behind those I have noticed.

Three Oriental figure studies of the veteran and always earnest Carl Haag must not be included among the weak things, though they are apparently studies for larger pictures; nor should Frederic Shields's drawing of "Abel"—academic, somewhat, but full of expression. It is one of a series of designs for Eaton Hall, Chester. Poynter sends two studies of heads in chalk, slight and wanting in style for him. Stacy Marks has two humorous pictures, like enlarged Christmas cards; very slight but effective sketches for decorations. The most elaborate is "An Argument," in which a man seated with a friend at a table where they have been drinking, argues with his friend, book in hand, while the friend fills his pipe; and it tells its story capitally, as Marks's pictures do for the most part. Another is "A Justice," in which his worship is discoursing with bumpkins in a charming landscape.

In landscape the little drawings by G. P. Boyce are, like Mrs. Allingham's, gems of style and dignity so perfect in form and color down to the least detail that they might serve as backgrounds for religious pictures. Davidson has a capital chalk drawing, on gray paper, of sheep in a field by moonlight, the sea showing beyond a cliff in full sight; and Holman Hunt a hard and unsympathetic drawing of the Archipelago, with a light sea and a blue-black mass of rock. Henry Wallis sends two admirable drawings, "The Gateway of the Palace of Don Pedro the Cruel, at Toledo," with an exquisite rendering of architectural detail and figures coming through the gateway, rich and harmonious in bright green and red attire; and "The Bishop's Tomb," another Spanish study, the Bishop's reclining effigy surmounted by a beautiful figure bas-relief, with some ladies in black kneeling before the tomb. Poynter has some admirable studies of autumn foliage. Charles Gregory contributes some landscapes with figures, ambitious, but sadly wanting in the higher qualities of art, heavy in color, lacking in ensemble. The best is "Marketing in Dinan." Miss Clara Montalba has a number of the meretricious dashes at Venice which are so well known, and are always the same—clever and shallow. Birket Foster goes on with his minute and tiny landscape, and H. P. Riviere sends a series of conventionally faithful views about Rome. There are, besides, a number of heavy and opaque attempts at strength and depth of color which in the main more resemble pastel than water color, of which H. R. H. Princess Louise furnishes one which has been noticed because it is hers rather than from any real artistic merit.

I find I have omitted to notice a drawing by Du Maurier, "A Last Look at Whitby," a drawing in color which much disappointed me by its want of the qualities of the colorist. It gives a girl in blue dress spotted with white, coming towards one along a paved esplanade. The gray stones are monotonous and papery; a young man, following the lady at a distance, is awkward, stiff, and out of perspective relation. The general color of furled sails, etc., is not bad, but unattractive. It is a clever work by a clever man who has worked so long in black and white as to lose perception of gradation when rendering drawing into color.

I have been over the criticisms of the daily papers which I noticed last summer while writing of Morris's criticisms, and it is worth while to see how loyalty struggles with duty to all—if, indeed, the critics had any perception of the latter. The *Telegraph* says of the chief of the contributions of H. R. H., "a firmly handled drawing, full of good color, and marked by gradations which argue a largely augmented mastery of technique." The *Times*, more dexterous and more doubtful, says simply, "in which it is difficult to detect the hand of the amateur." The *Standard* shirks the question; and it is difficult to imagine any one fit to be a critic who could conscientiously praise H. R. H.'s drawing. To take a picture as a text of the critic's abilities, that of Mr. Henshall, alluded to above—one which really requires some study of art and experience in seeing pictures to criticise

properly—it is interesting to compare what these teachers of the public find to say about it. The *Times's* critic did not see it; the *Telegraph*, vulgar in art as in everything else, says flippantly, that it "somewhat misses the intention. A staring, wistful wonder, such as the artist no doubt had in mind, is scarcely the expression conveyed by the too conscious and clever face of the pretty young lady." Yet if there is one picture distinguished above the rest by an earnest and truly artistic purpose, it is this. The *Standard*, which is getting to be (if not already) the most just and earnest of our mostly flippant daily news-spreaders, is far more thoughtful, and says:

"Its real success is to be found in the audacious dexterity of the treatment of modern attire—in a perception of the rhythm of line which actual dress reveals if the artist does but know where to look for it. The drawing will be a good deal objected to. It will be called trivial by those for whom seriousness exists only in unrealities, and vulgar by those to whom vigor and freshness is always a little offensive. But it is sterling work."

This is not profound criticism, and shows no knowledge of artistic ways of thought; but it is, from a certain not-too-high standpoint, honest and good criticism. I wish there were more even of that for our newspaper-ridden public among its daily teachers. The *Pall Mall Gazette* has no critique—it has the future navy of England on its hands, and is much more profitably em ployed than in criticising art. I don't speak of the weeklies—they all give vapid generalities, in which we find (as in most of the dailies) the flavor of the personal sympathies and antipathies of artist and critic. The *Portfolio*, whose editor is by far our ablest critic, does not notice the exhibitions; and from the general periodical literature what is there to hope?

Correspondence.

LAKE SUPERIOR ORE.

To the Editor of The Nation:

Sir: The *Nation*, No. 1017, December 25th, in an article headed "Tariff Reflections," commits itself to a statement so seriously inaccurate that wrong-headed protectionists may charge the author with something like prevarication.

It is stated on page 541 that the Lake Superior mines at present are producing no iron ore at all. Certainly none is shipped by water at present, and the rail shipments, at all times, to the total shipments are quite insignificant. Marine underwriters will not take risks on Lake shipments or shipping after November 30 until an arbitrary date in the spring; hence Lake Superior iron ore is not forwarded during the winter months.

During the year 1884 Lake Superior mines shipped about twenty-four hundred thousand tons of iron ore; and all the important companies at present are preparing their mines and stocking their ore, as usual at this time of the year, for the coming season. The companies will doubtless mine and market in 1885 far less than their maximum output, but their product will nevertheless be considerable.—Respectfully yours, James Rood, Jr.

Chicago, December 30, 1884.

[The words to which Mr. Rood calls attention were not intended to be taken with exact literalness, nor did the argument require literalness. We do not know how far Cuban ore might penetrate inland in competition with that of Lake Superior, if the former were no longer burdened with duties, but it is impossible to suppose that it could cross the Alleghany Mountains, unless it were needed to mix with our own ores for special uses. In the latter case the foreign ore would be a benefit, rather than a detriment, to the Lake Superior mining interests.—Ed. Nation.]

ARMY COMMISSIONS.

To the Editor of The Nation:

Sir: Will you oblige an old reader by giving your opinion on the following?

Non-commissioned officers of the army who have been recommended, and have passed according to the Act of Congress as set forth in Army Regulations, are now only allowed the commissions they are entitled to at the option of a board which convenes at Fort Monroe. This happened last year, and again this. This year one of these young men was rejected by the second board. Now, I am informed on excellent authority that, according to the existing law, such a thing as a second board is not contemplated, and that nothing but a court-martial can deprive a man of the commission which he gains by being recommended by a Department Commander and a board of officers of high rank. When we consider that there are generally about 400 applicants for the civil appointments, it is not hard to see why the non-commissioned officers are "double-banked."

Is there not room for a little "Cleveland and reform" here? At present we have the edifying spectacle of the President recommending a man for appointment as second lieutenant who had to leave West Point on account of incapacity, while a non-commissioned officer, who has fulfilled the requirements of the law to obtain his shoulder-straps, is doing duty in the ranks somewhere out on the Plains. If this state of affairs is allowed to obtain, justice to the non-commissioned officers of the army is a mere fiction. The army is certainly an important branch of the Government, and it is to be hoped that the new President will give it a good share of his attention. Old Point Comfort.

December 20, 1884.

A NAPOLEONIC ENGRAVING.

To the Editor of The Nation:

Sir: I have lately observed an engraving from one of the best-known of the Napoleonic series of paintings by Meissonier. It represents the Emperor in winter, mounted at the head of his staff on the march, he and they occupying the centre and left of the picture. On the right and in the rear is a column of infantry advancing in a direction parallel with the beaten track along which the horsemen are proceeding. This engraving is entitled "1814."

I always supposed that this picture represented the retreat from Russia in the fall and early winter of 1812, and that the picture usually known as "1814" was the one representing Napoleon alone on horseback, he occupying the entire centre of the picture, the only other figures therein being one or two horsemen on the right and in the rear, apparently ascending the knoll on which the Emperor stands at rest.

If I am right, the engraving just above mentioned is misnamed. Will some artist familiar with the pictures tell me whether I am right or wrong?—Very respectfully yours,

An Inquirer.

[The pictures alluded to are both of 1814. The snow picture represents a phase of the French campaign of 1814, but is often erroneously attributed to the Russian campaign.—Ed. Nation.]

THE "SOLID" SOUTH AND THE NEGRO.

To the Editor of The Nation:

Sir: The letter in No. 1015 of the *Nation*, entitled "An Explanation of the 'Solid' South of To-day," by "A Political Student," was just the kind of objective and fair-minded article that is needed at present, and was doubtless appreciated as such by Southerners. But has he not made too hasty a generalization in saying that the "almost unanimous testimony of Southern Democrats" is, that the negroes never vote the Democratic ticket in *national* elections? A few facts that have come under my observation may be worthy of mention, as tending to show that at least a not altogether contemptible fraction of the negroes have cast their votes for Democratic candidates for the Presidency.

During the campaign of 1876 I was on a visit to my grandfather in Hinds County, Miss. In many of the towns and villages—possibly in all of them—the Democrats had formed regular uniformed companies, whose business it was to bang cannon, hold torchlight processions, and the like. My uncle was President of the company at the small place of Dry Grove, and a negro was Vice-President. There were also a number of other negroes in the company, who wore the uniform, marched in the processions, and voted for Tilden. I am unable to give any figures, but if there were as many Democratic negroes in other parts of the State as in the neighborhood of Dry Grove, they undoubtedly made up a not insignificant total. Numerous barbecues were held, at which Democratic negroes as well as whites delivered speeches, and at which whites and blacks of both parties were at liberty to partake of the plentiful and well-cooked viands. I am unable to say anything now as to the cogency of the dusky Democratic orators in favor of Tilden; for the only thing I can recollect of their speeches was that one of them, who appeared to be a great admirer of Calhoun, informed the audience that he was from South Carolina and had "knowed ole John C."

Whatever may have been the case in former years, there was, in 1876 at least, no bull-dozing in that part of Mississippi; or, if there was, I have totally forgotten it. If the white men carried pistols—as is too often the case with Southern and Western men—they kept them in their pockets. Numbers of the negroes stayed away from the polls; some of them doubtless from fear of violence, others, as "A Political Student" remarks with truth, because they had found out that it was better for them to "make right smart o' cotton" than to listen to the lies of the "scalawags" and "carpet-baggers." As a frequent instance of these lies, let me mention that a friend of mine in North Carolina wrote me, shortly before the late election, that he heard the Republican candidate for Governor of that State tell the negroes, in a political speech, that if Cleveland were elected they would be practically put back into slavery.

In 1872 I was in the village of Middleburg, Loudoun Co., Va., and I remember hearing George Wilcox, one of the most intelligent negroes in the place, haranguing the men of his race in favor of Horace Greeley.

Undoubtedly a very large majority of the negroes always vote the Republican ticket; but I think that the few above-mentioned facts have a tendency to prove that the number of negroes who vote with the Democrats is sufficiently large, when combined with the probably still greater number who are apathetic and abstain from voting altogether, to account for Democratic victories in some of the "black belts." At all events, the wild wail of the Tattooed Knight about the shot-gun policy of the Solid South is too comic at this late date to be even worthy of contempt.

The eyes of thousands of well-meaning but prejudiced people are going to be opened very wide after Cleveland has been in office for a month or two, and Solid Southism and Bloody Shirtism will soon be things of the past. The election of Lincoln was the signal for the outburst of the "irrepressible conflict" into open war; Cleveland's election is the signal that the war is over at last.—Respectfully, R. H. DABNEY.

BERLIN, December 24, 1884.

THE DOG IN GREEK AND PHŒNICIAN RELIGION.

TO THE EDITOR OF THE NATION:

SIR: In your issue of to-day an account is given of Reinach's attempt to support Halévy's interpretation of *kelabim* in the Citium inscription, as "dogs." Whatever may be the view of Semitic scholars in the case, it raises the interesting question of the light in which the dog was regarded by Phœnicians and Greeks. Reinach wishes to prove the meaning "dogs" to be possible and natural, by showing that the dog was not merely employed as a guard, but was held sacred at the temple of Æsculapius in Epidaurus, and inclines to accept the view that Æsculapius was by origin Phœnician. It is true, he says, that the temple to which the Citium inscription relates was that of Astarte, but the cult of this goddess may have been associated with that of Eshmun, the Phœnician Æsculapius (as Serapis with Isis). Apart from conjecture, our knowledge of the Phœnician religion is desperately meagre, and the rôle played by the dog is yet to be known. On the general principle that the Phœnicians borrowed without stint from Egypt, we may suppose that the dog-headed deity was not left without his share of honor, and the dogs that were so carefully embalmed in the Cynopolite Nome may have been held sacred in Phœnicia. Certain it is that Reinach has missed some strong evidence in support of this theory with which he starts out, a deficiency of some importance in a theory that needs all the props it can gather.

Ælian tells us (H. N. xi. 3) that at Ætna in Sicily there was a highly honored temple of Hephæstus, containing an unquenched and sleepless fire, and about the temple and grove were "sacred dogs" that welcomed those who entered the precinct with pious hearts; but they would bite and rend any one that came with polluted hands, or from wicked associates. Again he relates (H. N. xi. 20) that in the city of Adranus in Sicily there was a temple of the deity Adranus of great fame, to which "sacred dogs" were attached, not less than a thousand in number. They acted as servitors and attendants of the god, and surpassed in beauty and size the famous Molossian breed. During the day they welcomed all that entered the temple and grove, whether natives or strangers; at night they played the part of the good policeman. Apparently, the excellent cheer that was furnished at the temple was accustomed to produce its effect upon the visitants; for Ælian says that such as were quite intoxicated and could only stagger on their way, the dogs conducted to their homes very tenderly and safely, but such as were violent and noisy, they jumped upon and tore their clothing, till they were brought to their senses; while thieves and pickpockets were torn to pieces by them without mercy.

The history of Sicily shows that we may naturally look for strong Phœnician influence in its early cults, and the Hephæstus of Ætna has been connected, on the one hand, with the Hephæstus of Lemnos, the Cabiri, and the Phœnician Kabir; on the other, with the Creto-Phœnician Talus, with his dog attendant, both of which are figured together on the coins of Phæstus in Crete. Creuzer sees in this Hephæstus one of the phases of the sun-god at the height of summer, when the celestial dog is raging. Adranus is believed by some to have the same origin, and the legends bring him into close connection with Hephæstus. On the coins of the Mamertini he is accompanied by his symbol, the dog.

It is a commonplace in mythology that the dog was sacred to Hecate and sacrificed to her. This deity was one of the phases of the tri-form Diana, as the Cretan Dictynna was another. In his life of Apollonius of Tyana, who pretended to be a sort of second Æsculapius, Philostratus gives an account of a temple of Dictynna in Crete, which maintained numerous dogs as fierce as bears, that recognized Apollonius and welcomed him, though he came at an unseasonable hour, when the temple servants thought him a thief. Here, as at the Ætnean temple, the dogs are accredited with an insight into the character of the visitants, which might have been regarded by the Greeks as partaking of the divine, the servitor being *en rapport* with the god, as when the dog of Epidaurus acts as the healing agent of the deity. Philostratus, indeed, says that the dogs of the temple of Dictynna were kept to guard its treasures; but their connection with the huntress goddess may well have been regarded in another light in earlier days, as we find Hecate with a dog's head, and Isis and Bubas is in Egypt accompanied by their faithful hounds. Between the Egyptian Isis and the Cretan Dictynna, the Cypriote Astarte may be regarded as a connecting link. In the light of this investigation, the question is pertinent whether the old Hebrew interpreters of II. Kings, xvii. 31, may not have been right when they assigned the figure of a dog to Nibhaz, the idol of the Avites, connecting the word with the root "to bark," as *Anubis latrator*.

A. C. MERRIAM.

NEW YORK, December 29, 1884.

Notes.

HARPER & BROS. hope to publish early in the present month the biography of George Eliot by her husband, Mr. J. W. Cross.

D. Appleton & Co. will shortly publish Miss Hale's biography of the late Thomas G. Appleton.

Macmillan & Co. announce for immediate publication, in two styles, Mr. P. G. Hamerton's 'Landscape.'

The Orange Judd Co. have in press 'A Dictionary of English Names of Plants,' in two parts, English-Latin and Latin-English.

The American News Company have disposed of the *American Bookseller* to Mr. N. R. Monachesi, who will continue to conduct it on its old lines.

A. D. F. Randolph & Co. will have for sale in this market a limited edition of 'The Letters and Journals of Mrs. Calderwood of Polton, from England, Holland, and the Low Countries in 1756,' edited by Lieut.-Col. Alexander Fergurson.

Maverick's Description of New England has been reprinted from the *New England Historical and Genealogical Register* by the Committee on English Research of the Society whose organ the *Register* is.

The very pretty little series of American Authors published in shilling volumes by Mr. David Douglas, of Edinburgh, now includes nearly all of the prose writings of Doctor Holmes, of Mr. W. D. Howells, and of Mr. John Burroughs, as well as one or more books by Mr. F. R. Stockton, Mr. G. W. Cable, Mr. J. C. Harris, Mr. G. W. Curtis, Mr. G. P. Lathrop, and Miss Blanche Howard. Mr. Douglas is now about to add 'In Partnership,' by Messrs Brander Matthews and H. C. Bunner, and all of the prose writings of Mr. T. B. Aldrich, which the author is to revise carefully for this edition. Certain stories and papers of Mr. Aldrich's will be included which have not yet been collected on this side of the Atlantic.

An Index to the Proceedings and Transactions of the Philological Society (England), for 1842-1879, has been issued, compiled by S. J. Herrtage and verified by F. T. Elworthy, with the help of his wife and daughters—a welcome work to all students of language. With it come also the articles of association in reference to the Society's Dictionary, and lists of members (Trübner & Co.).

That the American edition of Caedmon, by Professor Hunt, of Princeton, has come to a second edition within a year is a matter of some interest to the students of Anglo-Saxon and Early English. The author has carefully revised it.

Bulletin No. 18 of the Spelling Reform Association (New York, 324 West Sixtieth Street) is dated November, 1884, and embodies the proceedings of the Association at Hanover, N. H., in July, with some other news and information. Publishers are notified that the services of experienced proof-readers will be placed gratuitously at their disposal, for the purpose of printing books "in any degree of amended or fonetic spelling"; their only expense being for three new types. Mention is made of the English and German reform associations, and international agreement has so far been attained that the common sound represented by one of the three types in question has the same type in English and in German.

A spelling reformer, if we may credit the story, was the editor of the Cleveland *Advertiser*, who, on founding his paper in 1830, discovered that the current spelling (Cleaveland) was too long for his headline, and so set the fashion of dropping the needless *a*. The city was named after Moses Cleveland, a kinsman of the President-elect. A sketch of the life of this pioneer, with a portrait, is given in the *Magazine of Western History* for January. In the February number will be begun a series of "Notes and Criticisms on Unsettled Points in Early Western History," edited by Oscar W. Collet, of St. Louis, with the aid of Dr. J. G. Shea and, it is hoped, Francis Parkman and others.

The December number of Mr. W. E. Foster's *Monthly Reference Lists* deals with Samuel Johnson, apropos of the 100th anniversary of his death; and of the Rise of the French Drama, apropos of the 200th anniversary of the death of Corneille. An index to vol. iv. accompanies this issue, which closes also, we regret to say, the series. Mr. Foster's modest valedictory, reviewing the origin and growth of the conditions out of which his scheme was developed, states that no successor has come forward to relieve him of the burden, and the enterprise must accordingly come to an end in its present shape. Something like these *Lists*, on a coöperative plan, will hereafter be published in the *Literary News*, and sent as a supplement to the subscribers of the *Library Journal*.

The *Florida Annual* for 1885 (New York, 140 Nassau Street) is to a considerable extent identical with last year's issue, but, as the editor assures us, revision has been made to date, and this is true also of the map, which to many people will be worth the price of the pamphlet. Mr. Munroe takes a glowing view of the material prospects of the State, but as regards the proposed Florida Ship Canal he is evidently a pessimist.

Appalachia for December makes a good beginning of vol. iv., and reminds us more forcibly than ever that this is the geographical periodical *par excellence* of the country. Two papers will prove specially interesting—that on the ascent of the volcano Makushin, on Unalaska, by Prof. Geo. Davidson; and that describing a visit to

Mt. Mitchell and Roan Mountain in North Carolina, by A. E. Scott. We could almost predict that the next great venture in summer hotels, and perhaps ultimately in cottage life, will be among these park-like altitudes. Any one imagining himself a first-rate pedestrian will feel admiration, if not humility, on reading Mr. E. B. Cook's "Record of a Day's Walk" over the Presidential Range in New Hampshire. A fine view of Chocorua (but not the finest), well heliotyped, forms a frontispiece to the present issue

Mr. T. W. Higginson, forsaking his allegiance as a weekly contributor for so many years to the *Woman's Journal*, has begun a series of papers on "Women and Men" in *Harper's Bazar*. The first appears in the *Bazar* for January 17. It is devoted to an apology for the main title, and shows this writer's usual tact in adjusting himself to his new environment.

The *Sanitary Engineer* is now publishing full-page illustrations of architectural subjects, having no obvious connection with the leading objects of this journal.

Junges Volk (*Young Folks*) is a double-headed, bi-lingual, illustrated child's periodical, issued by the Cherouny Printing and Publishing Company in this city. On December 15 its eighth number was reached. Hereafter, instead of monthly it will be issued fortnightly. Its form is folio, and the contents are for the most part duplicated in parallel columns of German and English—an easy task for the prose, but often desperate for the verse. With prosperity ought to come clearer print and (why not?) Roman type throughout.

Prof. Pliny E. Chase's 'Elements of Meteorology' (Philadelphia: Porter & Coates), of which announcement was made some months ago, does not prove on examination as good a work as we had hoped it might be. It fails to reach the standard that books for popular instruction should attain, for its explanations are not lucid, and its statements are not logically consecutive. Still further, it does not at all fairly represent the modern school of meteorology; it is too largely occupied with theories and dogmas which the leading physicists and meteorologists of the day refuse to accept. We cannot consider it a text-book worthy of general use.

Part 20 of the Franklin Square Library edition of 'Stormonth's English Dictionary' carries the work along to *Unread*.

With Part 10, Mr. Ponce de Leon's Technical English-Spanish Dictionary passes from *Lamp* to *Nail* (New York, 42 Broadway). Apparently the Spanish mariner must box his compass in English.

In the recent Health Exhibition, held at London, many papers treated of the London sewage. Very apropos comes the publication of a Parliamentary return containing correspondence for the last three years between the Home Department, the Metropolitan Board of Works, and the authorities of the city of London, on the pollution of the Thames. In substance it amounts to this, that the Thames is, as the Home Secretary asserts, and the Board of Works denies, really polluted; that sewage sludge is deposited; that a month's sewage is always oscillating backward and forward between Greenhithe and Teddington; that a sort of floating island of sewage has been steadily increasing in extent from the opening of the main outfalls to the present time. Any one who has gone down to Greenwich on a river steamer knows the dark fluid that is stirred up by the screws, and what odors assailed his nose, and must wonder at the members of the Metropolitan Board who, on a very warm day, "could detect no offensive smell." The Board, however, pays some deference to other people's acuter senses, and last July used daily between seventeen and eighteen tons of chloride of lime, to disinfect the sewage before its discharge into the river, and now is manufacturing for the same purpose twenty tons a day of manganate of soda, at a cost of £130 per ton. At this rate the sewage of 5,000,000 people will cost some $500,000 a year just to disinfect. What it will cost to dig it out of the river bed, posterity will know better than we.

An attempt has been made to discredit beforehand the value of Mr. George Dolby's forthcoming addition to the pile of Dickens literature. Mr. Colby was Dickens's agent for the later reading tours in England and America (1866-70), rather imperfectly described in the last volume of Forster's 'Life.' However, Mr. Dolby is entitled to claim that he stood on more familiar ground with Dickens than his business relations required, and his pages will contain ample proof that he was freely admitted into the perhaps not very exclusive circle at Gadshill. The work will be divided into three books, the first being a narrative of the English tours (1866-67), the second treating of the American tour (1867-68), and the third dealing with what Dickens called the "final farewell" tour in the United Kingdom. The author will devote a chapter to American pilgrims to "Gad's," and will describe those sad "last days in town" which helped to wear away the then slender thread of Dickens's life. Mr. Fisher Unwin publishes the work in a popular edition.

The author of 'Much Darker Days,' a clever skit upon 'Dark Days' and 'Called Back,' is Mr. Andrew Lang. Mr. Hugh Conway, the author of 'Dark Days,' is said not to laugh with Mr. Lang and the public.

Miss Mary Anderson has taken the Haymarket Theatre, and, it is said, is going to make it the home for three years, not only of her own beauty and Shakspere's dramas, but also of American acting. All that is best in the United States is to be invited to see how it likes London audiences, and how London audiences like it.

The correspondence of Ivan Turgeneff, which has just appeared at St. Petersburg, contains not less than five hundred letters from this master. Extracts have already been made in the French papers.

That the desire of the French to extend their slim knowledge of foreign literatures has grown greatly, during the past ten years, is known to all. Its latest fruit is a volume recently prepared by M. Auguste Malfroy, a professor at Nantes, entitled 'Évangéline et poèmes choisis' (Paris: Hachette; New York: F. W. Christern). In this stout book of nearly four hundred pages we have found an outline sketch of American literature, a brief biography of Longfellow, 'Evangeline,' and the 'Courtship of Miles Standish,' fragments of 'Hiawatha' and the 'Golden Legend,' and some thirty of Longfellow's minor poems, in English, with abundant linguistic foot-notes, and with full appendices of grammatical and historical information. The illustrations are, unfortunately, very British; indeed, they are the most wooden woodcuts we have seen lately. The editor's work may be highly praised; a few of the parallel passages which he cites here and there in notes are of interest even to American critics of Longfellow. As a rule the Continental critics of American authors have been content to echo British criticism and to apply British standards; it is a pleasure to see that M. Malfroy relies on himself or cites American authorities.

A very concise, but as to names and titles rather comprehensive, synopsis of the literature of the United States, forms the forty-ninth volume of the "scientific series" of miniature handbooks (in 32mo), published by Ulrico Hoepli in Milan, and collectively designated *Manuali Hoepli*. The author of this 'Letteratura Americana' (1884) is G. Strafforello, probably the most prolific of his class. The little work is executed with a considerable bias for the literary and scientific genius of the great republic of the West, and occasionally indulges in strains of admiration which would not meet with an unbroken echo even on this side of the Atlantic; but it is remarkably free from slips discoverable on the surface. This is almost astounding when we consider that the author, who has written, translated, or adapted scores of volumes on scientific, historical, and miscellaneous topics unconnected with our history, has turned to this extensive American subject in the seventh decade of his life. His first chapter begins with "Le più antiche creazioni poetiche americane," and the seventh and last ends with the living humorists, and a doleful comparison of the barrenness of the Italian literature of our day with the richness of the American. "Oimè! *Fuimus Troes!*" he exclaims, after vainly looking about among the living Italians for a Longfellow or Bryant; a Prescott, Bancroft, Motley, or Ticknor; a Maury, Dana, or Edison, and so on, down to Mark Twain and Bret Harte.

Professor Pasquale Villari personally accompanied the thirty cases of Ashburnham manuscripts from London to Florence. On the day of his arrival home with the precious freight he was gazetted a Senator of the Kingdom by King Humbert. There is no doubt that, in inciting the Italian Government to this costly purchase, and in conducting the delicate negotiations which followed, the historian of Savonarola and Machiavelli has rendered another important service to his fellow-investigators in Italy. The manuscripts are now safely housed at the Laurentian library, where most of them, we trust, are likely to find a permanent abiding-place, though a few, of special local interest, will probably be restored to the Roman, Neapolitan, and other collections from which they were originally abstracted.

An elaborate catalogue of the MS. treasures of the library of the Trivulzio family has just been published by Count Giulio Porro, of the Italian Senate. It enumerates no less than 2,276 manuscripts.

Virgil, who in his epic connected Venus and Troy, through the fugitive Æneas and his little Iulus, with Rome's Julian house and his Imperial master Augustus, did, chronologically and otherwise considered, a less audacious feat than has just been carried out by Herr Oskar Gutsche, in a prose substitute for a German national epic, the novel entitled 'Torald der Hohenzollern Ahnherr unter Christi Kreuz' (3 vols. Stuttgart). The hero, who is recommended to our veneration as the direct ancestor of Emperor William—a kind of warlike but philosophically dream-ridden Gothic Anacharsis — is made to wander, in search of a vanished German patriot, of true knowledge, and of the tortured god whom prophecy had told him he would one day behold, from the oak forests on the Vistula, over land and sea, through Rome and Athens, to Jerusalem. Here he becomes the friend of Jesus Christ, philosophizes with him and his disciples on the great questions of humanity, and witnesses his passion; after which he returns to his native heathen land, marries the object of his early love, fights for his people, and dies a victim of envy and blindness. His eldest son is saved by Torald's *fidus Achates*, Heribert, who carries him to Mount Zollern in Swabia—the cradle of the Hohenzollerns—but afterward founds Schönhausen (Fair Home) in northern Germany. This Heribert was, it is needless to say, the ancestor of Otto von Bismarck-Schönhausen and of his son, Count Herbert. And thus the new Æneid is more than complete

It appeared in the right time—to serve as a Christmas gift book.

The Nestor of African travellers, Eduard Rüppell, died at Frankfort on December 10, at the age of ninety. His fame as an explorer of Nubia, Kordofan, Abyssinia, the shores of the Red Sea, and also of Arabia Petræa, he earned in repeated journeys, more than sixty years ago, and the last of his independent descriptive and scientific publications, the 'Systematische Uebersicht der Vögel Nord- und Ostafrikas,' appeared in 1845; but he remained active as a student and collector to the last years of his life. His own very rich African and Arabian collections, scientific and antiquarian—including Egyptian curiosities, Ethiopic manuscripts, coins, etc.—he presented to the Senckenberg Museum and the City Library of his native town, Frankfort. Later travellers, while eclipsing his achievements, amply confirmed the accuracy of his observations. When the autonomy of Frankfort was destroyed by Prussian annexation in 1866, he renounced his citizenship.

A Cretan newspaper, the *Minos*, reports the discovery at Messara, in that island, by an archæological traveller, F. Ernest, of a stone with an ancient Greek inscription, written boustrophedon, containing no less than 17,000 letters.

It is strange that any printed poem by Whittier should be inaccessible, but a correspondent writes us that he has in vain sought to obtain (even of the author) a copy of his song written for the Fremont campaign to the air "Suoni la tromba," and beginning—

"Sound now the trumpet warningly."

—A correspondent writes us from Lynchburg, Va.:

"Referring to your paragraph about bedecking Presidential candidates with plumes, we have a still earlier instance than that in John A. Andrew's Chicago speech in 1860, in S. S. Prentiss's famous speech in New Orleans, 22d February, 1848: 'Had *I* the choice of a President—did it rest with me to indicate the successor of the present occupant of the chief magistracy—I should not be much puzzled to select. I should cling to my first love; I should shout aloud the name of that veteran statesman who has attained the very highest eminence on the pedestal of fame, under whose banner I have so often been proud to fight, whose white plume I have so often followed in battle, when, like that of the gallant Henry IV., it tossed to and fro in the conflict, but never bowed to power nor was stained by cowardice. I should give my vote for——' The sentence was never finished, except by yells for Clay, etc. (Memoir of S. S. Prentiss, by his brother, vol. ii, p. 448)."

—The dead of the year 1884 were collectively less illustrious than those of the twelvemonth preceding. Not a crowned head (despite Nihilism) is on the roll, and the Duke of Brunswick is the nearest approach to one. Noticeable is the absence of "indispensable" men; further, a certain number of men, once eminent, whose time for active service had gone by—as much so as that of Gen. J. P. Adam de Schramm, who was decorated after the battle of Austerlitz. The Second Empire has been brought to mind by the deaths of its biographic apologist, Blanchard Jerrold; General Fleury, representing the period of the *Coup d'État;* Eugène Rouher, of the middle period; and General Wimpffen, who had the hard duty of surrendering at Sedan. The Russian service and panslavism were deprived of Gen. Ratislav Fadeyeff. Our own Godfrey Weitzel and Col. Geo. M. Totten were specially distinguished as engineers. Among administrators, an able and liberal Turk certainly deserves the first mention, and such exceptionally was Midhat Pasha. Great in another field and in another way was Sir George Lawrence, of Indian fame, and still otherwise Henry Fawcett. Quintino Sella not only lifted Italy out of the slough of deficits, but saved her from a French alliance in 1870. Eugène Pelletan bore a manful part in the Government of the National Defence. Germany's greatest loss in statesmanship was Eduard Lasker. Remarkable also for ability was his cosectary, Judah P. Benjamin. Charles J. Folger, without taking rank with Sella as a financial minister, came of Franklin's breed, and did his duty faithfully. The lamented Friedrich Kapp will furnish the transition from statesmanship to literature, and close beside him may be placed his countrymen and fellow-historians Karl Hillebrand and J. G. Droysen. The veteran Mignet was still continuing the line of historical works begun sixty years before. Emmanuel Geibel's muse in his seventieth year was yet strong, and worthy of the prime distinction accorded it among living German poets. Heinrich Laube earned his title to remembrance both as poet and as theatre-director. The death of Richard Hengist Horne, the author of "Orion," brought almost the same sort of surprise as did that of Charles Fenno Hoffman. C. S. Calverley, too, had begun to drop out of mind as a living humorist in verse. Giovanni Prati is the last poet on our list, of the same age as Geibel, and, like him, famous for his lyrics. Charles Reade, who had outlived his reputation at its highest; Mark Pattison, the accomplished editor of Milton; Abraham Hayward, the prose translator of 'Faust'; the inexhaustible (except by death) Paul Lacroix; Henry G. Bohn the author-publisher, and inventor of the great series which bears his name; Nicholas Trübner and Frederick Leypoldt, friends of those who live in the spirit of bibliography, conclude our literary summary.

—Turning to the full array of scholars, it is satisfactory to name first an American who challenged comparison with any in the essentials of scholarship, Ezra Abbot. Three eminent Orientalists, Thomas Chenery, editor of the London *Times*, Stanislas Guyard, and François Lenormant; the great Egyptologist, Richard Lepsius; our American sinologue, Dr. S. Wells Williams, with Prof. L. R. Packard, of Yale, are chiefly to be remembered among philologers. Dr. Erasmus Wilson's claim to be mentioned in the same category is more or less disputable, but his Egyptology gave the Thames Embankment its Alexandrian obelisk. After these belongs Julius Friedländer, the eminent numismatist. Science laments Charles Eugène Dumont, archæologist; the Abbé Moigno, physicist; Alfred Brehm, naturalist, traveller, and author; Paul Pogge and Eduard Rüppell, African explorers; E. Behm, the statistician of our globe; Arnold Guyot and Ferdinand von Hochstetter, geologists; J. B. Dumas and C. A. Wurtz, chemists, among the first; George Bentham and George Engelmann, admirable botanists; Alphonse Lavallée, with his arboretum; and the good physician whose forte was prevention, J. B. Fonssagrives. Wendell Phillips heads the short list of philanthropists, and stands alone in his kind of oratory. John F. Slater, bestowing his money on the education of the Southern blacks; Reuben R. Springer, with his vast benefactions to Cincinnati; Stephen Salisbury, of Massachusetts, a liberal giver in many directions, exemplify a class never wanting in this country. Art has received heavy blows in the taking off of Hans Makart, Gustav Richter, and Bastien-Lepage; and those other French painters, François Bonheur and Benjamin Ulmann, and that refined Boston artist George Fuller, are also to be regretted. A steel engraver, of local repute, Henry B. Hall, of this city, was a native of England. In music we bid good-bye reluctantly to John Hullah, Joseph Rubinstein, and Sir Michael Costa. The stage loses Henry J. Byron, the dramatist; Mme. Anna Bishop; and those queer survivals, Taglioni and Fanny Elssler, the latter following closely enough her old attendant the Chevalier Wikoff. The Rev. W. H. Channing is the most distinguished name among the theologians who have left us; but Bishop Simpson was one of the pillars of American Methodism, and J. P. Lange had a more scholarly reputation than either. Keshub Chunder Sen was the apostle of the Brahmo Somaj. Charles O'Conor may share with J. P. Benjamin the lawyers' renown in our necrology. Journalism has got off lightly, with two characteristic losses, nevertheless—James Watson Webb, of the old swashbuckler school of New York editors, and Jane G. Swisshelm, a pioneer in female journalism. The charlatanism of Vennor (an ornithologist before he became an almanac-maker and weather-prophet), and the swindling of Shapira, will long be proverbial.

— The *Centralblatt für Bibliothekswesen* says that, in the new Parliament buildings at Berlin, so little room has been assigned to the Library that the number of books cannot be increased; and yet there is an appropriation of 36,000 marks a year for purchases. It is the first time we have ever heard of so gross a blunder; but observation shows that architects may always be trusted to greatly overestimate the book capacity of their buildings, even if by capacity be meant the number of volumes that can be closely packed on the shelves; and every librarian knows that a library is inconveniently crowded long before it is absolutely full. Surprise is sometimes expressed that architects should succeed so ill in designing libraries. We have heard it said that there are hardly half-a-dozen well-planned libraries in the world. What else could be expected? Library buildings have certain peculiar needs which are hardly known to librarians themselves, and must be still less evident to building committees and to an architect who has paid no attention to the subject till he is called upon to design a library. How many thoroughly satisfactory Government buildings are there? The *Builder* and the *Building News* have lately been publishing all the plans submitted in a competition for the new War and Admiralty offices in London. A majority of them have the obvious defect of long and narrow rooms intended for clerical work and lighted only at one end by one window. If a dozen architects can make such a mistake in a kind of work on which they are continually employed, what wonder if, when they have to go out of the beaten track, they give us reading-rooms that cannot be ventilated; delivery-rooms where the light shines all day long into the face of the charging clerks; lofty study-rooms where the readers below are frozen in winter, and the books above are baked and disintegrated both in winter and summer; alcoves where little light can come, and shelves on the outer wall where the light shines in the eyes of those who are searching for books, and not at all on the books they are looking for; libraries that are noisy with marble floors, or dark with stained-glass windows; libraries that are inconveniently arranged, costly to administer, too small, and incapable of enlargement? The profession that suffers from these mistakes is apt to be disdainful of the profession that makes them; but let any librarian sit down and try to plan a library to suit a given lot of ground. When it is done, if he will consider how far he has satisfied the requirements of light, air, heat, space, convenience, economical administration, close packing, and capacity of enlargement, perhaps he will admit that the problem is not an easy one, and that failure in some particular is not disgraceful.

—M. Landau, a wealthy Austrian gentleman, but long a resident of Florence, has just published the first part of a catalogue of his private library, under the title of 'Catalogue des Livres Manuscrits et Imprimés composant la Biblio-

thèque de M. Horace de Landau.' The volume, of nearly 600 pages, is typographically luxurious, its execution being quite worthy of the well-known Florentine Tipografia dell' Arte della Stampa. Its most striking peculiarity is the reproduction, in the case of all the rarer works—on a reduced scale, of course, and with such variations as the employment of a single size of type necessitates—of the title-pages in their original inscriptional make-up, as, for instance:

MR. WILLIAM
SHAKESPEARES
COMEDIES,
HISTORIES &
TRAGEDIES.
Published according to the True Originall Copies.
(*Portrait de l'auteur gravé par M. Droeshoot*).
LONDON
Printed by Isac Iaggard, and E. Blount. 1623.

This has its uses, as every bibliographer knows, but it involves waste of space and an extravagant consumption of paper. The descriptions of the books are meant to be minutely accurate, and the bibliographical notes, though often too brief, are of value. The collection itself is a miscellaneous one, the major part consisting of early-printed Italian and German books, though the collector seems to have a passion for first editions of the different works of many moderns, such as Victor Hugo, Alfred de Vigny, Alexandre Dumas, Goethe, and Schiller. Dante occupies, perhaps, as large a space as any single author, the first title being a fine paper manuscript of the 'Divina Commedia' from the end of the fourteenth century, followed by the earliest dated printed edition, that of Numeister (Foligno,1472), that of Vindelinus de Spira (Ven.,1477)—with the commentary falsely attributed to Benvenuto da Imola—and five other issues of the quattrocento press. The earliest edition of Petrarch's 'Rime' is that by Theodorus de Reynsburch and Reynaldus de Novimagio (Ven., 1478), but the library possesses a unique copy of the 'Trionfi' printed by Pacini at Florence in 1503, the two Pacini editions hitherto known bearing the dates of 1499 and 1508. Of noted book-curiosities there are many, including a perfect set of the 'Grands Voyages' of De Bry (Latin text); no fewer than 1,098 Mazarinades, of which several are not cited by Moreau; 34 Rappresentazioni Sacre, all of the sixteenth century; a collection of 513 portraits by Anthony Van Dyck, of which 21 are engraved *à l'eau-forte* by the master himself; and what seem to be good copies of the four Shakespeare folios—besides which latter there are very few English titles. The final portion (pp. 487-578) of this first volume is devoted to a very extensive and interesting list of early musical works. The catalogue is alphabetical, but an excellent classified index is added. Its compiler and editor, as the introduction states, is "un savant distingué, M. Fr. Roediger." As will be seen by the Shakspere title we have copied, the proof-reading sometimes leaves something to be desired.

— No German writer of the last twenty years has discussed serious questions with the fire, energy, and rhetorical brilliancy of Professor Treitschke. Like the late Professor Fawcett, he has long suffered from a physical infirmity which would have kept in obscurity most men, of however brilliant mind; yet his oratory is as good as his writing, in spite of the fact that he is totally deaf, and hears his opponent's interruptions or replies only with his eyes. Apropos of his 'Deutsche Geschichte,' he has been styled, with more reason than is common in such cases, the German Macaulay; but he altogether out-Macaulays Macaulay in the passion he displays in support of party, and his complete obliviousness to the possibility that his side does not absolutely monopolize truth, honor, justice, patriotism, and political wisdom. Though equally opposed to the Catholics and to the consistent (or, in his phraseology, the doctrinaire) Liberals, he is not, like most thick-and-thin supporters of the Government policy, a personal adorer of Bismarck. Yet in one respect he goes further than even the Chancellor, who professes, at least, to admire the national unity he was so instrumental in bringing about. Treitschke cares not a rap for German unity—except as a much-to-be-deprecated intermediate stage. What he has always advocated is—to use an antithesis which has a famous history—not the disappearance of Prussia in Germany, but the disappearance of Germany in Prussia; and not even the encroachments of the Pope, or the intellectual and financial victories of the Jews, elicit from him such torrents of vindictive characterization as do the decentralizing or federalistic tendencies of the Liberal party.

— The question of the Brunswick succession seems to have acted like a chemical solvent in resolving the German parties, for the moment, into their original elements; and Treitschke's analysis of their motives (in the November *Preussische Jahrbücher*) seems to be true as well as penetrating, though we do not at all share his point of view. The Catholics, he says, favor the claims of hereditary descent, because, though the would-be sovereign is a Protestant, he would aid them in the struggle against the Prussianizing tendency, and afford a home for their intrigues. The Liberals are a much worse lot. Treitschke gives them credit for honesty, but their honesty only emphasizes their folly. They, it seems, object to the absorption of the Duchy for two reasons, which vie with each other in absurdity. One is, that Germany is a federation, in which the elimination of even a minor State disturbs the constitutional balance, especially as it would here increase the already too great power of Prussia, besides destroying an obstacle to the steady growth of centralization, and establishing a precedent which will result in making not the German people, but the Prussian monarchy, the reversionary heir of the lesser princes. As if this were not just the end for which every patriot strives, and the faster federalism disappeared the better! But if the Liberals' first reason is wrong-headed, their second is simply silly. It is, namely, that the wishes of the people of Brunswick should be consulted. The same objection to Prussian rule, combined with what they regarded as national patriotism, was conspicuous twenty years ago in Schleswig-Holstein, and has been rampant, ever since the annexation, in Hanover. But the professor is a true worshipper of the Juggernaut—if you don't like being crushed, that merely shows a misapprehension of the object for which you were created.

—The subject of part second of Professor Heinrich Zimmer's 'Keltische Studien' (Berlin, Weidmann, 1884), is more than usually recondite. It deals with the influence of accent (*i. e.*, voice-stress) in modifying the grammatical forms of Old-Irish. According as the accent falls upon the stem syllable or upon the prefix, we get a form either well preserved or quite corrupt phonetically. Students of Anglo-Saxon will best understand the point by a comparison of our early compounds with *and-* (*ond-*), German *ent-*. In verbal compounds this *and-* is atonic, the stress falling on the verb proper. Hence the *d* is dropped, as in *on(d)lúcan*, to unlock (*cf.* German *ent-schliessen*). Whereas in the noun-compound *ónd-wyrde* ("answer") and its verbal derivative *óndwyrdan* (*cf. Antwort, antworten*) the *d* is retained. In the Germanic family, this accent-corruption is comparatively simple. In Celtic it is excessively complicated. Thus the stem *mag*, compounded with the double prefix *do-for*, gives rise (with the accent on *for*) to *dofórmaigaim*, 'augeo.' Whereas the same compound, used as a verbal infinitive, accent on *do*, becomes *tórmach* 'au ere,' 'augmentum.' Our readers will perceive from this somewhat of the difficulty in dealing with Old-Irish. Not only are the word-endings clipped, as in other languages, but the beginnings are mutilated almost beyond recognition. Professor Zimmer has undertaken to treat this process of detrition in all its ramifica ions. Some of his conclusions may, perhaps, be questioned. But his treatise is searching, and will not fail to give new impetus to Celtic philology.

JOHN ADAMS.

John Adams. By John T. Morse, Jr. [American Statesmen.] Boston: Houghton, Mifflin & Co. 1884.

MR. MORSE'S life of John Adams, like his previous biography in the same series of John Quincy Adams, is a good piece of literary work. Together they constitute perhaps the two best volumes of the series. Without pretending to be books of original research, they cover the ground thoroughly, and give just the sort of succinct and simple account of the men with whom they deal that is wanted in a popular series of this kind. Mr. Morse has almost every quality which a biographer needs—a considerable power of sympathy, a rare facility of expression, combined with good sense, judgment, and discrimination in sifting evidence and using materials. On the present occasion he has necessarily followed, in the main, the excellent biography of John Adams written a generation ago by his grandson, Mr. C. F. Adams, and prefixed to that gentleman's edition of his grandfather's works. It is no more than fair to say that any biography of him produced now must be based in great measure on the narrative contained in that work, which throws new and unexpected light upon the most critical periods in Mr. Adams's career, clearing up much that had been obscure, and vindicating the reputation of one of the greatest Americans for all time to come.

There can be little doubt that John Adams's fame as one of the founders of a great modern state will increase as time goes on. The vivid impression made upon his contemporaries of a temper at times impracticable, and of an overweening pride, must be seen to be of less consequence than the permanent mark set upon the history of his country by his wisdom, foresight, courage, and unselfishness. From the time when, as a young man, in obedience to the dictates of professional duty and in defiance of public prejudice, he undertook the defence of the English officer who was charged with the wanton butchery of the "Boston Massacre," to the time when, as an old man, he wrecked his party by refusing to make war upon France, he appears to have been guided chiefly by an ambition of the most generous kind, and a public spirit of which, in our degenerate, money-loving days, we have few examples. In reading the lives of the somewhat statuesque heroes of our Revolutionary period, one is impressed by nothing so much as their incorruptibility, their superiority to the ordinary temptations of public life. Partly this was due, no doubt, to the circumstances in which they lived—the remoteness of the country from the great centres of luxury and corruption, the asceticism of the Puritans in one great colony, the influence of the hardships of pioneer life in the wilderness, and the enforced self-denial and self-sacrifice made necessary by a long and exhausting war. But whatever the cause, when we approach the men of that time we feel somewhat the same surprise and veneration that their European contemporaries did. Plutarch's

men, if we can imagine those heroes Christians, and accustomed to habeas corpus and the Bill of Rights, seem to tread the stage again, and to be engaged in the performance of one of those mighty dramas that now and then history provides, as if to remind the race of the immense heights to which human nature is capable of rising, and the traditions of which are, after all, the most priceless possessions that it inherits from the past.

Of all the men of that time who made a prominent figure in public life, none, with the exception of Washington, played a more important part in the founding of the American State than Adams, and his career is exceptionally interesting because he has had descendants who in each generation have also played an important part in public affairs, so that he founded a family having almost as such a public character—a feat which, in a democratic age and country, shows an extraordinary virility and force. His son succeeded him as President, his grandson occupied during our civil war the most important diplomatic post in the service of the Government, and the fourth generation has not been able to avoid public life, although public life has not, since the war, had the standing or attractiveness for ambitious men it formerly had; and both in it and outside of it they have displayed the same qualities which made their progenitors illustrious. This extraordinary tenacity and persistence is all the more remarkable because it has been exhibited at a period and in a country of which all the institutions and tendencies seem directed to the dispersion of families, family influence, and family fortunes. We are taught from our childhood to regard these things as the products of what is vaguely called aristocracy and feudalism; our laws are directed to exalt individualism at the expense of family; our mild religion and lax marriage customs have sapped the legal foundations of family authority and headship, until the family has been reduced from a powerful corporate unit to a shadowy social fetish, the potency of whose charm is secretly doubted by those who profess to revere it. Founding a family is an amusement which many men have tried in the United States, but how seldom have they succeeded in doing more than perpetuating wealth at the expense of everything which makes wealth worth keeping together; how frequently they have failed even in this. The fact appears to be that a family can only perpetuate itself in the United States by the vigor of its own moral and intellectual qualities, by that prudence and power of self-denial and far-sighted devotion to a generous ambition which conduces, if not, as Goldsmith says in the 'Vicar of Wakefield,' to happiness, at least to prosperity and success.

All these qualities in abundance John Adams had. His ancestry had been New England farmers, and in three generations of constant struggle with the ungrateful New England soil had succeeded in wringing from it a fortune amounting to thirteen hundred odd pounds. It was through this that John Adams was able to obtain a college education, and thus separate himself from the farmer class and become one of the Massachusetts "aristocracy." It would be a waste of time here to go over the facts of his life, which will be found entertainingly given in Mr. Morse's volume, and we shall content ourselves with calling attention to one or two points which he brings out with great distinctness, though for the authorities on which they rest the reader must consult the biography of Mr. C. F. Adams.

The first of these is, that Mr. Adams's difficulties with Franklin and Vergennes were chiefly due to his want of tact. Franklin has put himself on record as declaring that though "always an honest man, and often a wise one, he [Mr. Adams] was sometimes and in some things absolutely out of his senses." And it is easy to see why the astute and politic old savant was driven to this conclusion. Nothing could have been, as Mr. Morse shows, more ill-advised than Mr. Adams's behavior with reference to the repudiation measure of Congress in 1780. Why he, not being charged with any such duty, should have voluntarily undertaken the disagreeable task of explaining and then of vindicating the action of Congress it is impossible to say. As Mr. Morse says:

"It was a difficult task which he so readily assumed; for though, if it is ever honest for a government to force creditors to take less than it has promised to them, it was justifiable for the Colonial Congress and the several States to do so at this time, yet it is by no means clear that such a transaction is ever excusable. . . . Adams afterwards said that he might easily have shunned this argument, as Franklin did, by sending the French Minister's letter to Congress, and expressing no opinion of his own to De Vergennes. But this course he condemned as 'duplicity,' and declared: 'I thought it my indispensable duty to my country and to Congress, to France and the Count himself, to be explicit.' Mr. C. F. Adams also tries to show that his ancestor could not have shunned this effort without compromising himself or his countrymen. But it is not possible to take these views. At the outset Mr. Adams was at perfect liberty to keep silence, and would have been wise to do so. The trouble was that keeping silence was something he could never do."

It was this difficulty of keeping silence which made diplomatic life so hard for Mr. Adams. In the United States his work had been that of a leader in a political movement; he had been one of the earliest advocates of independence; he had been continually engaged in whipping up and spurring on his reluctant and half-hearted colleagues in the Congress into action. At Paris he simply went on doing the same thing, but the place was not fitted for the work. Diplomacy as then practised was an extremely intricate game, which no European diplomat was mad enough to play with his hands on the table. Vergennes and the court, it is now well enough established, had none of that sentimental sympathy with the American Revolution which we were pleased for so long to believe was the mainspring of their policy. What they wanted was to injure England, and the aid they gave the revolted colonies they would have given to Indians or Sandwich Islanders with as much good will. The sentiment and sympathy of Frenchmen were to be found in other quarters. Vergennes wanted to protract the war and exhaust the English even at the expense of his allies, and this is what a diplomat of his age and country must have regarded as his duty. He made the American alliance, not for the sake of America, but for that of his own country, and everything else flowed from this. In the intrigues which he was carrying on the appearance of an ambassador like Mr. Adams must have been excessively irritating—exactly as the proceedings of Vergennes and Franklin were irritating to Adams.

The break-up of the Federal party was no doubt occasioned by the part played by Adams in preventing the Anglicist Federalists from involving the country in a war with France; but it is clear enough now that this was most creditable to him. A war was entirely needless, except for party purposes. The time had come when the Federalists, whose leaders had been born English colonists, and many of them members of a sort of colonial aristocracy, were brought face to face with the democracy which they had created and brought into being. Nothing but foreign complications could have arrested or deferred the progress toward a pure democracy, which was the destiny of the country. Hamilton and the Federalists who sympathized with him felt this, and, like all men and parties who have long enjoyed power, they were made desperate at the idea of losing it, and conjured up every imaginable evil and disaster as the probable consequence of a new party coming in. Had Adams been less a statesman than he was, he would have played into their hands; there would have been war with France; a large military establishment would have been set up, and the material development of the country retarded for a generation. The Federalists would have kept Jefferson and the "Jacobins" out, however, which was all they wanted. Adams stood in the breach, and saved the country from a disaster. His reward was small. He went out of office friendless and hated. He had quarrelled with his Cabinet, he had broken up his party, he had sacrificed himself, and all in great measure probably from the same peculiarities of character which got him into trouble with Vergennes and Franklin in Paris, and afterward with the English court. But at this distance his defects, for which he paid the penalty in his life, sink into insignificance by the side of his virtues. Simple, truthful, frankly ambitious and combative, resolute and fearless in the discharge of every trust, his is one of the most interesting characters of a period full of great men. His naïf egotism, much as it must have embittered some of his quarrels, is not a quality which readers of his life can bring themselves to deplore. Without it he might have been a grander man, but he would have been less human; his hot temper and his good opinion of himself, of which he was always so ready to give exhibition, enable us to understand and sympathize with him far more thoroughly than we can with many of his more reserved and *posé* contemporaries.

FACTORIES AND CIVILIZATION.

Old World Questions and New World Answers. By Daniel Pidgeon, F.G.S., Assoc. Inst. C.E. London: Kegan Paul, Trench & Co.; New York: Scribner & Welford.

THERE must be in Great Britain an enormous appetite for facts from America if all the books published about this country find a remunerative sale. But, *per contra*, if all of them were like this one, such a demand would not be surprising. We have heard an old gentleman, whose life had been saddened by sympathy with the poor and suffering, say that his last days were made happy by Mr. George's book on 'Progress and Poverty.' We, on the other hand, laid down that book with a feeling of deep depression on account of the utter inadequacy of its conclusions, while we rose from the perusal of this with the most buoyant hopefulness we have ever derived from a work on the future prospects of labor. It is accompanied by a map of New England, with the author's route marked in red—from New York up the Naugatuck to Waterbury, then by Winsted, Great Barrington, Pittsfield, Williamstown, and North Adams to Deerfield, down the Connecticut to Hartford, then by way of Willimantic to Boston and Lowell, back by way of Providence and the Sound to New York, and finally up the Hudson through Lakes George and Champlain to Quebec and Montreal. We are accustomed to this sort of thing in travels through Siberia, China, or India; but as applied to the familiar scenes of New England it has an originality quite refreshing.

The tone of hearty enjoyment of scenery and blue skies and simple American life would alone give attraction to the style, but a much deeper interest comes from the discussion of the conditions of factory labor. On reading the accounts of Waterbury, Winsted, Dalton, Hartford, and Willimantic one is tempted to exclaim that this is quite too rose-colored; that such an Arcadian picture can exist only in the writer's imagination, and may hold out dangerous illusions to immigrants. But when it comes to Holyoke and

Lowell, we see that Mr. Pidgeon is fully alive to the other side of the case. He gives a dismal account of the lodgings and appearance of the French Canadian operatives of Holyoke, and a sad picture of the present condition of factory life in Lowell as compared with that which Dickens and Harriet Martineau saw forty years ago, since the "successive waves of Irish and Canadian immigrants have swept out of the factories the girl who tended a spinning frame during the day and wrote for the *Lowell Offering* at night." A just importance, therefore, attaches to what he says of the better cases.

The strongest of these is that of the Willimantic Thread Company. The manager, Colonel Barrows, has a firm belief that it pays commercially to keep the work-people in a high degree of ease, comfort, and intelligence:

"Why is it," he asks, "that the Willimantic thread will lift more ounces of dead weight and is smoother than any other? Every manufacturer can buy the same cotton and the same sort of machinery to work it. Why, then, the superiority of our products? Simply because they are made by people who know more than any other people in the world engaged in the same work. They put more brains into their work than others do. They are intelligent enough to know the value of care, intelligent enough to be conscientious about employing it, and intelligent enough to know how best to apply it with skill to produce the best results. That is why it pays us, directly, to increase their knowledge."

After quoting Colonel Barrows we must add a part of the author's account of the mill, necessarily omitting that of the library, reading rooms, schools, and the splendid coöperative stores:

"The floor of a vast single room, nearly a thousand feet long and two hundred feet wide, contains indeed 50,000 spindles; but instead of looking upwards to a low, dark ceiling and a chaos of whirling pulleys and belts, the eye seeks the azure of a New England sky, through a roof partly of clear, partly of colored glass, prettily disposed in geometrical designs. The walls are mere piers, separating great windows, also of clear and colored glass, below each of which the brickwork is fashioned into pockets filled with soil and forming great flower beds planted with climbers such as taxonia, cobœa, and English ivy, together with geraniums, petunias, and flowering shrubswhich frame the spindles, so to speak, in roses. The huge room is spotlessly clean, and beside the spinning frames stand girls all neatly dressed and wearing a uniform white linen apron of tasteful cut, while their faces are clean, bright, and healthful, and their hair carefully, often skilfully, dressed.

"One of the first things to catch my eye in the Willimantic mills was the following notice posted in all the entrance halls: 'No person who cannot read and write will be employed in this mill after the 4th of July, 1884.' The paper was dusty and stained with age, having already hung for some three years in its place, so that no employees were without ample warning of the manager's intentions, or the opportunity of learning in time, if they did not already know, how to read and write. Though almost all the help is Irish, with some admixture of Canadians, there is not a man, woman, or child in the mill who will be qualified for discharge under this notice when it comes into operation next Independence Day.

"The dining-room is a large, handsome apartment, decorated, like the porches, with pictures and plants, where all who please may get a capital midday meal, well cooked and daintily served, for a trifling sum. Here, too, at 9 o'clock every morning, the younger hands assemble in detachments to take a cup of milk and a slice of bread and butter. This light refreshment is furnished at the expense of the company, and may form the first and simplest example I have to offer of a benevolence that 'pays.' American mills begin work at 7 o'clock, and the first stop for a meal is made at noon. Five hours is too long for young people to wait for food without a sacrifice of vital energy, and hence it has been found, by carefully comparing the cost of time and food in question with the increase of production to which it gives rise, that it pays to show this attention to the health of the young hands. So marked, indeed, was the advantage that followed upon it that Colonel Barrows is now trying a further experiment in the same direction. A certain section of the help has been selected to receive a small cup of bouillon at 10:30 every morning, but without leaving their machines. This had been given for three months previously to my visit, and with such effect that I found it easy to determine in what section of the factory the experiment was in progress by the greater appearance of physical vigor in the operatives. 'It is not benevolence,' said Colonel Barrows, 'it pays; otherwise I could not ask my directors to adopt the plan. I proved the value of the milk meal by figures before I allowed the company to pay for it, and when I can do the same thing for the bouillon I will ask them to relieve me of the cost. But,' he added, 'those girls go from their work, as they come to it, singing, laughing, almost dancing, and I know that, in their high physical condition, they cannot help turning out more and better work than the others.'"

Compare this greatly abridged account with what is said of Lowell, where "young girls, tawdrily fine in dress, saunter along the sidewalks or loll idly from the windows, their hair shining with oil, their necks gaudy with flaring kerchiefs and gilt brooches, saluting passing friends and acquaintances." A lady who was invited to speak to a company of the mill girls says: "When it was over, a few of them gathered around and asked me many questions. When I urged them to occupy their spare time in reading and study, they seemed to understand the necessity of it, but answered sadly, 'We will try, but we work so hard and are so tired.'" And yet the writer adds: "The operatives of to-day have more leisure and earn more money than those of forty years ago, but they do not know how to improve the one or use the other."

As we read the glowing account of the Connecticut mill, we asked ourselves, Can these things be? Is it possible that the stimulus of gain shall lead men in the future to care thus for the welfare and happiness of those whom they employ? All honor to those who have set the example—to Colonel Barrows at Willimantic, the Cranes at Dalton, the Cheneys at South Manchester, Mr. Lock at Waterbury, the Fairbankses at Saint Johnsbury, Mr. Hazard at Peacedale, and Mr. Pullman at Lake Calumet, who, as Mr. Pidgeon says, have all followed the "God-like stirring" within them, and made their factories worthy of the self-respecting labor which they have created.

But this is not all the comfort which Mr. Pidgeon derives from the factory system. We had an impression, which we believe is pretty widely extended, that that system has had an injurious effect upon the welfare and the morals of operatives. This our author denies:

"If there was something idyllic about a picture of the old English weaver working at his loom, with his family around him carding and spinning wool or cotton for his use, that home of industry was very different in fact and fiction. Huddled together in a hut, whose living and sleeping accommodations were curtailed by the tools of his trade to limits which left little room for decency, the weaver's family lived and worked without comfort, convenience, good food, or good air. The children became toilers from their earliest youth, and grew up quite ignorant, no one having yet conceived of education, except as a luxury for the rich. Theft of materials and drunkenness made almost every cottage a scene of crime, want, and disorder. Against the spread of pauperism, indeed, legislation and philanthropy seemed alike powerless, and the evil was only at last checked by the rise of those manufacturing industries which followed upon the inventions of Arkwright, Hargreaves, and Crompton, and the enterprise of men like Wedgwood."

It was the flow of labor to the factories which first revealed the ignorant, brutal, and debased condition of the English laborer, and it was the association of numbers which made possible the reforms which have permeated the mass. To the argument that improvement was owing to the general progress of civilization, Mr. Pidgeon replies: "But the two systems were simultaneously in force in France down to a very late period—domestic industry being, even now, the rule in the country round Amiens. There, however, the rural workers have a very bad reputation as compared with that of the town operatives. Their homes are worse and worse kept; beginning work at no regular hour, they idle more and earn more precarious wages than do the factory hands, and they are inveterate drunkards." Moreover, "in the district already alluded to, between 1855 and 1859, the criminal list was reduced by 25 per cent., notwithstanding the fact that the factory population was at the time rapidly increasing at the expense of the domestic workers."

The discussions upon the tariff, wages, and the New England town meeting are well worth attention, but we have dwelt upon the one point in respect to which we can mainly recommend the book as a mental tonic against a tendency to pessimism. It ought to be on the list of every public library, and we should like to place it in the hands of every factory operative, and still more of every factory official, in the United States.

Folk-Etymology: a Dictionary of Verbal Corruptions, or Words Perverted in Form or Meaning by False Derivation or Mistaken Analogy. By Rev. A. Smythe Palmer, Curate of Staines, etc. New York: Henry Holt & Co.

FOLK-ETYMOLOGY is a new branch of science. A few of the most striking facts which it deals with have been current in literature as philological curiosities. Our English folk had interpreted *asparagus* as *sparrow-grass* so universally, that the great English authority for polite pronunciation in the last generation declared that *asparagus* had an air of pedantry. Most of us have heard that *Shotover* is an Oxfordshire corruption of *Château Vert*, and that the story is pure fiction which they tell about Robin Hood or Sir Harry Bath having *shot over* this castle, to the astonishment of the natives; and we have been told in the same way that the English sailors called the ship *Bellerophon* "*Billy Ruffian*," and that English jockeys knew the two horses named Othello and Desdemona as *Old Fellow* and *Thursday Morning*, and that sundry negroes knew their mistresses, Pauline and Imogen, as *Polly Ann* and *Emma Jane*. These are transformations (or, in the folk-dialect, transmogrifications) of words, which in some sense give them a new etymology; but in most instances the transforming is play rather than exposition.

Asparagus, spelt (as Steele has it in the *Tatler*) *spara-grass*, then *sparrow-grass*, seems to indicate a real effort of the understanding to make some sound English sense, or, at least, some good English sounds out of the Latin original; but calling the *Bellerophon* "*Billy Ruffian*" is plainly playing with the name, as much as calling Bonaparte *Malaparte*, or Athanasius *Satanasius*, or Metternich *Mitternacht*, Hildebrand *Brand of Hell*, presbyters *priest-biters*, or even as Swift's derivation of *ostler* from *oat-stealer*, *apothecaries* from *a-pot-he-carries*, and the like.

Examples of proper folk-etymology, words in which a serious mishearing and misinterpreting have been embodied in the spelling and fixed in the standard speech, have not been supposed to be very numerous. There is a considerable number of words in modern English which have been spelt to simulate imaginary derivations, as *island*, spelt with *s* to look as though it were derived from *isle*; *rhyme*, spelt with *hy* to look like a Greek word; *could* with an *l* as though from a present in *l*. But these are only simulacra of words. The inserted letters are silent. The spelling is the work of pedants—professors and dictionary-makers, who are no "folks." But even if we give the most liberal interpretation to folk-etymology, and let in all the play-words of this kind and all the blunders in spelling of the

etymologists, it is still surprising to find a dictionary of folk-etymology making a book of 664 pages of octavo in double columns, like this of Rev. A. Smythe Palmer.

He gives notice, however, that he has introduced another class of words—words which, though not actually corrupted from their true shape, are suggestive of a false derivation, and have been generally accepted in that mistaken sense; such as *camlet*, *carp*, *colonel*, *cozen*, *crabbed*, *fratery*, *god*, *hawker*, etc. This opens a wide door, and it will be seen from the examples that a promiscuous crowd has rushed in. Who can assure us that folks generally believe *camlet* to be from *camel*, *carp* from Latin *carpere*, *colonel* from *column*, *cozen* from *cousin*, *crabbed* from *crab-juice*, *fratery* from *frater*, *god* from *good*, and so on? Almost any word of doubtful derivation might be counted in this class. But, in fact, the words in the body of the book are very fairly chosen. A great many of them are dialectic interpretations of names of plants, animals, and utensils. The first word, for example, is *aaron*, a popular name for the plant *arum*, sometimes called *barba-aron*, as if *Aaron's beard*. The next is *abbey*, a Somerset corruption for *abele*, the white poplar; and shortly follow *Abraham's balm*, a willow; *acorn*, which must not be taken as *oak-corn; acwern*, a squirrel; *adder* for *nadder*, *an adder* for *a nadder; aerolite* (*-lite* for *lith*, stone, as in *chrysolite*, *coprolite*); *air-bell* for *hare bell*, and so on. There are plenty, of course, of more bookish terms with queer explanations of learned book-men. Persons fond of picking about among the curiosities of philology may here find plenty of nuts to crack.

Besides the common English words discussed there are vocabularies of corrupted foreign words, of corrupted proper names, and of corruptions due to coalescence of the article, as *alcoran*, the Coran; *al-ligator*, the lizard; *apron*, for *napron*, *an apron* for *a napron*. There are twenty pages of these, including many surprising examples and many doubtful ones. Then there is a vocabulary of words corrupted through mistakes about number, as *alms*, taken for a plural; *bodice*, taken for a singular; *child-r-en*, a double plural. Here are found such words as *Chinee*, *Cyclop*, *Æthiop*. Besides all these there is an Introduction of twenty-eight pages, which would have delighted Dr. Johnson, if he sat up all night, as they say, to read Burton's 'Anatomy of Melancholy'; it would be hard to find a score of pages in Burton which yield a richer treat of quaint learning.

On the scholarly side the book shows competent acquaintance with the best authorities, and is altogether worthy to take its place beside its single predecessor, Andresen's 'Deutsche Volksetymologie.' The linguistic philosophers who are generally inclined to rule out etymological perception and imagination in their explanation of the acquisition and tradition of speech, may here see them in lively action. There are more English words, it seems, which have been transformed by them than the whole vocabulary of many a nation.

Oriental Religions, and Their Relation to Universal Religion. By Samuel Johnson. With an Introduction by O. B. Frothingham. Persia. 1 vol., 8vo. Boston: Houghton, Mifflin & Co. 1885.

In his eloquent tribute to Mr. Johnson, prefixed to this volume, Mr. Frothingham expresses surprise that one so gifted as was the author should have met so little recognition for labors manifesting talent of a high order, assiduously devoted to a subject of absorbing interest. Yet the explanation is not far to seek. In spite of his capacity as a thinker, his unwearied diligence, his honesty of purpose, and his facility of expression, Mr. Johnson's works have the fatal defect of being constructed on a theory. Doubtless, as Mr. Frothingham says, that theory was not an *a priori* one, but was formed after conscientious study of the facts; yet none the less it deprives his works of substantial value as a picture of the religious development of the elder races of mankind, by substituting his interpretation of facts for a simple presentation of the facts themselves. A large and increasing class of the best minds in the country would be deeply interested in a clear exposition of the diverse manners in which Chinese, and Hindu, and Zend, and Moslem, and Christian have sought to explain the relations of man to the universe; the several solutions which they have endeavored to give to the awful problems of existence, and the influence of these conceptions on the moral and physical development of the race. Few subjects would be found more fascinating than this to the thoughtful, and few which would be followed with more attention. Yet even the thoughtful reader may well hesitate in undertaking three ponderous tomes, devoted to the elucidation of what the editor tells us was "to him [Mr. Johnson] the fitting and all-important result of his studies of Oriental religions, namely: the connections between the religions of personal will, which found their culmination in Mahometanism, and universal religion; and the natural and necessary evolution, in connection with scientific thought, of the worship of personal will in the worship of cosmical substance, order, and law." He would have won a wider audience and more general attention to his views had he given us, as he was well able to do, a clear and impartial historical account of the faiths passed in review, and then have followed this with a forcible presentation of his theory within moderate compass. As it is, his volumes are incomplete as a history, and too bulky for a philosophical discussion.

A single instance will serve to show how this mistaken plan renders Mr. Johnson's work, not an exposition of its subject, but a commentary upon such portions of it as chanced to suit his purpose. On p. 25 we read: "The Zoroastrian meant by fire whatever was noblest in personal will, and would not allow that it ever destroyed life, even when one was burned to death." This is a kind of implied argument in which not only the conclusion is not warranted by the premise, but the premise itself is defective. It is true that the text of the 'Vendidad' to which he refers does indeed say, "Ahura Mazda answered: Fire kills no man" (Fargard V., 30); but this is preceded by a similar assertion respecting water—"Ahura Mazda answered: Water kills no man" (V., 24). Whatever may be the esoteric meaning of these mystic phrases, it certainly has not been guessed by Mr. Johnson. Thus the book is neither an historical relation of facts nor a scientific interpretation of them.

The contents of the present volume, in fact, illustrate unfortunately the arbitrary conditions imposed on Mr. Johnson by the plan to which he adhered. In a sketch of Mazdeism and its offspring Manichæism, the reader would naturally look for a continuance of the history through Paulicianism down to the most remarkable development of religious thought in the Middle Ages—the spread of Catharism, which, during the twelfth and thirteenth centuries, seemed to threaten the existence of the Church, and to promise the replacement of Christianity by that curious admixture of Christian, Mazdean, and Buddhist elements. Yet of all this there is no word. It was a necessity to the completeness of Mr. Johnson's speculations that Mahometanism should come under review, so the geographical idea is substituted for the religious one; the development of Manichæism is dropped, and we are treated to a long chapter upon Islam.

This is not a case in which to apply the criticism that the picture would have been better had the painter taken more pains. Rather we may say that the book would have been better had the author taken less pains, had his aim been less ambitious, and had he abstained from seeking that philosopher's stone, a universal solvent of the development and relations of man's complex and irreconcilable theories of the Unknown. The ambition was a noble one and it was not unworthily developed, yet none the less must we regret the zeal, and learning, and eloquence so unavailingly lavished upon it, for it was doomed from the first to inevitable failure.

The Genius and Character of Emerson. Lectures at the Concord School of Philosophy. Edited by F. B. Sanborn. Boston: James R. Osgood & Co. 1885.

Here is a collection of more than a dozen essays by the persons who are professedly the disciples of Emerson, who received the fire direct from the apostle and keep it burning in the Concord School. What they contain should *prima facie* have some illuminating power; but (though we have read very slowly in order to increase our chances of taking in any large or germinative idea), so far as appears, the sole purpose of that sacred flame is to light up the portrait of the saint. The volume is, in fact, a kind of handbook of worship, and it is provided with several hymns to the head of the cult, as good in poetical merits as hymns usually are. One would think 'The Praise of Emerson' to be a more accurately descriptive title, for there is no master of the human mind, and hardly any highly-honored, inspired madman, whom he is not said to recall much as sunlight does moonshine. It is a mistake, apparently, to regard John the Baptist as the last of the forerunners—the line went on through Christ, St. Paul, and the Alexandrines, through Dante and Rabelais (yes, "Rabelaisian" is one of the Emersonian epithets) and Montaigne; and now in the Seer of Concord the true spiritual guide of the race has come. It is doubtful whether any fine genius of the high rank that Emerson really held, has ever had his memory degraded by such insensate eulogy.

In a course of lectures delivered before a selected audience, and written with the declared object of exhibiting genius and character, one looks for instruction. There are some sayings of Emerson that will bear a little explanation, and if a few of those quoted, merely, had been elucidated, it would have been useful, for the writers disclose a special fondness for his most "Orphic" utterances. But instead of scrutinizing the dark idea, they generally prefer to stand awe-struck, contemplating the profound depth out of which such a word must have come. In fact, if one passes over the eulogy, he will find the remainder hardly more than a string of quotations, a sort of abstract and brief compend of Emerson's thought. In other words, there is next to no exposition of the meaning, only a rearrangement of the sentences; and, as is well known, Emerson's style and the structure of his thought readily lend themselves to such treatment. Owing to this peculiarity of these essays, there is little room for difference of opinion, and there is none, except in one case; but on one point, where there was opportunity for originality, all the lecturers exhibit a unanimity truly miraculous in wearers of the gown, to wit: Mr. Arnold was a vastly mistaken man (not to apply any less brotherly epithet to him), and it will not be the fault of the Concord School if the world does not find it out. There has never been such an institution on earth, we have all been told, as the Concord School, which marks

the last and expiring stage of transcendentalism. We are sure there has never been such a memorial volume, so provincial in spirit, so puerile in criticism, so self-complacent, inflated, and in such bad taste, in the case of any great literary man. Even Dr. Harris's papers do not lift its thought to the level of respectability.

Life of Mary Wollstonecraft. By Elizabeth Robins Pennell. [Famous Women Series.] Boston: Roberts Brothers. 1884.

In writing this 'Life' the author had little more to do than collect the various fragmentary notices that exist in other books, and reduce them to a narrative, with illustrations from the heroine's own works; and this has been done with thoroughness and patience. Mary Wollstonecraft had but little influence in her own day, and, except for the pathos and the literary associations of her life, her name would long since have been unspoken. Her opinions were more innocent than is commonly supposed, and even the more extreme of them were palliated by the extraordinary wretchedness of her experience in early life, and by the actual position of woman in society as she saw it after she had become mature. She was genuine and lived out her conclusions, and she was broken by suffering in consequence. The letters which she then wrote are the best expressions of her womanly nature, and it is the energy and charm of this latter that have principally interested posterity. She deserves credit as the first Englishwoman to depend solely on literature for her livelihood, and for her efforts at reform in education and in the practical ideal of women; but, with all her errors, which are plainly enough revealed in this volume, she deserves more than the usual tenderness accorded by men of heart to such failings, and she earns a true respect for the qualities of virtue which she exercised in many noble ways and under exceptional difficulty. It is a pleasure to have the memorials of her life intelligently gathered and set forth by a woman capable of discerning, if not of bringing out, the power of character that is the main excellence of her life's pitiful and truly heroic story.

Rochester: A Story Historical. By Jenny Marsh Parker. Rochester: Scranton, Wetmore & Co. 1884. 12mo, pp. 412.

The capital city of what was known in New England, in the earlier years of this century, as "the Genesee country," seems fatally to have missed the beatitude pronounced upon those communities which "have no history." For even now, when it has just come from celebrating its first half-century of existence as an incorporated city, it has no less than three. So early as 1838 appeared the profuse and miscellaneous compilation of Henry O'Reilly, the value of which, at least as a *mémoire pour servir*, is certainly very substantial, and is to some extent attested by the extravagant price which copies already command. The occasion of the present year has called forth a great quarto, with gilt edges, conspicuously constructed upon the plan of the "county histories" which have of late afflicted the rural districts. These, indeed, are properly classed among the "biblia a-biblia"—the books which are not books—of Charles Lamb, such as backgammon boards and directories. But the handsome volume whose not altogether felicitous title is given above, is a work of an altogether different character. It shows, indeed, the pressure of some special urgency, not so much to make a book with insufficient material (for diligent and intelligent research has disclosed abundant matter) as to bring the material into a concrete and salable form as speedily as possible. But the author, who is not without some experience of authorship in less ambitious undertakings, is distinctly endowed with the literary faculty. Her plan, however hastily adopted, is at any rate a plan, and an intelligent and even skilful one. The brief period of occupation by white men, from the building of the first log house in 1812, is judiciously extended by reaching back, through the French campaigns and explorations of Denonville and La Salle, into prehistoric times. The vivacity of the narrative would go far toward making attractive even a less amusing process than the peaceful growth of a great city in a few years. A more heroic resistance to the temptations which urged the author, in the later chapters, to commemorate the achievements of successful patent-medicine men and their like, might have heightened the literary character of her work without impairing its historical value. But upon the whole the volume may be honestly commended as one of positive value and of real interest, even for readers at a distance from the scene.

The printer's and binder's work, from the Riverside Press, is, of course, all that could be desired. The illustrations are numerous, admirable, and really illustrate.

Leisure Hours among the Gems. By Augustus C. Hamlin. Boston: James R. Osgood & Co.

If the author of these 'Leisure Hours' had employed more of his own on the *labor limæ*, he would have given his gems more polish and more compactness. The book is mainly composed of pleasant gossip, of which little is new or recondite, while the scientific dissertations which occur here and there are hardly to be reckoned as contributions to solid knowledge of the treasures they treat of. Of the diamond he says: "Among all these investigations and reasonings the question comes forcibly to the mind, *Why* was the gem created, and has the day gone by when the conditions required for its formation no longer exist?" Naturally, in the present state of theology and mineralogy, he replies to his own question, "With due respect to the phenomena connected with the crystallization and deposition of metals and minerals at the present time, we cannot answer this question hastily." The phenomena ought to be gratified at the respect paid them, the more as no one knows what or *who* they are. The author coins the word diamondiferous, which shows that his philology is not well organized. On one page we read, of the conglomerate formation containing the diamond, "Its peculiar hue, together with the metallic fracture of its layers, has given rise to the belief that it was composed chiefly of a ferruginous oxide. Recent analysis, however, of the 'allios', has shown that this idea is partly erroneous, and that the *color and the substance* of the formation in reality arises from the juice and débris of plants loaded with tannin and other matter." And a page further on, the following: "But we do not regard their [quartz and itacolumite] presence as essential as that of a ferruginous oxide, which is one of the distinguishing features of all gem mines, etc." It does not appear that our author's geological views have taken a distinct formation yet; so he will excuse his readers if they do not adopt them, the more when he bases some of his conclusions on the discoveries of General di Cesnola in the "Phœnician tombs" of Cyprus.

"In searching for the mysterious in the gems," the author says of the sapphire, "the Assyrians discovered the cuneiform crystals in the interior of transparent sapphires, and adopted the forms for their own use, believing them to be the language of the genii. We have little doubt but that the cuneiform character which now reveals the history of the extinct Oriental Empires, had its origin from the wonderful crystallizations sometimes seen in the internal structure of the sapphire."

He need not, then, doubt of the use for which *this* gem was created, for, with so vivid an insight into causes and origins, he might see that it was sent into being to teach the Assyrians how to write. Only it would have been better to have some historical tradition or authority to show that the Assyrians got their ideas of writing from the observation of nature rather than from the analysis of speech. But Mr. Hamlin's science has curious roots of sympathy. Speaking of the opal, he says:

"The Turk believes that it falls from heaven in the lightning's flash, and it is often *regretted by the mineralogist* that the theory (!) cannot be sustained. Surely, a gem so beautiful, so delicate, and so pure ought to be of celestial origin and free from the impurities and imperfections of the earth. Alas! we have but one precious stone that comes to us from the far-off region of celestial space—olivine—and that as yet has been found only in minute grains."

In this chaos of facts, fancies, vague sentiments, and dislocated theories with only the semblance of order and not even that of proper construction, full of pleonasms, contradictions, and childish repetitions, one might, if he were cast on a desolate island with it, pass an hour or two over the historical allusions connected with gems; but certainly no one would care to make it a book of reference.

The Spanish and French Schools of Painting. [Illustrated Art Handbook Series.] By Gerard W. Smith, Exeter College, Oxford. New York: Scribner & Welford; London: Sampson Low & Co.

This compendium of information as to the Spanish and French schools (including a brief section on the Portuguese) comes down to Fortuny of the former, and Regnault and Courbet of the latter, and gives the needed information as to who "lived and labored" which a popular guide-book should possess; but there is no relative recognition of excellence, and no apparent individuality in the opinions, which seem to be those which newspaper opinion has made acceptable and accepted. "Ary Scheffer bears much resemblance to Delacroix, his fellow-pupil under Guérin," is one of the comparative judgments which show the futility of the author's opinion on matters of pure art, as does another that "Ingres was in aim and achievement one of the most *original* painters of the French school." The editing of this series is nominally performed by Mr. Poynter, whose classical art education is not to be put in doubt, so that we can only suppose that the editor's work has been purely nominal, for it is difficult to believe that Mr. Poynter could recognize the crudities of this book as sound art literature. The illustrations are wretched.

BOOKS OF THE WEEK.

Abbott, Lyman. A Study in Human Nature. Chautauqua Press. 50 cents.

Atkinson, J. Centennial History of American Methodism. Phillips & Hunt. $2.

Baldwin, Dr. J. The Book-Lover: a Guide to the Best Reading. Chicago: Jansen, McClurg & Co.

Barnes, Rev. C. R. Hand-Book of Bible Biography. Phillips & Hunt. $2.25.

Boyle, F. A Good Hater: a Novel. Harper's Franklin Square Library. 20 cents.

Brockhaus's Conversations-Lexikon. 13th ed. Parts 131-135 (close of vol. 9). New York: L. W. Schmidt.

Charnay, D. Les Anciennes Villes du Nouveau Monde. Paris: Hachette; New York: F. W. Christern.

Foster, Bishop R. S. Centenary Thoughts for the Pew and Pulpit of Methodism. Phillips & Hunt. $1.50.

Guernsey, F. R. A—B—C Spanish Phrase Book for Travellers in Spanish-speaking Countries. Boston: Edward P. Call. 50 cents.

THE HARVARD UNIVERSITY CATALOGUE FOR 1884-'85

Is for sale by CHARLES W. SEVER, Cambridge; CUPPLES, UPHAM & CO., 283 Washington Street, Boston; and F. W. CHRISTERN, 37 West 23d Street, New York.
Price, 50 cents; if sent by mail 60 cents.

SATAN IS COMING.

For sale—The Book of Knowledge—Contents: Millennium, 1890; arrival of the long-anticipated Jewish Messiah; great financial crisis, 1886; great war throughout the entire world, 1886; Satan, the chief Anti-Christ, time of his birth, incidents connected with Satan's birth, powers and advance skirmishers, Satan's Temple, Ten Commandments, Satan's Ensign and Inscriptions, what Satan says regarding his ensign to all nations, etc. Price 25 cents; stamps. Address AUGUST ROHE, St. Paul, Minn.

FLORIDA.

Lands and locations suitable for building sites, orange groves, fruits, and vegetables, in one of the most beautiful, healthy, and desirable sections of South Florida. Letters of inquiry promptly answered. Maps and descriptive pamphlet furnished. Address, with stamp, R. G. ROBINSON, Zellwood, Orange Co., Fla.

RECORD OF POLITICS and Politicians in the United States, 1865-1882: An analytical index to the *Nation* for that period (with occasional parallel references to McPherson's Political Handbooks and other sources). This index supplements the chiefly literary index to the *Nation* published in 1880. Valuable to all libraries, students, and editors. Price, in paper, $1 00. (Purchasers will please remit with order; accounts cannot be opened.) Address PUBLISHER of the *Nation*, Box 794, New York City.

SCHOOL BOOKS IN FOREIGN LANguages. Miscellaneous Books in Foreign Languages. Catalogues on application. Foreign Periodicals. CARL SCHOENHOF, Importer, 144 Tremont St., Boston.

SCRIBNER'S MAGAZINE, COMPLETE set—27 vols. and index, bound in the best manner in half-morocco—for sale by A. S. CLARK, 34 Park Row, New York City.

FLORIDA ANNUAL FOR 1885.—A 200-page Book, with New Map, 22in.x22in., 50 cts.; by mail, 60 cts. No. 140 Nassau St., New York City.

TWO CHOICE NOVELS.

Farnell's Folly.

By J. T. Trowbridge, author of 'Cudjo's Cave,' 'The Three Scouts,' 'Neighbor Jackwood,' 'Neighbor's Wives,' 'The Drummer Boy,' 'Martin Merivale,' and 'Coupon Bonds' (of which new editions are ready). Price $1.50.

"This story, by the always popular Trowbridge, is very bright and entertaining. It is written in his quaint and humorous style, and is one of the best, if not the best of any of his novels."—*Worcester Spy.*

Out of the Wreck;

or, Was It a Victory? By Amanda M. Douglas. Price $1.50. Uniform with 'Floyd Grandon's Honor,' 'The Old Woman that Lived in a Shoe,' 'Whom Kathie Married,' 'Lost in a Great City,' 'Hope Mills,' 'Home Nook,' 'In Trust,' 'Nelly Kinnard's Kingdom,' 'From Hand to Mouth,' 'Stephen Dane,' 'Claudia,' 'Sydnie Adriance,' 'Seven Daughters.'

"'Out of the Wreck' will increase the reputation of the author, and is sure to give much pleasure to the wide circle for which she writes."—*The Beacon, Boston.*

Charles Scribner's Sons

HAVE READY:

THE ELEMENTS OF MORAL Science, Theoretical and Practical. By NOAH PORTER, D.D., LL.D., President of Yale College; Author of 'The Elements of Intellectual Philosophy,' 'Books and Reading,' etc., etc. One vol., 8vo, $3.

President Porter's book has a wider scope than most similar treatises have allowed themselves, but the increased attention given of late to this study, and the remarkable quickening of thought consequent upon the publication by several very able writers of views more or less at variance with the long-established principles of moral science, have rendered necessary a fuller and more complete discussion of a number of topics. In every respect President Porter's work is abreast of the time, and it leaves no controverted point undefended.

EGYPT AND BABYLON. From Sacred and Profane Sources. By GEORGE RAWLINSON, Professor of Ancient History, Oxford. 1 vol., 12mo, $1 50.

Professor Rawlinson has written nothing more instructive and significant than this little book, which takes up consecutively every reference to Egypt and Babylon in the Old Testament, illustrating and filling out the Scripture accounts from profane sources. The confirmation of the historical accuracy of the Biblical narrative is most striking and delightful.

EVE'S DAUGHTERS; or, COM- mon Sense for Maid, Wife, and Mother. By MARION HARLAND, author of "Common Sense in the Household Series," etc. I vol., 12mo, $1 50.

"It is needful, and will be useful as coming from a *woman* who knows what she is talking about."—*Dr. Oliver Wendell Holmes.*

*** *These books are for sale by all booksellers, or will be sent, post-free, on receipt of price by*

The Nation.

NEW YORK, THURSDAY, JANUARY 15, 1885.

The Week.

THERE are many reasons which often make it expedient for the Senate to discuss purely political treaties in secret session. But the secret discussion of commercial treaties involving very serious results to the commerce and taxation of the country, or treaties, like the Nicaragua treaty, providing for vast outlays of the public money on quasi-commercial enterprises, is something deserving of the strongest public reprobation, which ought to lead to an abandonment of all secret discussion of public affairs. There is no one in the Senate, no matter who he may be, who stands so high in public confidence as to be relieved from the necessity of letting the country know how he votes and why he votes on such questions as these. The matter is not quite as important in the present case as it might be in others, for the House will almost certainly not pass the necessary enabling acts before this Congress quits the scene. But the principle is important, and the Senate cannot be too often reminded of it. The principle is, that bargains of a commercial nature with foreign Powers are the concern of every taxpayer, may be discussed without danger, offence, or embarrassment, and ought to be so discussed as a matter of right.

"Must we ask Great Britain whether we can make a treaty with Nicaragua? Do we fear the lion's roar? Is that the reason why we hesitate to build an inter-oceanic canal?" These and similar appeals to national pride and national combativeness, which would be more appropriate to a country not entirely sure of its standing in the family of nations than to the United States of America, and more fitting to be addressed to a Fenian circle than to the Congress of the United States, form the staple of a large part of the argument in favor of the Nicaraguan treaty. Let us see what foundation there may be for the bellicose attitude which the *Herald* and some of its imitators have suddenly struck. On the 19th of April, 1850, we entered into a solemn agreement with Great Britain, engaging on our own part and accepting the pledge of Great Britain on her part, that neither the one nor the other would ever obtain or maintain for itself any exclusive control over any means of communication by ship canal which should be constructed between the Atlantic and Pacific Oceans, by way of the river San Juan de Nicaragua or either or both of the lakes of Nicaragua or Managua, or would ever erect or maintain any fortifications commanding the same. This treaty has been in force nearly thirty-five years. There is nothing in its language or subject-matter to distinguish it from any other treaty so far as its binding obligation goes, except that the concluding article recites that its purpose is "to establish a general principle." This general principle was set forth in unambiguous terms. It was to be a mutual guarantee of the neutrality of any canal which might be constructed to join the two oceans via Nicaragua, Tehuantepec, or Panama, to the end that the right of transit on equal terms should be extended to the citizens and subjects of the United States and Great Britain, and "of every other State which is willing to grant thereto such protection as the United States and Great Britain engage to afford."

All this is very clear, intelligible, and, we must insist, reasonable. It secures all the public purposes which the pending treaty seeks to secure, and without the expenditure of a dollar on our part for ships, forts, soldiers, or police. It was a wise and rational proceeding on our part, and its wisdom has lost nothing through the lapse of years. It is idle to say or pretend that other commercial countries have no concern in a means of communication which may revolutionize the world's traffic. It was for the very reason that they have concern in it that we made the treaty in the first instance, leaving a door open for all nations to join in the guarantee. If the treaty had never been made it would be desirable to make it now, if for no other reason than to save us the expense of enforcing, at our sole cost, the neutrality which we have declared our intention to guarantee and maintain. Treaties, of course, are not eternal. Time, which wears away the rocks and hills, and changes human institutions, may render treaties obsolete. But the requirements of national dignity remain the same from one generation to another. They grow with the nation's growth. *Noblesse oblige!* The more powerful the nation, the more careful should it be of the steps which it takes as a member of the family of nations, lest it should appear to presume upon its strength to do wrong. A country which is really strong can least of all afford to act the part of a bully. There is no reason to suppose that Great Britain would not receive in a friendly spirit any overtures from our Government to modify or annul the treaty of 1850, although it is hard to see why we should want to annul it. Probably the difficulty of finding excuses for desiring to annul it is the reason why overtures have not been made. It is very easy to ask, "Who's afraid of England?" Any dynamiter can say that. The proper question for sober-minded people to ask is, "Who is afraid to proceed in an orderly way to accomplish whatever the interests of the nation require?"

The news from the American delegates at the Congo Conference at Berlin grows more and more varied and entertaining. The Berlin *National Gazette* now announces that they "explicitly disavow any intention on the part of the United States to be responsible for the execution of the resolutions of the Conference on account of having taken part in the proceedings." The question then arises, What are they doing in the Conference? If the United States Government is not to be in any way responsible for the action of the Conference, Messrs. Kasson and Sanford are simply present as advisers. What are their qualifications for any such office? None under heaven that anybody knows of. Neither of them has, we believe, ever been in Africa. Nothing is known of them as geographers, explorers, soldiers, sailors, lawyers, or sages. Yet they have been showering resolutions and speeches on the Conference with a profusion which has impeded business. The State Department ought to disavow them promptly, unless it proposes that the United States should back up, if called on, the decrees of the Conference.

The cable on Friday informed us that Mr. Sanford considers the resolution of inquiry about his presence there, introduced in the House of Representatives, very "ridiculous." We are not surprised at this. Those may laugh, and generally do laugh, who win. The more he laughs, however, the more, in our opinion, should he be investigated. The reason why the Conference thought there was "money" in his Vivi-Stanley Pool railroad, and therefore fought shy of it, ought in particular to be looked into. The popular suspicion that he is in the employ of the King of the Belgians as well as in ours, ought also for his sake to be cleared up.

We cordially concur in the following paragraph from the Boston *Herald*. It is extraordinary that such observations should need to be made, and that Mr. Blaine's friends and admirers cannot be got to recognize and accept the situation which the late election has made for him, and cease, at least for the present, from obtruding him on the attention or patience of that immense body of American citizens who do not share their opinions about him. The American people emphatically demand a rest from Mr. Blaine and his belongings and doings:

> "The suggestion comes from the capital that Mr. Blaine be invited to deliver the oration at the dedication of the Washington monument. It is a preposterous idea. What a spectacle it would be to intrust the most conspicuous part in dedicating a monument to the man who could not tell a lie, to one who not only can tell a lie, but is self-convicted of having told several to save himself from the consequences of predatory speculations based upon his official influence! It would be monstrous."

Mr. Reagan, of Texas, when pushing his wonderful bill for the regulation of the railroads in the House the other day, caught a Tartar in Mr. William Walter Phelps. He accused Mr. Phelps of being rich and a friend of monopolies, which enabled the latter to say that he had lost the position of a rich man by investing half a million in the construction of a railroad past Mr. Reagan's door in Texas, for which he received stock at par, which has never paid any interest, and is never expected to pay any. The promoters were also to have got bonds from the State, but the State repudiated the obligation, and has never delivered the bonds. In fact, all the profit of the road has gone to those owning land along the line, of whom Reagan is one. Mr. Phelps finished off his remarks by a telling illustration of the way the Reagan bill would work in practice.

It prohibits railroads from making any discrimination in the despatch of goods. All classes must go at the same time. Therefore if fruit, flour, and grain were waiting on the platform of a station at the same time, and a freight train came along which had not room for all, the conductor could not take the fruit only, as perishable, or the coal only, as something for which iron works along the line were waiting. He would have to take all or none, and as he could not take all, he would, to avoid the penalties of Reagan's law, take none.

The Reagan Inter-State Commerce Bill now goes to the Senate, where it must be disposed of within the forty or fifty remaining days of the session, taking its chances of securing attention in competition with the appropriation bills, the treaties now pending, and the great crush of legislation which accumulates in the closing days of every Congress. There is very little chance of its passing in any shape. If it secures the attention of the Senate at all, it will be amended more or less and sent back to the House for concurrence or conference. It will probably be lost somewhere in the hurrying stages of an overburdened Congress. Surely nothing could be more easily spared. We doubt whether any measure has ever been passed by an American Congress fraught with such gigantic and unknown consequences, except possibly the legal-tender act. Its chief virtue consists in the impossibility of executing it. The forces of competition, ever varying, but always working silently and irresistibly, will thrust it aside or avoid it in countless ways, and while Congress is stopping up one hole a hundred others will be opened. Mr. Edward Atkinson rightly characterizes the bill as "another of the many examples of futile attempts to alter the nature of things; another effort to overcome what are considered hardships, which can only be remedied by the slow progress of events, and not by the enactment of what may be called meddlesome statutes." He points out the fact that the lowest rates of transportation are to be obtained only on lines where there is sufficient traffic of the bulkier products of commerce to keep men and machinery constantly employed, and that any attempt of the Legislature to prevent or curtail this constant employment—as, for instance, by prohibiting a lower charge for a long haul than for a shorter one—must necessitate a higher average rate for the total traffic moved. In other words, the trading and travelling community must, in the long run, pay for the services of men, locomotives, and cars, whether they are actually employed or not. It is, therefore, for the interest of the community that they should be employed at their fullest capacity, and if bare cost to the railroad can be obtained by carrying wheat from Dakota or cattle from Montana, it is better for everybody that the carrying should be done than that a rule should be established which would make it for the interest of the railroad to forego that portion of its traffic.

The speeches of Democratic statesmen at the various Jackson banquets on Thursday were not especially interesting. The most notable thing about them is the necessity under which all the speakers felt themselves to be to say something about civil-service reform. Mr. Cleveland's letter has made a deep impression upon them, and he is a very dull Democrat who has not an interpretation of his own of the policy which the new President will pursue. We note with considerable gratification signs of progress on the question of the reform in the mind of Senator-elect Payne of Ohio, who is to succeed Mr. Pendleton. Last year Mr. Payne made a speech which was almost totally devoid of sympathy with any reform that did not contemplate a complete "cleaning out of the Augean stables." He was in favor of having all the Republican office-holders and employees turned adrift and their places filled with cold-toed Democrats. Now he says, in a speech at Columbus, that "turning the rascals out" does not signify that honest incumbents, competent and faithful in the discharge of duty, and blameless in political action, shall be indiscriminately discharged. He even concedes that half the service may be filled with Republicans, for, in a passage in which "politics" and reform are curiously mixed, he says: "All admit that an unpartisan, stable service is desirable, but an attempt to accomplish it until a just and fair distribution is made between the parties in the ratio of their respective voters will be futile." A year hence we shall probably find him so far advanced that he will comprehend, even more clearly than he does now, just what happened when Mr. Cleveland was elected President.

Governor Hoadly, of Ohio, recommends in his message that the State cease to be "pivotal," or in other words that the State elections should cease to be held in October, inasmuch as this causes both parties, in Presidential years, to make it the scene of great corruption and disorder, in their efforts to secure what is called "the moral effect" of a victory. Other States, and notably Pennsylvania and Indiana, have had to give up the "pivotal" position for similar reasons. After what occurred last fall, Ohio will probably gladly give it up too, because it was a disappointment to both parties. The result of the October election cheered up the Democrats mightily, but the "moral effect" was apparently worthless, because Blaine got a large majority in November. Marshal Wright, who employed about 600 bad characters in Hamilton County as deputy marshals, to watch the polls and bully the Democrats, confesses before the Congressional Committee to have received from the National Republican Committee, before the October election, the very odd gift of 600 "bulldog" pistols, and he distributed about 300 of them among his deputies. It does not appear as yet proved that these deputies really prevented anybody from voting, but that many of them were non-residents and ruffians, unfit to be armed and charged with any official duty, especially on election day, seems to be admitted on all hands.

The truth is, that the United States statute giving marshals power to appoint an unlimited number of deputies to keep order at elections was passed, like all statutes, on a theory which has no foundation now in the practice of the Government: the theory that the Government occupies a non-partisan position at elections. If this were true, and United States marshals were selected in accordance with it, there would be no harm in leaving the number or character of their deputies on election day to their discretion. But it is not true. On election day all the officers of the Government appear as partisans, some of them as furious partisans, whose object is by no means to see fair play, but to see that their own side somehow comes off victorious. The reason why they play this part is, that they fear that they will be turned out and lose their living if there is a change of Administration. Consequently Wright, in collecting a large force of blackguards, and arming them with Jones's bulldog pistols, really felt himself defending his bread and butter. It will be President Cleveland's duty to help put an end to this state of things, and restore to the officers of the Government a correct notion of their position and duty. That Dudley, who passed two months in a corrupt and corrupting Blaine canvass in Ohio, while drawing pay from the United States Treasury, cannot be sued, and made to refund, shows a serious defect in the law, as his taking the money was, under the circumstances, really as great a fraud on the country as if he had run off with it or cooked his accounts.

Among the wise sayings of Mr. Samuel J. Randall in his recent Southern tour we find the following:

> "You may talk to me about free trade. There can be no free trade between the United States and any country successfully where the business rate of interest in one is different from the business rate of interest in the other; and where the wages for like work are different in the one from the other. The country which has the lower rate of interest and pays the lower rate of wages will exhaust the other."

This method of grouping the rate of interest and the rate of wages together was very happily conceived, if the intention of the speaker was to produce the same confusion in the minds of his hearers that there was in his own mind. He might have said with equal propriety that there can be no free trade between two countries where the average rainfall and the percentage of church-goers are different. How is it possible, according to the Randall theory, for England and India to trade without one or the other being ruined? India has a very low rate of wages—perhaps the lowest in the world. Yet England has free trade with India, and sends her vast quantities of cotton goods. India, on the other hand, has a higher rate of interest than England; nevertheless, India is increasing her cotton manufactures rapidly, and more rapidly since the repeal of her duties on cotton goods than before. Since 1880 the number of spindles in the Bombay Presidency alone has risen from 1,151,000 to 1,540,000, and the number of mills from 42 to 61. The consumption of raw cotton has doubled in seven years. Will not Mr. Randall tell us in some detail how the rate of interest and the rate of wages conspire to produce these results?

The Charleston *News and Courier* begins the new year with an earnest editorial appeal to

the ladies and gentlemen of South Carolina to make pistol-carrying odious by rigidly excluding from their society those known habitually to go armed, as they would those who possess burglars' "kits." It urges specific mention of murders by the press, and a faithful and detailed report of the evidence, that committing officers and jurors may not, when remiss, escape public censure, and calls earnestly for the conviction, as soon as the first opportunity offers, of some member of that peculiar class of "gentlemen" who are accustomed, because the pistol is always convenient, to turn what would commonly prove merely a slight altercation into a shocking homicide.

Governor Jarvis, in his recent message to the Legislature of North Carolina, having in mind the late lynching in that State, warmly recommends as an imperative necessity an increase in the number of Superior Court judges, reduced ten years ago from twelve to nine. The delay in the trial of criminals which now prevails in the State, he says, has put the law-abiding spirit of the people to a test which some communities have not been able to stand. He very justly intimates that legislators who refuse to provide a sufficient number of tribunals for the trial of criminals, deserve some of the condemnation heaped upon lynchers. Recommendations of this kind cannot be too frequently urged by Governors of Southern States. Others praying for the passage of a law abridging the right of criminals to new trials might with great propriety be added.

There is one notable fact about the dynamiters who had the bloody quarrel in O'Donovan Rossa's den last week which has not been sufficiently dwelt upon by our esteemed contemporaries, and especially by the *Tribune*. Captain Phelan, who was so nearly murdered, was a prominent Blaine advocate in the late campaign, and shared with the gifted Finerty, of Chicago, the honor of leading the Irish Blaine contingent in the West. Whether Short, the would-be assassin, was a Blaine man or not, does not appear, but the first man to call upon him in prison as his personal friend was one of the little band of Blaine Irishmen who used to meet once a week in the "Headquarters" in Fourteenth Street, furnished for the purpose by Elkins, and there denounce Great Britain and extol Blaine as the man who would bring England to her knees if he became President. The *Tribune* was wont to report these weekly proceedings with great respect, and always spoke of the assembled dynamiters as "Independent Irishmen." Now that they have leaped into wider fame, we do not think that the *Tribune* ought to show so much false modesty in concealing its former association with them.

The excitement produced in London, Short and Phelan will be glad to hear, by their encounter in O'Donovan Rossa's office, is intense. The cable despatches report that it has driven all political complications, both home and foreign, out of men's minds, and all eyes are fixed on New York. Great and very extraordinary results are expected to flow from the affray. The *Telegraph* thinks the United States will now "interfere with the operations of the murder colony," but does not explain how. The editor probably supposes that when an attempt at murder in New York is unusually serious or exasperating, the President orders the prisoner and a few of his friends to be taken out of the hands of the State authorities and tried by court-martial in Washington. The *St. James's Gazette* is still more obscure, for it "wishes it could be believed that American politicians could be seriously induced to think about extirpating Rossa and his crew; but there will be a Democratic President at the head of affairs, and there is the Irish vote to be considered." This is very mysterious, but if it means anything, it probably means that "American politicians" can, if they please, and whenever they please, "extirpate" any collection or gang of evil-disposed persons whose mode of life in any of our great cities they do not like; and that they would perhaps deal in this way with Rossa and his gang, but for the opposition which President Cleveland would offer to such a proceeding, owing to his fear of the "Irish vote," which, by the way, went to Blaine at the late election. The *Morning Post* is on the whole the most profound of the commentators. It foresees that the Mayor and the District Attorney, "having been elected as anti-Irish candidates," and the Mayor and Recorder, though both Irishmen, being of "the anti-agitation type," they will not only have Short brought to trial, but will extract from "the criminations of Captain Phelan, and the recriminations of his assailant, much respecting the methods, plans, and history of the dynamite league"; and then we are to have, based on these revelations, a new State law against dynamiters and a new Federal extradition act. This is all rather melancholy reading, because not only does it contain no hint or suggestion of a way in which the United States, or the State of New York, could act against the dynamiters, but it shows that the English daily press is so ignorant as to the American law and American political manners that it is incapable of making any suggestions. The blunders of the French press about English institutions and manners afford a great deal of amusement in England, but are they more absurd than those of most writers in the London press on points of American law and politics, whenever they have to go into detail?

The steady adhesion of the Irish to Parnell, and in fact obedience to him in all election matters, as recently illustrated in Tipperary, over which the London *Times* makes such gloomy comments, is one of the best signs of the times in Irish politics, because it shows the growth of sound political sense among the people. The two Irish politicians to whom the Irish have been most indebted since the Union are O'Connell and Parnell. They are the only men who accomplished anything for them in Parliament. All the others simply made motions in the House of Commons, which Englishmen hardly took the trouble to debate, and which never had any result. O'Connell compelled Catholic emancipation, and Parnell has compelled at last a serious attempt to solve the land question, in the teeth of the indifference of the English public and the hostility of the whole land-holding class. If the Irish failed to follow leaders who had done such things for them, and heed them implicitly in politics as long as the fight lasted, they would furnish a crowning proof of their political incapacity.

The view of Lord Wolseley's enemies in England of late has been that, if he ever reached Khartum at all, it would not be before March. He now announces, however, that he will be there by January 24. In fact, the road to Shendy from Korti seems to be completely open to him, and, since he obtained secure possession of the wells at Gakdul half way across, presents no difficulties. At Shendy Gordon's steamers are waiting for him, and there is then a comparatively easy trip of ninety miles up the river. It is, however, very likely that he will find it harder to get away from Khartum than to reach it, because he will have to convoy a large body of non-combatants. There is a considerable number of European traders in the place, besides Egyptians, with their families, who must be removed, and their transportation will be a work of considerable difficulty. In fact, it is hard to see how General Gordon can well refuse to carry off with him any inhabitant of the place who is not a native of the Sudan, and has stood by him during the siege.

One of the great perplexities into which the Gladstone Government finds itself plunged is due to the adoption of the Monroe doctrine by the Australian colonies. They some time ago made up their minds that all the islands, great and small, included under the term Australasia, should belong to men of the English race, and in view of this proposed to occupy as a beginning the immense island of New Guinea, then in the possession of savages. The Government at home, however, which is getting alarmed over the size of the empire, opposed this, and assured them that there was no danger of foreign meddling. However, as a partial satisfaction, possession was taken of the southern end of New Guinea. But now comes Bismarck and occupies northern New Guinea, besides the adjacent islands of New Britain, New Ireland, and others not a few. The Australians are furious over this, because they say the appearance of a foreign Power in these waters will force them to keep up an army and navy, and have a foreign policy and all the rest of it. At present there seems no way out of the difficulty short of a war with Germany. Of course nothing would be easier than to drive the Germans out of the South Pacific, and the German army would be of little consequence in the conflict; but German cruisers could inflict terrible damage on British commerce, and then Great Britain is already sufficiently isolated in European politics, and sufficiently embarrassed by the Egyptian trouble, not to wish to have a quarrel with a first-class Power on her hands. Nor is Bismarck the man to recede easily from a position he has once taken, and which flatters the national pride. On the other hand, he can hardly hope to occupy New Guinea and New Britain comfortably and prosperously in the teeth of the hostility of the British colonies; and something in the shape of a "deal" will probably be resorted to to get rid of him—that is, something nearer home will probably be offered him in its stead.

SUMMARY OF THE WEEK'S NEWS.

WEDNESDAY, January 6, to TUESDAY, January 13, 1885, inclusive.]

DOMESTIC.

IN the U. S. Senate on Wednesday, the House joint resolution appropriating $50,000 to relieve the wants of the destitute Piegan Indians, was passed. The Nicaragua treaty was reported favorably from the Committee on Foreign Relations. It was voted on Thursday to discuss it in secret session.

In the House of Representatives on Wednesday, the Consular and Diplomatic Appropriation Bill was introduced. It appropriates $1,190,885, a reduction under the appropriation for the present fiscal year of $34,255, and under the estimates of $432,291. The bill provides for an agent and Consul-General at Cairo, Egypt, at an annual salary of $5,000, and for a Consul-General at Madrid, Spain. The House passed the Reagan Inter-State Commerce Bill on Thursday—yeas 158, nays 65. The House on Friday afternoon adopted the resolution introduced by Mr. Belmont relative to the Congo question. His resolution was chosen instead of that of Mr. Herbert, as it contained no reflection upon the State Department. It is expected that the Department will make a speedy answer and will defend its policy.

Mr. Randall, Chairman of the Committee on Appropriations, made the important statement in the House on Saturday, that unless the Committee shall be given the floor from now on continuously whenever an appropriation bill shall be ready, an extra session will be inevitable, and he did not regard an extra session as desirable either for Congress or the Democratic party. Mr. Randall was not given the floor for the appropriation bill that was ready. He was voted down by a combination of those who desired to bring up the public-building bills, and this combination was in its turn prevented from getting the floor. Later in the day, the public-buildings combination having been defeated, the House proceeded with the consideration of the new Naval Appropriation Bill.

The resolution appropriating $100,000 for the pedestal of the Bartholdi statue was reported favorably to the House on Saturday.

In the Senate on Monday there was a lively debate over Senator Hawley's resolution calling for a certain letter and documents filed by General Sherman with the War Department. This has reference to the allegation of General Sherman that Jefferson Davis at one time wrote a letter aiming at a dictatorship in the South. Mr. Vest (Dem., Mo.) objected to the resolution. He spoke of General Sherman as a friend and constituent of his. He then gave a history of the controversy from its inception, stating that it arose from a statement made by General Sherman at a meeting of a Grand Army post in St. Louis. Mr. Vest said that while he was in the Confederate Senate he felt called upon many times to oppose Mr. Davis in matters of policy, etc., but now that Davis is a poor old broken-down man, broken in health and fortune, he ought to be permitted to rest. Mr. Vest also protested against the resolution as tending to revive the animosities of the past which had better be permitted to sleep. Messrs. Morgan, George, Harris, and Lamar also objected. The latter made a positive denial that Mr. Davis ever wrote such a letter. Mr. Hawley said he wanted the Sherman letter printed because it contained matter valuable in an historical sense. He avowed his entire sympathy with General Sherman in the personal and political phases of the question, and asserted that there was a conspiracy on foot in Washington in 1861 to establish a Southern Confederacy, and that certain Senators were to remain there and prevent legislation that would interfere with the conspirators. No vote was taken, and the incident closed at the expiration of the morning hour, when the Senate went into executive session.

The debate was continued on Tuesday. Senator Vance, of N. C., asserted with great positiveness that he had never received such a letter from Jefferson Davis as was alleged by General Sherman. Senator Brown, of Ga., said that while he was Governor of that State he never disobeyed any legal order of President Davis. When the resolution was put to vote it was carried, ten Democrats voting in the negative.

A statement prepared by the United States Treasurer shows that there are now outstanding $26,523,144 in one-dollar notes, and $26,840,217 in two-dollar notes. The Treasurer says that there is now no scarcity of notes of small denominations, and he is prepared to supply all legal demands for them.

General Grant has declined in advance the offer of the fund which Cyrus W. Field, George W. Childs, A. J. Drexel, and other of his friends started a short time ago to raise by subscription, in order to release the property pledged by the ex-President for his debt of $150,000 to William H. Vanderbilt. In a letter to Mr. Field the General says: "I appreciate both the motive and the friendship which have dictated this course on your part, but on mature reflection I regard it as due to myself and family to decline this proffered generosity."

Mr. Vanderbilt has attempted to acquit General Grant of the above debt of honor, which was incurred in connection with the failure of the firm of Grant & Ward. Mr. Vanderbilt, having bought in all the personal property pledged by General Grant as security for the debt, on Saturday wrote to Mrs. Grant, presenting it, together with the judgments obtained at the request of General Grant, to Mrs. Grant, the only condition being that on the General's death, or sooner if she desired, the latter's trophies of war and peace having an historical interest should go to the national Government. This offer was declined with thanks so far as everything except the trophies was concerned. These, General Grant said, should go to Washington as soon as they could be transmitted. On Sunday Mr. Vanderbilt wrote a second letter, in which he modified his offer so as to create a trust fund out of the proceeds of the real-estate, the income for the fund to go to Mrs. Grant during her lifetime, and the principal to be at her disposal by will. This offer was at first accepted, but later was declined in a letter written by Mrs. Grant.

President-elect Cleveland went to Buffalo on Friday for a short visit. He attended the charity ball that evening.

A Leavenworth, Kan., despatch on Friday said: "The true inwardness of the St. John sell-out came to light to-day in the confession of James F. Legate, a prominent Kansas politician and Prohibitionist. Legate confesses that he attempted to sell out St. John to the Republican Committee."

The National Committee of Independent Republicans, at a meeting in this city on Monday, decided to continue its existence, to meet at the call of its proper officers, and to preserve its rolls and records.

The Connecticut Legislature elected Mr. Harrison, the Republican nominee, Governor, on Thursday, and he was installed in that office. At the November election no candidate for Governor received a majority of all the votes.

The Albany *Evening Journal* on Thursday printed a list of fifty-four members of the New York Legislature who, it asserted, were for Evarts for United States Senator as against Morton. The *Journal* added: "Unless the promises of men go for nothing, and written words fail to express their usual meaning, unless evil influences succeed in quarters where we have not believed it possible for them to find success, the next Senator from the State of New York will be William M. Evarts." The accuracy of this list has been seriously disputed.

An annual review of Southern industries shows that during the past year, in fourteen Southern States, there have been 1,865 new manufacturing and mining enterprises organized, with an aggregate capital of $105,269,500.

Captain Thomas Phelan, Superintendent of the Kansas City Workhouse, was desperately cut and slashed on Friday afternoon by a man named Richard Short, in O'Donovan Rossa's newspaper office in Chambers Street. Short is an Irishman. There are conflicting stories about the manner of the assault, but Phelan declares that a deliberate attempt was made to assassinate him, because he had talked about certain secrets of the dynamiters to a reporter of the *Kansas City Journal*. He came to New York in consequence of a letter from one Kearney, one of the dynamiters in question. This letter is in the possession of the police. Short was arrested as he was quietly walking across the City Hall Park after the stabbing. He was confronted with Phelan, who identified him as his assailant, and then suddenly drew a revolver and shot at him. The aim was good, but the bullet was stopped by a metal match case. Short was then locked up. Phelan is likely to recover.

Richard Short, who made the attack on Phelan, was suspected by the Irish police authorities to have been connected with the Cork dynamite conspiracy. When Featherstone was arrested in March, 1883, Short's house was searched. Short thereupon went to America. Phelan assisted Kearney to leave England when the latter was suspected of being a dynamite conspirator by the Glasgow police. Kearney used to be a signalman on the Caledonian Railway at Glasgow. He had attended dynamite meetings and had been associated with Featherstone. He left his position just before the railway company's works and the Corporation Gas Works were made the objects of dynamite outrages.

General George M. Wright, the State Treasurer of New Jersey, died at Bordentown on Thursday, aged sixty-seven years. Jonathan H. Blackwell, of Trenton, was appointed on Monday to succeed him.

Myra Clark Gaines, the famous litigant, died in New Orleans on Friday night, aged 78. Her suits to recover property valued at many millions of dollars have been in the courts for more than forty years. She was a brilliant woman, who gained her legal victories by persistency and acuteness.

Prof. Henry Lawrence Eustis, Dean of the Harvard Scientific School, died at his residence in Cambridge, Mass., on Sunday morning, aged sixty-six. He was graduated at Harvard in 1838. He then entered the Military Academy at West Point, and was graduated at the head of his class in 1842, among his classmates being Generals Grant, Sherman, and Halleck. In 1849 he became Professor of Engineering in the new Scientific School at Harvard. He reëntered the army in 1862 as Colonel of the Tenth Massachusetts Regiment, and was made a Brigadier-General in 1864; soon after which, his health failing, he resigned his command and resumed his professorship at Harvard. He was the author of technical books on engineering science.

Captain Charles W. Folger, only son of the late Secretary of the Treasury, died of consumption at his home in Geneva, on Sunday, at the age of forty. He leaves a widow and five children.

Schuyler Colfax dropped dead in the Union Depot at Mankato, Minn., on Tuesday, from heart disease. He was born in New York city, March 23, 1823, and removed to Indiana in 1838. He established a Whig paper at South Bend, Ind., in 1845, and edited it for ten years. In 1855 he entered Congress, and was a member until 1869, being Speaker of the House for the last six years of that time. On March 4, 1869, he became Vice-President under General Grant. Of late years he has lived in retirement, occasionally lecturing.

John B. Jervis, a noted American civil engineer, died on Tuesday at Rome, N. Y., aged ninety. He superintended the construction of

many of the most important railroads and canals in the country.

FOREIGN.

Mr. Gladstone's health is pronounced to be greatly improved.

Prince Albert Victor, of Wales, heir presumptive to the British throne, attained his majority on Thursday. This event was made the occasion of general rejoicings.

The British Government has decided to create a Minister of Education, and it is probable that Mr. Lyon Playfair will receive the appointment. The new Minister will have a seat in the Cabinet.

Mr. Parnell has been triumphant in the Tipperary County, Ireland, contest. At the second nominating convention, held on Wednesday, Mr. Parnell presiding, Mr. O'Ryan, who was nominated for member of Parliament several weeks ago, withdrew, and Mr. O'Conner, Mr. Parnell's candidate, who was rejected at the first convention, was unanimously chosen as the Parliamentary candidate.

Mr. Parnell addressed a meeting at Tipperary on Thursday. He promised the farmers the full fruits of their toil, and a much larger reduction than the pretended fair rents of the land court, which meant bankruptcy, would give them. Landlordism would soon disappear when really fair rents were obtained. He looked forward to the extension of the Laborers' Act to give laborers a share in their national heritage, and advised the tenant farmers, in justice to the laborers, to avoid coercion. It was impossible, he declared, for home rule to be long delayed.

It is officially announced in London that a messenger arrived at Khartum on December 27, bearing a letter from General Wolseley to General Gordon. He left Khartum on the 28th, but was captured and beaten. The papers intrusted to him by General Gordon were taken from him, with the exception of a small note, which was sewed in his clothes, and which said that General Gordon and the garrison were in good health and spirits, and that steamers were bringing cattle and grain from the North. Gordon attacks the rebels on every possible occasion. The messenger returned to Korti on foot, arriving on Sunday.

Lord Charles Beresford's naval brigade arrived at Korti on Wednesday. They made the journey up the Nile from Sarrass in twenty-seven days. They are in good health and spirits. They will accompany the expedition across the desert, and on their arrival at Metamneh will man General Gordon's steamers. Stores of provisions are being sent daily to Gakdul, where a depot is being formed. General Wolseley telegraphed from Korti, January 7, 4:10 P. M.: "A strong convoy is leaving camp for Gakdul. General Stewart will take another to-morrow for Metamneh, which we expect to occupy by the 15th instant. If a steamer is found there, we shall communicate with General Gordon without delay." The Black Watch Regiment started from Korti for Meraweh on Thursday. A messenger who left Gakdul on Sunday reached Korti on Friday with despatches for Lord Wolseley. He fell in with some armed natives at some wells on the way, who treated him in a friendly manner and gave him correct directions as to the way, his guide having proved false. The messenger reports that the country for eighty miles out from Korti is open, but beyond that point is dangerous from the caravans of the Mahdi.

General Lord Wolseley telegraphed the Prince of Wales on Friday that he would reach Khartum by January 24. He telegraphed the Government advising it immediately to despatch 3,000 picked troops to Suakim to operate against Osman Digna and open the Berber route. He recommended that General Graves be placed in command of the troops to go to Suakim, and asked that another battalion be sent to reinforce the Nile expedition. It is surmised that he expects heavy fighting after Khartum has been relieved. A detachment of General Gordon's troops is at Shendy.

All the members of the Egyptian Debt Commission at Cairo, with the exception of the English delegate, have signed a statement to the effect that the financial proposals of Earl Granville are unacceptable. It is understood that France desires the Powers to make a simultaneous answer to England's proposals for the settlement of the Egyptian question. Active negotiations are in progress between Germany, Austria, Russia, and France with the view of despatching an identical note in answer to the proposals. Italy has not been asked to join in the negotiations.

Protocol 39 was distributed among the delegates of the Congo Conference at Berlin on Wednesday. It provides that any Power annexing territory in the Congo country shall notify the other Powers taking part in the Conference of the fact, in order that they may recognize the protectorate or advance their own claims to the territory annexed. Any Power establishing such protectorate must agree to maintain peace in respect to the rights of nations as to commerce and transit.

At a meeting of the Conference on Wednesday the decision of the Committee on the slavery question, binding the Powers to adopt all possible means to prevent slave traffic in the Congo territory, was unanimously adopted. During the sitting of the Conference on Thursday Mr. Kasson repeatedly expressed the desire of America that the rights of the aborigines should be respected.

The London *Post's* Berlin despatch on Wednesday said the activity in the Congo Conference of the American delegates, Minister Kasson and General Sanford, seemed to indicate a wish to make clear that America will in the future be more concerned in European interests than has been the case heretofore.

It was reported from Berlin on Friday that General Sanford ridiculed the resolution offered in the United States Congress regarding the American representation in the Congo Conference. He expressed confidence that the negotiations of France with the African International Association would soon be completed. The Berlin *National Gazette* said on Friday that the American delegates to the Congo Conference explicitly disavowed any intention on the part of the United States to be responsible for the execution of the resolutions of the Conference on account of having taken part in its deliberations.

The framework of the new Congo State Constitution is based upon the principles of English colonial administration, there being a Governor, entitled *Chef d'État*, three Deputy Governors, and a full number of officials in the various districts. Brussels will be the headquarters of the Government. King Leopold, of Belgium, has already expended $5,000,000 in forwarding the work of the African International Association, and he still adheres to his promise to bestow upon it a yearly endowment of $200,000.

The German Reichstag reassembled on Thursday. During a debate Prince Bismarck said that the new tariff had resulted in a better condition of the people generally. He said that certain classes of poor native labor needed further protection, and that small proprietors emigrated because they were unable to profit by their labors. He proposed to alleviate their burdens by raising the duties on corn. This view of the matter, he said, was shared by the farmers; Germany was a nation of farmers and required duties on corn. On Friday Bismarck met with another rebuff. The Budget Committee moved that the proposed credit of 150,000 marks for African colonization be reduced by one-third. Prince Bismarck opposed the motion, and urged prompt action in regard to the colonization project of the Government in order to anticipate the other Powers. A motion to refer the credit back to the Budget Committee was adopted by a vote of 135 to 128, although both Prince Bismarck and the Minister of the Interior strongly opposed this action.

Commander Knorr, of the German squadron on the coast of West Africa, telegraphed on Friday that the corvettes *Olga* and *Bismarck* had suppressed the revolt among the negroes in Cameroons. Several chiefs and a number of natives were killed or captured, and many villages were destroyed.

The Madagascar Committee of the French Chamber of Deputies has prepared a report adverse to the extension of offensive operations in Madagascar. It recommends that the operations be limited to a maintenance of the posts already occupied.

The Paris *Événement* on Wednesday published an interview with General Campenon, late Minister of War. General Campenon says Prince Bismarck is luring M. Ferry on to unforeseen difficulties. He has already embroiled France with Italy and Spain, and now with England. France ought to conserve her energies for a struggle in Europe, and not be wasting them on colonization schemes. The present contest with China is likely to be far more formidable than that of 1860. M. Ferry's policy General Campenon pronounced "deceptive, and totally opposed to that pursued by Gambetta."

General Lewal, French Minister of War, has unfolded his plans for the French operations in Tonquin. Reinforcements will start for that country at the beginning of February. General Lewal has fixed the number at 6,400, which will make a total effective force of 31,500 men, not including the 4,000 men in the Formosa expedition. The *Figaro* says that the Government is convinced that the campaign must go further than operations in Tonquin, and that it intends to occupy Canton. Admiral Courbet has been ordered to occupy Tamsui before February, and, after garrisoning Kelung and Tamsui, to raise the blockade of Formosa. General Brière Delisle telegraphed from Tonquin on Sunday announcing the arrival of 3,200 reinforcements in the best of health and spirits, and stating that he is ready to march on Langson.

The French Government received news on Monday of a revolution in Cambodia headed by a brother of the King. Chinese emissaries fomented the trouble. Late despatches on Tuesday announced that quiet had been restored.

The business of exporting art products from France to America has suffered greatly from the American duty on pictures and other art creations. The American Consulate at Paris has just been compiling the statistics of the art exportation from France to the United States during the past three years. In 1882 the exports were of the value of $1,800,000; in 1883, $1,200,000, and in 1884 only $600,000.

The trial of Mme. Clovis-Hugues for the murder of her traducer, M. Morin, a private detective, took place in Paris on Thursday. The court-room was crowded, and many eminent and notorious persons were present. Mme. Clovis-Hugues displayed great nerve during the trial, and calmly admitted that the murder was premeditated, but dramatically narrated the insults she had been subjected to by M. Morin. The plaintiffs denied that M. Morin wrote the insulting post-cards. The jury, which was divided, returned a verdict acquitting Mme. Clovis-Hugues of murder, but awarding $400 damages to M. Morin's father, Mme. Clovis-Hugues to pay the costs of the trial. The verdict was received with applause.

Fresh earthquake shocks were felt in the Province of Malaga, Spain, on Saturday. King Alfonso has started on a tour of the afflicted districts. This has allayed the panic and added much to the King's popularity.

The proposed expedition by Professor Nordenskjöld to the South Pole has been postponed until 1887.

It is reported that China and Japan have agreed to submit the Corean question to the mediation of the representatives of England, Germany, and America.

THE DEMOCRATS AND THE SILVER COINAGE.

THE responsibility for the purchase and coinage of two millions of silver dollars per month from this time forward will rest upon the Democratic party. Whatever mischief it may bring upon the business of the country, whatever embarrassment it may entail upon the incoming Administration, the Democrats in Congress will be answerable for. They have sufficient votes in both houses to suspend the coinage. The Republicans dare not oppose such a measure. Except the Senators from Colorado and Nevada, no opposition need be looked for on that side of the House. If any other opposition should be met, it would have to reckon with all the great commercial interests of the country. These interests are mainly Republican in their political attachments, and they will not fail to visit with their indignation any Senator or Representative who shall stand in the way of a remedial measure which, in the belief of the great body of business men, is absolutely necessary to a restoration of confidence and a return of prosperity. It is only a few months since the commercial community was agitated by the apprehension of a gold crisis. The Treasury Department, alarmed by the running down of its gold balance, had asked the Clearing-house Committee what action it would take if silver were tendered in the settlement of the Government balances. The answer was returned (unofficially) that the banks would loyally acquiesce in whatever the Government should deem needful. The crisis passed away, however, and the situation remains as before, with only the difference that there are eight or ten millions more of silver dollars on hand than there were then, and that the present Administration will pull through, leaving the crisis, with all that it implies, to the Democratic party.

The economic reasons for discontinuing the silver coinage have no effect upon Mr. Bland and his followers, because, if the worst should happen which anybody can picture or imagine, it would be the very thing which they want to bring about. They are not bi-metallists at all. Their ears are closed to the arguments of the bi-metallists both at home and abroad as tightly as against those of the "gold bugs." What they want is the poorest money attainable. This happens to be silver; consequently they are silver mono-metallists. If anything less valuable could be found which public opinion would tolerate, they would be for that as against either silver or gold. When so resolute a bi-metallist as Judge Buckner urges the necessity of a suspension of the coinage in order to pave the way for another International Conference, they oppose him with a motion to remove the existing limitations upon silver coinage. An international agreement is exactly what they do not want, for if it should have the effect which the bi-metallists claim, it would defeat their main purpose, to depreciate the money standard of the country.

But the Democratic party cannot avoid the political consequences of a money crisis coming within President Cleveland's term of office. Nor can they escape the financial embarrassments involved in the expenditure of $2,000,000 per month for useless ingots to be buried in the vaults of the Treasury. When the crisis comes, as it will come, it will be no answer to say that the way for it was prepared beforehand, that the explosive material was collected during the years of Republican rule. The public will not draw fine distinctions. They will hold the party which shall be in power at the time responsible for the mischief. Even if they should take pains to weigh judicially the responsibility, they would find that the Democratic party has furnished the larger share of the votes which have fastened the silver misery upon the country and refused any measure of relief.

But this is not the whole of the trouble. The estimates of the Secretary of the Treasury for the coming fiscal year show a surplus of only $6,000,000 over the regular expenses of the Government and the sinking fund, as against a surplus of $57,000,000 the past year. If the revenue continues to fall off as rapidly as it has fallen off during the past four months, Mr. Cleveland's Secretary of the Treasury will have a deficit staring him in the face before he gets fairly settled in his office; and instead of announcing to the country in his monthly bulletins a decrease of the public debt, he will be forced to acknowledge an increase. Here again the public will fail to make careful distinctions. The Republicans could have no more trenchant and cutting argument for the next campaign than a comparison in the matter of debt-paying between Democratic and Republican rule. In the face of such a contrast and of the political consequences which it entails, every dollar which can be saved ought to be saved; and of all the opportunities for economy nothing is half so inviting as economy in the purchase of silver bullion. Twenty-four millions per annum is its exact measure, and now is the time to apply it. Twelve months hence may be—in all human probability will be—too late.

THE OUTLOOK FOR TARIFF REFORM.

ALTHOUGH the tariff question did not constitute as prominent a feature in the recent Presidential campaign as Mr. Blaine and his friends desired to have it, it did, nevertheless, enter into the canvass to a considerable extent; and as the results which followed may fairly be regarded as affording some indication of what would have happened had it constituted the main issue between the two great parties and been everywhere intelligently discussed—both which contingencies are likely to occur in the not distant future—it will be interesting and profitable to look about and see what these results really were.

In the first place, the protectionists may certainly claim credit for having carried Pennsylvania (the home of Mr. Randall) on this issue, by a greatly increased majority—an achievement, however, very closely akin to the taking of Holland by the Dutch. Then, one of the most distinguished free-trade leaders — Mr. Frank Hurd—failed to obtain a reëlection in Ohio; but it is now well understood that, although Mr. Hurd's outspoken antagonism to the protective policy occasioned much opposition, this would not have defeated him had it not been for other and wholly local and personal causes. In Louisiana, also, one or two Democrats failed to obtain renominations because they were believed to be not sufficiently identified with protection to the sugar interests; but other Democrats were chosen in their places. And this is all, we think, that the protectionists can fairly claim in the way of gain as the result of the recent Presidential canvass.

On the other side, the first item is that Mr. Blaine, the advocate of excessive duties, was defeated in spite of his attempt to represent protection as the one thing necessary to national prosperity, and his opponent, who, if he may not be classed as a free-trader, is certainly not known to be a protectionist, was elected. The second item is the reëlection of Mr. Morrison. Extraordinary efforts were made to defeat him. Pig-iron contributed liberally to this end. The Republican National Committee flooded his district with the speeches of Democratic Congressmen who favored protection and opposed the "Morison bill"—as those of Eaton and Ferrell—while the St. Louis *Post-Dispatch*, a Democratic newspaper which circulates largely in Morrison's district, gave its support to the Republican high-tariff candidate. Mr. Morrison was, however, reëlected by a larger majority than ever; and, as he made tariff reform the main issue of his canvass, it is not a little significant that the Democratic gain in his district, as compared with the vote of 1880, was greater than in any other district in Illinois.

The next most notable matter was the result in Indiana, and especially in the Indianapolis District. In the latter there is a strong revenue-reform organization; and through its influence the Democratic Congressional nomination was given to Mr. W. D. Bynum, a leading lawyer of Indianapolis, and as uncompromising an opponent of protection as Frank Hurd himself. As a consequence the tariff was intelligently discussed, and Mr. Bynum was elected by over 1,500 majority, in a district which gave Garfield 2,400 in 1880 and elected Peele, Republican protectionist, in 1882. A like policy of bringing the tariff to the front was also followed throughout the State. Governor Hendricks took the aggressive, and he did not waver at any time. Blaine entered the State and attempted to make headway by vigorously preaching the beauties and benefits of high protection, and very curiously his path was everywhere marked by Democratic gains. Thus, for example, he spoke at South Bend, a manufacturing centre, and the Democrats here gained 500 over the vote of 1880; at Fort Wayne, another manufacturing place, and they gained 1,500; at Terre Haute, 800; at Logansport, 400; at Lafayette, 300, while at Evansville, a hitherto Republican Gibraltar, the result of his efforts was that Cleveland carried the county by a handsome majority. Blaine very significantly avoided Jeffersonville and New Albany—the latter the seat of the De Paw Glass Works—for there the principal establishments were idle, and he could not well talk of the happy condition of the laboring man under the protective policy. In Iowa, where revenue reform has been steadily preached during recent years, a plurality for Garfield in 1880 of 78,059, with no anti-protection Congressmen, was changed to 19,801 Republican plurality. Although this result was largely due to the temperance issue, four revenue-reform Congressmen were elected in 1884; and in two districts anti-protection candidates

were only defeated by personal considerations, and barely defeated at that. Of seven Iowa Congressmen who voted against the Morrison bill, but four were reëlected. Michigan returned seven Democratic Congressmen (out of eleven) pledged to work for tariff reform, and defeated Roswell G. Horr, whose district has a heavy Republican majority, but who failed to recognize as serious the desire of his constituents for an abatement of tariff taxation. His Democratic opponent fought him and beat him squarely on the issue of revenue reform, and won the election by over fifteen hundred majority. In the Detroit district, Maybury, who sustained the Morrison bill, was reëlected by over 5,000 majority.

It is also worthy of note that the only four Republican members from Minnesota who voted against striking out the enacting clause of the Morrison bill—Messrs. Nelson, Strait, Wakefield, and White—were all reëlected by pronounced majorities, and yet the State they represent, with only five Congressional districts, gave Blaine and Logan nearly twice the majority received by them in Iowa, with eleven Congressional districts.

In Ohio, Mr. Converse, who, with Randall, led the opposition to the Morrison bill in the House, and who especially championed the cause of the distressed wool-growers of his State, failed to obtain a renomination; while his successor, Mr. Outhwait, who made an anti-protection contest, won his election by a majority of 500 more than Converse received two years ago, when the Democrats carried Ohio by 19,000.

In the Atlanta district of Georgia, where Mr. Randall had an enthusiastic reception some time since, Mr. Hammond, who voted for Carlisle and for the Morrison bill, beat his competitor for the nomination, although he had all the influential newspapers of his district against him; and also won his election. In the Sixth District of Massachusetts, which includes the well-known manufacturing towns of Lynn, Malden, Medford, Stoneham, Wakefield, and Reading, Mr. Cabot Lodge, Chairman of the Republican State Committee, and a man of high character and qualifications, after swallowing the nomination of Mr. Blaine, which he had vigorously opposed in the Chicago Convention, obtained the Republican Congressional nomination. His opponent was Mr. Lovering, a member of the present Congress, and as the weak point in the case of the latter was assumed to be his support of the Morrison bill, Mr. Lodge forced the fighting on the tariff issue, and went back on his former well-recognized position and sympathies on this matter with as little hesitation as he did on his ante-Convention ideas about Mr. Blaine. The result was, that Mr. Lodge found that the Massachusetts workmen could no longer be humbugged with protection arguments, and preferred that Mr. Lovering should continue to serve them as representative, and continue to favor tariff reductions. In Connecticut, the protectionist Democrats muzzled Professor Sumner and Mr. S. B. Sargent in great part, and Mr. Wells to such an extent as they could, for fear that Mr. Eaton would be defeated in the Hartford district. The result was that Mr. Eaton lost his election. If Mr. Wells had been cordially supported, Governor Waller would probably have been elected, and the State carried for Cleveland by a much larger majority, for there was no town in which Mr. Wells spoke in which the Democrats did not gain very considerably. Finally, the Republicans worked the protection theory in New Jersey, New York, and Connecticut, to the fullest extent, and confidently expected to rally the masses to their cause as effectually as they did in the last weeks of the Garfield campaign. The workshops and factories in all these States were deluged with cards, showing how much more could be earned under high than low tariffs, and with gorgeous chromos exhibiting the interiors of laboring men's houses shielded by the tariff, where the inmates were feasting sumptuously on roast turkey, and, in juxtaposition, the interiors of free-trade houses, where turnips and dry crackers were the "chief of their diet." But it was of no use. The people had come to see that high tariff is only another name for high taxation, and to realize, through hard experience, that only a few can get rich out of it, and that the many are necessarily impoverished by it. And the testimony is concurrent, from all parts of the country, that no speakers were received with more interest by the masses, or listened to more attentively, than those who were able to present intelligently the cause of freer trade and tariff reform.

THE COPYRIGHT AGITATION.

Senator Hawley, of Connecticut, introduced in the Senate on Tuesday week an international copyright bill, the passage of which is favored by the American Copyright League. Its provisions are as follows:

1. The citizens of foreign States and countries of which the laws, treaties, or conventions confer, or shall hereafter confer, upon citizens of the United States rights of copyright equal to those accorded to their own citizens, shall have in the United States rights of copyright equal to those enjoyed by citizens of the United States.
2. This Act shall not apply to any book or other subject of copyright published before the date hereof.
3. The laws now in force in regard to copyright shall be applicable to the copyright hereby created, except so far as the said laws are hereinafter amended or repealed.
4. Section 4971 of the Revised Statutes of the United States is hereby repealed. Section 4954 is amended by striking out the words "and a citizen of the United States or resident therein." Section 4967 is amended by striking out the words "if such author or proprietor is a citizen of the United States or resident therein."
5. The proclamation of the President of the United States that such equality of rights exists in any country shall be conclusive proof of such equality.

It will be seen that this bill gives foreigners copyright here only when their government gives us copyright in its own jurisdiction. Under its provisions we shall get rather more than we give, for the copyright laws of most foreign countries are more liberal than ours; but this arises from the different policies of different countries, and is no objection to the bill, which abolishes the distinction between citizens and foreigners, and gives, for instance, American and English authors in either country precisely equal rights.

The object to be accomplished by this measure is precisely the same as that of the Dorsheimer bill of last year. It is a more concise bill, and will no doubt have the support of all those who are in favor of international copyright. There is, we understand, no antagonism between the two measures, but as action in the House this winter seems out of the question, and as the present House passes out of existence in a few weeks, the bill has been introduced into the Senate, whose existence is continuous, to expedite matters, and not to have to begin the work of agitation entirely anew next winter.

Public opinion has within the past four years made great strides in favor of an author's international copyright bill. The President, in his annual message this year, commended the subject to the attention of Congress, and the Judiciary Committee of the House reported a year ago, through Mr. Dorsheimer, that the justice of such a bill was too manifest to make it necessary to enter into any discussion, and urged the passage of a measure which would "remove the just reproach which has so long rested upon American law and practice." Many people suppose that foreign governments foster piracy of American works, just as our laws encourage the pillage of foreign authors; but this is an entire mistake. In England, foreigners may secure copyright if they are within the British dominion at the time of publication; and a general law on the subject authorizes the Queen at any time to direct, by Order in Council, that foreign authors shall be entitled to English copyrights when the country of which the foreign author is a citizen has granted reciprocal rights. Neither France nor Italy makes any distinction between foreigners and natives; and Spain gives foreigners copyright privileges for the same time accorded them in their own country. It may thus fairly be said that the general policy of civilized modern States is to foster literature without regard to nationality, while it is reserved for the United States alone to foster the trade of piracy at the expense of literature.

Germany has a copyright law which protects the foreign author on condition that his work shall be published by a house having its place of business in Germany, but this seems to be the only State which has applied the protective principle in this way. The Copyright League takes the ground that any attempt to apply the protective system to copyrights between this and foreign countries will break down, because in the case of the country with which (on account of the identity of language) we most need to establish copyright and break up piracy—that is, England—the provisions of her international law recognize only author's rights, and the condition of publication or manufacture in this country would destroy the reciprocity and justice of the scheme.

Most of the publishers—to judge by their support of the Dorsheimer bill last year—have come to the conclusion that the choice lies between a simple author's-copyright bill and a continuance of the present unfortunate system, which even those most strenuous in their advocacy of protection to American manufactures may well object to. Piracy, of course, operates as a discrimination in favor of foreign cheap literary labor—cheap because it is not paid for. Supposing an English and American author to stand, for example, on about the same level, the English book can be produced and sold here for a sum which represents the cost of publication

and a small profit, while the price of the American book must also include a royalty for the author. Is this protection to American literary labor?

But it has always seemed to us that there was no reason here for introducing the question of free trade and protection at all. What the advocates of international copyright ask is merely the protection of a property right, a right of ownership, *between* countries, which is now recognized in the domestic law of all countries. We do not make it a condition of a foreigner's right to own his coat or his hat or even to sell coats and hats that they shall be manufactured in this country. And if he has patented coats or hats, or other objects, his right in them our law will protect by patent here. We provide that if he imports them they shall pay duties, and in the same way we have a tariff on books and on all the materials which enter into the manufacture of books. To go to the point of insisting that a foreign author shall be robbed of his property unless he manufactures it here, is hardly giving that encouragement to literature which is among the duties imposed by the Constitution on Congress.

CANDLES.

It is curious that at the very time when we are resorting to electricity to light our streets more effectively, we should for the interiors of our houses be falling back on oil and candles. We hear now and then of some rich man who has his house lighted by electricity; but for ordinary domestic life the social forces all tend, and have for some years tended, in the direction of replacing gas by lamp and candle light. Roughly speaking, down to the time of the surrender of Richmond, we all used gas in our parlors and dining-rooms. In that bygone time, gas seemed to have driven out oil and candles finally and for ever, and a prediction that they would return would have seemed like a prediction that Broadway would become a "dirt road," or that people would cross over Buttermilk Channel dry shod, or that we should again take to living on the Battery. Gas was a peculiarly American light in its social aspect; we were a go-ahead people and liked light and plenty of it, and although we knew that candles were still burnt in England, we felt that it was merely because the English were not emancipated from the prejudices of the past and the slavery of inherited custom.

The reason now generally given by society for going back to oil is that it is "so much cheaper," but there is good ground for believing that this is merely a specious pretext, because it clearly will not explain the contemporaneous reintroduction of candles. Candles are dear and hard to get good, and any family which habitually dines by candle-light will, we venture to say, at the end of the year find, at least, that the saving produced by the use of the large umbrella and other lamps in the parlor, is counterbalanced by the loss on candles in the dining-room. We do not wish to weary the reader with statistics on a matter in which accurate estimates are so difficult to get, but expert housekeepers who have studied the question, and tried all kinds of illumination, are just those who laugh most sardonically when they hear of a reduction of expenses effected by means of oil and candles. Besides this, the class which alleges economy as its reason is notoriously not an economical class. The great bulk of Americans still use gas; it is the lavish classes, the fashionable set—in a word, the families which constitute what is known as "society"—who are responsible for the change. In the ordinary American home gas still reigns supreme; people save money, not by using gas, candles, and oil, but by using less gas.

The real reasons which led to the change are closely connected with the causes that have led to the abolition of New Year's day, the decline of the bouquet nuisance, the disappearance of the once universal custom of "introducing," the introduction of a quiet style of dressing in public, and many another curious social change, each one of which is in itself insignificant, but all of which taken together make American society so strikingly different nowadays from what it was, and was becoming, a few years ago. Fashion, a generation ago, seemed mainly bent on exaggerating what was vulgar; now its chief object seems to be to avoid what has become vulgarized by a too general adoption. Considering in what sort of a direction we were going a generation ago, the new departure is not a bad one, and it has been greatly reinforced, and perhaps, in fact, greatly caused, by the Anglomania which has got such a remarkable hold upon society. The English idea that gas is vulgar has accordingly found a home in New York, and it may be regarded as an accomplished fact that it is, for social purposes, on the wane.

Against this, as social reformers, we have not one word to say. Candle-light is very becoming to women, and the associations connected with it are all pleasant. No religious prejudices against it exist in this country. It is impossible to imagine any condition of society in which it will ever become vulgarized by too general use. We need have no dread, for instance, that it will ever become popular in the kitchen, or that even the strictest cooks will shrink from accepting situations in families which have gas in that part of the house. The great safeguard in this direction is the amount of care and attention which all substitutes for gas require. The tradition has been handed down to us that our ancestors occupied a great deal of their time in snuffing candles; but this duty is now replaced by the care of the peculiar cover, collar, or top, without which no modern candle is complete. The object of this being to protect the eyes from the direct rays of the light, it is necessary that it should be kept in position from the time dinner begins until it is over. But as wax, spermaceti, composite, or whatever the substance is of which candles are made, melts under the influence of heat, the angle of this object tends continually to alter, and a large part of the time of the guest or the host or his servants must be taken up in managing it, especially as, if the top tilts over too far, it takes fire. No mechanical device seems yet to have been invented which wholly gets over this difficulty, and, therefore, we may confidently say that candles will never become popular with persons of small incomes, who are hard-worked during the day, and need a mind free from care at the end of it.

With regard to oil, some of our most experienced inventors are now at work on lamp-wicks; and the danger that threatened society from the "duplex burner," which seemed at one time likely to become dangerously common, promises to disappear. A wick has been invented which, we understand, is absolutely certain at the end of an hour, unless unremitting vigilance is exercised, to either exhaust the oil, smoke the chimney, break it, or go out. It has only thus far been introduced in a few houses; but it will obviously prove much more popular than the old wick, which any one could manage. For some time, at any rate, so far as illumination is concerned, society may be able to look forward to a secure future.

MEMORY.

Mr. Huxley, commenting on a singular letter of David Hume, written at sixteen, says: "Though few thoughtful, lonely, studious boys of sixteen give vent to their thoughts in such stately periods, it is probable that the brooding over an ideal is commoner at this age than fathers and mothers, busy with the cares of practical life, are apt to imagine." If, instead of "imagine," he had said *remember*, it would have allied the truth he was uttering with many other truths not more clearly nor more often recognized than this. It would be well, perhaps, if the despicable weakness of remembrance and admirable powers of forgetting, which are an essential part of human nature, were more taken into account by us than they are, for they connect themselves both with blessings and with curses. Forgetfulness, usually thought of as one of the minor vices, is sometimes one of the highest virtues; while in some relations it may have as tragic effects as sinfulness, in other relations it may be a sign of supreme strength. It is often only by forgetting the things that are behind that we can press on to the things that are before. It has been excellently said by Balzac, "To forget is the great secret of strong and creative existences. . . . Feeble natures live in their sorrows instead of converting them into experience: they are saturated with them, and they consume themselves by sinking back each day into the misfortunes of the past."

The doublefacedness of all truth especially belongs to this one that we are considering. It is only by forgetting our own sorrows that we become able to help others directly and personally; but it is only by remembering them that we know what help to give. And this brings us back to Huxley's remark about fathers and mothers, and shows us that this parental dulness is but a part of the deplorable forgetting of our own past emotions, which we give proof of every hour in our intercourse with our fellow-creatures. Lack of sympathy is at bottom a failure of memory.

But to what extent is the faculty of memory under our control? Montaigne, in an accidental passage in his defence of Raymond de Sebonde, opposes vehemently the belief that we can forget at will, that there is a "science de l'oubli." He quotes but to dispute Cicero's counsel "to impress on the memory only the happiness of the past, and to efface from it the afflictions we have suffered." He disputes it on the ground that it is both cowardly and ridiculous: cowardly, because we should master adversity, not escape from it; and ridiculous, because we cannot make a choice in what memory presents to us, "since in no way is a thing so vividly impressed on our minds as by the desire to forget it." When Cicero says, "It is in our power to bury our misfortunes in a perpetual forgetfulness, and to remember our prosperities," Montaigne declares it false; and "this is true," he

says, when Cicero just afterward admits—"I remember what I would not; I cannot forget what I would."

But Montaigne defends his assertions by no arguments, and perhaps they are not so secure as they seemed to him. A "science of forgetting" is perhaps not impossible, and it may be we can learn how to efface from our memory what we will. The late Mr. Chauncey Wright, than whom there could scarcely be a better guide in such investigations, was of the opinion that "For the most part we remember what we like [not what we "like" to remember, but what we enjoy], and are therefore grateful to memory—the indulgent, the kind, the illusive painter of the past, whose pictures are, on the whole, bright day scenes, or, at the worst, tender twilights. I say for the most part and on the whole, notwithstanding typical instances to the contrary. . . . Its black marks are more delible than the white. Pleasures last longer than pains in memory, or more of them last, because the will practises memory in the rehearsal of them."

In these last words we grasp the clue which carries us through the mazes where Montaigne went astray. Even though the desire to forget an impression only intensifies the idea of it, the will can master memory in the end. Therefore must Cicero's thought be enlarged and modified. We must counsel ourselves to will to forget for our own sakes, to will to remember for the sakes of others. It is suicide to remember, it is cruelty to forget.

LORD RIPON'S VICEROYALTY, AND ENGLISH RULE IN INDIA.

LONDON, December 29.

THE departure from India of Lord Ripon, the Viceroy who has governed it since the present Ministry entered power in 1880, is an event of more than merely formal interest; for while it is regarded with satisfaction by the Anglo-Indian community of Calcutta, which disliked and feared his policy, it has led to an unprecedented series of demonstrations on the part of the native population, who regarded him as their friend and advocate. Even in England, where Indian affairs rarely stir much interest, people have been set thinking about the peculiar and delicate position of our sovereignty over that country by this remarkable display of native feeling, and its contrast to the sentiments of the British residents.

Lord Ripon is not a statesman of the first order. Nobody ever regarded him as a leader of men, and his sudden conversion to the Roman Catholic Church disparaged his judgment in the eyes of many. He was liked in England by his colleagues, not disliked by the public, which really knew very little about him, accepted as one of those respectable and useful administrators of the second rank who, under our system, get office the first time because something is expected from them, and get it on the second and all successive occasions merely because they have had it before. When Mr. Gladstone appointed him Viceroy, the ultra-Protestants, especially among the English Evangelicals and in the Scottish Free Church, raised a cry of horror, because, forsooth, he was a Roman Catholic; but the ridicule with which their horror was received showed how little power religious prejudice now has against a public man.

Lord Ripon's conduct as Viceroy, so far as here in England one can judge of it, has been marked throughout by earnestness and a sincere wish to benefit the people of India. His intentions have been excellent, and they do not seem to have been tinged by vain-glory or the desire for popular applause. On the other hand, he has shown some want of foresight and prudence. He miscalculated the temper of the English community in Bengal when he introduced the Criminal Jurisdiction Bill, which their opposition forced him, after a long and angry agitation, to withdraw. He was over-hasty for reforms when he made that bill follow so quickly on the measure for extending and developing local self-government in India—a change not only large in itself, but important as necessarily foreshadowing a further committal of power to the hands of local bodies mainly composed of natives. Toward the end of his Viceroyalty he started a third and not less serious measure of change, the Bengal Rent Bill, which has excited the hostility of the Zemindars or landlords (if one may call them so) of Bengal, and may cause further trouble before it becomes law. He may have been right, and most of us here in England think he was right in all these projects; but it was a bold thing to crowd them into the space of four years. With less haste there might have been more speed. His educational policy, of which less has been heard in England than of these controversial matters, seems to have been enlightened, and was, of course, marked by the same desire to benefit and advance the native population.

It is the warmth with which he has expressed this desire by words and acts, and the reception it has found at the hands of the Anglo-Indians on the one hand and the native population on the other, that makes his Viceroyalty, quiet as regards external policy, seem likely to mark an epoch in the annals of English rule in India. For the last fifty years, ever since the power of the East India Company became consolidated and the era of oppression and private enrichment began to be forgotten, England has recognized the duty of spending Indian revenues upon India, and of using them and all her resources there for the purpose of raising the moral and intellectual level of the native races, as well as of improving their material condition. Upon this point there has been no difference of opinion either at home or among the Anglo-Indian administrators of the country. Even the Mutiny did not check this current of sentiment; indeed, the assumption by the Crown of direct sovereignty over the country, which followed the struggle of 1857, rather quickened the growth of philanthropic sentiment and beneficent legislation, for it made the English more sensible of their responsibilities. And it was about this time that another development of the same disinterested policy began to be heard of, viz.: the admission of natives to posts in the upper part of the civil service and in the judiciary. This was a legitimate consequence of the impulse given to the higher education, and became easier to effect by the abolition of the old system of patronage and introduction of competitive examination for civil-service appointments. Before long, natives of India came to England to enter at the annual competition, though of course their numbers were small compared with those of the English candidates. Several natives have obtained judgeships; several have risen to good, although none to the highest places in the civil service; while another avenue to public life has been opened in the municipal councils of some of the Indian cities. Lord Ripon's Local Government Bill and Criminal Jurisdiction Bill were intended to extend the attributions of native bodies and the jurisdiction of native magistrates.

The Anglo-Indian community, when it took alarm at these measures, began to ask, and its friends in England to urge upon home opinion, the question, how far we mean to go in this direction. Does England really propose to extend self-government in any large measure to races like those which inhabit India? Does she believe that they are now, or can within any assignable period become, fit for it? What would be the first use to which self-government would be turned? Would it not be to overturn the edifice of English power, and throw the peninsula back into that chaos of petty and mutually hostile states for which England substituted her present strong and well-ordered dominion? Is there any use in blinking the fact that, as the English won India by the sword, so they must hold it by the sword? To expect native races, differing from us in customs, ideas, religion, wounded by our constant assumptions of social superiority, which the meaner sort of Englishmen display in the most offensive ways, not to dislike foreign rule and not to seek to get rid of it on the first possible occasion, is to misread history and human nature. It may be quite true that India and all classes in India, except the warlike retainers of some native potentates, are better off under English government than they would be under any native government, whether Mohammedan or Hindu. Life and property are secure, the Hindu is not suffered to rise against the Mohammedan, nor the Mohammedan to oppress the Hindu. Trade is far more prosperous than it ever was before, communication easier. Famines are averted or relieved. Industrial enterprises are promoted; education is beginning to be provided; the frontiers are guarded against invasion. Nevertheless, all these benefits have not really conciliated the affection of the people, and would not prevent an insurrection, should one break out, from spreading far, nor Russia, should she attempt an invasion, from finding a great deal of support. It becomes necessary, therefore (so these Anglo-Indians argue), not only to maintain the full military establishment of India, but to let the people clearly understand that England means to keep the government absolutely in her own hands, neither encouraging natives to aspire to high posts in her service, nor intrusting to them any but the most routine and unimportant departments of local government.

These doctrines are not popular in England, for they run counter to the popular view about India, which is sympathetic and even sentimental. A singular illustration of this was afforded the other day by the acceptance of a Hindu from Bengal as candidate for the borough of Greenwich, one of the divisions of London. Mr. Lal Mohun Ghose is a speaker of much fluency and even eloquence, who has been sent to England by a native association in Calcutta to plead on English platforms for certain legislative and administrative changes which these natives desire. His able addresses have made him popular, and the Liberal "nominating convention," if we may call it so, for the Parliamentary district of Greenwich adopted him by a large majority. As the Redistribution Bill will alter the constituency, no one can tell what are his chances of getting in; but that he should be run at all is a new and significant phenomenon. The Anglo-Indians' contempt for natives does not exist at all here, and their wish to keep the natives down finds no echo in the English democracy, which is quite capable of passing resolutions in favor of extending political rights to its Indian subjects.

However, the English democracy has so far thought very little about India—even less than does the House of Commons, in which an Indian debate is a rare event and gathers a very thin attendance. Indian affairs are left almost entirely to the Government on the spot and the Indian Secretary in London, whose policy is largely influenced by the Council of old Indian officials which sits to advise him. There is no likelihood that any sudden step will be taken to develop a sentimental policy, still less to recede from the promises already made. But among the retired Indians who have not joined in the attack on Lord Ripon, there are sages who

nevertheless hold the situation in India to be one of increasing difficulty. They point out that our educational system, especially the universities founded in India, are raising up a class of persons who will have ambitions to be satisfied, and who will make leaders for their fellow-subjects. We are breaking down caste, and thereby removing the greatest barrier which kept each group of the Hindu population aloof from the others. The rapid extension of the English tongue, which will soon be understood by the richer class all over India, will supply a means of intercourse between different races and parts of the country such as has never been seen before. Railways and telegraphs are covering British possessions and entering the native States; they, too, will contribute to fuse the native races together, and to make more manifest the scantiness of the European force that holds an empire peopled by two hundred and forty millions. It does not follow that in conferring these benefits on India, you really acquire the friendship and gratitude of her people; one may do great things for others and be no better liked by them. Nor does it follow that even if the intelligent class perceive the value of your rule and desire to maintain it, they will be able. The position of two hundred thousand Europeans (which is about our full number in India) among subjects twelve hundred times more numerous, can never be a safe one.

These alarms may be well founded, but what practical course do they suggest? Certainly not the closing of the universities and the stoppage of the railways, nor cessation of the promotion of natives in the civil service. It is too late to do any of these things, for even if English opinion permitted them, which no persuasion could bring it to, it would be deemed a sign of fear in India, and would excite legitimate discontent there. We must, therefore, persevere in the present path, watching the signs of the times as carefully as may be, and avoiding all secondary sources of danger. One good forward step would be to mollify the minds and mend the manners of the Anglo-Indians. The scorn which they habitually—and especially, of course, the non-official part of them, for the civil service has always had a sense of its duties in this respect—display toward even the well-born and well-educated natives, rankles in the hearts of the latter. Many of them now come to England, and express astonishment at the courtesy which meets them there, the equal footing on which they are at once placed. It was the sense that Lord Ripon meant well by them, that he represented the good intentions of the English people and not the haughty exclusiveness of the Anglo-Indian community, that he had incurred abuse and dislike on their account, that has made his departing journey through India a sort of triumphal progress. Never before has the native population expressed its feelings so unanimously, so forcibly, or in such marked opposition to the European residents. Far off as we are from anything like Indian nationality, or even from local political life among any section of the natives, the phenomenon is a remarkable sign of the changes that are in progress and the development one may live to see—all the more remarkable because they coincide with a great step forward toward democracy in the ruling country.

Lord Dufferin, who has taken over the reins of government from Lord Ripon, is doubtless well known to your readers as the most popular of the recent Governors of Canada. His duties in India will be far more delicate and difficult than those of a mainly ornamental position such as he held at Ottawa, but there is no reason to think that he will prove unequal to them, for he is believed to have plenty of ability under his courteous manners and graceful eloquence. The Anglo-Indians have received him the more gladly because they think that his knowledge of Russia and her designs, acquired as Ambassador at Petersburg and Constantinople, will enable him to deal successfully with those Afghan and Central Asian questions which form their constant disquietude. Y.

Correspondence.

ITALIAN DISLIKE OF FOREIGNERS.

To the Editor of The Nation:

Sir: Your correspondent, "S. K.," writing from Alassio, disputes the conclusion formed by many foreigners in Italy, and expressed by Mr. James, "that Italians at bottom despise strangers and regard them as barbarians." I do not know what facilities for forming a judgment "S. K." may have had, but, from the experience of ten years' life in various parts of Italy, I am invincibly of the opinion that said conclusion is absolutely true. There are exceptions to all rules, but not enough to this to invalidate it—the Italian has, as a rule, "less national pride" but more national vanity and contempt of a foreigner than any other people in Europe. It is very rarely, indeed, that Italians are really and unreservedly cordial to any foreigner. They are polite and sympathetic in manner as a habit, but as a rule detest the strangers who come to Italy, and only welcome them for the money they spend there. The debauched and effeminate sons of the old nobility condescend to ask in marriage the rich Inglesine and Americane, and, when they have got possession of the pecuniary advantages arising therefrom, return to their Italian *liaisons* and habits, and the poor fools who have sold themselves for a title in a country where titles have grown contemptible, find that they have made a wreck of life to grasp a mere shadow.

With my experience, I should say to anybody thinking of buying property in Italy, *Don't*, unless you are willing to be vexed by unequal taxes, unjust imposition of all property obligations, with no recourse; for the chances are that all these will come to you if you are induced to buy an estate or even a residence. You have no refuge at the tribunals, for a foreigner will scarcely ever get a judgment against an Italian, no matter how just may be his case.—Yours truly,

Forestiero.

THE PRESIDENT AS A LEGISLATOR.

To the Editor of The Nation:

Sir: In your issue of January 8, speaking of the course of the *Sun* and *Tribune* in suppressing ex-Governor Cleveland's letter on civil-service reform (p. 22), among other things you state that: "When he [the President] talks about the tariff, . . . what he says is hardly more interesting than what any other man says. . . . These are the things which lie within the domain of legislation, and the President does not legislate."

Allow me to differ with you, for this reason, that, whereas the duties of the President are chiefly executive in their character, there are times when his action is and must be purely legislative. The Constitution requires that every bill, after having passed the Senate and House of Representatives, shall, before becoming a law, receive the signature of the President, or, if vetoed, be repassed by a two-thirds vote. When the President signs or vetoes a bill he is acting in the capacity of a legislator just as much as he who votes aye or no on its passage through Congress. With respect to all bills which are not likely to command a two-thirds vote (for instance, those relating to the tariff), the President not only exercises the functions of a legislator in signing or vetoing a measure, but his influence as such is equal to that of the difference between the two-thirds necessary in case of a veto and the majority by which it had previously passed Congress. This being the case, are not the President's views on the tariff "interesting"?

If it is expected of a Presidential candidate that he let the people know his views on civil-service reform, is it not reasonable to demand some intimation as to how he should vote in case a tariff bill was presented him for action thereon?—Yours truly, W. H. R.

New York, January 12, 1885.

[The President's veto enables him not to legislate, but to prevent legislation. A legislator says there shall be such and such a law. The President, at best, can only say there shall be no such law. Of course, under the Constitution, he plays some part in bringing legislation to pass, but not the kind which makes his views supremely interesting or instructive. As regards the tariff, for instance, what tariff, of the many passed, has owed anything whatever to Presidential initiative or recommendation?—Ed. Nation.]

THE TREASURY WHISKEY CIRCULAR.

To the Editor of The Nation:

Sir: Please permit me to call your attention to the circular issued on January 6 by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, which, although in its direct bearing of no great interest, deserves much more discussion than it generally seems to have received from the press. The circular is published by the Cincinnati *Commercial Gazette* justly under the headline: "Seven Months' Extension Will be Given to Bonded Whiskey." The gist of the circular is contained in the following sentence:

"The regulation series No. 7 now are hereby amended by striking out the words 'thirty days' in the condition of the bonds prescribed in articles 10 and 11 thereof, and collectors are directed to substitute therefor such time, *not exceeding seven months*, as in their opinion may be reasonably required in the process of the exportation, etc."

The efforts and events which led to the promulgation of this order are not without interest. In the years 1881 and 1882 the manufacture of whiskey, that is, such spirits as require age to become fit for consumption, had received such encouragement from Congressional legislation and the then prevailing spirit of speculation, that the production became much greater than the consumption of that class of spirits. When the tax of ninety cents per gallon became due on these spirits, everything was tried to induce Congress to change the law so as to extend the time during which whiskey might remain in the bonded distillery warehouses. In the late Congress a law to that effect passed the House, but failed in the Senate. In the first session of the present Congress the House refused by an emphatic majority to extend the bonded period, although no compromise was left untried, and every influence which the whiskey trade could command was brought to bear upon Congress. Congress refused extension in any form and under any circumstance. Thus defeated in Washington, the whiskey men gave up lobbying, attended again to their proper affairs, and, by exporting the surplus stock as it matured in bond, had apparently accommodated themselves to what seemed to be the inevitable, when, some weeks ago, it became known that three gentlemen from Kentucky were at work in

the Treasury Department endeavoring to obtain, through a change in the regulations, what Congress had so unmistakably refused to grant to them.

On December 27th a letter from the Solicitor-General, approved by the Attorney-General, was telegraphed from Washington, in which certain questions, asked by the Secretary of the Treasury, are answered. The letter is a curious document and the following is the real point:

"There is, therefore, no statutory reason why it [whiskey] may not, for a period reasonably [?] required in process of exportation, remain in the same custody as before [the distillery warehouse] even after three years."

On January 3d the Secretary of the Treasury and the Commissioner of Internal Revenue listened to arguments of the aforesaid gentlemen from Kentucky, who recited a long list of imaginary hardships to which distillers were subjected by alleged tyrannical regulations of the Department. The briefs are long, and some passages cannot fail to stir the heart of the loyal distiller because of the eloquent allusion to his constitutional rights; but as I have not been able to find anybody acquainted with the subject who is not willing to admit that the whole is simply a tissue of sophisms, it is difficult to understand how it made any impression upon the Secretary of the Treasury, while it seems almost impossible that the Commissioner, who is necessarily familiar with the details of exportation, should have been deceived.

The facts are, that about forty-five days after the bonded period of three years has expired, the District Collector sends a notice to the distiller that unless within ten days the conditions of the warehousing bond be satisfied, the Government will hold the whiskey for an additional assessment. This practically gives about sixty days more time than the law intends either to pay the tax or file the export bond. The export (or transportation) bond so far required demanded that the spirits should be delivered within thirty days after filing of the bond on board the foreign-bound vessel; and from sixty days' to eighteen months' time was given to produce the foreign landing certificate, according to distance of foreign port of destination. In the event of any fair reason for delay, the time could under old regulations be prolonged 50 per cent.

184,692 barrels whiskey had been exported under the regulations from 1883, when these exports began, to December 1, 1884, and I feel safe to say that not even a murmur was heard from anybody actively engaged in the exportation of these whiskeys against any regulation, or against the spirit in which the Government met any innocent deviation from its rules. No great delay need ever have occurred, nor will any irregularity be avoided by the new rules. There occurred a case where whiskey was shipped to a port of export from which no shipping facilities to the foreign port of destination could be expected, unless provided by the shipper. For a reason, satisfactory to the Government, this was not provided, and as no suspicion of any kind rested against the shipper, the Department treated this case leniently, and assisted the shipper in every way; the difficulty was overcome, and nobody suffered any hardship. Nevertheless, this very case is cited to show that a change was necessary.

It has even been the practice of the Department, upon proper application, to accept the taxes due on whiskey bonded for export, in liquidation of the bond, no matter whether the whiskey remained still at the distillery or had already reached the port of export. There was a great deal of disappointment when Congress refused to change the law, but nobody has ever complained about the manner in which the Government supervised the export of whiskey.

This new order is simply intended to give owners of whiskey nine months more time than the law intends to give for either the payment of the tax or the exportation in bond; and whether the Department will admit the intention or not, the effect is just the same, for it will not be difficult to produce good causes why whiskey, which the owner expects never to export, cannot find shipping facilities in less than nine months, during which time it will be optional with the owner to cancel the bond by paying the tax.

Many good reasons were brought forth a year ago for an extension of the bonded period by Congress, the proper authority. Some of these are still good, but can anything be said in extenuation of this act of the Commissioner of Internal Revenue, approved by the Secretary of the Treasury, which sets aside the deliberately expressed will of Congress? The law says that a bond be given to be further prescribed by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury. If the Commissioner holds that it requires, reasonably, nine months to ship from the interior of Kentucky to the seaport, why may he not rule that nine years is a time reasonably necessary? It must not be forgotten that, the Secretary having discretion, all cases where extraordinary delays had to occur have been satisfactorily treated, and could be so treated in the future.

Had Congress not voted upon this question of extension, were the law in any manner obscure, the step would seem less violent. As it is, it must be considered an unprovoked usurpation on the part of an executive officer; and as it comes with the approval of a Cabinet officer who enjoys the greatest respect of the best part of our business community, the precedent is all the more to be deplored by all friends of good government.

You will please pardon me for this intrusion upon your time, but I hope that you will not let this extraordinary ruling pass without an earnest protest in your columns. A MUGWUMP.

CINCINNATI, O., January 9.

A BOSTON GRIEVANCE.

TO THE EDITOR OF THE NATION:

SIR: It is a well-known fact that the water which is supplied to the inhabitants of Boston is as bad as that which is supplied by any water works in the United States. The sewerage of the town of Natick empties into a pond separated by a sand bank from one of the reservoirs that feed the city. In making one of these reservoirs the earth of the field which had been manured and cultivated, was not removed, and everything that could be dissolved, and the mud itself, went into the drinking water.

Three years ago the water was filled with decaying sponge and was made unfit to drink, so that a great number of people had to buy their drinking water, and even at present, though the water is better than it has been for some time, the purchase of drinking water is still kept up. In some restaurants the notice that the water drunk in the establishment comes from some well-known spring in the country, is put up as an advertisement. As far as water goes, the inhabitants are completely in the hands of the Water Board, the individual members of which are irresponsible, and their corporate body intangible. This year, to the astonishment of everybody, the water rates were enormously increased. This produced an outburst of indignation, and some of the abuses of the present system became apparent. One gentleman, who spent most of the year out of the country, is charged with twice the quantity of water he used the year before. A gentleman and his wife without children, with three servants, in an old-fashioned house, are charged with 300,000 gallons of water. "Why am I taxed for twice the amount of water I was last year?" said a West End gentleman to an intelligent clerk at the City Hall. "Because," said the clerk, "we must raise the money somehow."

"Why," said another, "do you make me pay for water I do not use?" "Because," said the clerk, "we should otherwise have to raise the water rate." "Can I have a water meter put into my house?" "No, sir," was the answer; "there is a law against putting meters into the houses of private families." "I shall be gone most of the year," said another one; "why must I pay in advance for 150,000 gallons of water I shall not use?" "Because we estimate your house as twice as valuable as it was last year." "I do not see the connection," says the householder. "Well, that is the reason," answers the clerk. "Why am I to pay for water I do not take?" said another victim. "Because we must have water in the city." "If that is so, why do you not, on the same principle, take my watch out of my pocket and sell it to supply the city?"

Mr. George M. Hobbs, of the Water Board, who was interviewed on the subject, defended it by a novel theory of political economy. He wanted to lower the taxes of the large manufacturers, so he increased the taxes of individual householders. The Standard Sugar Refinery employed 600 men. To enable them to do this and compete with Brooklyn and St. Louis, it was necessary to lower their taxes, and therefore it became necessary to raise those of 600 other householders, who are not interested in sugar refinery. In closing, he remarked that the taxpayers would be at first excited, but would get over it and pay up. His theory of taxation leaves out the fact that if a man is obliged to pay $30 more for the benefit of sugar refinery, he will spend that amount less for the benefit of the butcher, the baker, the bootmaker, the dry-goods dealer, and so forth. R. D.

BOSTON, January 8, 1885.

BEN JONSON AND PHILOSTRATUS.

TO THE EDITOR OF THE NATION:

SIR: In an article by Charles Mackay, in the *Nineteenth Century*, on "English Songs, Ancient and Modern," there occurs the following statement:

"Some of Ben Jonson's songs are exquisite in their delicacy and grace. Every one has read (or heard sung) the delicious song—better than anything attributed to Anacreon or any Greek or Roman writer whatsoever—'Drink to me only with thine eyes,' a paraphrase from the Low Latin of a nameless poet in the Middle Ages, and a great improvement on its original—a song sufficient for fame, if its author had written nothing else."

Now, without assuming to hold a general brief for the "Greek and Roman writers," I would venture to suggest that, before pronouncing the song "a great improvement on its original," it would have been well for Mr. Mackay to take the trouble to read the original. So long ago as 1786 Richard Cumberland, in the seventy-fourth number of the *Observer*, let out the secret of this neat little bit of poaching on the part of "learned Ben," by copying the song and comparing it, stanza by stanza, with passages from the love-letters of the sophist Philostratus. He quotes the original by the numbers of Olearius, but I will add those (and the pages) of Kayser, as more convenient for readers now. Stanza 1 is from Letter 24 (33, p. 355 K.); the second is from Letter 25 (32 K.); the third from Letter 30 (2, p. 343 K.); and the fourth from Letter 31 (46, p. 358 K.).

I feel bound to add that a perusal of the original has not led me to form a different opinion from Mr. Mackay as to Ben's improvement upon it; but, on the other hand, I cannot agree with Cumberland in his disparagement of it as "a parcel of unnatural, far-fetched conceits." The learning displayed in the Lives of Apollonius of Tyana and of the Sophists, and the taste and judgment shown in the 'Images,' merit for their author a better title than that of "a despicable sophist." Nor are these love-letters, and the similar productions of Aristænetus and Antiphon, by any means such flimsy and worthless trifling as Cumberland supposes. They possess a great deal of value for us on account of the glimpses they give of the social life and manners of the ancients. Certainly they have afforded entertainment to numbers, and they have been often translated—Aristænetus by a man of no less taste than Sheridan. My own copy of Alciphron bears the autographs of two former leaders of the bar in this State, eminent for their learning and love of the classics—Judge Davis and Rufus Choate.

In trying to make out whom Mr. Mackay could have had in mind in speaking of "the Low Latin of a nameless poet of the Middle Ages," it has occurred to me that possibly he may have had an indistinct recollection of the 'Kisses' (Basia) of Joannes Secundus (John Everard), a famous Dutch poet, who died in 1536, in his twenty-fifth year, who, according to Hallam, "found the doves of Venus in the dab-chicks of Dutch marshes."—I am very truly yours,

HENRY W. HAYNES.

BOSTON, January 6, 1885.

TELEPATHY.

TO THE EDITOR OF THE NATION:

SIR: As a contribution to the numerous well-authenticated cases of telepathy published in your valuable paper, I mention the following incident:

Several years ago an officer of the United States navy, while on the Pacific Ocean at the hour of midnight, was walking to and fro on his vessel. Suddenly he heard a splash in the water, and, rushing to the side of the vessel, he saw the form of his father struggling in the waves. He immediately consulted his watch, noted the hour, and reported the circumstance to his commanding officer.

The next mail brought him the sad intelligence that his father, who was a professor at West Point, had committed suicide by drowning, on the very night and about the same hour that the apparition had been seen by him.—Very truly yours, W. D. MORGAN.

LUTHERVILLE, MD.

AN EXPLANATION OF TELEPATHY.

TO THE EDITOR OF THE NATION:

SIR: I beg to offer some hypotheses in explanation of telepathy:

(*a.*) Suppose that the fact of telepathy has been established substantially according to the results reached by the London Society for Psychic Research, viz.: that one person can know what another person is thinking of without any known physical means of communication;

(*b.*) Suppose that consciousness and memory, will, understanding, etc., do not depend upon matter for their existence, but only for their manifestation; *i. e.*, are spiritually self-existent, but require a physical basis whence to effect any knowable result, *i. e.*, to become efficient causes or "forces";

(*c.*) Suppose there is an ubiquitous, imponderable, frictionless, tomic (*i. e.*, not atomic) or any other state of matter, ordinarily inappreciable to the physical senses, having modes of motion peculiar to itself and appropriate to the support and primary manifestation of consciousness; and that we agree to call this kind of matter "akasa," or "od," or "biogen," or anything else;

(*d.*) Suppose akasa susceptible of being set in sundry modes of motion by the consciousness, will, etc., of some person, and that such modes of motion are respectively the expression of such and such thoughts, in the form of thought-waves;

(*e.*) Suppose biogen capable of continuing for some time a particular mode of motion impressed upon it by the will, and of propagating this motion to some distance from the point of its origination, just as light-waves, etc., are propagated—both the matter and its motion being ordinarily imperceptible to the physical senses;

(*f.*) Suppose a person at some distance to be affected by the impacts of these waves in a way that causes in him waves identical in all respects with those proceeding from the originator of the motion;

Obviously, then, the consciousness of the two individuals would coincide; *i. e.*, one would have come to think the same thing the other thought; *i. e.*, one would have "read the mind" of the other; and the operation of the one mind upon the other would not have been cognized by the physical senses of anybody; *i. e.*, it would have been the action of one mind upon another at a distance, without any known physical means of communication; *i. e.*, it would constitute telepathy—just what the London S. P. R. would appear to have established.

Assuming the truth of this hypothesis, it accounts for the facts, is not incompatible with any of them, and is, therefore, an available working hypothesis to explain telepathy.

The biogen-theory derives some confirmation from the fact (not generally known or accepted, and contrary to some of what are called "laws of matter"), that some persons, in certain states of mind, can *see* the biogen-waves proceed in a ray or pencil from the agent and impinge upon the object.

It derives additional confirmation from the fact, that biogen, in some of its states and modes of motion, may be smelled, heard, seen, and handled by any one; *i. e.*, comes under the ordinary observation of the physical senses.

It may relieve the minds of some to be assured that no *Deus ex machina* need be invoked to lay some of the "ghosts" that haunt the séances of the spiritualists. I have nothing to say here of those alleged ghosts supposed to be apparitions of dead persons. But I will give a new name to what are called "veridical phantoms." I will call them *telepathic automata.* With this hint, and the reminder that the substance which composes the visible and tangible bodies of telepathic automata is that which I have elsewhere described and named biogen I remain,

Very truly yours,

ELLIOTT COUES.

1726 N St., WASHINGTON, D. C., December 28, 1884.

[The American Society for Psychical Research was very judiciously organized last week in Boston, with Prof. Simon Newcomb, of Washington, for its President, and Mr. N. D. C. Hodges, of Cambridge, Mass., for its Secretary. It is announced that the Society will for the present confine itself exclusively to experiments in thought transference, and will not attempt to collect other evidence. Nevertheless, we venture to think that it would put on file such communications as we have already published under the head of Telepathy, and which our space will not allow us to continue.—ED. NATION.]

THE NIGHT-GOWN.

TO THE EDITOR OF THE NATION:

SIR: 1. *Night-gown* used to mean 'dressing-gown,' or else 'coat unfit for occasions of ceremony,' I am not certain which; perhaps it had both senses. It now means *night-shirt.* 2. *Bed-gown* has been used as the name of some garment—unknown to me—worn by Welsh women out of doors. 3. *Bed-shoes* are shoes worn, not in bed, but in the bedroom. 4. The German *Schlafrock* (sleep-dress) means 'dressing-gown.'

It is easy enough to theorize from these facts, provided we disregard the last third of Professor Sophocles's dictum that "Sound etymology is founded on (1) sound, (2) sense, (3) history." But is it historically true that our ancestors went to bed at night in dressing-gowns and soft slippers?

INQUIRER.

January 9, 1885.

Notes.

AN *American Journal of Archæology* is to be published quarterly in Baltimore. It will embrace "the whole field of archæology—Oriental, Classical, Early Christian, Mediæval, and American"—and will be the official organ of the Archæological Institute of America. Communications, contributions, and subscriptions should be addressed to the Managing Editor, Dr. A. L. Frothingham, of Johns Hopkins University (whose address is No. 29 Cathedral Street, Baltimore). Prof. C. E. Norton will be Advisory Editor, and special editorial assistance will be rendered by T. W. Ludlow, New York; Prof. Allan Marquand, Princeton; A. R. Marsh, Harvard; and C. C. Perkins, Boston. Contributions to a reserve guarantee fund are solicited, and may be sent to the Safe Deposit Company of Baltimore, as trustees.

'Personal Traits of British Authors' will shortly be published by Charles Scribner's Sons, as will also 'The Rescue of Greely,' by Captain Schley and Prof. J. Russell Soley, of the Navy Department.

J. B. Lippincott & Co. have nearly ready Dolby's 'Charles Dickens as I Knew Him.' They announce also 'Women of the Day,' a biographical dictionary by Frances Hays; and 'Geonomy: Creation of the Continents by the Ocean Currents,' by J. Stanley Grimes.

'The Religion of Philosophy,' by Raymond S. Perrin, is in the press of G. P. Putnam's Sons.

Under the title of 'Literary Landmarks of London,' Mr. Lawrence Hutton has prepared a handbook to those spots in the British capital which are hallowed by association with distinguished authors. The arrangement of the book is alphabetical, and under each author's name are given exact particulars of his London homes and haunts, with precise indications of their present condition. It has been the labor of years, both here in New York in libraries and in London in the streets. It will have the elaborate and careful indexes to which Mr. Hutton has accustomed us in his "American Actor Series." It will be published in March by J. R. Osgood & Co.

Mr. Austin Dobson's new volume of poems, 'At the Sign of the Lyre,' will be published here by Henry Holt & Co. about the first of March. In it will be included most of the poems which Mr. Dobson has written since the American edition of 'Vignettes in Rhyme' was published, and also certain of the poems which appeared in the English edition of 'Vignettes in Rhyme,' and in the later 'Proverbs in Porcelain,' but which were not included in the American collection. The forthcoming volume has been prepared expressly for America; it will not appear in England for several months.

Mr. George E. Woodberry's 'Edgar Allan Poe,' the next volume in the series of "American Men of Letters," will appear the last of January. Houghton, Mifflin & Co. will also soon have ready 'Congressional Government: a Study in American Politics,' by Woodrow Wilson.

Rowel's 'Letters from Hell,' to which reference was made in No. 1011 of the *Nation*, as having had a great run in a German version, will now be brought out in English by Funk & Wagnalls. George McDonald contributes a preface. The same firm is to issue 'A Brief History of Mormonism,' by Mrs. Ellen E. Dickinson.

It is thirty years since Charles Kingsley's 'Heroes' was first given to the infant world. Macmillan & Co. now publish a new edition of it as a supplementary text-book in their series of "Globe Readings." The original illustrations are retained, but this is of less moment than the exceptional beauty of the typography. The public at large will be glad to take advantage of the very low price which this educational edition bears.

The same house has brought out a volume of 'Daily Thoughts,' selected from Kingsley's writings by his wife, and cast in the form of a diary, with blanks for each day in the year, facing the passages selected not alone from the author's printed works, but from his MS. note-books, sermons, and letters. At the close of each month excerpts for saints' days, fasts, and festivals are added. The rubricated rules and titles give a very pretty effect to this handsomely-printed volume, which is well calculated for a gift-book.

The intelligent care of the sick by trained nurses is one of the blessings of the age, but the blessing is not yet universal. From their excellent presentation of this important subject, the 'Lectures on General Nursing' by Mrs. Eva C. E. Lückes (Scribner & Welford) deserve special commendation. They are eminently practical, they cover both details and principles, and they are well written.

The infinitesimal vital agents that modify life have a copious and ever-increasing literature devoted to them. One of the latest and most intelligible works is Dr. Klein's 'Micro-organisms and Disease' (Macmillan & Co.), which may be read with satisfaction by most intelligent laymen and with profit by most microscopists, whether physicians or not.

The tenth volume of the Tenth Census has been issued from the Government Printing Office. It binds together, each with its own pagination, monographs on Petroleum and its Products, the Manufacture of Coke, and on the Building Stones of the United States—the first two by S. F. Peckham and Jos. D. Weeks respectively. The information thus compacted is of great practical value. The illustrations are numerous, and those of the various stones (microscopical sections and superficies) are of great beauty.

We have received a copy of a memorial paper read by Hampton L. Carson before the American Philosophical Society on December 5, 1884, concerning the life and works of the late General A. A. Humphreys.

The *Literary World* of January 10 contains a long defence of Margaret Fuller against the judgment passed upon her by Nathaniel Hawthorne, and lately put in print by his son Julian. We may return to it hereafter. The writer, Mr. Frederick T. Fuller, of Boston, is a nephew of Margaret Fuller.

The January number of the *Auk* is replete with valuable information for the specialist in ornithology, and contains much that is curious for the general reader. The West is particularly well looked after, and here we remark Dr. W. J. Hoffman's "Bird Names of the Selish, Pah-Ute, and Shoshoni Indians," and F. M. Drew's "Vertical Range of Birds in Colorado." But the central interest of the number lies in the preliminary report of the Committee on Migration. It appears that nearly 700 observers (including twenty-five women) have been secured with stations in every State and Territory in the Union except Nevada. So vast is the amount of material thus gathered by the Committee that they despair of elaborating it fully unless pecuniary assistance is forthcoming. The northward movements of the martin, and of the Baltimore oriole in the Mississippi Valley, are summarized here. In addition to the observers enumerated, the light-house-keepers of North and South America have contributed their invaluable testimony, having now a motive for precise records of birds destroyed by dashing against the lantern or (still more) the structure of the lighthouses. In this instance, as in the case of telegraph wires, civilization is fatal to bird life to a very large extent, though relatively the destruction must be insignificant.

Science for January 2 copies Chavanne's map of the lower Congo, which will be found handy for legislators and others. The "almanac" number of this weekly has been enlarged and more fully illustrated, and given an independent cover and title, and the 'Science Almanac' will doubtless find many admirers.

The *Phrenological Journal* for January begins the thirty-first volume of its new series, and is a phenomenon in periodical literature well worth considering by any one who regards the difference, say between the Boston of 1832 and of 1885 on the subject of phrenology. The editor passes in review fifty years of this semi-science or pseudo-science, and his article is illustrated by a series of portraits of its chief apostles—Gall, Spurzheim, Combe, Sylvester Graham, the Fowlers, Doctor Trall, etc., etc.—and an early view of Clinton Hall, which formerly stood on the corner of Nassau and Beekman Streets, the present site of Temple Court.

We note the appearance of the first number of the *Army and Navy Quarterly*, published by L. R. Hamersly & Co., Philadelphia.

The *Library Journal* announces that hereafter the Coöperative Index to Periodicals, which has been published monthly in connection with it for the past two years, will give way to a quarterly issued during the present year, and extended so as to include all the periodicals admitted to Poole's Index.

The *pièce de résistance* of the December number of *Le Livre* is an essay at enumerating the works of the late Paul Lacroix as a bibliographer—only one of the many sides of this extraordinarily prolific writer, perhaps the most so of the present century. M. Fernand Drujon mentions no fewer than 279. A fine engraving of Paul Lacroix is also the sole illustration of the number. It appears from his will that he leaves nothing to the library of the Arsenal over which he presided, but that, with a few exceptions (in favor of the public library of Montpellier, for instance), his private collection will be sold during the present winter.

Spemann's ever attractive magazine, *Vom Fels zum Meer* (New York: F. W. Christern), is resplendent with color and gold in its Christmas issue. The opening article sketches the life of that genial artist, Albert Hendschel, specimens of whose graceful and humorous designs (partly derived from drawings left by the deceased) are interspersed with the text.

The exceedingly interesting letters of the explorer of Phrygia, W. M. Ramsey, to the *Athenæum*, recording his researches and discoveries, excite the hope and the belief that they will appear in a more convenient and complete form. It would seem that we are thus far only very incompletely furnished with the data requisite for a satisfactory understanding of the history of Asia Minor, and such explorations as Mr. Ramsey's, undertaken with as much patience as courage, and recorded in the purely scientific spirit, deserve the largest encouragement they can receive. The grateful modesty of Mr. Ramsey's letters will not desert his book, and his frank confession of mistakes in conclusions or observations shows that he will not strain either to strengthen a theory—the most common danger in archæological research.

Herr Theodor Gomperz has discovered, in a puzzling inscription lately found at Athens, a system of Greek stenography. It will form an addition to the bibliography of that subject lately published by Mr. J. E. Rockwell, under the auspices of the Bureau of Education, and it will carry the history of the art back some centuries; for the Romans were the earliest stenographers previously known. Herr Gomperz is inclined to think that the inventor of the system, who inscribed it on stone and sent it to a temple, just as he would nowadays have published it in a scientific journal or read it before some learned academy, did not intend it merely for a system of shorthand, but as a substitute, devised on philosophical principles, for the unscientific and inconvenient alphabet which the Greeks derived from the Phœnicians—that he was, in fact, an ante-Christian Mr. Pitman. The spelling reformers will be glad to learn that they mount to so respectable an antiquity, and sorry on the other hand to reflect that their efforts have continued so long with so little result; that, after struggling with prescription more than twenty centuries, the language which has the best chance of becoming universal has a very much worse orthography than the language on which their first attempts at reform were made.

Mr. Francis Parkman has presented to the library of the Massachusetts Historical Society a part of his invaluable manuscript material for his series of histories of the French in North America. It consists of thirty-five bound volumes, quartos and folios, and three unbound volumes, copied expressly from French and English archives and from private collections, and for the most part unprinted. Three volumes are filled with Montcalm's private correspondence.

The historian, Paul Lacombe, is preparing, says *Polybiblion*, a 'Parisian Bibliography'—"Tableaux de Paris, et documents pour servir à l'histoire des mœurs de la fin du XVIe siècle jusqu' à nos jours."

M. Guyau has published a book whose title fifty years ago would have raised a storm—'Esquisse d'une morale sans obligation ni sanction.' And even now many will think that it treats of an impossibility. But M. Guyau does not propose to substitute his voluntary and unsanctioned morality for that of the best accredited teachers; he would merely add his to theirs. In his scheme the moving force is the desire to increase the intensity of life, material and intellectual—not a bad motive to have as an assistant. Duty with him proceeds from capacity. One should not say, "I ought, therefore I can," but "I can, therefore I ought." In other words, M. Guyau has brought forward more forcibly a side of morality which had by no means been overlooked by the older moralists.

The recent bi-centenary of the death of Corneille (1606-1684) has called forth in Paris the usual throng of new editions, pamphlets, studies, and criticisms. Among these, one of the most interesting is a little pamphlet by M. Arthur Heulhard on 'Pierre Corneille, ses dernières années, sa mort, ses descendants' (Paris: Jules Rouam; New York: F. W. Christern). Upon one point in the accepted account of Corneille's career M. Heulhard is a heretic: he does not believe that Corneille spent his last days in penury. He maintains that he was always in modest circumstances, and that he never sank

into want; and makes out a strong case against the legend.

Mark Twain's new book, the 'Adventures of Huckleberry Finn,' extracts from which have been printed in the *Century* and have been read by the author on his tour with Mr. Cable, is to be published (by subscription only) on February 16. Huckleberry Finn first appeared in Mr. Clemens's 'Tom Sawyer,' and we see announced a French version of 'Les Aventures de Tom Sawyer,' by William L. Hughes (Paris· Hennuyer; New York: F. W. Christern), with seventy illustrations by M. Achille Sirouy. If we remember aright, Mark Twain made fun of the French translation of the 'Jumping Frog.' What would he say to French illustrations of that Missouri idyl 'Tom Sawyer'?

A recent French book likely to be welcome in American households is a volume of 'Contes Choisis, à l'usage de la jeunesse,' selected from the works of M. Alphonse Daudet and illustrated by MM. Émile Bayard and Adrien Marie (Paris: Hetzel; New York: F. W. Christern).

The great illustrated edition of Cooper's novels, published in Paris by Firmin-Didot & Co., uniform with their illustrated Scott, includes the 'Last of the Mohicans' and the 'Pioneers,' and these will be followed soon by the 'Prairie' and the 'Spy.'

—Professor Baskervill writes us from Nashville:

"In my letter about the study of English in Southern colleges, I seemed to assert that not *one-third* of the graduates from *each* of the schools named could enter the Freshman Class of Harvard College. This assertion I did not intend to make. By so doing I should have done Mr. McCabe's 'University School' a wrong. His school I have known for eleven years, and the standard is high, I think, and the work as thorough as in any school of like kind in the United States. Especially in English Mr. McCabe is doing good work."

—Mr. Cable's article in the January *Century*, on "The Freedman's Case in Equity," has occasioned no indignation in the South. There are naturally but few who sympathize with him, but we have heard of no abuse being heaped upon him. Those who oppose his views and who have attempted to answer them, are two classes. The first is represented by the Louisville *Courier-Journal*, which frankly admits both that race prejudice exists, and that it alone accounts for the withholding from the negro of those social privileges to which Mr. Cable thinks him, as an American citizen, entitled. It argues that this race prejudice cannot, however, be removed by any amount of rhetoric, nor, indeed, of legislation, and that all attempts like Mr. Cable's are, therefore, absurdly Quixotic. The second is represented by the humorist "Bill Arp," who maintains that "the trouble with Mr. Cable is that he does not consider the negro as a race, but lets his large philanthropy consider them individually. He finds a case where a negro became an expert from having the advantage of a high degree of culture, and he makes him a type of the race, and puts a demand upon us for a like civilization to all." This class of people knows that the "black negro" was "by nature and nature's God" created only for manual labor. The negro of any note is sure to have Caucasian blood in his veins. That some of these have shown a capacity for learning, is no reason why the race should be highly educated. Because one hog was educated to play cards, it does not follow, says Bill Arp, that we should educate all the hogs in the country. As a race, they do not desire to "mix." Nature's God has given them an instinct which is against it. Mr. Cable has, in advocating their admittance on equal terms with the whites to schools, hotels, and theatres, shown an utter ignorance of the race as a race. They would tell him almost uniformly that they do not desire such privileges. It is useless to argue with people like Bill Arp, as they already understand the negro more completely than does any philosopher or philanthropist, and they see no reason why any importance should be attached to the race question, since "we are getting on very well now." But the other class should bear in mind that Mr. Cable is endeavoring only to stir up inquiry concerning the nature and extent of the race prejudice which exists in the South, and, if possible, to increase that sense of justice which will eventually soften, if not remove it.

—A few months since we gave some interesting statistics concerning the literary profession in Germany, derived from the current issue of Kürschner's 'Litteratur-Kalender,' which is in fact, though not in name, a directory of authors of the German-speaking world. We now have before us a little book intended to serve the same purpose, though on a very much smaller scale, for the "Writers for the Literary Press in the United States." Kürschner's scheme, it may be remarked, embraces writers in every field of literary activity, from theologians to playwrights, and includes 6,000 names. We should expect to find a much smaller number in an American directory, even if it attempted to cover as large a field as the German work, and, in this respect, some allowance is to be made, as is hinted by the compiler in his preface, for the difficulties in procuring information not to be overcome in the case of the first issue of a work which, to some of the persons concerned, perhaps, was suspicious from its novelty. Of the statistical information the most curious is that showing the parts of the country from which the literary profession is drawn. It appears that of the 350 persons represented, no fewer than 125, or 35 per cent., are natives of New England, and of these 76, or 21 per cent. of the whole, are derived from Massachusetts. It should be observed that about 10 per cent. of the writers named have failed to give their birthplace, so that these percentages should probably be slightly increased. Next to Massachusetts naturally comes New York, with 49 (14 per cent.), Connecticut with 18, Pennsylvania with 14, and Maine with 13. The quotas of the other States are trifling. As regards educational information, we learn that of the 350, 131 are graduates of American colleges, divided as follows: Harvard 56, Yale 19, Williams 14, West Point 6, Amherst, Michigan, and New York City College 5 each, Princeton, Brown, Columbia, and New York City University 3 each, Dartmouth, Union, and University of Virginia 2 each, Cornell, Lafayette, and Rochester 1 each. Singularly enough, Bowdoin, the college of Hawthorne and Longfellow, is not represented either by graduates or by instructors. The intellectual centre of gravity appears to be New York, as 66 writers live there, to 35 in Boston, 24 in Cambridge, 22 in Washington, 16 in Philadelphia, 11 in Baltimore, etc. A feature of the Index to the 'Directory,' which might be very useful but which we have found disappointing, is the references to the topics treated—most of the answers given being so vague as to be of little value. Thus 26 writers are referred to under Literary Criticism, 30 under History, etc.

—Under the title 'Contributions to the Tertiary Geology and Palæontology of the United States,' Prof. Angelo Heilprin has endeavored to embody a succinct statement of the geology of the tertiary formation in the Atlantic and Gulf States, together with a review and analysis of the formation and its invertebrate contents taken as a whole. To this he has added a comparison of certain allied European and American fossil shells of this formation, and a chapter on the age of the Tejon rocks in California. The work is in quarto, and illustrated by a geological map and several figures in the text. The literature of this formation is scattered in numerous papers, some of which are not easy of access. In summarizing and reviewing the information they contain, the author has performed a task for which he will receive the thanks of geologists. In doing this he brings out more clearly than ever the imperfection of our knowledge of the details upon which generalizations on this subject have been founded. If the conclusions reached have been, as in many cases they were, accurate, it has come about as much by happy guesses as otherwise. The determination of the nummulitic deposits of Florida by Professor Heilprin is one of the recent steps toward a better knowledge, and important as definitively sweeping away the mud-and-coral hypothesis by which the formation of that peninsula was so long explained. It is true that the development of the adjacent sea-bed by the Coast Survey had irretrievably damaged this hypothesis, but a discovery such as that above mentioned was much needed to complete its overthrow. Most geologists will find Professor Heilprin's book a necessary addition to their libraries.

—The superiority of modern musical form over that of what is absurdly called the "classical" period, is gradually meeting with general recognition. One of the most artificial and reprehensible things in the sonata form is the frequent repetition of the first part (or even both parts) of an extended allegro movement. When Rubinstein printed the first edition of his first 'cello sonata, there were repetition marks in the first and last movements. In accordance with the superior taste of the present day, he removed these marks in the new edition of the same sonata. Hans von Bülow, in his notes to Beethoven's C sharp minor sonata, remarks, with reference to the third movement: "The repetition of this part, prescribed according to custom, we look upon as a chilling tautology." Mr. Theodore Thomas, it is well known, generally omits the repetition marks in Schubert's ninth symphony and some other long-drawn-out works. This whole question is discussed in detail in recent numbers of the *Neue Zeitschrift für Musik*, by Carl Richter. He thinks that when Beethoven wrote repetition marks to every one of his "thirty-three variations on an air by Diabelli," he simply, without reflection, followed an old custom, which in a waltz, considered as a dance piece, originally had a certain justification. But in the sonata it is difficult to find any rational ground for this proceeding. Perhaps, he suggests, the first part, which contains the principal themes or ideas, was repeated in order to impress these ideas on the hearer's memory, so that he might be able more readily to follow their development in the succeeding movement. From a didactic point of view there may be an advantage in this, but a work of art must be based on æsthetic, not on didactic, principles. Mozart, in his Jupiter symphony, repeats even the second part in the final movement, and Herr Richter justly observes that "certainly no conductor can be blamed for ignoring the repetition mark in this and similar cases." The repetitions of the parts of slow movements are still less relished in these days when audiences no longer delight in a sort of musical *dolce far niente*, but prefer to have their music, like their literature, served up in a crisp, concise, and condensed form.

—We have received Part I. of a 'Manual of International Law for the Use of Navies, Colonies, and Consulates,' by Jan Helenus Ferguson, Minister of the Netherlands in China. It is published at the Hague by Martinus Nyhoff, and at Hongkong by Noronha & Co. The present in-

stalment deals with general principles, and shows that Mr. Ferguson belongs to the school of jurists which insists, as disciples of Austin would maintain, on confusing the boundaries of Law and Morals; but he introduces a new factor into the problem by treating Law as being in some way dependent on "Common Sense." Common Sense, he says, "is that plain, practical logic, suitable to common intelligence as formed by the actual composition of the human mind, under the influence of the Moral Law of Nature, of which it is the logic (*sic*), and as such the language of Conscience and Sympathy combined, by the harmony of which its arguments are proved." The reply to this is, of course, that though common sense plays a part in the development of law, common sense will never enable us to know what law is, nor can we assume even that the law is founded upon common sense, for it may be founded upon the exact opposite. For purposes of analysis, therefore, common sense does not help us at all. The strange part of all this is that Mr. Ferguson, like most other Continental law-writers, does not seem to know of the existence of the writings of the English school. No one familiar with Bentham and Austin could possibly write about International Law without at least attempting to reply to their systems. It is very much like writing about metaphysics in ignorance of the fact that Kant also wrote about them.

— Thinkers addicted to brooding in solitude must beware of hallucinations. Luther dashed his inkstand at the devil, Loyola saw Christ in the garb of a recruiting officer, Hobbes believed he had discovered the quadrature of the circle, and Eduard von Hartmann, the father of the philosophy of the unconscious, is unconsciously haunted by the vision of Israel pressing on toward the rule of all the nations. Had Schopenhauer, that older master of philosophical pessimism, lived in seclusion like Hartmann, he might have been equally tormented by the imaginary sight of Woman, the object of his abhorrence, ascending in might the steep flank of the Capitoline Hill, bent on hurling Man down the Tarpeian rock, and dictating feminine laws *urbi et orbi*. Authors of works on such subjects as 'Das Ding-an-sich und seine Beschaffenheit,' 'Neukantianismus, Schopenhauerianismus und Hegelianismus,' or 'Erkenntnisstheoretischer Realismus,' ought to abstain, or perhaps to be restrained, from writing on the vexed questions of the day; but Hartmann has the precedents of Hobbes, Leibnitz, Fichte, and other metaphysicians who dabbled in politics, in his favor, and as long as his own suggestions for curbing the political press—as ruinous to reason, heart, and character, and prone to oppose Bismarck—are not carried out, he can surely not be expected to remain an idle spectator of the fray between Antisemites and Philosemites. With his 'Das Judenthum in Gegenwart und Zukunft' (Leipzig and Berlin, 1884), an eloquent and vehement appeal, he rushes in between the two parties—for, "a philosopher who joins a party," these are his first words, "at that very moment ceases to be a philosopher"—and calls to the Antisemites to relax their onslaughts, and to the Jews to disarm, repent, and renounce their nefarious schemes. He sees Germany's national and intellectual welfare imperilled by the unbroken onward march of her Jewish citizens, though they comprise only "1 1-3 per cent." of her population, and in spite (or rather because) of their "frugality, temperance, patience, tenacity, elasticity in misfortune, laboriousness, activity, industriousness, thriftiness, economical habits, domesticity, family-spirit, parental love, esteem and reverence for women, filial piety, thirst for knowledge, desire of culture, and zeal for study." (The objurgations are equally redundant.)

— For "all these qualities serve the practical realism" of the Jews, in their struggle for world-rule with nations steeped in intemperance, sloth, and discord, while among the dispersed Semites—such is their crowning virtue, eclipsing the civic greatness of Spartans or Romans, not to speak of the Biblical Hebrews—"the individual instinctively subordinates his private ends to the general interests, and, repressing his personal will, feels and serves as a member of the whole." Yet the philosopher gently advises the Antisemites to be patient under provocation and declare their readiness for peace, on condition that the Jews of Germany henceforward use all their virtues, abilities, and money for the weal of the Fatherland alone, formally abjure all communion with "das Judenthum," pluck from their hearts all special sympathy for their kin and fellow-sufferers beyond the German frontiers, and deaden the last spark of Jewish national sentiment. The word *Judenthum* Hartmann uses—to the total exclusion of *Judenheit*, which holds the same relation to the term employed which, in English, *Christendom* holds to *Christianity*—in a most elastic un-German sense, so as to make it cover in the same breath the meanings of *Jewish faith*, *Jewish spirit*, *Jewish people*, *Jewdom*, *Jews*, etc. By this process of perhaps unconscious jugglery the Laskers and Bambergers are made responsible for the Messianic dreams of Polish rabbis; the teachers of the Synagogue for the flippancy of Heine; Jewish poets and theologians, for the scribblings of journalistic hirelings; and all these for the success of the Rothschilds, and with the latter for the Chatham Street of Vienna or Frankfort. Being thus responsible each for all and all for each, the Jews are warned and threatened with the irrepressible and deadly wrath of the nations for whose enslavement they work with such wonderful harmoniousness—all of them, whether calling themselves Cohn or Caro, Levy or Halévy, Deutsch or Franck, Fürst or Geiger, Jacoby or Joachim, Mendelssohn or Philippson, Montefiore or Crémieux, Lady Rosebery or Sarah Bernhardt.

MR. BLAINE AS AN HISTORIAN.

Twenty Years of Congress. From Lincoln to Garfield. With a Review of the Events which led to the Political Revolution of 1860. By James G. Blaine. Volume I. Norwich, Conn.: The Henry Bill Publishing Co. 1884.

THIS work, which is sold by subscription, was not offered us for review till after the election. We lacked the ordinary inducements to procure it for that purpose, being well aware that it was not composed by or in the spirit of an historian, and that only by courtesy could it be said to belong to literature. For those who take a serious view of politics, or history, or biography, or political economy, or the law of nations, there is something almost ludicrous about Mr. Blaine's masquerade as an historian. For those who have not yet made up their minds whether Mr. Blaine is a great publicist or a great impostor, we will single out a few of the leading proofs of his disqualifications for his task.

In the first place, in his estimate of men of the period he covers, he differs from all previous historians in giving every one he introduces a genial puff or advertisement. The contrary method, of attacking reputations, once in vogue, has been superseded in our day by that of analysis or criticism; but of any powers in this direction Mr. Blaine does not show a trace. We get the impression of Washington having been literally packed in our time with statesmen. There was, for instance, Thaddeus Stevens, "an authority" upon "all political questions," gifted with "a style somewhat resembling the crisp, clear sententiousness of Dean Swift"—the latter, it should in fairness have been added, not himself a member of the House at any time. Among Mr. Stevens's colleagues there were the "distinguished" John Hickman, William D. Kelley, noted for his "ability, fidelity, and usefulness"; Reuben E. Fenton, "prominent, popular, and strong"; James K. Moorhead, John Covode, Edward McPherson, and John W. Killinger, all "active and influential"; and "ablest and most brilliant of all," Roscoe Conkling, never surpassed "in affluent and exuberant diction" in either branch of Congress, "unless perhaps by Rufus Choate." Several pages are devoted to puffs of this sort, and, as we plod our weary way through the volume, we cannot help coming to the conclusion that Mr. Blaine believes the main object of historical writing to be to make friends for the historian.

Again, Mr. Blaine devotes a considerable portion of his book to the economical history of the country, and to the question of Free Trade and Protection. As to this, he begins with the profound remark that "the difficulty in reaching a satisfactory and impartial conclusion arises from the inability or unwillingness of the disputants to agree upon a common basis of fact"—a difficulty unquestionably inherent in this as in many other controversies; and then throws out the suggestion that, "in the absence of an agreement as to the points established, it is the part of fairness to give a succinct statement of the grounds maintained by the two parties to the prolonged controversy." He then innocently proceeds to put in the mouth of both the free-trader and the protectionist one of the greatest pieces of nonsense ever attributed by one human being to another—the idea that the tariff controversy can be settled by a comparison of the prosperity of the country "under" protective and moderate tariffs. The silliness of an argument of this kind has long been known to all educated men, and a controversy between a free-trader who undertook to prove to a protectionist that the country was prosperous in 1850 because of the tariff of 1846, while his antagonist contented himself with observing that it was still more prosperous under the Morrill tariff, would be a "symposium" to make any real historian guffaw.

But Mr. Blaine is not only entirely unaware that a high or low tariff is but one among a multitude of causes which affect the prosperity of a country, and therefore that we cannot, as soon as the country is prosperous, at once attribute it to the tariff; he apparently thinks that the facts on which the controversy turns are not only unascertainable by the free-trader and protectionist, but are not within his own province. He makes the free-trader "maintain," for instance, that the country was prosperous under the "moderate tariff" prevailing "from the origin of the Government to the war of 1812"; but to meet this the protectionist "avers" that the influence of this tariff was "demonstrably protective," and "effectually did its work in establishing the foundation of the American system." Again, between 1846 and 1857 the free-traders point with complacency to the tariff of 1846:

"They challenge a comparison of the years of its operation, between 1846 and 1857, with any other equal period in the history of the country. Manufacturing, they say, was not forced by a hot-house process to produce high-priced goods for popular consumption, but was gradually encouraged and developed on a healthful and self-sustaining basis, not to be shaken as a reed in the wind by every change in the financial world. Commerce, as they point out, made great advances, and our carrying-trade grew so rapidly that in ten years from the day the tariff of 1846 was passed, our tonnage exceeded the tonnage of England. The free-traders refer with especial emphasis to what they term the symmetrical development of all the great interests of the country under this liberal tariff. Manufactures were

not stimulated at the expense of the commercial interest. Both were developed in harmony, while agriculture, the indispensable basis of all, was never more flourishing. The farmers and planters at no other period of our history were in receipt of such good prices, steadily paid to them in gold coin, for their surplus product, which they could send to the domestic market over our own railways, and to the foreign market in our own ships.

"Assertions as to the progress of manufactures in the period under discussion are denied by the protectionists. While admitting the general correctness of the free-traders' statements as to the prosperous condition of the country, they call attention to the fact that, directly after the enactment of the tariff of 1846, the great famine occurred in Ireland, followed in the ensuing years by short crops in Europe. The prosperity which came to the American agriculturist was, therefore, from causes beyond the sea and not at home—causes which were transient, indeed almost accidental. Moreover, an exceptional condition of affairs existed in the United States in consequence of our large acquisition of territory from Mexico at the close of the war; and the subsequent and almost immediate discovery of gold in California. A new and extended field of trade was thus opened in which we had the monopoly, and an enormous surplus of money was speedily created from the products of the rich mines on the Pacific coast. At the same time Europe was in convulsion from the revolutions of 1848, and production was materially hindered over a large part of the continent. This disturbance had scarcely subsided when three leading nations of Europe, England, France, and Russia, engaged in the wasteful and expensive war of the Crimea. This struggle began in 1853 and ended in 1856, and during these years it increased consumption and decreased production abroad, and totally closed the grain fields of Russia from any competition with the United States. The protectionists, therefore, hold that the boasted prosperity of the country under the tariff of 1846 was abnormal in origin and in character."

It would be difficult to find anywhere a better *reductio ad absurdum* of this species of argument. But what has the Historian to say about it? Instead of knocking the heads of his maundering free-trader and protectionist together, and passing on to a real exposition of the matter, he makes a little incursion into English history, and shows Great Britain to be one of the strangest economical fields ever explored. It appears that England had at one time more than four hundred acts regulating the tax on imports; that by the aid of these she "brought her fabrics to perfection"; that she then craftily adopted free trade in order "to invade the domestic markets of other countries, and undersell the fabrics produced by struggling artisans who were sustained by weaker capital and by less advanced skill." At the same time, she was "not candid in her advocacy and establishment of free trade"; for she basely stimulated the growth of her steam marine by "the most enormous bounties ever paid by any nation to any enterprise," thus creating for herself a practical monopoly of the ocean traffic. With her usual craft, as soon as the work was done, she stopped the subsidies, and "proceeded to inveigh, through all her organs of public opinion, against the discarded and condemned policy of granting subsidies to ocean steamers. . . . Even now there is good reason for believing that many lines of English steamers, in their effort to seize the trade to the exclusion of rivals, are paid such extravagant rates for the carrying of letters as practically to amount to a bounty," etc. Now all this, as Mr. Blaine says, would, if true, show that England was not a "candid" country at all; but it would also show, as she has prospered, that her nefarious behavior was economically wise. And as the historian (p. 208) declares that the old English protective system "clogged and embarrassed trade for a long period by the most unreasonable and tyrannical restrictions," we are left in doubt as to what his own views may ultimately turn out to be, especially as we find him (p. 210) rejoicing that the United States has, internally, "a freedom of trade beyond that enjoyed by any other nation," and finally summing up the controversy by declaring that "it is the enjoyment of free trade and protection *at the same time* which has contributed to the unexampled development and marvellous prosperity of the United States" (p. 211).

A shabbier piece of historical work than this chapter we have never met with. It is a stump speech, and a very ignorant stump speech, from first to last. Precisely the same ignorance is apparent in the treatment of the important question of the English recognition of belligerency in our war (pp. 591-595). The objection to the recognition was that it was premature. Mr. Blaine's objection is that the South was recognized as a maritime belligerent, when it ought to have been recognized only as a land belligerent. "The Southern Confederacy," he says, "had an organized Government and great armies. To that extent its power was a fact. But when foreign governments recognized in the insurgents the rights of ocean belligerency, they went beyond the fact." A recognition of terrestrial, combined with a denial of maritime belligerency, would produce a curious state of affairs, because all acts of war by sea would be acts of piracy, while similar proceedings by the same belligerent on land would be legitimate. A denial of ocean belligerency to the Southern Confederacy would have been particularly curious in our war, when we were actually blockading all their ports because we dreaded their maritime operations so much. As a matter of fact, England recognized the belligerency May 13, 1861; France, on June 10, 1861; and between April 19 and July 13 we captured several neutral vessels, and the validity of the captures was passed upon afterward in some pretty notorious cases in the Supreme Court of the United States, which tribunal decided that the blockade was an act of war, and that the captures were valid. We presume that our Historian is the only living man who has had the audacity to touch this question in a serious work without even taking the trouble to inform himself of the facts. And having prepared himself in this way, he illuminates the subject still further by introducing it with a private brand-new theory of international law. The whole "arraignment" of England is evidently a stump speech for the Irish vote.

The dense ignorance pervading this book will reflect, we must say in conclusion, great discredit on American intelligence wherever it is read. That its author should have held the Secretaryship of Foreign Affairs for a considerable period of time, and still be masquerading before the public alternately as a Statesman and an Historian, will, we are satisfied, fill our descendants with amazement.

RECENT NOVELS.

Dark Days. By Hugh Conway (F. J. Fargus). [Leisure Hour Series]. Henry Holt & Co.

My Friends and I. Edited by Julian Sturgis. [Leisure Hour Series.] Henry Holt & Co.

An American Politician. By F. Marion Crawford. Boston: Houghton, Mifflin & Co.

A Matter of Taste. By George H. Picard. White, Stokes & Allen.

Choy Susan, and Other Stories. By W. H. Bishop. Boston: Houghton, Mifflin & Co.

Otillie. An Eighteenth Century Idyl. By Vernon Lee. London: T. Fisher Unwin; New York: Scribner & Welford.

At the World's Mercy. By the author of 'The House on the Marsh.' D. Appleton & Co.

Jack's Courtship. By W. C. Russell. Harper & Bros.

'Dark Days' will have the same success as 'Called Back,' and for the same reasons. Both books are of the kind in which the average public delights. Hugh Conway has taken Wilkie Collins, or perhaps more exactly Miss Braddon, as pattern, and then just blocked out his stories and thrown them together rough-hewn. Or, to compare from another point of view, both stories would have been accepted as spirited syllabi of forthcoming novels by either of the authors above mentioned. A crowd of incidents so rapid and so startling as to do away with any need of logic will content five-sixths of the world, whether it be in a novel or in a play upon the stage; so 'Dark Days' is sold far into the second hundred thousand, 'Called Back' draws full houses for weeks, and both will next year be forgotten.

The careful elaboration which Mr. Julian Sturgis has bestowed upon 'My Friends and I' deserved a more fortunate subject. In the form of three autobiographical sketches there is given what may be called the theory of life of a man to whom tangible worldly success is the only good, human or divine. Of course it is the man himself who is wholly evil, the embodiment of superlative egotism. The hero of his boyish fancy has made no mark in the world; the comrade of his first struggles in political life has been alienated from him; she whom he chose to be closer than a friend has been to him the greatest disappointment of all. Not even Mr. Sturgis's agreeable style can make of such arrant selfishness and abject meanness an attractive tale. It is not seldom difficult to account for an author's choice of subject. Permanent fame was never yet won by any book which did not tempt to a second reading. That is not saying that the story may not be sad or even painful—all the greatest work rises before us to prove the contrary. The thrill of excitement, the sympathetic pang, are the very emotions for which a novel is read over and over; but that which inspires only cold disgust will never be opened again.

Whoever has been obliged to describe or to rank Mr. Marion Crawford's work must be grateful to him for the opening paragraph of the second chapter of 'The American Politician.' The most practised hand could not have hit off more exactly the construction and the style of the whole set—from 'Mr. Isaacs' down:

"Fate, the artist, mixes her own colors, . . . but now and then she takes a palette loaded with strong paint, and a great brush, and splashes a startling full-length portrait upon the canvas, without much regard for drawing or general composition, but with very startling effect. To paint well needs life-long study; to paint so as merely to attract attention needs courage and a heart hardened against artistic sensitiveness."

Unluckily for Mr. Crawford, his last portrait comes between the delicate incisiveness of Mr. James's 'New England Winter' and the fine shading of 'Silas Lapham,' which make its crudeness only the more staring. It will not do to say that political life is a rough affair, demanding broad coarse strokes. Compare Crawford with Trollope in the Plantagenet Palliser series; and should the comparison be made by one who does not specially like Trollope, the superiority of the latter's workmanship will be only the more apparent.

The hero, John Harrington, as we are informed from different sources, is "endowed with unbounded courage and an extraordinary command of language—he is immensely honest—he has the strong oratorical temperament"; all which sounds very well, but, unhappily for himself, the author does not leave it to faith, but proceeds to practical illustration. It is possible to do some very heroic fighting over a subject so prosaic as civil-service reform; but to intermingle the politician's very humdrum platitudes with poetic flourishes about "the surging crowd" and the ladies "pale with excitement," reduces

it to bathos. The hero is "the strongest man in this part of the world" (Boston, be it noticed), and his views on the tariff, if discreetly left to fancy, might have been worth something; but his interview with Mr. Ballymolloy permits no misconception as to their originality and practical wisdom. He fails of election as Senator, and receives from the heroine a note expressing her regret. Though too childish for a well-trained English girl, and lacking the impulsiveness of passion, it is natural enough to deserve something better than fatuous priggishness in reply: "It is the privilege of elective bodies to choose as they please, and, indeed, that is the object of their existence." Mr. Harrington calmly folds up the note, "convinced he had said what he meant to say, which was always the principal consideration in such matters." The reader, however, is not to suppose that the politician's love-making is a calm affair. There is no difficulty about it beyond the delays usual in the novelist's world, and in any other hands the catastrophe would come in the customary well-bred way. Not so Mr. Crawford. At the decisive moment, "every feature of his strong face seemed changed in the convulsive fight that rent his heart and soul to their very depths; . . . in his words the deep agony of a mortal struggle rang strangely."

Of other matters than politics, there is little of worth in a composition so careless. "When the heat begins, Boston goes to New York," may be a trifling inaccuracy, but nothing worth talking about as a picture of society can be drawn in that way. All the men except the Irishman talk like women, and all the women talk alike. The supply of stock quotations and literary small-talk must be pretty well exhausted. How poor is the best of it all may be seen in the remark by a lady whom Mr. Crawford wanted to make the type of the fine, old-fashioned, well-read gentlewoman. Her "Goethe must be a good deal amused, I expect, when people write books to prove that Byron was Euphorion," sounds like a schoolgirl in the pride of her first note-book. Mr. Crawford is nothing if not grandiose and darkly mysterious. There are three men, fitly named X, Y, and Z, who, from their secret chamber in London, guide the course of American politics. Will it not be the duty of those who are on guard against British gold to discover and expose their plots? We will not delay the reader by any analysis of the political views in the book. Ideas at once so crude and so trite are below the level upon which discussion is possible.

There will be no difference of taste as to the dainty dress in which the publishers have sent forth Mr. Picard's little sketch. We call it sketch, for it is nothing more. Pretty and not very probable will be the general verdict, while the reviewer counts it as another study "after Henry James," though this time it is not 'Daisy Miller,' but the 'Portrait of a Lady,' which furnishes the model. The connection between title and story is slight enough to admit of any sort of interpretation.

Mr. Bishop's stories have already entertained a good many readers, and we are sure few will take them up in their present shape without finishing them. He sees clearly his object, and goes very straight to it. He fails of marked literary success, however, because he does not understand the limitations of the short story. Every one of these now before us has material enough for a full novel. What seems clumsy handling, violent compression, or awkward blanks is simply the result of the necessities of the case. If, for instance, he had worked out "The Battle of Bunkerloo" solely as the boys' affair, it would have gone very well. He has not room now to make the lovers anything but commonplace.

In the preface to 'Otillie' Vernon Lee makes a graceful plea in behalf of the essayist who is tempted to enter the field of the novelist. "He possesses, inasmuch as he is an essayist, some of the instincts of the superior creature called a novelist: a certain half-imaginative perception of the past, a certain love of character and incident and description, a certain tendency to weave fancies about realities." Her story of Otillie certainly vindicates her own claim to the privilege of presenting "imaginary lives in a quiet imaginary German town." They are sad and solitary folk, leading shadowed lives, but the remoteness of that still calm life out of the eighteenth century is a restful picture amidst the hurry of our own.

Since the days of Jane Eyre the governess has blossomed in fiction, faded, and died. The author of 'The House on the Marsh' has initiated a revival, and her last book, 'At the World's Mercy,' may be regarded as the second instalment of an educational epic. The epic, so far, explodes several well-established notions about the status of the governess in an English household. Traditionally she is a discreet and feebly accomplished person, who spreads the schoolroom butter very thin, who plays for carpet-dances automatically, and who accepts a kind attention or a snub with exactly the same kind of a smile. To-day, according to the epic, she is a phantom of delight, who, in answer to an advertisement, descends upon an aristocratic but Heaven-abandoned family, and proceeds forthwith to make the wilderness blossom as the rose. Just here it is well to anticipate a popular error, which may credit Girton or Newnham with this change, which is, out of all hooping, wonderful. It does not appear that graduates of those institutions have anything to look forward to but hard grind from term to term, and a slight recognition of their parchment in salary. It is in her merely human capacity that the governess is great, moulds order out of mad disorder, and compels from the men of the family "all homage short of worship." The heroine of 'The House on the Marsh' subdued a burglar; the heroine of 'At the World's Mercy' conquers a host of what she is pleased to call dipsomaniacs. Miss Guinevere Verney has all the seductiveness of her forerunner, and she is fully as pious, though not so ingenuous. She knows her world, and, having fallen among the terrible Godfreys of Hawkstone, she determines to accept the risk of their depravity. The record of her achievements is dull and repulsive, with so many incoherent passages that the author's vagueness of conception is painfully evident. There is something naïf in the way she drops Eugene Barach, the character who first excites interest, and who offered opportunities for clever drawing. His reappearance at the end, in the guise of protector to Hubert Godfrey, the dipsomaniac whom Guinevere has favored with inexpressible passion, is grotesque—a lame step to a most impotent conclusion.

No story ever needed a plea for mercy more than 'Jack's Courtship,' and Mr. Russell enters it in the repeated assurance that the narrator is not an artist. According all leniency to a tar's loquacity, it is human to resent an abuse of privilege. The interesting features of Jack Seymour's courtship could be revealed in a short story, and that would allow ample margin for apostrophe to sea and sky, and for dazzling professional metaphor. Mr. Russell's work has hitherto been distinguished by his vigorous conduct of sufficiently interesting people through a series of exciting adventures, and by a fresh and vivid style. Here the central situation, the shipwreck of Jack and his sweetheart, is old, while the numerous incidents before and after the sinking of the *Strathmore* are told in a perfunctory manner, contrasting unfortunately with the author's earlier spontaneity and vivacity. The coincidences are too pat, the catastrophes too orderly, and even the behavior of the weather is exasperatingly genteel.

The volume of sea stories entitled 'Old Sailors' Yarns' is probably intended to entertain old shipmates. A landsman might swallow the narrator's somewhat inconsistent illiteracy, but he could scarcely be expected to struggle with the nautical phraseology. In the face of such difficulties of manner more than ordinary patience is required to discover that some of the anecdotes—they are hardly stories—are novel and worth telling.

RECENT ASTRONOMICAL ANNALS.

Annals of the Astronomical Observatory of Harvard College. Vol. xiv, part 1. Cambridge. 1884.

Publications of the Washburn Observatory of the University of Wisconsin. Vol. ii. Madison, Wisconsin. 1884.

Astronomical and Meteorological Observations Made during the Year 1880 *at the United States Naval Observatory.* Washington. 1884.

Professor Edward C. Pickering, who assumed the directorship of the Harvard College Observatory about seven years ago, in reviewing the fields of possible astronomical activity of that institution for the future, concluded that its energies might, in view of the character of the work already appropriated by other observatories, be largely expended with the best advantage in the neglected field of astronomical photometry. This was a determination carefully considered and very wise. In the autumn of 1878 effort was made to secure for the maintenance of the Observatory and its work for the term of five years, an annual subscription of $5,000; and about seventy ladies and gentlemen of Boston and vicinity, by their generous response to this call, have placed the Observatory in its present improved condition, and secured for the science of astronomy an immense deal of research of high value. The Observatory's most important contribution to astronomy is the fourteenth volume of its annals, the first part of which was lately issued.

An extensive and systematic inquiry by photometric methods into the comparative brightness of the stars has long been regarded among astronomers as highly desirable. The undertaking has been greatly delayed by doubts with regard to the instruments best adapted to the work. The observations now brought to completion by Professor Pickering were planned with the view of obtaining a satisfactory determination of the comparative brightness of all stars not fainter than the sixth magnitude, and which could be conveniently observed at the latitude of the Cambridge Observatory. An entirely new instrument was contrived by Professor Pickering with the utmost care in every detail to eliminate the errors of every sort which had embarrassed all similar work in the past. The introductory chapter of the volume describes minutely, with accompanying plates, the *meridian photometer*, and deals with the methods of its use and the reduction of the observations made with it. The nearly constant altitude of the pole star indicated the use of this object as a standard of comparison for all the other stars. Professor Pickering enters into a thorough discussion of the constancy of the light of Polaris during so large a part of the period of the star-comparisons as was necessary to show its practical invariability, and this is followed by a chapter which deals in a very satisfactory way with the absorption of the light of the stars by the atmosphere. We have, subsequently, the general catalogue of results of the measured magnitude of all stars not fainter

than the sixth magnitude, and contained between the north pole of the heavens and the thirtieth degree parallel of south declination. The actual measures on which this admirable catalogue was based were begun in October, 1879, and completed in a little less than three years. The number of stars included in the catalogue was 4,260. The photometric observations were comprised in seven hundred series, and the entire work embraced a total number of light comparisons which exceeds one hundred thousand. The publication of this catalogue removes the subject of stellar magnitudes from the hazy region of approximate eye-estimates (where it has always hitherto been) to the domain of accurate scientific measurement; and may properly be regarded as forming an epoch in the history of stellar astronomy. The new meridian photometer is competent to the accurate measurement of the light of all stars brighter than the ninth or tenth magnitude, and there will thus be an abounding field for its employment for an indefinite period of years to come. If the importance and character of work well done, and its bearing on astronomy in general, are conceded to be the criterion, the observatory of Harvard College will now be accepted as second to none on the Western Continent; its position in the first rank with the observatories of Europe is already fully justified.

Another establishment, rapidly rising to the first rank among the astronomical institutions of America, is the Washburn Observatory of the University of Wisconsin at Madison. The initial volume of its publications was issued about two years ago, and the second, more than twice the size of the first, is now distributed. It will be remembered that the late Professor Watson was its first director, and that he was succeeded in 1881 by the present director, Professor Edward S. Holden. The observatory may now be regarded as entirely completed, with a full and admirable instrumental equipment. The instrument last added is a large meridian circle, from the shops of the celebrated Repsolds, of Hamburg; and a large part of the present volume is devoted to a detailed description of it, together with the methods of observation and reduction.

Professor Holden is directing the work of this observatory largely in the line of star-gauging, and about one-third of the present volume of its publications is occupied with a reduction of two series of star-gauges of Sir William Herschel (the second series never before published, and for a copy of which from the original records Professor Holden is indebted to Lieut.-Col. John Herschel, R.E.), and with counts of stars from the celestial charts of Peters, Watson, Chacornac, and Palisa. The tabular exhibit of these counts suffices to furnish several simple proofs that the stars cannot be regarded as equally distributed in space, and is suggestive of more general methods of investigating that distribution than have heretofore been employed. An independent series of star-gauges with the great telescope of fifteen inches aperture is now in progress at the Washburn Observatory.

The annual volume of observations made at the Naval Observatory, Washington, which was issued two years behindhand, contains the results of the customary routine work of the establishment for the year 1880, presented in the usual form. The fundamental instrument, or transit circle, was used with great regularity throughout the year. The great equatorial, of twenty-six inches aperture, was occupied exclusively with micrometric observations of double-stars, and of the satellites of the outer planets. All observation with the old transit instrument and the mural circle—with which a large share of the best work published by the observatory has hitherto been done—appears to be now discontinued. If the late annual volumes issued by this observatory are conspicuous for any one thing more than another, it is the growing absence of the appendixes—also issued in monograph form—which have always constituted the best index of the vigor of the establishment, and have, more than anything else, given character to the institution, and contributed to its recognition abroad. This is traceable, not so much to the publication elsewhere of the work of the observatory-staff, as to the removal from the observatory of a number of those whose inclination and capabilities led them in the direction of original research of a high order.

In the Lena Delta, etc. By Geo. W. Melville. Edited by Melville Philips. Maps and illustrations. 8vo, pp. xvi, 497. Boston: Houghton, Mifflin & Co. 1885.

THE latest contribution to the literature of the *Jeannette* expedition comes to us in unexceptionable dress as regards binding and typography, and with maps and illustrations which, if not of the highest class, are at least tasteful and sufficiently good for the purposes intended. The book opens with about eighty pages devoted to a sketch of the *Jeannette* voyage and the retreat to the Siberian coast. About 300 pages treat of the experiences of the Melville party in the Lena delta, while retreating and during the subsequent search for De Long and Chipp. A short chapter is devoted to the journey home, and four to the Greely relief expedition of 1884. The work closes with a proposition for reaching the North Pole and getting home again, together with an appendix on equipment, and an index.

A prominent characteristic of the work is the straightforward earnestness of the narrative, devoid alike of literary style and of those pretensions to it which so often repel the reader in works of travel. The personality of the author is unconsciously revealed to us in his pages, and in a manner which commands our respect and admiration. The difficult task of describing endeavors which may be fairly called heroic, without degenerating into brag, has been well performed. For those who have followed all the literature of the expedition, the long record of cold, hunger, privation, and endurance in the Lena delta will not have the charm of novelty. For others the present book, with that of Lieutenant Danenhower on the voyage preceding the search, may be recommended as the best of the whole *Jeannette* series. But two criticisms of importance are suggested by the perusal of the work before us. One is due to the utter failure of the editor to rectify the spelling of proper names, geographical and other, which are frequently so far from accurate as to be unrecognizable except to experts, *e. g.*, Oceansk (Ustiansk), Tuamen (Tiumen); while "*Thegetoff*" for Weyprecht and Payer's renowned vessel is even less excusable. The second exception must be taken to the insertion, in perfect good faith of course, of several extraordinary "yarns," related by alleged political exiles, which the ready sympathy of the author seems to have accepted without question as true. Whatever the sins of the Russian administration may be in the matter of punishing political offenders, and they are plentiful enough, it is hardly fair to condemn them in particular instances without investigating both sides of the question. The individual who asserted that he was, with his family, "exiled to the Yenisei country simply because he was a Jew" (p. 402), unquestionably took a biassed view of his own case, and, like the littérateur referred to in another place (p. 269) as kept in captivity while the "authorities" grew rich by stealing and selling his poetry, must be regarded as a contributor to fiction.

The account of the Greely search is the best part of the book. The race between the whalers and the naval vessels, related with a dash and frankness equally attractive, can hardly fail to stir the blood of the most sluggish reader. The plan for reaching the Pole is an application of Weyprecht's proposed stations to Franz Josef Land, with retreat either to Novaia Zemlia or the Seven Islands north of Spitzbergen. The comments on the details of such an expedition are judicious, though not particularly novel. It is with little doubt the most available route poleward yet remaining, and, a fact more important, it offers the best remaining field for exploration in the high north apart from pole-hunting. In conclusion, we heartily commend the volume to our readers.

The Literary Remains of the Late Henry James. Edited, with an introduction, by William James. Boston: James R. Osgood & Co. 1885.

THE substance of this volume is metaphysical in thought and mystical in religion. Henry James's opinions were few, and were many times expressed in his successive books, as his son admits; in what is now published there is consequently nothing new, so far as dogma and faith are concerned. Nevertheless, the peculiar form of Swedenborgian thought that Mr. James elaborated in his own original handling, was never in any of his works stated by himself in such apprehensible terms as in the Introduction, in which his son has summarized and defined the radical parts of the system. Except for students of philosophy, this essay does away with the necessity, if there ever was any, of reading Mr. James; and even in it the humanly interesting thing is the too slight account of the individuality and religious experience of the thinker, whose views his son seems to regard as apocalyptic. It appears from Mr. James's own papers that while busily engaged in a study of the Scriptures, concerning the interpretation of which he had made "an interesting discovery" as he thought, he suddenly, "in a lightning flash, as it were"—just after having eaten "a comfortable dinner"—was struck with a paralysis of will and hope, forsook his work, and, failing to find relief at a water-cure, at last began to recover by resorting to Swedenborg's volumes. From this and other autobiographical fragments, as well as from the tenor of his writings, it is clear that Mr. James was peculiarly subject to what in old times was called "conviction of sin." Out of his real and violent moral experience (and apparently under peculiar vital conditions) came the curious speculations and beliefs of which we have now the last expression in "Spiritual Creation"—perhaps as composite a metaphysical illusion as ever "rose to upper air." To the student of human nature in its spiritual aspects this system has a kind of experimental interest, as an exorcism of the evil principle from the life of an exceptionally strong nature; but no one should attack it without a strong taste for intellectual castle-building of a ponderous sort, and a "realizing sense" of the wickedness of his own heart.

In his life, as well as in his works, Mr. James was engaged with the riddle of evil; and this gives a quite exceptional value to his criticism of so optimistic a thinker and believer as was Emerson, his intimate friend. He brings this in without rhyme or reason as a chapter of "Spiritual Creation," and, notwithstanding the author's known frankness and breadth of style, it has a piquancy surprising in Emersonian literature, and wholly delightful:

"The actual truth, at any rate, was that he never felt a movement of the life of conscience from the day of his birth till that of his death. . . . He did not know the inward difference between good and evil, so far as he was himself

concerned, . . . I found, in fact, before I had been with him a week, that the immense superiority I ascribed to him was altogether personal or practical—by no means intellectual; that it came to him by birth or genius, like a woman's beauty or charm of manners; that no other account was to be given of it, in truth, than that Emerson himself was an unsexed woman. . . . He seemed to me unmistakably virgin-born whenever I looked at him. . . . In short, he was, as I have said before, fundamentally treacherous to civilization, without being at all aware himself of the fact. He appeared to me utterly unconscious of himself as either good or evil. He had no conscience, in fact, and lived by perception, which is an altogether lower and less spiritual faculty."

This is extraordinarily fresh and genuine, and gives a stranger a notion of the more than geographical distance that intervenes between Cambridge and Concord. Except for these reminiscences, and those of Carlyle, which were widely noticed on their first appearance in the *Atlantic*, the volume has no literary interest.

From Opitz to Lessing: A Study of Pseudo-Classicism in Literature. By Thomas Sergeant Perry. Boston: J. R. Osgood & Co. 1884. Pp. 207.

The aim of Mr. Perry's volume, as stated in his preface, is "to give some few of the many available proofs that the different nations of modern Europe have passed through very nearly the same experience in literature." To this end he takes up the dreariest century in the history of German poetry, and shows how its jejuneness corresponds *en gros et en détail* to the contemporary jejuneness of poetry in England and France. He contends that although the great days of German literature begin with Lessing, yet neither Lessing nor what came in his wake can be understood without a careful study of that which had gone before. He distinguishes three stages in that spurious classicism which intervenes between the Renaissance and the upspringing of a new European literature in the latter part of the eighteenth century. In the first stage the new formal knowledge of the classics became the main foundation of literature, and the "history, mythology, manner of thought of Rome and of Greece, as seen by the Romans, were substituted for the natural past of each nation." The characteristic work of this era lay in translations of classical masterpieces, and in the domestication of classical standards, forms, epithets, and literary apparatus generally. The second stage was a "form of writing of which elegance and conceits were the most admired constituents"; and the third was French classicism as interpreted in England by Dryden and Pope, and in Germany by Canitz and Gottsched.

Following up this scheme, the author proceeds to discuss various German poets whom, as he says, it would be high praise to speak of as second-class. Numerous quotations are given from Harsdörfer, Günther, Canitz, Brockes, and others, and analogies are pointed out between these and English poets of corresponding grade. (These quotations, by the way, are disfigured by a score or so of misprints.) An account is then given of Gottsched as leader of the French school in Germany, and of the various agencies by which his authority was broken. The Swiss "poets," Bodmer and Breitinger, come in for discussion, as do also Haller, Klopstock, and Wieland. Finally, the latter half of the book, or very nearly half, is devoted to Lessing, the stress falling mainly upon Lessing's efforts, both critical and creative, in behalf of the drama.

There is in English no good and comprehensive history of German literature, and careful studies of particular authors or of limited periods ought to be all the more welcome for that reason. It is, therefore, with regret that we find ourselves compelled to give to Mr. Perry's volume anything short of high praise; but the fact is that two careful readings of it have left us with the impression of a somewhat sketchy and desultory book. It is not quite obvious, in the first place, for whom the author writes. His quotations are left without translation or comment, and he has next to no biography. One who has not a pretty good knowledge of the German language and literature could hardly read him at all; and one who has, would do well to go for enlightenment to that very Hettner who has evidently been favorite reading with Mr. Perry. What the former goes into with German thoroughness and with a fine critical tact and insight, the latter touches in a light excursive manner that seems in comparison almost journalistic. Any one who wishes to test this judgment of ours should compare the treatment of Lessing by the two authors. The American book is written for the express purpose of making Lessing intelligible, and perhaps does contribute somewhat to that end; but one who had read it, and it alone, would hardly guess that he had been dealing with one of the master minds of the eighteenth century, or be able to surmise in what Lessing's greatness consisted.

The difficulty is, that Mr. Perry cares everything for light and not at all for warmth. His hobby, using that word in no opprobrious sense, is the necessity of studying literature in a perfectly dispassionate temper. Again and again he admonishes us that praise and blame have no place in criticism. He forbids us to laugh at the puerilities of Brockes or of Gottsched, and insists that we try rather to understand the great process of which these were necessary parts. "The highest quality in human nature is comprehension, and that is a placid quality." "Truth is the only thing that makes life valuable." "Our study will be of little profit if it does not teach us how much greater are the long and silently-prepared movements than any brilliant performance; how the most striking thing about any genius is its inevitableness, and that we cannot understand it without the comprehension of the whole spirit of the time." This, in one form or another, is the thread upon which all of our author's beads are strung.

Now it is with no intention of belittling the value of the historical method in criticism (we should as soon think of throwing contempt upon science in general), that we record a suspicion that Mr. Perry's admiration of that method has played him, upon the whole, an evil turn. For the truth is, the most striking thing about genius is not its inevitableness at all. Inevitableness is a quality that belongs to stupidity and impotence just as much as to genius. Furthermore, it would never have occurred to any one to say such a thing but for the fact that, during many centuries, men talked and wrote as if the thing they called genius were a thing outside of or above the ordinary range of cause and effect. We now know that this is not so. We feel sure that if we had before us literally *all* the antecedents of a Shakspere or a Lessing, we could show with the precision of a mathematical demonstration that he must have been thus and not otherwise. But the trouble is, that, with our best efforts, we cannot make a perfect map. We can examine the meat upon which our Cæsar fed, the stupidities he had to explode, the malaria into which he drove his ozone. But when we have done all this what have we got? We have got a plexus of causes which operated on a thousand other minds as well as his, and we have missed the invisible chemistry which created in him and him alone the personal endowment that enabled him to do his work. Explain and analyze as we will, there is always in the greatest men an unexplained residuum of personal power which has the appearance of being *urplötzlich*. We do not say that it is so, or that it must for ever be inexplicable. We only say that it is thus far unexplained, and is pretty likely to remain so until the fundamental riddle of psychology is solved.

Meanwhile, it is precisely this unexplained residuum to which we give the name of genius. We say, therefore, that the most striking thing about genius is not its inevitableness, but its power. But power, when upborne by good will to humanity, is a beneficent thing that calls for admiration. Our hope for the future lies in the prospect we have of making such power more and more coveted and admired. We may, then, anatomize our Hercules as much as we choose; we may examine the marshy habitat of his monsters, and survey the forest from which he got his club; but we need not forget in doing that that there is, after all, between Hercules and Cacus a difference worth accenting, and that the only way of accenting it to any purpose is by means of the old-fashioned *Bravo, Hercules!* Salvation lies not in an enthusiasm for inevitableness, but in an enthusiasm for men.

History of the Netherlands (Holland and Belgium). By Alexander Young. Fully illustrated. Boston: Estes & Lauriat. 1884. 8vo, pp. 672.

Mr. Young's history is a scholarly and able work. Its chief fault is a lack of proportion, which is apologized for in the preface, but which none the less makes the title something of a misnomer. When the middle ages are dismissed in forty pages, and the two centuries and a half since the death of Maurice in less than one hundred, it is hardly fair to call it a "history of the Netherlands." It is in reality a compendious history of the period covered by Mr. Motley's three works. This period has been the subject of patient and thorough investigations by Netherland historians, and Mr. Young has attempted the useful task of laying the results of these investigations before the American people.

This he has done faithfully and thoroughly, and his book will form a desirable supplement to Mr. Motley's works. He enumerates in the preface the several points on which this recent evidence has thrown new light, and they are numerous, and extend over a large field—even as late as the stadtholderate of Frederick Henry, and the death of the De Witts. While emphasizing the patriotism, integrity, and toleration of William the Silent, he insists upon his "profound dissimulation" quite as strongly as is done by his enemies, and attributes to this, indeed, the failure of the Pacification of Ghent, at least in large part. "It was his dependence upon political artifice that led the Prince to encourage those desperate ventures of Ryhove and Imbize which helped to destroy the union of the Netherlands. It was his repute for double dealing that made it impossible for William the Silent to restore confidence to the Walloons and prevent them from resuming allegiance to Spain" (p. 319). Mr. Young has described, much more fully than Mr. Motley was able to do, the outrages committed by the Protestant fanatics in Ghent and Bruges at this period, which led directly to the withdrawal of the Walloon provinces. These outrages, which William in vain attempted to control, included the burning of six monks at Ghent and two at Bruges. He expresses wonder that this fact is not mentioned by Motley.

Mr. Young's estimate of St. Aldegonde in the latter part of his career is more favorable than Mr. Motley's. Of the execution of Barneveldt he says:

"The researches of Dutch scholars have given an entirely new aspect to the execution of Barneveldt, which is still held up by foreign writers, in ignorance of the facts, as due to Maurice's ambition for sovereignty. It is now known that the

Prince engaged reluctantly in the work of subjecting the provincial governments to the control of the States-General, and that . . . he yielded to the earnest appeals of his adviser and friend, Count William Louis, the Stadtholder of Friesland, from a solemn sense of duty to the country, and to preserve it from ruin. The execution of Barneveldt was not then thought of, but the pressure of popular feeling and the sense of public peril compelled it" (p. 529).

Two or three pages follow containing a careful estimate of Barneveldt, which is one of the most interesting parts of the book. Mr. Young rates him not very high as a statesman.

One meets here and there with a clumsy or inaccurate expression, as (p. 293) where mention is made of the soldiers "whom Anjou had expected would capture Antwerp." The illustrations are very unequal in merit. There are some excellent portraits and views, and, along with them, some of very inferior quality, and some that do not appear to have anything to do with the text.

The Law in Shakespeare. By Cushman K. Davis. 2d ed. 12mo, pp. 303. St. Paul: West Publishing Company.

THE second edition of Mr. Davis's little work, with its long list of legal phrases from the plays of Shakspere, shows how much a specialist can find in them on a topic as dry as the common law; and shows, too, how aptly and how frequently the poet converted the dullest and dryest matter into sparkling stage effect. He was not always successful. Mr. Davis does not pause to criticise, but there are times when Shakspere's work suffers from his fondness for verbal conceits, and his use of law terms is sometimes of this kind. When we find Venus and Lucrece and Cleopatra versed in the subtleties of the English common law, we can hardly help feeling that the mighty artist stooped too far to those quibbling fashions which, however much admired by the more learned part of his audience, were really artificial and false. It was not done in the careless haste of hurrying off copy to a waiting actor. Mr. Davis points out that in the revision of "Hamlet," in which the play received some of its most splendid passages, the number of legal phrases was very much increased; and the change was not always an improvement.

Mr. Davis's long list of legal terms from the poet's pages is a new proof of the wonderful wealth and precision of his vocabulary. Of the profounder legal conceptions which underlay the phraseology, Shakspere's knowledge is not so clear. He never used words amiss, but he showed no sympathy with those great conceptions of human rights which were being moulded by legal struggles into shapes to which civil war was soon to give a permanent impress. Shakspere liked to enliven his lines with legal suggestions, but when the law came in his way he pushed it easily and indifferently aside. Mr. Davis might have pointed out how, in the celebrated trial in the "Merchant of Venice," the law was subordinated to stage effect. A bond which violated the law of Venice, as the later ruling of *Portia* showed that this did, could not possibly have been binding, as she began by ruling it to be; and the points about the drops of blood and the exact size of the pound of flesh were mere quibbles, which no court would hesitate over if the bond were valid. But if the poet had displayed his legal knowledge, it would have been at the expense of the delight of the civilized world over a scene that is true to nature if not to law.

The Admission Registers of St. Paul's School, from 1748 to 1876. Edited, with Biographical Notices and Notes on the Earlier Masters and Scholars of the School, by Rev. Robert Barlow Gardiner, Fourth Master. London: Geo. Bell & Sons. 1884. Large 8vo, pp. 515.

WHEN Dean Colet founded in 1509 his free grammar school in honor of "Christ Jesu *in puericia* and of his blessyd Mother Mary," he was the pioneer in reviving English scholarship in Greek and in giving a scholarly tone to the education of the children of the substantial citizens of London. Although a free school, it was not a charity school, the scholars receiving nothing but daily instruction. Its management was in the hands of the Mercers' Company, one of the richest guilds of the city, and by the liberality of its friends there has never been any lack of opportunities to send the most deserving graduates to the universities.

That the school has been of great and continuing service is undeniable, and in this handsome volume are preserved all the fragments of the records of its graduates. As the authentic lists do not begin until 1748, Mr. Gardiner is to be praised for his industry in hunting out the evidences of preceding classes. The lists, of course, like all similar ones, are of interest chiefly to the alumni, presenting hundreds of utterly obscure names, animated only by those of successful scholars who have attained a brief advancement. But a school can be congratulated whose rolls bear the names of John Milton, Samuel Pepys, John Strype, Benjamin Calamy, Edmund Halley, Philip Francis, Thomas Clarkson, and John Bowyer Nichols. The great Duke of Marlborough and Major John André here received the rudiments of knowledge, as have lawyers innumerable, from Chief Justice Jeffreys to Sir Charles Wetherell, Chancellor Wilde (Lord Truro), and Chief Baron Pollock. Richard Harris Barham is perhaps the best-known author herein graduated, but a few bishops and many minor lights of the Church are piously commemorated for much-forgotten divinity.

American Comments on European Questions, International and Religious. By Joseph P. Thompson, formerly of New York and afterward of Berlin. Boston: Houghton, Mifflin & Co. 8vo, pp. 341.

THESE papers, by an intelligent and patriotic American residing in Berlin, will be found a useful commentary upon the course of European politics during the last few years. The author was a careful student of international law, and took an active part in the movements for its amelioration. All the eight papers that treat of international relations are worth reading; we have been especially pleased with that entitled "The Intercourse of Christian with non-Christian Peoples." Most of these are, as would be expected, written from the German point of view; and the fact that their author was a resident of Germany during the whole period in which that country made such rapid progress toward unity and power, gives them peculiar value. The last five papers treat of Science and Religion, final causes, and other theological and philosophical topics.

BOOKS OF THE WEEK.

Allgemeine Weltgeschichte. Parts 1-3. Berlin. New York: E. Westermann & Co.
Atkinson, E. The Distribution of Products; or, The Mechanism and the Metaphysics of Exchange. G. P. Putnam's Sons. $1.25.
Colombi, La Marchesa. The Wane of an Ideal. W. S. Gottsberger.
Converse, Harriet M. Sheaves: a Collection of Poems. 2d ed. G. P. Putnam's Sons.
Davidson, Dr. A. B. The Book of Job. With Notes, Introduction, and Appendix. Cambridge, Eng.: University Press.

The Nation.

NEW YORK, THURSDAY, JANUARY 22, 1885.

The Week.

MR. EVARTS has been elected Senator by the unanimous vote of the members of his party in the Legislature. He is very much pleased with his victory, and he has great reason to be. All the intriguers of his party—Platt, Conkling, Cornell, and other faction-workers—were against him, but he has won because the masses of the party made themselves felt in his behalf. In fact, his selection is the result of one of those uprisings of popular sentiment for which New York State is peculiar. The Republicans of the State saw in the efforts to secure Mr. Morton's nomination a combined movement to fasten upon the party management the grip of a new machine, which should control the nomination for Governor next November, and "run" the organization in the interest of a clique of politicians until the next Presidential campaign; and they no sooner saw this than they resolved to thwart it by the election of Mr. Evarts. Their action is a fresh and most gratifying assurance that the day for "bosses" has passed in New York. There is nothing for Messrs. Platt, Cornell & Co. to do but retire from politics. Our opinion of Mr. Evarts's qualifications for the Senatorship is well known, and has not been changed by his success. The non-factional aspect of his election is ample compensation for all defects in his temperament and character, and we rejoice in believing that in nominating him his party has taken a long step away from threatening dissolution. The nomination of Mr. Morton, if it had come after the discreditable outcome of the Speakership contest, would have been an almost fatal blow to the prospects of the party in the next election. It would have driven away the Independent voters and made the State surely Democratic.

The prompt and almost unanimous passage of the bill in the Senate to put General Grant on the retired list of the army, was an act of public justice, gratifying to national pride and commensurate with the national dignity. Recent events have revealed General Grant to the hearts of his countrymen in a condition of mental and physical distress brought about by a trusting and over-credulous nature, and bearing a load grievous and humiliating in the last degree. Mr. Vanderbilt's generosity, while it might relieve General Grant's pecuniary embarrassment, could not make him in the estimation of himself or others anything but a pensioner upon a private individual. Such a position, for one who had commanded the Union armies in the greatest crisis of our history, would have been intolerable to himself, to his contemporaries, and to posterity. It would have been as shameful to the nation as it was creditable to the individual who had voluntarily assumed the entire burden. Mr. Vanderbilt's act would have linked his own name with that of General Grant in the pages of history, but at the expense of the American people. It was and is necessary that the public should assume this burden, if it can be called a burden; but it ought to be esteemed rather a privilege to rescue General Grant from the position in which the unexampled frauds of one man and the unexampled liberality of another have placed him. The action of the Southern Senators upon this bill, following so closely upon the Jeff Davis debate, was nothing less than a grand political stroke.

The bill seems likely to fail in the House through President Arthur's extraordinary conduct in vetoing the Fitz-John Porter bill, on constitutional grounds, when the truth was that he had signed many similar bills, and only vetoed this one because he did not like it. For this the Democrats are now revenging themselves. It is human, but it is bad politics. There is no greater mistake in party warfare in the long run than to give tit for tat. Temporary success is sometimes achieved in this way, but to win popular confidence, there is nothing like doing the right thing every time, no matter how often the other side does the wrong thing.

The letter of Mr. Charles Francis Adams, President of the Union Pacific Railroad, to the Government directors of that corporation, tells us that the company has made no proposition to the Government for a modification of the Thurman Act, but is merely an interested spectator of the proceedings which may be instituted by Congress, in obedience to the suggestions of the executive branch of the Government, to change the requirements of that act. It is a great relief to those charged with the duty of looking after the Government's interests to know that there are no sinister influences at work, and that they are dealing with a man whose word can be relied on. Nobody can really believe that Mr. Adams means anything different from what he says, or that he conceals anything which it is important that the public should know in order to arrive at an intelligent understanding of the business. It is safe to say that the company will get much better terms through square dealing than could possibly be obtained if chicanery and duplicity were lurking in the background. When Mr. Adams says that the company are proposing nothing, but are waiting the action of the Government, not omitting to give their own views, but yet intending to pay the Government what is justly due to it in the way which may be determined by lawful authority, there is no room for suspicions of any sort. Mr. Adams is bound to do the best for his company within the limitations of honor. His name is sufficient assurance that these limitations will be observed. The policy which Mr. Adams would like to have adopted by the Government is that of allowing the company to acquire its natural growth by applying its surplus earnings to the building of branch lines, and taking these branch lines as additional security for the existing debt. This is the best thing for the company, and it may be the best thing for the Government, but it is open to the objection that it makes the Government a partner in a new railroad enterprise of undefined extent.

This has a political as well as a financial aspect. The question is not merely one of dollars and cents. It involves a policy which can only be defended upon the ground that something worse may happen. Taking the existing branch lines so far as the title to them is still in the Union Pacific Company—that is, so far as the bonds have not passed into the hands of private investors—is one thing. Laying out new lines to be treated in the same way is a different thing, and is not the kind of work for which our Government was intended, or is at present equipped. Very substantial reasons should be given for making such a precedent. The important question for Congress to ask is this: Within what period can the Union Pacific Company repay the money which it owes the Government without impairing the original security and without impairing the property? Impairment of the property is impairment of the security, and it is quite certain that the property would be impaired if the stockholders should lose all interest in it through failure to receive any returns from it. It is for the Government's interest that it should not become a mere football of speculation. The debt will be collected, if at all, by securing the most diligent attention and the best talent and the highest integrity that can be obtained for its management and operation. These requisites are not usually obtainable by broken-down railroads, and the class of speculators who commonly pick up such properties do not always seek such qualifications in their managers. There being no fund from which the debt can be paid except the property itself and what it can be made to yield, the policy of conservation is indispensable, and we think that Mr. Adams is right in holding that conservation implies necessarily some return to the shareholders upon their investments. What this shall be in amount must be determined by the net earnings and the other facts of detail in the case.

The Rev. Dr. Van Dyke and Henry Ward Beecher discuss the question whether "clergymen shall be politicians" in the new number of the *North American Review*. Dr. Van Dyke answers decidedly not. He says that the clergyman in politics—as a clergyman, be it understood—is "injurious"; that "when he attempts to lead the church, as a religious organization, into the train of any candidate for office, he is doing a great and irreparable harm to the cause of religion." He intimates, moreover, very broadly that there were too many clergymen in politics in the late campaign, and that, as their numbers increase, "party discipline will teach them to condone immoralities on their own side and repeat slanders against the other side. A lack of worldly experience, combined with a professional habit of rhetorical statement, will produce an *odium politicum*, compared with which the traditions of the extinct *odium theologicum* will seem like the stories of the golden age."

Mr. Beecher makes a distinction between Catholic and Protestant Episcopal ministers on the one hand, and ministers of the other denominations on the other. The former should keep out of politics because they cannot divest

themselves in the eyes of their parishioners of their sacerdotal character. But the clergy of other denominations, having no sacerdotal character, and being simply citizens with a teaching function, should teach good politics as well as other good things from the pulpit. But he prudently adds, that "as a general thing instruction from the pulpit on political duty should not be given on the eve of an election." For our part we think that as political duty for the citizen consists almost wholly in the choice of candidates at election, political duty can hardly be taught from the pulpit at all. Political duty is really not distinguishable in the forum of morals from other duty. It is every man's moral duty to vote for the candidate whom he honestly thinks the best; but the considerations which determine which is the best candidate are often not moral considerations at all, but historical or economical, or purely political, and a minister in nine cases out of ten is no better judge of them than anybody else. The two articles in the *Review* are interesting, but they skim very lightly over the question under discussion.

A flood of light is thrown upon the queer condition of journalistic morality in Cincinnati by a furious quarrel over the Sheriff's advertising. One of the lesser fruits of the great Blaine victory in Ohio in October was the election of the Republican candidate for Sheriff in Hamilton County, or Cincinnati. He was supported with great fervor by the *Commercial Gazette*. On taking office, however, the Sheriff bestowed the advertising in his gift upon the Democratic organ, the *Enquirer*. The *Commercial Gazette* says that in doing this he has "betrayed his friends," and "sold his office to the *Enquirer* gang," and "has received a little dirty money for doing it." In order to reveal the extent of his "perfidy," the *Commercial Gazette* publishes a formal contract signed by the Sheriff on the eve of election, promising, in case he is elected, to give the advertising to the *Commercial Gazette;* it publishes also a formal affidavit by the Sheriff, made a few days before election, denying as an "unmitigated lie" a rumor that he had made a similar contract with the *Enquirer*. The *Commercial Gazette* admits that its faith in its own contract with the Sheriff was so strong that it "disbelieved the charges which he has proven were true," and supported him, though "he could have been beaten with a paragraph." Aside from the revelation that both these organs of public opinion were supporting a candidate, not on account of his fitness for office, but because of private contracts, for benefits to be bestowed after election, the Sheriff's "perfidy" is instructive as furnishing additional evidence of the peculiar attitude of the *Enquirer* toward the Democratic party in the late Presidential campaign. The general belief that it had a "contract" of some kind with the Blaine managers for the defeat of Cleveland, will be strengthened by this evidence of its relation to the Republican ticket in October.

The late Mr. Colfax filled a very considerable place during the most stirring period of our history. He was not a strong, but an exceedingly nimble man. He attained to the Speakership and the Vice-Presidency by virtue of remarkable alertness of intellect, joined to indefatigable industry and an accommodating nature which made neither enemies nor lasting friends, but which fitted him to receive blows without emotion, and to return them without animosity. Among the members of the House during his Speakership there were many abler men than himself—Stevens, Winter Davis, Garfield, Conkling, Blaine, Washburne. He was the senior in service of most of these, and he had acquired a mastery of parliamentary law which often gives to second-rate men a first-rate importance. His seniority caused him to be deferred to, his knowledge of procedure made him useful, and his suppleness, nimbleness, and unvarying good nature made him popular with his fellow-members. Mr. Washburne, of Illinois, his competitor for the Speakership after Mr. Grow's term had expired, had no more chance than a Spanish galleon of the Armada against an English gunboat. What Mr. Colfax lacked in calibre he more than made up in rapidity of action, and his victory in that contest was never doubtful. The same resources availed him in his next considerable encounter, with Senator Wade, of Ohio, for the Vice-Presidency in the Chicago Convention of 1868. As the colleague of General Grant, he brought his full measure of popularity and his full share of resources to the campaign of that year. In 1872 he allowed himself to be flattered with the idea that he might receive the nomination for the Presidency, and thus allowed the second place on the ticket to be taken by Henry Wilson. Then the Crédit-Mobilier investigation came on, and he retired to private life. Dropping the veil over this episode, it may be said that Mr. Colfax held the foremost rank among the second-rate men of his time. He did not rank with Lincoln, Seward, Sumner, or with certain of his contemporaries still living, but he outranked the multitude who served with him, and secured a distinct place in history.

Mr. Clarkson has been shown Mr. St. John's last denial of the charge of seeking to sell out to the Republicans, and pronounces it "more a confession than a contradiction," and says he "deals in quibbles, and craftily evades the main facts," and challenges him to bring a libel suit in an earthly tribunal, where the whole affair can be thoroughly sifted. This is a reference to Mr. St. John's expressed desire to have the matter investigated at the judgment day. We regret to see, however, that Mr. Clarkson is unconscious of the figure which he and Mr. Elkins cut in the matter, according to his own story. They seem to have entered into bona-fide negotiations with St. John, to pay him for perpetrating in the Blaine interest a gross fraud, both on the Prohibitionists and Republicans. He was, for instance, to be paid for inserting the following bit of cant and hypocrisy in his Ohio speeches:

> "It is now evident to every one that either Blaine or Cleveland is sure to be elected President. It is time for every lover of his country to stop and ask himself what his duty is in such a situation. Blaine represents whiskey and loyalty; Cleveland, whiskey and disloyalty. As between whiskey and loyalty and whiskey and disloyalty, I am for whiskey and loyalty every time."

Of course, the Prohibitionist who would utter such stuff for pay would be a degraded person, but what kind of men would they be who would pay him for doing it, while maintaining a champion at their heaquarters to keep them "in line with the religious sentiment of the country"?

It appears to be a part of the regular business of the protectionists in the United States to attempt to frighten people by circulating the most ridiculous stories respecting the doings of the Cobden Club. The last one that is travelling the rounds of the press is, that the Club issued, during the recent Presidential campaign, in aid of the Democratic party, 1,000,000 leaflets entitled "New York Campaign Documents." We stand ready to pay a handsome reward to any one who will produce *one* copy of any such leaflet issued by or bearing the imprint of the Club. This yarn would seem to be the natural growth, acquired in time and by travelling, of a statement made by the Hon. Thos. H. Dudley, in a lecture on the Cobden Club, delivered at Astoria, L. I., "to a large assemblage of farmers and artisans," in October last, and reported in the *Tribune*. As reported, the statement was as follows: "That foreign club cannot rest until the United States are subdued, and they are at work subduing us. I repeat, they have their agents all over this country, and that they have distributed 700,000 copies of their circulars here." At this meeting Mr. Dudley read for the edification of his hearers (according to the *Tribune's* report) from a book entitled 'Special Report from the Club for the Members Alone.' As no such book or report was ever made or published, we should be pleased if Mr. Dudley would rise and explain. And if he is an honest man, he will make haste to do so.

Mr. Abram S. Hewitt said very truly, in the debate on the McPherson Bank Bill, that there had really been no contraction of the currency during the past year. What has really contracted during the period of depression has been the demand for currency. To all intents and purposes the currency has been enlarged rather than diminished in volume since the beginning of 1882. Everybody knows that when prices are declining, less and less money is needed to do business with than when prices are advancing. It is true, also, that when business is dull and profits are unsatisfactory, money accumulates in the banks and lies there, either unused or loaned at very low rates of interest, as is the case now. It is entirely misleading to infer at such times that currency contraction is going on, merely because the statistics of the Treasury Department show that more bank notes have been surrendered for cancellation than have been taken out for circulation. The McPherson bill, allowing the issue of notes up to the par value of the security bonds, is in our view unobjectionable, but it is not now necessary to pass any measure to prevent contraction of the currency. The only contraction which hurts anybody at present is the contraction of business, and this is not to be cured by swapping bonds or by multiplying bits of paper.

A correspondence between Bishops Lee and Potter contains an interesting discussion of the

vows of poverty, chastity, and obedience taken before the latter by two members of the so-called "Order of the Holy Cross." Nobody who reads it will doubt that Bishop Potter has by far the best of the argument, and has in fact produced a very masterly vindication of his action. In fact, we never could see what objection there was to any man's taking such a vow as an assistance to him in work among the poor, except that similar vows have been taken and are now taken by persons in the Catholic Church who lead lives which Protestants consider idle or trivial, or for the simple purpose of what is called "saving their souls." The practical view of the matter in our day would seem to be that any man who thinks that he can do good work better by taking a vow of some sort of self-denial, does well to take it, with whatever solemnities he thinks necessary. Any one, on the contrary, who thinks he can do good work without a vow, had better let it alone. The hostility excited by the vows in the present case is the odder because there are many Protestant sisterhoods under vows. All ministers, soldiers, and married men, too, are under public vows, and so are a great number of abstainers from alcoholic drinks. Doubtless the number of persons who are living under some kind of secret vows is very large. In fact, no vows of self-denial have thus far proved dangerous to society that were not perpetual, that did not involve complete abandonment of all share in the work of the world, and that did not help to build up rich corporations.

Mr. Bangs delivered a severe tirade on Monday in court on the obstruction offered to the administration of justice by the press, which he accused of terrorizing both witnesses and counsel, sometimes by eulogy and sometimes by caricature and abuse. Part of what he said appeared to be intended to be humorous, but there is some truth behind it all. The press has become a terror to a great many unoffending people, and has made publicity of any kind a fearful thing for the nervous or timid, mainly through the immense development of what we may call the irresponsibility of reporters. A generation ago, editorial attacks on or ridicule of private individuals were far commoner than they are now. At present few respectable papers ever indulge in them. The editorial page has become much more sober and self-restrained than it used to be. But during the last twenty years the rôle of the reporter has been greatly enlarged. He does a great deal of purely descriptive writing, and makes a great deal of interesting discussion pass through his mind in the shape of interviews. But the editorial hold on him has apparently grown weaker as his function has grown wider. There appears to be but little editorial censorship exercised over his contributions in any city paper as long as he manages to be amusing. Accordingly he distorts, caricatures, invents, and colors almost at pleasure. He is hardly ever called to account unless he brings on a libel suit. Much of this enormous power over the comfort of individuals, too, is put into the hands of very young men, who are allowed to cultivate freely, wherever they go, the art, not of amusing description, but of amusing caricature. Everything called reporting now takes or tends to take this form. The proceedings in important law cases are served up in the same kind of burlesque as a street fight or a row at a ward meeting. The evil is great, and tends to become greater, and ought to be checked.

The Legislature of Georgia during its past session provided employment for women for which they are quite as well fitted as men, and in so doing has set an example which, we predict, will be promptly followed by other Southern States. Heretofore the clerk of the Lower House of the Legislature of Georgia (who, it should be said, does all of its clerical work at a contract price, and employs his own assistants), has at every session engaged about eight or ten male clerks at a salary of $2 50 or $3 a day, to do the necessary engrossing. He was directed by a resolution passed at the late session to employ women for this work. As the movement was one which he favored, he doubtless took pains to secure as clerks not only deserving women, but skilful copyists, and the result is that Governor McDaniel is much pleased with the appearance of the bills engrossed by them, sent to him to be signed, and finds in them fewer clerical errors than in any heretofore submitted to him. It is not improbable that this may be the means by which women in the South, compelled to earn a living, and having hitherto only a choice between school teaching and keeping a boarding-house, may obtain an abundant admission to places of profit under State governments. There has been little or no demand made by them, it is true, for situations of this kind. The resolution referred to was passed by the Georgia Legislature purely on its own motion. It had received no petitions from women, it had not been appealed to by the press, and it had no instances laid before it of a similar step having been taken by other States.

The increasing radicalism of Mr. Chamberlain's speeches on the land question makes it plain that he is looking to Mr. Gladstone's retirement in the near future, and a reorganization of parties when the next Parliament, elected by the new voters, meets, which will be probably in the spring of 1886. The Redistribution Bill will be finally passed when Parliament meets in February, and then the work of registration and of fixing the boundaries of the new constituencies will be begun, in preparation for a general election in the fall of this year. The most powerful element in the new vote will be the agricultural laborers, whose condition has for centuries been the disgrace of English society, and Mr. Chamberlain is evidently determined to secure their adhesion in advance for a party which perhaps has as yet no name, but of which he will be the head. In listening to Chamberlain, the Tories who used to abuse Gladstone so bitterly are probably beginning to look on the latter as a strong tower of defence.

We have not received for a good while an odder piece of news than the cable story that Schotz, the German sculptor, who was the principal witness in the libel suit brought by an English sculptor, Belt, last winter, against another named Lawes, has confessed perjury. The case occupied the courts for many weeks, and ended in a verdict of £5,000 against Lawes for having said that Belt's works were not his own, but were done for him. There was a fearful amount of directly contradictory testimony. Lawes, to avoid payment of the damages, had himself declared a bankrupt, and during the bankruptcy proceedings Schotz has confessed that he and Belt and another man had entered into a conspiracy to bring the suit for the sake of the damages, and that he (Schotz) was the real author of Belt's works. Lawes was well known not to have money, but he had a rich father, who, it was thought, would pay. This confession is the oddest part of the affair, because it was apparently unnecessary, and Schotz will now be prosecuted and punished. He is evidently venal, but it is hard to see where he would get sufficient compensation for a term of penal servitude. As an illustration of the condition of morals in "art circles" in London, it is an extraordinary affair. If Schotz's confession be true, it shows that a man may enjoy considerable reputation and extensive patronage for years as a sculptor in one of the greatest "art centres" in the world, while in reality nothing but a fraudulent vender of other men's work.

Edmund Yates's appeal against his sentence was on a technicality, his point being that he was prosecuted for criminal libel without the consent of the Attorney-General, which a recent act of Parliament has made necessary. The question before the Court was whether this consent was necessary for a criminal information filed in the Queen's Bench, as well as for an indictment by the Grand Jury. The decision has gone against him, and so he has gone to jail. There appears to be more or less sympathy for him among his brethren of the press, but none at all in "society," which suffers from papers like his, but nevertheless feeds on them greedily, and in fact maintains them. He gave up the writer of the libel, Lady Stradbroke, whom the exposure has ruined, and made all the atonement in his power in the way of apology; so that he is really suffering rather as a warning and example to society papers than as a real culprit. As he is to be a "first-class misdemeanant"—that is, deprived of nothing but his liberty—the punishment is not severe, and will be considerably mitigated by the service it will render his paper as an advertisement.

The cable despatch from London about the excitement in English official circles over a threat of Turkey to send troops to occupy Suakim, is absurd on its face. Turkey has no troops, and no money, and no ships for any foreign expedition. Moreover, the notion that reinforcements are being despatched to Egypt to resist her, is ridiculous. In case Turkey announced any such plan as is ascribed to her, and England were determined to oppose it, the British Ambassador at Constantinople would simply inform the Porte that the despatch of an expedition to Egypt would not be permitted, and there the matter would end. The reason it would end there is, that the British fleet would capture or sink it before it left Turkish waters.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, January 14, to TUESDAY, January 20, 1885 inclusive.]

DOMESTIC.

IN the United States Senate on Wednesday, Senator Edmunds called up his bill by which General Grant is to be appointed by the President to the retired list of the army, with full rank and pay of General or General-in-Chief ($13,500). Warm tributes to General Grant were paid by the Southern Senators Maxey, Jonas, George, Jones, of Florida, and Voorhees. Senator Cockrell (Dem., Mo.) spoke against the bill. Mr. Edmunds was the only Senator on the Republican side who found it necessary to speak on the measure. It was passed by a vote of 49 to 9, the negative votes being Democratic.

The House Committee on Military Affairs on Friday voted to call up in the House the Grant Retirement Bill first introduced in the Senate, and not the one which passed it on January 14. This was done to put President Arthur in an inconsistent light on the Fitz-John Porter veto if he should sign the Grant Bill, which is open to the same technical objection

During the debate on the Inter-State Commerce Bill in the Senate on Friday, Senator Van Wyck (Rep., Neb.) made a long speech in which he severely criticised Messrs. Allison, Ingalls, Sewell, and Morgan, for their kindly feeling toward railway corporations. A running debate followed, in which Messrs. Ingalls, Allison, and Brown replied to Mr. Van Wyck's criticisms. An adjournment was then taken without a vote on the bill.

In the House on Thursday the McPherson Funding Bill, by which national banks are to be allowed to issue notes to the full amount of their bond reserve, came up under a special order. In the midst of the discussion an adjournment was taken by a vote of 130 to 112. While this was in no sense a test vote on the McPherson bill, it operated as a virtual defeat of that measure, as the special order for discussion on a fixed day is not a continuing order. Congressman Potter has issued a card asserting that the onus of preventing remedial national bank legislation must rest upon the friends of the McPherson bill, who, when it became evident that their bill could not pass, refused to consent to a consideration of the Potter Refunding Bill.

The bill referring the French Spoliation Claims to the Court of Claims has passed both houses of Congress and will be approved by the President. These claims have been before Congress for many years, and in 2,563 cases amount to $7,300,000.

Secretary McCulloch on Friday transmitted to the House of Representatives a draft of a bill prepared by the Commissioner of Internal Revenue to amend the law relating to the entry of distilled spirits, in distillery and special bonded warehouses, and the withdrawal of the same therefrom. The bill provides that the tax on all distilled spirits hereafter entered for deposit in distillery warehouses, or in special bonded warehouses, or remaining in such warehouses at the time of the passage of the act, shall be payable before and at the time the same are withdrawn therefrom, except in cases of withdrawals without the payment of tax as now or hereafter authorized by law. The Secretary recommends the immediate passage of the bill as tending to relieve the present business depression.

The House Committee on Rivers and Harbors on Wednesday completed its bill, with the exception of the item making an appropriation for the Hennepin Canal and one or two items for small rivers. The sum appropriated is over $6,000,000.

Judge William A. Richardson, of the Court of Claims, was on Thursday nominated by President Arthur to be Chief Justice of the court in place of Mr. Drake, resigned. To fill the place made vacant by Mr. Richardson's promotion the President has named Mr. John Davis, Assistant Secretary of State, and son-in-law of Secretary Frelinghuysen.

President Arthur has nominated Carroll D. Wright, of Massachusetts, to be Commissioner of Labor.

The Senatorial canvass at Albany assumed a new phase on Wednesday, when the politicians began seriously to consider the make-up of Speaker Erwin's committees which had been announced on the previous evening. It was found that they had been made entirely in the interests of Mr. Morton, and with utter disregard to propriety or efficiency. A number of members of the Legislature, who had previously been for Morton for Senator, came out for Mr. Evarts. The appearance of ex-Governor Cornell at Albany personally to further the Morton campaign added to the unpopularity of that candidate. Mr. Evarts's friends were elated, and confidently predicted his nomination by the Republican caucus.

At midnight of Thursday the withdrawal of Congressman Hiscock, of this State, from the Senatorial contest was formally announced at Albany, and caused additional uneasiness to the Morton managers, who saw that the eight supporters of Mr. Hiscock would go to Mr. Evarts. In Mr. Hiscock's letter of withdrawal, he expressed the opinion that for him to continue in the canvass would be unprofitable for New York and the Republican party. Floods of Evarts petitions were presented in both houses of the Legislature on Friday, and the tide was strongly setting in his favor. Both houses adjourned early in the day until Monday. A little after noon the Morton men were again startled by the announcement that Gen. Leslie W. Russell had withdrawn from the contest in favor of Mr. Evarts.

The Republican legislative caucus on Monday night voted for an open ballot, 64 to 28. It then nominated William M. Evarts for United States Senator by a vote of 61 for him to 28 for L. P. Morton and 3 for Chauncey M. Depew. The Democrats held a caucus on Tuesday morning, and nominated as their candidate for Senator ex-Mayor Edward Cooper, of this city, the vote being: Cooper 28, Pulitzer 21, William E. Smith 2, Hewitt 3, Jacobs 1. At noon the Senate took the first formal steps toward the election of a successor to Senator E. G. Lapham. Each Senator rose in his place as the roll was called and announced his choice. Nineteen Republicans voted for William M. Evarts, and thirteen Democrats voted for Edward Cooper. At the same hour the Assembly balloted for United States Senator with the following result: William M. Evarts 73, Edward Cooper 52. Mr. Evarts was thus elected. The result is announced at a joint session of both houses.

At a caucus of the Republican members of the Pennsylvania Legislature on Thursday night, in Harrisburg, after a session of four hours, J. Donald Cameron was renominated for United States Senator. There were fifty opposition votes.

The Republican members of the Connecticut Legislature have renominated United States Senator Platt, and as they are in the majority he will be elected. Senator Vance has been renominated by the Democrats of North Carolina, and Senator Ingalls by the Republicans of Kansas. Both will be elected.

The first annual report of the New York State Dairy Commissioner was sent to the Senate on Thursday. It says that, owing to the prosecutions instituted by the Commissioner and his assistant, 75 per cent. of the sales of spurious butter in this State, as compared with 1883, have been suppressed. Sixty arrests have been made, eleven convictions secured, forty persons are under indictment or have elected to be tried by special session.

The Court of Appeals of this State handed down a decision on Tuesday declaring the Tenement-house Cigar Bill unconstitutional.

Mayor Grace, of this city, has appointed E. Henry Lacombe Corporation Counsel for the term expiring May 1, 1889.

There was great excitement in the iron trade on Thursday afternoon when it became known that the prominent Pittsburgh firms of Oliver Bros. & Phillips and the Oliver & Roberts Wire Company had issued the following card to their creditors: "We are to-day compelled to suspend payments, and purpose calling immediately a meeting of those interested, to whom we believe we can show assets amply sufficient, with some indulgence, to pay every dollar of our liabilities." H. W. Oliver, the head of the firm, is noted in the iron trade for his business ability and energy. He was a member of the Tariff Commission. His firm owned three iron mills employing 1,500 men. The explanation of the failure is that the firm attempted to do too much business for the amount of their capital, and when a dull season came they had no reserve to fall back on. Their liabilities are estimated at $5,000,000. The trade in other cities was not seriously affected

At a meeting of the creditors on Tuesday Mr. H. W. Oliver, jr., presented a statement, proposing to pay all claims by notes maturing one each year for five years, one-fifth at each payment, each note to bear 6 per cent. interest from the date when the claims are respectively due. A committee of the creditors reported favorably on the proposals, and it was decided not to take final action until January 29. The greatest harmony prevailed, and there was a general disposition to grant the five years' extension asked

Late on Thursday afternoon the well-known banking firm of John J. Cisco & Son, of this city, made an assignment. It was after hours, and much excitement and alarm on Wall Street was thus avoided. The failure was primarily due to a great depreciation of Houston and Texas Central Railroad bonds, of which $500,000 worth were held by the firm. Rumors affecting the standing of the firm had been circulated for ten days, and worked them great injury. Their liabilities to depositors are about $2,000,000, and they also owe about $1,200,000 in secured loans. Stocks fell on Friday 1 or 2 per cent. in consequence of this failure, but it had no alarming effect on the market. The firm of John J. Cisco & Son was founded by the late John J. Cisco in 1864. Since his death, in March last, the firm has been composed of John A. Cisco and Frederick W. Foote, who was formerly a confidential clerk.

The Pennsylvania Railroad on Saturday announced a cut in emigrant rates (confined to those persons reaching New York and Philadelphia by ocean steamer), by which the fare was reduced to $1 from those cities to Chicago, St. Louis, and Cincinnati. This move was made necessary by the action of the Erie Railway, the New York Central, the Delaware, Lackawanna and Western, and the West Shore Companies in adopting reduced emigrant rates without consultation with the Pennsylvania Company, and in direct violation of the rules governing the emigrant pool. With the reduction in the rate of steerage passage by the transatlantic steamers to $8, this cut makes an emigrant rate from Liverpool to Chicago of $9.

About 11 o'clock on Friday night an attempt was made to destroy one of the hat factories at South Norwalk, Conn., owned by Crofut & Knapp. A can containing an explosive, supposed to be dynamite, was exploded by means of a fuse. The damage to the building was comparatively small, but the affair has excited afresh the feeling against the operatives in the factories, who struck work some time ago, as it is believed that they are responsible for it.

One ward of the Insane Asylum at Kankakee, Ill., was burned on Sunday morning and seventeen patients lost their lives.

Professor Benjamin Silliman, of Yale College, died at ten o'clock on Wednesday night,

of heart disease and uræmic poisoning. He was born in New Haven, December 4, 1816, and was graduated from Yale in 1837. He was then employed as assistant in the department of chemistry, of which his father was the head from 1802 to 1853. In 1842 Professor Silliman began to receive private pupils in analytical chemistry and mineralogy. This was the germ of the Sheffield Scientific School, which was, however, known, at its organization in 1847, as the Yale Scientific School. Professor Silliman was in that year appointed to the chair of chemistry in the new school. In 1846 he published his 'First Principles of Chemistry,' of which 50,000 copies have been sold. From 1849 to 1854 he was Professor of Medical Chemistry and Toxicology at the Louisville, Ky., University. In the latter year he succeeded his father at Yale in the chair of chemistry. He resigned his chair in the Academical Department in 1870, but continued to instruct in the Medical Department.

Rear-Admiral L. M. Powell, of the Navy (retired), died in Washington on Thursday, at the age of sixty-seven.

FOREIGN.

Prime Minister Ferry created a sensation in the French Chamber of Deputies on Wednesday by declaring, in reply to an interrogatory, that the Government intended immediately to increase its energies in Tonquin, and would not stop until it occupied the entire country up to the frontier of the Chinese Empire. General Lewal, the new Minister of War, in speaking on the military situation, declared that he was a soldier and had no desire to interfere in politics. He praised General Campenon's devotion to France, and said he would strive to imitate it. He denied that the present operations in Tonquin would endanger the mobilization of the army in France, should occasion therefor arise. M. Ferry asserted that the Government insisted upon the complete execution of the Tientsin treaty, and was resolved by every means in its power to chastise China. After these remarks the order of the day was adopted by a vote of 294 to 234. The speech of M. Ferry has created a bad impression in Paris.

It was reported in Paris on Thursday that Admiral Courbet had captured the mines at Kelung. On Friday, China ordered a squadron to Formosa to attack the fleet of Admiral Courbet, to recapture Kelung, and to raise the blockade established by France on the northern coast of Formosa.

It was reported, on good authority, on Wednesday, that France and Germany had come to a complete agreement in regard to the Egyptian, Chinese, and Congo questions. France engages to protect German commerce in the French colonies, and Germany promises in consideration thereof to support France in her colonial schemes. Bismarck only withholds his final assent until after the French elections, when, if Prime Minister Ferry secures a good majority of the Chambers, he will sign the agreement.

The counter proposals of the Powers regarding Egyptian finances were presented to Earl Granville on Saturday. They demand that an inquiry under the control of the Powers be instituted in Egypt with the object of ascertaining the resources of that country, and determining whether the sacrifices which the holders of Egyptian bonds have been asked to make will be reimbursed or made permanent. They also demand that all coupons shall be provisionally taxed.

Hassan Fehmi Pasha, the Turkish Minister of Justice, who has set out on a special mission to England in regard to Egyptian affairs to effect an *entente cordiale*, will also visit France.

A despatch from Constantinople, which was not fully credited, was received in London on Sunday, stating that the Sultan of Turkey had sent a force of 6,000 troops to occupy Suakim, on the eastern coast of Egypt, to chastise Osman Digna, and to maintain the Sultan's authority in the Red Sea littoral. The cost of the expedition and of the maintenance of the troops hereafter is to be charged against Egypt. This news caused great excitement in British political circles. A special council was held at the War Office and great activity immediately ensued at the naval stations. The Ministry is determined, it was reported in London, not to allow Turkey to interfere in Egyptian affairs.

The Paris *Temps* published a rumor on Wednesday that El Mahdi had accepted General Wolseley's proposals and would not oppose his advance to Khartum. It was mere bazaar gossip.

General Wolseley telegraphed on Friday from Korti that Major Kitchener had returned there, having left Gakdul on January 14. Major Kitchener reported that all was quiet when he left, and that the troops were healthy. The guards had built two forts for protection, and made several roads. Five of the twelve wells at Howeiyatt are in good working order. The others are being repaired. General Stewart started on Wednesday with the advance guard for Metemneh.

General Stewart's force reached the Howeiyatt Wells on Saturday, January 10, obtained a supply of water, and resumed the march to Gakdul. A detachment of the Essex Regiment remained as a garrison at Howeiyatt, where a fort and hospital have been erected. General Stewart's force reached Gakdul on January 12. It consists of a squadron of Hussars, a heavy section of the camel corps, mounted infantry, the Sussex Regiment, and the Naval Brigade. The march across the desert was very trying on account of the great heat and scarcity of water.

At the Congo Conference in Berlin on Friday the proposal to construct a railway from Vivi to Stanley Pool was again actively discussed. There is a prospect that it will be eventually adopted. The decided opinion is expressed in Berlin diplomatic circles that the recent resolution submitted to the American Congress in regard to the American representation in the Congo Conference is founded on a misconception of the principles forming the basis of the Conference. The American delegates have not engaged in any polemic discussion whatever, but have merely watched American commercial interests.

The announcement that Sir Edward Malet, the British representative at the Berlin Conference, had been instructed to accept the French proposal regarding freedom of trade in the Congo country, caused great excitement in London mercantile circles. France proposes that the freedom of the Congo shall be limited to a period of twenty years. African traders in London say that the object of this is to attract capital to that country during the next twenty years, although at the end of that time, after the country has been developed and made valuable by the enterprise of merchants of all nations, it is to be closed to all except King Leopold's International African Association or to France, which is looked upon as the future legatee of that association. In a letter explaining the Government's position Earl Granville, British Secretary of Foreign Affairs, said: "England understands the Congo declaration to mean that imports shall be admitted into the Congo country free of taxation for an indefinite period, unless after twenty years the Powers shall give their unanimous sanction to a revision of this arrangement."

Admiral Peyron, French Minister of Marine, will resign on January 27.

An Anarchist plot has been discovered at Lyons, France. The plot contemplated the seizure by night of the arms belonging to the Rifle Society, and the immediate proclamation of a revolution.

Edmond François Valentin About, the distinguished French novelist, died on Saturday. He was born February 14, 1828, and made his literary début in 1855 with a work called 'La Grèce Contemporaine,' which had a large circulation. His first romance was 'Tolla,' founded on a book which had been suppressed. He wrote plays, novelettes, and novels rapidly, and in a few years became one of the foremost literary men of France. He wrote in turn for *Figaro*, the *Gaulois*, the *Soir*, and the *XIXe Siècle*. In 1872 he was arrested by the Germans at Strassburg and accused of high treason, but was released. Many of his novels have been translated into English, the most popular of which are 'The Notary's Nose' and 'The Man with the Broken Ear.' He was recently elected a member of the French Academy.

A sensation was caused throughout Germany on Wednesday, when it became known that, on the previous evening, at Frankfort-on-Main, Police Commissioner Rumpff had been stabbed to death in front of his own house. Herr Rumpff was actively connected with the recent prosecutions at Leipsic of the Anarchists Reinsdorf, Rupsch, and others who were engaged in the Niederwald attempt to kill the Emperor. There is no doubt that friends of the condemned Anarchists committed the deed. A German traveller was arrested at Brussels on Friday, who is believed to be the assassin.

During the discussion in the German Reichstag on Wednesday on the proposed increase in the duties upon imports of cereals, Prince Bismarck stated that the Government, in order to meet the demands of the farmers, would require the duty upon wheat to be increased to treble the present rate, and upon rye to double the amount now paid upon the imports of these classes of grain from all countries, excepting Russia, which could not be included in the advance on account of the treaty existing between Germany and Russia regulating the customs duties upon importations from that country.

At the opening of the Prussian Landtag on Thursday, the speech of Emperor William, as King of Prussia, was read by an officer. It was stated in the speech that the financial condition of Prussia was satisfactory. The surplus of revenues over expenditures for the year 1884 had been devoted toward the payment of the public railway debt. It was estimated that the surplus for the year 1885 would not be sufficient to meet the increased contribution demanded of Prussia for the Empire. To meet the deficiency thus incurred a loan would be necessary.

The British Court of Appeal on Friday dismissed the appeal of Mr. Edward Yates, editor of the London *World*, against the sentence to four months' imprisonment for libelling Lord Lonsdale. Mr. Yates is serving out his sentence with every convenience of life except liberty.

Mr. Schotz, one of the principal witnesses against Mr. Lawes, the sculptor, in the libel suit brought against him by Mr. Belt, a brother sculptor, last winter, in London, has confessed that all his testimony was the result of a conspiracy entered into by him and another witness and Mr. Belt for the purpose of securing a share in the heavy damages which were assured by the lawyers. Schotz claims to have been the author of Mr. Belt's sketches and models. The damages awarded in this suit were $25,000, and Mr. Lawes had himself judicially declared a bankrupt in order to escape paying them.

Ten thousand unemployed workmen and Radical sympathizers held a meeting on Saturday afternoon in front of the Royal Exchange, London. Henry George was one of the speakers.

The packet steamer *Admiral Moorsom*, running between Dublin and Holyhead, was sunk on Thursday night by collision with the American ship *Santa Clara*. Five lives were lost.

In the Spanish Chamber of Deputies on Friday, the Minister of Foreign Affairs announced that the Sooloo protocol remained unsigned, because of troubles between England and Germany respecting freedom of navigation in Borneo.

THE ELECTORAL COUNT.

THE day being near at hand when the result of the Presidential election is to be officially declared, it is found that there is no joint rule in force governing the meeting of the two houses of Congress; the rule adopted four years ago being applicable to that particular occasion only. To renew it will not be difficult, since there is no dispute about the result, or about the vote of any particular State. If, however, the State of Indiana had been carried by the Republicans in the recent election, the vote of Virginia would have been disputed. In that case the country would have been in the same situation as in 1876, and with little chance of a peaceful outcome, there being still no law on the statute-book providing for the decision of disputed returns.

The want of such a law was perceived early in the history of the Government, and numerous attempts have been made to supply it. The first was an electoral-count bill introduced by James Ross, a Senator of Pennsylvania, in the year 1800. It provided for a committee, consisting of six Senators, six Representatives, and the Chief Justice, to decide all disputes respecting the returns. This bill contained the germ of the Electoral Commission of 1876. It passed the Senate. When it reached the House, an amendment was attached providing that each return should be counted unless both houses concurred in rejecting it. When it came back to the Senate, the amendment was amended so as to provide that if any return was objected to, it should be rejected unless both houses concurred in admitting it. As neither house would yield, the bill failed. Every subsequent attempt to pass a bill regulating the count has failed, because the two houses could not agree as to the mode of treating disputed returns or double returns.

In 1824 Mr. Van Buren introduced an electoral-count bill in the Senate, providing that if a return were objected to, it should be counted unless the two houses voting separately concurred in rejecting it. This bill passed the Senate, but was not acted upon in the House. The principle upon which it was founded is undeniably that which the framers of the Constitution had in view—that no return should be rejected upon the motion of one house only. The contingency of double returns had not been thought of, nor did any such case ever come up for practical determination until 1876, although several cases of disputed returns had been presented.

In 1875 Senator Morton of Indiana introduced an electoral-count bill which engaged a great deal of attention, and which, if it had become a law, would have seated Mr. Tilden as President the following year. It provided that if objection were made to any return, the return should be counted unless rejected by the concurrent vote of both houses, and that, in case of double returns, that one should be counted which the two houses acting separately should declare to be the true one. In case of failure of the two houses to agree, the vote of the State would be lost. The bill passed the Senate by a party vote, the Democrats voting in the negative. A motion to reconsider was entered, and this motion was never finally disposed of.

The Edmunds bill, originally introduced in 1878, and reintroduced by Senator Hoar and passed by the Senate, is the wisest measure of all. It provides that each State may establish tribunals for the trial of electoral contests, and that their decision shall be final; that if there be any dispute as to the lawfulness of the State tribunal, or if there be double returns from a State which has not provided such a tribunal, only those returns shall be counted which the two houses, acting separately, shall concur in receiving, and that any single return shall be counted unless rejected by both. The House has not concurred in this measure, and is not likely to do so. Nor is it probable that any measure will be passed on the subject at this session. We stand exactly where we stood in 1876, exposed to the chances of the direst civil commotion in case of a disputed return, since it is not probable that another electoral commission would ever be agreed to.

The Edmunds bill embraces one feature which there ought to be neither hesitation nor delay in adopting, and that is the machinery for getting rid of disputed returns altogether. If the two houses of Congress are unable, as it appears they always have been, to agree as to the method of deciding between disputed returns, they can at least minimize the chances of dispute by prescribing the mode of settling them in the States where they have their origin. If any State should neglect to create the tribunal which the bill calls for, it would be justly punished by losing its vote. There is really no excuse for leaving the door open to the indescribable calamity of another disputed election. When the closeness of the vote in November last was perceived, an instant tremor ran through all channels of business and all ranks of society. The most ardent wish and fervent prayer of good citizens was not that Blaine or Cleveland might be elected, but that there might be no room for dispute about the result. Among all the shortcomings of Congress the most flagrant and inexcusable is that which leaves the country exposed once in four years to the chances of a Mexican revolution. Nothing saved us from this calamity last fall except that Providence which, a foreign statesman said, takes care of children, drunkards, and the United States of America.

PRIVATE OWNERSHIP OF FORESTS.

MR. O. R. WILLIS, in a recent issue of the New York *Observer*, discusses at some length and with considerable adroitness the Adirondack forest question; and although he does not say so directly, he makes it appear that the forests will stand a better chance of escaping destruction if left in the hands of private owners than if placed under some sort of State control. This conclusion has been reached, it seems to us, through insufficient information, and is based upon an inadequate and partial appreciation of the real dangers which, under the present ownership of a large part of these forests, menace their existence. Mr. Willis acknowledges that the destruction of the forests would result in diminishing the water supply of the Adirondack rivers, and that the whole Adirondack region is unfit for tillage, on account of its low annual temperature and the character of its cold and barren soil. Lumbering, however, he maintains, is not an injury but a real benefit to the forests; and even if this were not the case, a large portion of the Adirondack forests are so remote from streams that they must for ever remain undisturbed by lumbermen. It will not be safe to place too much confidence in these plausible and interested arguments of the lumbermen. Their methods, as at present practised, are not, it is true, directly destructive to the permanency of the Adirondack forests. They do not cut away all the forest growth, or strip the ground of its covering of foliage; they cut the spruce and pine or hemlock which are found scattered through the maples and other hard woods, of which these forests are principally composed. This in itself is really an advantage, as the lumbermen claim, rather than an injury to the forest.

The real dangers to these forests through private ownership are these:

1. Private owners, with few exceptions, cut off all the timber for which they can find a market, without regard to the continuation of the supply, and then pay little attention to preventing the spread of fires over lands stripped of immediate commercial value.

2. Private owners are willing and anxious to sell to agricultural settlers those portions of their property from which timber of immediate commercial value has been cut. It is the agricultural settlers probably more than the lumbermen who are directly responsible for the desert belt (swept clean of vegetation, and of soil even by fires kindled to clear up so-called farms), which stretches far and near about the remnants of the Adirondack woods, and which is slowly and surely extending in toward the heart of the wilderness. As long as these forests remain in the exclusive control of private owners, they run the risk of being sold out in small lots to settlers, who, for every acre they try to reclaim, endanger a hundred or a thousand acres of forest.

There is another and a greater danger, too, which threatens the Adirondack forests, and which will inevitably destroy them as reservoirs of moisture, unless some change of ownership can be effected. Adirondack lumbering, as at present conducted, takes few trees from the forest, and (except in the neighborhood of the iron furnaces) practically nothing is yet cut but such light woods as pine, spruce, or hemlock, which can be floated down the streams to market. The great stores of hard woods which these forests contain, have been spared up to the present time, not because the owners desired to perpetuate the forests, but because the condition of the lumber market did not justify the expense it would be necessary to incur in getting heavy woods to the mills. The demand, however, for the best hard woods is rapidly increasing in this country, and the time is not far distant when the owners of Adirondack forest property will find it profitable to cut and ship their maple, birch, and beech to New York and the Eastern markets. Then narrow-gauge logging roads will penetrate the Adirondack wilderness from every side, and the forests will fast melt away before the general cutting and the more numerous fires, which the new system will render inevitable.

A beginning in this direction has already been

made, and the Northern Adirondack Railroad and its enterprising and energetic projectors serve to illustrate the real dangers which threaten the north woods, and the speciousness of the lumbermen's arguments for private ownership of forest lands. Lumbermen and others hold forest property for the purpose of making money from their investments, and not from philanthropic motives or because they desire to keep up the water supply in the rivers. If they find it for their interest to let their trees grow, they will not cut them down; if, on the other hand, there is money, or they think there is money, in cutting them or allowing them to burn up, the forests will be sacrificed without a thought of the consequences, beyond the immediate effect upon their individual pockets. The lumbermen are right; and if they acted otherwise they would be more than human. The discussion of the Adirondack question has given rise to a vast amount of talk about the crimes of the lumbermen in destroying the forests. They often conduct their business in a foolish and short-sighted manner, but as long as they confine their operations to their own land and do not—a thing not without precedent, to be sure—lumber upon their neighbors' lands, they are justified in doing what they like with their own property, and must go on cutting and burning as the spirit moves them. In the meantime the forests will be destroyed beyond all hope of recovery, and the great and lasting misfortunes which must inevitably follow will fall upon the State. There is little comfort to be found in the delusive hope that the forests will be safe for any length of time in the hands of private owners, or that there is any less expensive method of perpetual forest preservation than is offered through State control.

CATHOLIC REACTION IN MEXICO.

The Roman Catholic restoration in Belgium seems to have started a wave across the Atlantic and into the Gulf. Mexican Catholicism has felt the impulse. After ten years of complete prostration, it is now rising rapidly against Liberal oppression. This reaction is not working under constitutional forms and on the electoral battlefield, as in Belgium; for those things are mere names in Mexico. It is rather by indirection, by quiet yet firm assumption and display of power, by steady defiance of hostile legislation, that the revolution is going on.

To understand rightly the significance of the recent signs of Catholic recovery in Mexico, it is necessary to bear in mind the tremendous odds against which the Church has had to fight. It seemed as if her power must be for ever broken by the so-called "Laws of Reform." They constitute a body of anti-Catholic legislation for a parallel to which the statute books of other countries would be searched in vain. Bismarck's Falk Laws were child's play beside them. The first stroke was the "nationalization" of the Church property—estimated to be of the value of from one-third to one-half of the entire real estate of the country. This measure was the rallying cry of Juarez in 1859 at Vera Cruz, and its execution had only to wait for his triumph after the French intervention. Since 1867, the Church has been able to hold only those buildings which are strictly devoted to religious rites, and even those it could control only on the sufferance of the Government. The choicest of them, the great Cathedral itself, are subject at any time to "consolidation," that is, to sale to the highest bidder. Under Lerdo the work of crippling the Church went still further. By the amendments to the Constitution adopted in September, 1873, Church and State were declared for ever independent, marriage was made a civil contract, the Church was disqualified from ever holding any real estate or capital invested in real estate, and monastic orders were abolished. Thus these ecclesiastical privileges and sources of power were shorn away, one after another, and the thing was done not by mere act of Congress, but by actual incorporation into the organic law of the land. By a law of December 14, 1874, the work was still more advanced. The State was not only declared to be independent of the Church, but also supreme over it; religious liberty was proclaimed; religious instruction was forbidden in all public schools; all religious rites were restricted to the interior of the churches; priests were not to wear any distinctive dress in the streets; the Church could receive no legacies. These are the principal features of the law, which embraces also a great number of petty restrictions and regulations, chiefly designed, apparently, to aggravate the Church and remind her of her subjection. It only remained that a law should be passed "for the expulsion of pernicious foreigners," under the authority of which the Jesuits were unceremoniously bundled out of the country. Now, it was very natural that the people should have come to take the degree in which these "Laws of Reform" were enforced as an index at once of the power of the Government and of the strength of the Church. For many years they seem to have been enforced with great rigor, except in the remoter country districts. But they have been all along the point of attack of the clergy. Whenever and wherever the priests dared, they trampled upon the obnoxious statutes. The significance of the present situation is, that the Church has grown so bold as openly to defy the Government. In Toluca, but fifty miles from the capital, religious processions have marched through the streets, and, it is credibly asserted, monasteries have been reëstablished. Even at the seat of government the sacerdotal garb is seen in public. All over the Republic the idea is prevalent that the Church is on the eve of a restoration to something like her old power.

Several reasons enter into the explanation of the apathy of the Government in the face of these violations of the law. There is no danger that the old Liberal leaders are about to return to the bosom of the Church, or are thinking of delivering over their country again to the power of the hierarchy. Their present policy of ignoring the rising arrogance of Catholicism is no doubt partly due to their severe embarrassment over the financial straits in which they find themselves. All their thought has to be given to the difficult task of getting a revenue equal to the enormous and constantly increasing drains upon it. Their feeling is: One trouble at a time; let us devise new and successful expedients for escaping these threatening deficits first, and attend to those minor matters afterwards. The Church is fully awake to the situation, and is not slow to avail herself of the opportunity offered by the financial difficulties of the administration.

There is also, it is probable, a foundation of truth in the rumor that General Diaz and his followers have found it to their advantage to enter into some sort of a compromise, tacit if not expressed, with the leaders of the Church. With universal suffrage and a population nine-tenths Catholic, the priests can wield a formidable political power. Of course, as things have gone, the administration has not had to fear any body of hostile voters, as it had abundant facilities, which it did not scruple to profit by, for securing the exclusive return to Congress of its own creatures. But this method is getting to be more and more outrageous and difficult. The Church is in a better position now than for years to demand a bargain in virtue of which governmental candidates shall not be defeated at the polls, provided that the anti-Catholic laws shall be but languidly enforced.

Then it is, perhaps, not giving too much credit to the good sense and tact of the dominant Mexican statesmen to say, that they perceive the inconsistency of the "Laws of Reform" with their professedly republican institutions, and are willing that the severity of the Lerdist legislation should be somewhat relaxed. The time is not yet ripe for open amendment or repeal, and accordingly violations of the offensive laws are winked at. President Diaz is said to believe in the power of education, rather than stringent repression, as the means of freeing his country from the dangers of an ambitious ecclesiasticism. In any case it will be of great interest to watch the Mexican clergy under the prospect of regaining something of their old prestige, to see if they have learned anything by the past. The dullest of them must now perceive that they themselves brought the woes of the last twenty years upon their own heads. It remains to be seen whether they will again prove themselves to be, as they were declared to have always been in the past by one of their own brethren of France, "sans prévoyance et sans vues élevées."

THE MIGHT-HAVE-BEEN OLD AGE OF BYRON.

It seems perhaps a strange "angle" from which to consider Byron's character, to place ourselves immediately opposite the figures of Goethe and George Sand. Yet the position offers many advantages, if only in bringing under one *coup d'œil* the great German, the great Englishman, and the great Frenchwoman; and it is peculiarly interesting if we think of them as representing old age in man, old age in woman, and that youthfulness of intellectual development which is of no sex. Mr. Arnold has lately spoken of Goethe and George Sand in one breath; Mr. Carlyle, more than fifty years ago, wrote of Goethe and Byron on the same page; and it is not difficult to group the three together. But in such a group Goethe would not be the central figure. It is rather George Sand, who with one hand touches the wise old man, and with the other the passionate poet.

The contrasts and parallels between the individualities of Goethe and George Sand are ex-

tremely interesting, and in nothing more so than in the manner (different yet alike) in which in both of them the agitations and irregularities of youth, the multiform and profound anguish of middle life, passed into their lofty composure of mind in old age. Had Goethe died having written only 'Werther,' and George Sand after writing 'Indiana,' who could have dreamed of the serenity, the dignity, the ennobling influences of later years? It is difficult to imagine Lord Byron, had he lived, as a gracious, friendly, peaceful, enlightened, and enlightening old man; yet there is enough kinship between his mind and those of Goethe and George Sand, from intellectual lucidity, from intimacy with nature, and from force of conviction, to render it not absurd to judge him by them. Shelley's quaint little phrase about him, three years before his death, when he was staying with him at Ravenna, comes to one's mind: "He is becoming, what he should be, a virtuous man." And Carlyle, describing the change in some men "from inward imprisonment, doubt, and discontent into freedom, belief, and clear activity," declares that in our day "among our own poets Byron was almost the only man we saw faithfully and manfully struggling to the end in this cause." And then adds the sad truth: "He died while the victory [the attainment of spiritual manhood] was . . . only beginning to be gained." But that he had begun "sich selbst zu empfinden," that he was nearing his best self, can scarcely be doubted; and the thought gives an almost tragic pathos to the last line of the verses of *recognition* from Goethe himself, which Byron received on the eve of his going to his death in Greece, whose cordial kindliness sums itself in

> "Und wie ich ihn erkannt mög' er sich kennen."

"Das tiefste Weh," which was one of the things Goethe "*knew*" in Byron, Goethe himself had met and conquered; but the modes and conditions of battle with it were different in the two men. The temptation to escape from wretchedness by suicide had pressed closely on Goethe, as it was to do on George Sand, but as it did not on Byron. In 'Dichtung und Wahrheit' Goethe gives an account of how, night after night, he attempted stabbing himself. But at last he "determined to live." "To do this with cheerfulness, however, I required," he says, "some poetical task," and 'Werther' presented itself. He would have understood Byron's saying, "If I don't write to empty my mind, I go mad." "God grant," Goethe wrote afterward to Eckermann—"God grant that I may never find myself again in a state of mind which forces me to compose such a work." George Sand cries out in her despair: "I am often ashamed of the cowardice which prevents me from ending it all immediately; do I know neither how to live nor how to die?" Byron went no further, apparently, than to say:

> "And I at times have found the struggle hard,
> And thought of shaking off my bonds of clay,
> But now I fain would for a time survive,
> If but to see what next can well arrive."

And he adds:

> "Something—I know not what—does still uphold
> A spirit of slight patience; not in vain.
> Even for its own sake do we purchase pain."

He makes very few references to voluntary death in his journals or letters; but in 1813 he speaks thus impersonally and slightly of a then famous book on the subject: "Rogers is out of town with Mme. de Staël, who hath published an Essay against Suicide, which, I presume, will make somebody shoot himself"; a mere ironical jest, but a prophecy, nevertheless, which was singularly *half* fulfilled, it may be said, in the effect of the volume on George Sand. After reading it (in 1834), in days of utter disappointment and desolation, she says:

"I have found no solace in this pamphlet except the pleasure of learning that Mme. de Staël loved life, that she had a thousand reasons for clinging to it, that she had an infinitely happier fate than mine, an infinitely stronger and more intelligent head than mine. For the rest, I think her book has doubled to me the attraction of suicide."

We will turn for a moment from Byron to follow out George Sand's condition at this period, for it is not irrelevant. She continues in complete despondency:

"My days go by as sad as death, and my strength is rapidly failing. . . . It is clear to me that I shall come to nothing in this life, and that there is no hope for me on the earth. . . . My children cause me much pain in the midst of all the happiness they give me: they are the sacred ties which bind me to life, to a hateful life. I desire to break these terrible ties; the fear of remorse withholds me."

But with the inconsistency which is a part of all passionate emotion she declares, in the next breath:

"But I endure life because I love it; and although the sum of my sorrows is infinitely greater than that of my joys, although I have lost the possessions without which I supposed life to be impossible, I still love this sad destiny which remains to me, and I discover in it, every time I reconcile myself with it, sweetnesses which I did not remember or else disdainfully denied when I was rich in happiness."

In these last words lies the secret of what may be called the humanities of old age. This discovery of hidden sweetnesses, a late and noble power of the mind, is not, we too well know, a necessary or frequent consequence of long life. As we enter the regions of the old, the air is full of farewells to hope, of mournful sighs; it is the land of lamentation. The great and small Carlyles are always and everywhere saying: "Very sad, sunless is the hue of this now almost empty world to me—world about to vanish for me in eternities that cannot be known."

But there are other voices. Three months only before her death George Sand said: "The happiest and most favoring age of life is old age." And looking back at herself as the passages we have quoted show her to have been forty years earlier, she says, in these or almost precisely these words: "In other days I desired death; . . . I lacked strength, . . . and I said, 'I can do nothing.' I lied to myself. One can do everything. The strength is there one believes to have not, when one desires ardently to ascend, to mount up one rung each day—when one says, 'The *I* of to-morrow must be superior to that of to-day, and that of the next day still more solid and more lucid.'" We see here, as Carlyle said of Goethe—and may we not believe that only the grave hindered our saying it of Byron?

"Anarchy has now become Peace; the once gloomy and perturbed spirit is now serene, cheerfully vigorous, and rich in good fruits. Neither—which is most important of all—has this Peace been attained by a surrender to Necessity, or any compact with Delusion. . . . Here the ardent, high-aspiring youth has grown into the calmest man, yet with increase and not loss of ardor, and with aspirations higher as well as clearer."

He who grows into, not the "calmest" only, but the noblest man, does so through larger, more generous, more wide-embracing aspirations, as well as higher and clearer. If in this view even Goethe is not among the best; if his absence of concern in the interests, the more visible interests, of his nation and the world—in public affairs—seriously derogates from his greatness, the promise in the younger poet of a humanity broader than patriotism is to be all the more highly valued. So vehement a belief as Byron felt in the cause of mankind is a great quality, and a constantly ennobling one; it is essentially a virtue; and weighty and prophetic meanings may be found in such carelessly uttered but not thoughtlessly felt words as these (January 11, 1821): "I should almost regret that my own affairs went well when those of nations are in peril. If the interests of mankind could be essentially bettered (particularly of these oppressed Italians), I should not so much mind my own 'sma' peculiar.' God grant us 'all better times or more philosophy!" Six months later: "I have had my hands full with tyrants and their victims. There never was such oppression—even in Ireland, scarcely!" And lastly, "Onward!" he calls to us. ". . . What signifies *self*, if a single spark of that which would be worthy of the past can be bequeathed unquenchedly to the future?"

"The tranquillity of old age," it has been said, "is dependent on the increasing supremacy of ideas in our lives." If this be true, it is no idle fancy to believe that the old age of Byron might have been "tranquil," and might also have fulfilled—they are his words—

> "The noble aspirations of my youth
> To make my own the mind of other men,
> The enlightener of nations."

TOLSTOI'S 'PEACE AND WAR.'

PARIS, January 1.

IT is said that after having read the Book of Baruch, La Fontaine, whenever he met a friend, always began by asking him, "Have you read Baruch?" I feel somewhat like him with regard to a book by Count Leo Tolstoi. Whenever I meet anybody, I am disposed to ask first, "Have you read 'La Guerre et la Paix'?" I have read it, not in the Russian text, but in an excellent French translation made by Princess Paskevitch, one of the persons who hold a literary salon in St. Petersburg; and in this case, I believe that it cannot be said "Traduttore traditore." The translation shows the most intimate acquaintance with all the resources and delicacies of the French language.

The fate of this French edition of 'Peace and War' is singular. The translation was forgotten at the publisher's office. Nobody had ever heard of it when M. Melchior de Vogüé, one of the most brilliant writers on the modern staff of the *Revue des Deux Mondes*, wrote an article on Tolstoi. M. de Vogüé knows Russian well; he has been in the French diplomatic service and married a Russian lady. His article was a revelation. Till then, the French public was only acquainted with Turgeneff, and it may almost be said that the great fame of Turgeneff was established in France. He was adopted in Paris and his fine genius was appreciated by all. Of Tolstoi, we knew nothing. I had, indeed, met him long ago, not at the house of Ivan Turgeneff, but at the house of Nicholas Turgeneff, the author of 'La Russie et les Russes.' Nicholas was one of the Decembrists; he had advocated the abolition of serfdom, he was an apostle and a statesman. The Russians of distinction always called on him when they came to Paris—those, at least, who were not afraid of the Emperor Nicholas. It must have been a little while after the Crimean War that I saw Count Tolstoi at N. Turgeneff's. I was informed that he was a writer of great merit, but I was unable to read any of his writings; he was then young and handsome, and he simply left on my mind the impression of an accomplished man of the world, somewhat too much interested in spiritualism.

'Peace and War,' as it now appears in the French translation, forms three volumes very closely printed. It is called an historical novel, but it hardly deserves that name. It is not an historical novel; history is merely a thread which binds together the heroes and heroines of a complex human drama. It is not even a novel, as in a novel there are always favorite heroes or heroines, surrounded with accessory personages, and the novel is chiefly consecrated to the delineation of a few central figures. Here we have

nothing of the sort. This single work might better be compared to the series of novels by our great Balzac, in which the same figures always reappear, sometimes more in the light, but sometimes more in the shade. The personages of Balzac, men and women, virtuous or criminal, weak or heroic, form a sort of human medium, an atmosphere of passions, sometimes almost nebulous, and sometimes condensed in brilliant constellations. Balzac himself gave to his huge work, which fills so many volumes, the graphic name of 'La Comédie Humaine.' The world in which all his actors move, suffer, and die seems as real as the true world. Such is the power of this writer that he gives life, he creates; our memory preserves all his types as easily as the men or women who have been thrown in our path and in the vortex of our own destiny.

This book of Tolstoi's might be called with justice 'The Russian Comedy,' in the sense in which Balzac employed the word. It gave me exactly the same impression: I felt that I was thrown among new men and women, that I lived with them, that I knew them, that none of them could be indifferent to me, that I could never forget them. I entered into their souls,and it seemed almost as if they could enter into mine. Such a power in a writer is almost a miracle. How many novels have I not read, and, after having read them, and admired many qualities—the beauty of the style, the invention, the dialogues, the dramatic situations—have still felt that my knowledge of life had not increased, that I had gained no new experience. It was not so with 'Peace and War.' The work begins in 1805, before Tilsit; it carried me through the great battles fought between Napoleon, Austria, and Russia, to the invasion of Russia, to Borodino, to the burning of Moscow; and all along I felt as if I was on the great stream of life—sometimes with the Emperors in the midst of their staff, in the councils of war, or on the battlefield; sometimes amidst the common soldiers, under the tent, on the high roads; sometimes in the great drawing-rooms of St. Petersburg with the diplomats, the fine ladies; sometimes in the great country houses of Russia—abodes of peace, of petty tyranny, of lazy, monotonous, and almost animal life, suddenly thrown into commotion by the news of the invasion.

History, in this extraordinary work, merely plays the part of a huge disturbing element: it acts on a host of actors, high or low, as a foreign body would act if a powerful hand threw it into the midst of our planetary system. It does not change men, but it gives them new and unforeseen opportunities. It changes the cold, heartless profligate, the man of prey, who lives but for his material pleasures, into a brave man, and sometimes into a hero. It brings out the dormant capacities and virtualities. It reveals all sorts of secrets to man. It brings men constantly before a formidable unknown. It exasperates some; it calms and soothes others. It gives to all the tender relations of life a new intensity, by depriving them of security. It is a powerful motor, but it is only a motor; the masses which it puts in motion are already formed of determined units, and each of these units is a human soul, a world in itself, shrouded in mystery. Conceived in this sense, Tolstoi's work has all the variety of human experience; it is less a novel than a succession of pictures, of small scenes, in which we often see the same actors. The book, in order to be well understood, must be read twice. The first time, you have to make the acquaintance of a number of people, and to become familiar with their barbarous Russian names. It is rather fatiguing at first, especially as there is no *story*, in the English sense of the word, as applied to a novel. You are constantly shifted from one place to another, from one set of people to another set of people. By degrees, all becomes clear, the action is fairly engaged, the drama—or, rather, the dramas, for there are several in one—develop themselves, and you soon feel the keenest interest in all the actors. I ran, so to speak, through the book the first time, in order to form a conception of the aim of the author, and then I read it a second time, *con amore*, interrupting myself so as to prolong the pleasure, finding infinite joy in some of its tableaux, in the descriptions of nature, in the conversations, in the accessory details.

It would be difficult to give a proper definition of the talent of Tolstoi. First of all, he is an *homme du monde*. He makes great people, emperors, generals, diplomats, fine ladies, princes, talk and act as they do act and talk. He is a perfect gentleman, and as such he is thoroughly humane. He takes as much interest in the most humble of his actors as he does in the highest. He has lived in courts: the Saint-Andrés, the Saint-Vladimirs have no prestige for him—nor the gilded uniforms; he is not deceived by appearances. His aim is so high that whatever he sees is, in one sense, unsatisfactory. He looks for moral perfection, and there is nothing perfect. He is always disappointed in the end. The final impression of his work is a sort of despair. The cherished figures of his "Russian Comedy" are all fatally condemned to an untimely end, to continual mental and moral misery, to undeserved misfortune. It seems as if suffering was the mark of goodness, and as if a certain amount of virtue was incompatible with happiness. Then, by a sort of physical and natural necessity, the element of evil is always mixed up with the element of good. Natacha, one of the heroines of the book, who is represented as so charming, so good, so fascinating, has suddenly bad impulses. She does things or wishes to do things almost horrible. The women are all painted as somewhat irrational and unconscious; but it is not the privilege of their sex—the men are irrational also, led by instinct much more than by reason. Their courage, their honorable resolutions, their heroic actions, do not seem to belong to them. This fundamental idea of fatalism pervades the book. Fate governs empires as well as men: it plays with a Napoleon and an Alexander as it does with a private in the ranks; it hangs over all the world like a dark cloud, rent at times by lightning. We live in the night, like shadows; we are lost on the shore of an eternal Styx; we do not know whence we came or whither we go. Millions of men, led by a senseless man, go from west to east, killing, murdering, and burning, and it is called the invasion of Russia. Two thousand years before, millions of other men came from east to west, plundering, killing, and burning, and it was called the invasion of the barbarians. What becomes of the human will, of the proud *I*, in these dreadful events? We see the folly and the vanity of self-will in these great historical events; but it is just the same in all times, and the will gets lost in peace as well as in war, for there is no real peace, and the human wills are constantly devouring each other. The mother is devoured by the child, the husband by the wife, the slave by the master, the weak by the strong, the affectionate by the heartless, the rational by the irrational. We are made to enjoy a little, to suffer much, and, when the end is approaching, we are all like one of Tolstoi's heroes, on the day of Borodino. Allow me to cite this passage as a specimen of Tolstoi's manner. Prince André has been waiting behind with his regiment in the reserve, while the battle was raging; his men have been without food for eight hours:

"Prince André was walking to and fro in the meadow, with his hands crossed behind his back, his head bowed. He had nothing to do, no order to give; everything was being done without his interference. The dead were taken away, the wounded were carried to the rear, and the ranks were reforming themselves. At the beginning of the action he had thought it necessary, to encourage his men, to walk in the ranks; but he soon saw that he had nothing to teach them. All the forces of his soul, as well as those of every soldier's, tended only to drive from his mind the horror of his situation. He dragged his feet on the trodden grass, and looked mechanically at the dust which covered his boots. Sometimes, making great strides, he tried to follow the lines made by the mowers; sometimes he counted them, asking himself how many would be necessary to make a verst. Sometimes he plucked a bit of absinth, which grew on the edge of the field, pressed it between his fingers, and perceived its strong and acrid smell. There was no trace left in his mind of his ideas of the day before; he thought of nothing. He lent a fatigued ear to the endless noise, to the cracking of the grenades and of the firing. From time to time he looked on the first battalion, and waited. 'There! . . . it is coming on us!' he heard; and at the same time a whistling and a little cloud. . . . 'There is another! there! . . . No, it passed over our heads. That one has fallen.' And he began again to count his steps.

"Suddenly a shell whistled and struck in the earth five yards before him. He could not help shuddering. He looked on the ranks; many men had probably been thrown down, for he remarked a great agitation. . . . Another came, and fell at the feet of the horse of the chief of battalion, two steps before Prince André. The horse, not knowing whether it was right or wrong to show its alarm, rose on his hind legs, and turned himself aside. . . . Prince André was standing, hesitating. The shell, like an immense top, revolved near the absinth, between him and his aide-de camp. 'Is this really death?' thought he, with an indescribable feeling of regret, looking on the absinth and on that black object. He said to himself, 'I will not die; I love life, I love this world.' And still he did not quite understand what he had before him. 'Monsieur l'aide-de-camp,' he screamed, 'it is a shame to——' He could not finish; a formidable explosion was heard. . . . Prince André was thrown with his arms forward, and fell on his breast."

I feel almost ashamed not to have been able to do better justice to Prince Tolstoi. It will be something if I can inspire a few with a desire to read his book, which is by far the most remarkable work of imagination that has been lately revealed to us.

Correspondence.

MR. KASSON'S THANKSGIVING TOAST.

To the Editor of The Nation:

Sir: In your issue of December 4, I notice the statement that at the American Thanksgiving-day dinner in this city, "Minister Kasson called for three cheers for Grover Cleveland, the next President, which were heartily given." Such an act on the part of the presiding officer at a public dinner would certainly have been in very questionable taste. I am glad, therefore, to be able to say that the above statement is in error. Mr. Kasson confined himself strictly to the regular toasts of the evening. The cheers which were called for and given were for President Arthur and the German Emperor; and no mention of Governor Cleveland was made by Mr. Kasson or any other speaker. Student.

Berlin, December 29, 1884.

THE ELIOT FAMILY.

To the Editor of The Nation:

Sir: The exceptional interest which attaches to the name of Eliot will perhaps excuse my appeal to you to aid me in a genealogical search. I hasten to add that it does not interest me personally, as a descendant in any way from the family sought. But the sudden disappearance of a family of good standing from all the usual records forces me to try the effect of an unusual remedy, if you will kindly afford me a little space.

The Rev. John[1] Eliot, "the apostle to the Indians," had brothers Philip[1], Jacob[1], and Francis[1], all settled here, of whom the first and third left female issue only. Jacob[1] was of Boston, a deacon in the First Church, and he left sons Jacob[2] and Asaph[2]. Jacob[2] Eliot, jr., had sons, Joseph[3], Benjamin[3], and Jacob[3], of whom Joseph[3] had John[4], Jacob[4], and Joseph[4]. Of these last named, John[4] was a stationer in Boston, deacon at Hollis Street Church, and left a son Joseph; Jacob[4], born in 1700, was, as I suppose, of H. C. 1720, and minister of the Third Church in Lebanon, Conn., in 1729. He married twice and had sons Jacob[5], Joseph[5], and John[5], and died in 1762. Jacob[5] Eliot, jr., of Lebanon, Conn., married in 1761, and had issue Jacob[6] and Samuel-Blackleach[6], twins, in 1765, and Benjamin[6] in 1767. He died in 1783, and there the record ends.

It seems inconceivable that the progeny of Jacob[5], jr., starting with three sons, and of his two brothers, should have all ceased, yet I have vainly sought to come in communication with them. I therefore venture to ask any of your readers who can assist me in tracing the more recent generations, to do so. I believe that in Boston the male line is extinct, but I hope this vigorous branch may still survive. I ask for the aid of your readers because the name has been so prominent and honored, and because its disappearance is quite unprecedented.—I remain, yours very respectfully, WILLIAM H. WHITMORE.

P. O. Box 3478, Boston, Mass.

VOLUNTARY MEMORY.

To the Editor of The Nation:

Sir: There can be no doubt of the soundness of the view presented by a writer on "Memory" in the *Nation* for January 15, that remembering and forgetting are to a large extent voluntary. Nothing can be more tonic than the stern aphorism which this writer quotes from Balzac, that "To forget is the great secret of strong and creative existences. Feeble natures live in their sorrows instead of converting them into experience." The difference between individuals in this respect is very evident, but the cause is not so clear. Is it a matter of strength or feebleness merely, or a thing of temperament? Are there not some persons, whether strong or weak, who are melancholy by temperament and prone to hug their griefs; while others are blessed with that merry disposition which inclines them always to keep in the sunshine, even in that "blind life within the brain"?

There is one consideration that makes it seem to be largely a matter of the relative teachableness by life-experience, in different natures. I mean the fact that in childhood we have none of us learned this great secret of forgetting our hurts by refusing our attention to them. It is a thing that judicious parents try to teach their children, but it takes years of life-training to teach it thoroughly. The result is that in looking back at our childhood, we have a vivid remembrance of its pains and troubles. They were "bitten in" permanently by reiterated recollection, before the child learned the folly of it. I am aware that we are accustomed to speak of childhood as a happy time by comparison with after life, but this impression comes rather from the superficial observation of other children's outward demonstrations of happiness, than from recollection of our own childhood. Most persons will probably find on reflection that the epochs of that period in their own experience are marked in memory by hurts. The milestones are the things that bruised them. Geo. Sand's repeated testimony to this, in her 'Histoire de ma Vie,' has interested me. In recalling a painful separation from her mother she says:

"Ces quinze jours sont plus distincts dans ma mémoire que les trois années que venaient de s'écouler. . . . Tant il est vrai que la douleur seule marque dans l'enfance le sentiment de la vie."

And again:

"Mais le printemps et l'été de 1811 furent sans nuages, et la preuve, c'est que cette année-là ne m'a laissé aucun souvenir particulier."

And once more:

"Il m'est impossible de me rappeler si nous allâmes à Paris dans l'hiver de 1812 à 1813. Cette partie de mon existence [she was born in 1804] est tout à fait sortie de ma mémoire. Je ne saurais dire non plus si ma mère vint à Nohant dans l'été de 1813. Il est probable que oui, car dans le cas contraire j'aurais eu du chagrin, et je me souviendrais."

It may help us, then, to persist in the wise course of cultivating our "forgettery," to reflect that this power indicates a mature stage of evolution. To brood over, and so to perpetuate our sorrows, is to remain in an arrested development of character—a childhood of the mind.

ARMY COMMISSIONS.

To the Editor of The Nation:

Sir: Referring to the letter in No. 1019 of the *Nation* under the head of "Army Commissions," allow me to call attention to section 1214 Revised Statutes, which reads: "Non-commissioned officers may, *under regulations established by the Secretary of War*, be examined by a board of *four* officers as to their qualifications for the duties of commissioned officers in the line of the army." Par. 27 Army Regulations of 1881 states plainly that the recommendation must originate with the applicant's company commander; and the same paragraph requires that the department commander shall assemble a board of *five* officers to make a preliminary examination as to the claims and qualifications of the candidates. I think there can be no doubt that the Fort Monroe Board is the one contemplated by the law.

Without having any knowledge of the particular case referred to by your correspondent, I have in mind a recent case in which the non-commissioned officer, being absent from his company on detached service at Department Headquarters, was ordered before the Department Board for examination without the recommendation, and, in fact, against the protest, of his company commander. He subsequently failed to pass the Fort Monroe Board, and whether the irregular manner of his recommendation was the reason for his rejection or not, it would seem to have been a sufficient cause.

If the enlisted men of the army, of the best talent, were encouraged to serve with their companies, a much larger proportion of them might hope to obtain commissions; but the staff idea that line service is of a degrading and inferior quality permeates the ranks, and soldiers whose capabilities are beyond the average, seek and obtain clerical positions or non-commissioned staff appointments, in which their services become so valuable that the officers under whom they serve are loth to part with them.

The recent appointments of civilians into the army, as a reward for political services, over the heads of old and deserving officers, is not an agreeable spectacle, and I heartily agree with your correspondent in the hope that the army may receive some benefit from the new departure in reform. X.

January 12, 1885.

NIGHTGOWN AND SCHLAFROCK.

To the Editor of The Nation:

Sir: Referring to "Inquirer's" communication on the "night-gown," and kindred subjects, I take the liberty of writing you what I happen to know of the uses of the German *Schlafrock*.

In the fatherland, and in this country among Germans, the *Schlafrock*, say thirty years ago, was almost exclusively worn by doctors, lawyers, and the clergy—persons who, from the nature of their professions, were liable to be called upon at unseasonable hours. Thus, for instance, my uncle, a doctor, always had his *Schlafrock* and *Pantoffeln* at some convenient place in his sleeping apartment. When called out of bed he simply slipped into his *Schlafrock*, a long garment reaching to the ground, plainly made of serviceable stuff, with a cord about the middle (not a fancy, embroidered, velvet-lined thing such as the modern "dude" delights in), and, stepping into his *Pantoffeln*, was ready almost in a second to see his visitor, give the necessary directions, preliminary to personal attendance on the patient, or to treat the "case," if it proved to be one, on the spot.

As the Herr Doctor did not wear a *Nachthemd*, despising such a "thing" as too effeminate, it not unfrequently happened that on such occasions he disclosed more of his person than a fastidious caller cared to see, or, for that matter, than he was anxious to disclose. But, then, he was an "ancestor," and lived in the long ago.

PHILANDER.

New York, January 16, 1885.

HENRY LAWRENCE EUSTIS.

To the Editor of The Nation:

Sir: The late Professor Eustis of Harvard, whose death you have noticed, was a man whose excellence as an instructor deserves public acknowledgment from his pupils. The quality of his teaching was exceptional. The bent of his mind and the thoroughness of the old West Point discipline made him intolerant of half training or superficial knowledge. The early practice of his profession, and afterward constant reading of its literature, kept him up to the level of its best attainment; and he had a lively contempt for the makeshifts and rules of thumb by which many professional men and some instructors try to handle the results of knowledge without the understanding of it. At the same time he could do justice to that native instinct for construction which he called *gumption*, and which in rare instances—much rarer, probably, than is believed—proves a safe bridge for minds for which formulæ have no meaning. His most characteristic qualities were his rare clearness and directness of mind. These, with his freshness and power of presentation, made his teaching luminous, filling any but a very laggard pupil with interest in his subject, and making the way plain. It was a maxim with him that clear thought made clear speech; he would not admit that any one who had a distinct idea should be unable to find distinct expression for it. There could be no better enforcement of this doctrine than the lucidity of his own explanations. He always went behind his text-books, and it was seldom that he did not let light into the mind of his pupil.

The charm of a straightforward and genial manner won the confidence of his pupils even before they felt the mastery of his teaching. This made him unusually accessible and correspondingly popular. Interest in the music of the students added to this accessibility. He had been an early leader of the Pierians, and was the one of the instructors to whom years ago the musical clubs would go with a serenade, and be sure of a hearty welcome. So to the friends who attended his funeral there was a fitting touch of pathetic association in the sound of the young men's voices which sang the familiar hymn.

W. P. P. L.

Boston, January 17, 1885.

THE ACADIANS AGAIN.

To the Editor of The Nation:

Sir: A few weeks ago your correspondent, Mr. Philip H. Smith, took exception to my account of the deportation of the Acadians, and tried to show that the act was unprovoked. Some of the reasons he alleges belong to a time and to conditions different from those in question, and the rest are overborne by incomparably stronger evidence, both English and French, of which Mr. Smith seems to have had no knowledge. But there is one part of his letter which has produced some impression, various newspapers having copied it as presenting a strong point in his favor. This is his closing sentence, which runs thus: "If the English concerned in the Acadian eviction were conscious of the rectitude of their intentions, and were secure in the belief that their course would be justified by a full knowledge of attendant circumstances, why were the entire French records coming into their hands destroyed, and the archives of Nova Scotia rifled of the documents covering the year of expulsion?"

This final touch perplexed me at first, because I knew that it was absolutely incorrect, and could not guess what had suggested it. I knew not only that the archives of Nova Scotia contained great numbers of papers "covering the year of expulsion," but that these papers had been published not many years ago by the Nova Scotia Government. I knew also that, what with public documents and private letters and journals, few events of American history have been put so fully into the light as this affair of the deportation of the Acadians, and that, far from trying to hide it, the chief agent in it has left a minute record of everything that passed from day to day, and carefully preserved his correspondence relating to it.

If what Mr. Smith says about "rifling the archives of Nova Scotia" was a riddle that might have puzzled the Sphinx, scarcely less so were his emphatic words about "the destruction of the entire French records." There were no French records of a political or military character in Nova Scotia after it became a British province, except in the hands of priests acting as secret agents of the French Government to stir up the Acadians to revolt against the English. The chief of these priests, Abbé Le Loutre, had a box of such papers, and, in terror lest their contents should cause him to be hanged, he fled with them to Canada. Far from wishing to destroy them, the English were vexed at failing to get them into their hands. Besides these and other seditious writings, the only French records in Nova Scotia at the time were registers of churches, title-deeds, and similar papers of no political bearing, and, after the inhabitants were removed, of no value at all. Whether these were destroyed or not is a question of no significance as to the points at issue.

But while there were no French records of a political or military character in Nova Scotia, there was a great abundance of them, relating to Acadian affairs, in the hands of the French officials elsewhere. These are still in existence and are of a most damaging character, not to the English, but to the French themselves. If the English could have got hold of them, they would have thought them invaluable as a justification of their own measures.

Mr. Smith says in his book about Acadia that "the French people (Acadians) cannot be heard in their own behalf, as their papers were taken from them at the time of their forced extirpation." Does he mean to say that the Acadians were all put to death, or are we to understand that extirpation means expatriation? "If they had any record of their sufferings and wrongs," he continues, "it will ever remain a sealed book." As they were so illiterate that very few of them could write their names, they could hardly have made any such record. Their scribes were their priests, and their priests, without exception, were, as before mentioned, agents of the French Government to stir them into revolt.

But where did Mr. Smith get the idea that "the archives of Nova Scotia had been rifled of the documents covering the year of expulsion"? In order to solve this enigma I diligently examined his book, and, though he rarely gives authorities for anything, I at last found a passage which clears up the mystery. In this passage he quotes the following note in Haliburton's History of Nova Scotia:

"It is very remarkable that there are no traces of this important event [the removal of the Acadians] to be found among the records in the Secretary's office at Halifax. I [Haliburton] could not discover that the correspondence had been preserved or that the orders, returns, and memorials had ever been filed there. The particulars of this affair seem to have been carefully concealed," etc.

It is on the strength of this that Mr. Smith declares the archives of Nova Scotia to have been "rifled." Now, anybody acquainted with these archives knows that this is not so, and that Haliburton is wholly wrong. The Secretary's office at Halifax contains, as I have said before, an abundance of documents on the removal of the Acadians. Mr. Smith had a printed collection of them before his eyes, drawn from this very source, and if the fervor of his zeal for the Acadian legend had not stricken him with judicial blindness, he must have seen that Haliburton's statement could not have been correct. But how came Haliburton to make it? It was in order to answer this question that I have deferred my reply to Mr. Smith. The following is a letter written to me by Thomas B. Atkins, Esq., who for many years has been Commissioner of the Public Records of Nova Scotia, and who was the editor of the Government publication containing the documents which Mr. Smith assumes were destroyed:

"In reply to your letter, in which you mention that it has been stated and circulated in newspapers that the records of the proceedings against the Acadians in 1755 were destroyed at the time, and that no traces of the affair exist among the papers in the Secretary's office at Halifax, I have to say that every document which appears in the work entitled 'Selections from the Archives of Nova Scotia' I found among the public papers preserved in the Secretary's office, and they are all now to be seen in the archive rooms of the Province Building at Halifax by any person who may desire to examine them.

"I beg also to say that all the documents relating to the removal of the Acadians which appear in the printed archives, with the exception of three letters since found among our English transcripts, were in the office of the Provincial Secretary or in his custody at the time Mr. Haliburton published his 'History of Nova Scotia.' It is therefore to be presumed that that gentleman did not prosecute his search with sufficient diligence, or he would not have written the note in which he asserts that there are no traces of this important event to be found among the records in the Secretary's office at Halifax, and 'that the particulars of the affair seem to have been carefully concealed, etc.'

"When editing the 'Selections from the Archives of Nova Scotia,' I thought of noticing the observations of Mr. Haliburton with regard to the existence of the papers in question; but on consideration I concluded that the publication of the documents under the authority and by the direction of the Government of this country would be a sufficient refutation of the charge.

"I have not met with anything during my researches which would lead me to suppose that any attempt at concealment had been made on the part of the Government of that day."

That the Acadian story is a most deplorable one nobody will deny. That this unhappy people were deeply sinned against is equally true: but the chief offence has been laid at the wrong door. Nor were the sufferers guiltless, as may be amply shown from French as well as English testimony. To quote from another letter of Mr. Akins: "Their removal was a terrible necessity—how cruel, yet how unavoidable!" I cannot think it an absolute necessity. The purpose might perhaps have been answered by seizing the principal men among them and holding them as hostages for the good behavior of the rest.

It would be curious to trace out the evolution of the Acadian legend. But my only object here is to answer Mr. Smith's triumphant question, "If the English were conscious of rectitude, why were the entire French records destroyed and the archives of Nova Scotia rifled?" The reply is simple. No French records bearing on the matter in hand were destroyed and no archives were rifled.

F. Parkman.

Boston, January 18.

Notes.

Not only the *Portfolio*, it seems, but *L'Art*, of both which periodicals Mr. J. W. Bouton was until lately the agent, is to be in the hands of Macmillan & Co. on this side of the water.

Macmillan & Co. have begun the publication of a 'Dictionary of National Biography,' of which Leslie Stephen is editor. The first volume (Abbadie—Anne) is before us. The plan of the work seems to be to give an account, sufficiently full for all ordinary purposes, of every man and woman now deceased whose name is in any way memorable in the history of the British islands. The contributors are, for the most part, well-known scholars and specialists, and each article is signed with the initials of the writer. A list of the authorities used is given in each case—a fact which adds much to the value of the work. Noteworthy among the biographies in the first volume are: Archbishop Abbot, by S. L. Lee; Adrian IV., by Professor Creighton; Addison, by Leslie Stephen; King Alfred, by E. A. Freeman; Anne of Denmark and Queen Anne, both by Prof. A. G. Ward. The work is marked throughout by accuracy, clearness, and good judgment. If the standard set in this volume shall be maintained in those that are to follow, the whole will make an invaluable addition to the stock of works of reference.

Mr. Reuben A. Guild, librarian of Brown University, is to celebrate one of the founders of that institution, and a Revolutionary chaplain, in the 'Life and Times of Hezekiah Smith.' The work will be issued by the American Baptist Publication Society.

D. Appleton & Co. will publish immediately 'The Money-Makers,' an offset to 'The Bread-winners'; and the controversy between Herbert Spencer and Frederic Harrison on the nature and grounds of religion, which lately appeared in the *Nineteenth Century* and *Popular Science Monthly*.

'The Mystery of the Locks,' by E. W. Howe, author of 'The Story of a Country Town,' is in the press of J. R. Osgood & Co. The scene is again a Western town.

G. P. Putnam's Sons have in press for early publication 'William E. Burton: Actor, Author, and Manager; with Recollections of his Performances,' by William L. Keese. The work will be handsomely printed and illustrated, and will be sold in a limited edition to subscribers. The same publishers also announce for the coming year 'Kaméhaméha the Great: His Birth, Loves, and Conquests,' an Hawaiian romance, by C. M. Newell; 'Fragments from an Old Inn,' sketches and verses, by Lilian Rozell Messenger; 'How Should I Pronounce?' by W. H. P. Phyfe; 'The Life of Society,' a general view, by E. Woodward

Brown; 'Bible Characters,' sermons (with a memoir and portrait), by the late Alexander D. Mercer, D.D.; 'The Lenape Stone; or, The Indian and the Mammoth,' by H. C. Mercer; and a popular edition of Williams's 'History of the Negro Race,' two volumes in one.

G. P. Putnam's Sons have been made the publishers of the new American Historical Association, and announce the first of a series of historical monographs introduced by a report of the organization of the Association last September. No. 2 will be 'An Address on Studies in General History and the History of Civilization,' by Andrew D. White, President of the Association; No. 3, 'Federal Land Grants for Education in the Northwest Territory,' by Geo. W. Knight.

'A Trip to Alaska,' by George Wardman, United States Treasury Agent at the Seal Islands, is announced by Samuel Carson & Co., San Francisco.

Mr. Austin Dobson is editing a volume of 'Selections from Steele' at the request of the Regents of the Clarendon Press. Much new material will be utilized in the introductory biographical sketch.

In the *Publishers' Weekly* for December 20, 1884, Mr. Thorvald Solberg completed, but for some supplementary titles, his valuable catalogue of books and articles relating to literary property. Under the heading United States, is given a complete list of the acts of Congress relating to copyright, and of acts in force as to the jurisdiction of copyright cases.

The current number of the *American Journal of Philology* (No. 19) is more than commonly readable and free from technicality. Prof. W. D. Whitney leads off with an article on the study of Hindu grammar and the study of Sanskrit. Prof. C. D. Morris discusses the jurisdiction of the Athenians over their allies, apropos of the first four lines of Thucydides, I, 77. A. L. Frothingham, jr., attempts to fix the meaning of Baalim and Ashtaroth in the Old Testament. The editor, Professor Gildersleeve, contributes a sympathetic sketch of his old teacher, Friedrich Ritschl. B. Perrin's "Lucan as Historical Source for Appian," has also its interest for scholars. The death of the late Professor Packard is fitly noticed by Prof. T. D. Seymour.

The *Photographic Times* of this city begins the new year by a change from monthly to weekly issues, and by such an addition to its staff as to indicate the desire of the proprietors to keep it out of the category of mere advertising mediums. Mr. J. Traill Taylor, the editor-in-chief, is to be assisted by Messrs. W. J. Stillman and Chas. Ehrmann. The large body of amateur photographers, as well as the profession itself, seem likely to find their account in this periodical, which is now in its fifteenth volume. The *Times* is published at 423 Broome Street.

A view of Mormonism charitable beyond what we are accustomed to from the clergy, is presented at some length in the *Bibliotheca Sacra* for January. It is from the pen of the Rev. Delavan A. Leonard, Salt Lake City, who at least regards his subject from near and not from afar. The price of this quarterly, now published at Oberlin, Ohio, has been reduced to $3.00.

The *Builder* closed last year with a statement of the building movement of England, which shows not merely that the tendency of the rural population to flock to the cities, of which we have heard so much, is as great in England as elsewhere, but that there is in that country a special tendency to desert the interior for the seacoast. In part, but probably it is a small part, this comes from the attraction of sea air; but mainly it is due to the advantages of water communication, which has caused the transfer of a number of manufactories to the coast, aided by the injudicious policy of the railways, which have driven off their best customers. From a military point of view, this transfer of wealth and population to the most exposed part of the country can hardly be satisfactory to the patriots who were afraid of a Channel tunnel; but as yet not a word has been said against it.

The current issue of the *Portfolio* has for its frontispiece a charming etching by C. O. Murray, one of the best of the English etchers, after Morland. The second etching—of Windsor, by Edward Hull—is but commonplace; but the third, again, "Gateway of Canterbury Cathedral," by Joseph Pennell, is a great improvement on anything we have seen from that prolific designer's hand. There are none of the old, scrawling, meaningless lines about his foreground or sky, but, as far as they go, the forms of the etching are made out simply and significantly. The minor illustrations of Windsor are poor enough, and those by Pennell to the Canterbury article, especially "On the Stour," though freer from the vice of scrawling than earlier work, are still, in the water drawing, far from good form. The sense of the pictorial, which is the chief charm of Mr. Pennell's work, never, however, deserts him, and the Canterbury bits are attractive. As literature, the number has no special interest except in the leading article on Morland.

"*Puck's* Annual for 1885" derives its literary quality chiefly from its verse. Mr. H. C. Bunner's "A Look Back" and Mr. Robert Grant's "Froth: a Wagnerian Operetta," are noteworthy bits of *vers de société*; and neat and delicate also is "Left Behind," by "P. O'Hara." Of the prose, perhaps the best bit is Mr. J. L. Ford's "Samples of Humor," which reveals much keenness of observation. The illustrations are many and various in value.

Mr. J. A. Mitchell, the originator and editor of *Life*, has just begun a novel series of sketches which he calls "Glimpses of Heaven." His facility in drawing angels and cherubs and magnificently pillared halls, not less than his delicate humor, will find ample scope in this field, which cannot be said to have been overworked.

A circular letter, embodying a number of questions on "Recess or No-Recess in Schools," has been sent in many directions by Mr. J. H. Hoose, of the State Normal School at Cortland, Cortland County, N. Y. Mr. Hoose is one of the Committee on Hygiene in Education of the National Council of Education, which will report to the Council on this subject in July next.

Prof. Francis William Newman has recently published through Trübner a Latin translation of Robinson Crusoe, under the title 'Rebilius Cruso; a book to lighten tedium to the learner.' In his preface he indicates as his reasons for the choice, "its vivid interest, and because it includes a far greater variety of vocabulary than can be obtained from any of the received classics of the same length." In one sense this is perfectly true, for he is obliged to coin some words, as "ignipulta" for gun, and "cannones" for cannons. There is another Latin translation made by a Frenchman named Goffaux.

Among recent contributions to Shakesperian literature in Germany is 'Shakespeare's Stellung zur katholischen Religion,' by J. M. Raich. It appears to be simply another vain attempt to prove Shakspere a Catholic, mainly by quotations from his works. For instance, the author considers that he believed in transubstantiation because of *Rosalind's* words, "His kissing is as full of sanctity as the touch of holy bread." So, because *Othello* speaks of "the office opposite to Saint Peter," Shakspere must have believed in the Papacy! This is nearly as bad as the work of that member of Parliament who explained not only Shakspere, but Horace and 'Hudibras,' by the appearances of the moon.

The last number of the *Bulletin de la Société de la Géographie* contains an article by Prince Roland Bonaparte on "The Last Voyages of the Dutch to New Guinea." As long ago as 1828 the Dutch made a settlement and built a fort at Triton Bay on the southwest coast, and at the same time took formal possession of the country as far as longitude 141°. But the fort was soon abandoned, and for many years few attempts were made to establish commercial relations with the natives. Since 1875, however, the Government has sent out fourteen different expeditions to explore the territory claimed in 1828. Of these a brief account is given by Prince Bonaparte, together with a map of that part of the island visited. The result of these expeditions appears to be a fair knowledge of the coast line both on the north and south nearly up to longitude 141°. No attempt, however, seems to have been made to penetrate into the interior. A number of settlements have been founded, and since 1877 a line of steamers has touched at two ports on the west coast three times a year.

In a few places in France local customs of processions inherited from the Middle Ages still exist. Usually they are much modified, and have lost as much of their original color and life as the Mardi Gras procession has in Paris. M. Robert Trigev, in a small book called 'La Procession de Rameaux au Mans,' has given an account of one that has preserved more than usual of its early features, only the jousts with which it was formerly concluded having been suppressed. It took its origin, toward the close of the eleventh century, from a sally of the principal citizens (and especially the butchers of the town) to recover the Count of Maine and the great crucifix which had been captured by a band of Norman adventurers. The society of *Francs-Bouchers*, which takes a large part in the procession, has disappeared, but the *Mézaigers* still exist—twenty of the principal bourgeois, who, like our Cincinnati, transmit the honor from father to son.

The most elaborate publishing enterprise lately started in France is M. Quantin's 'Bibliothèque des Chefs-d'œuvre du Roman Contemporain,' which is to include some forty of the masterpieces of contemporary fiction, illustrated in the most lavish manner with etchings or woodcuts or lithographs or cuts in color, either inserted or on the page with the text, as may seem best suited to each individual book. At least six uniform small quarto volumes will appear every year at a uniform price of twenty-five francs. Among the works promised and likely to be of interest to American readers are Dumas's 'Trois Mousquetaires' in one volume, M. Halévy's 'L'Abbé Constantin' and 'Deux Mariages' in another; M. Feuillet's 'Roman d'un Jeune Homme Pauvre,' Hugo's 'Notre Dame' in two volumes, and 'Les Misérables' in five; Sandeau's 'Mlle. de la Seiglière,' and George Sand's 'Petite Fadette' and 'Mare au Diable' together in one volume. The first of the series to appear is Flaubert's 'Madame Bovary.'

The great edition of Victor Hugo's works (complete and *ne varietur*) is finished for the present, at least (Paris: Hetzel-Quantin; New York: Christern), in forty-six volumes—sixteen of poetry, fourteen of fiction, four of drama ('Torquemada' is not yet included), two of philosophy, three of history, three of 'Actes et Paroles,' two of travels, while the two volumes of 'Victor Hugo Raconté' make up the tale—these last thus confessing their autobiographical character.

Mr. Christern has received the prospectus of the latest of the sumptuous works associated at once with St. Mark's and the Venetian house of

Ferdinand Ongania. The present undertaking, to be begun next month in parts, is 'Le Trésor de Saint Marc à Venise,' by the Abbé Pasini, a work accompanied by ninety-three large plates in color.

The much-talked-of bigness of everything American is surpassed in one respect by Russia, which offers the greatest prize ever known for a literary work. The Russian Academy will decide in 1925 who shall receive $1,000,000 for the best work on the life and reign of the Czar Alexander I. The favorite and minister of that monarch, Araktcheyeff, left 50,000 rubles to be used in honor of his master a century after Alexander's death in 1825. Put at compound interest the 50,000 will have grown to $1,000,000, the largest sum, probably, ever received by any author.

—After a long interval, we are glad to receive three more volumes or parts of the well-designated 'Encyclopædic Dictionary' (Cassell & Co.). The work has now reached nearly to the letter K in seven of these parts: in other words, is about half finished. On its first appearance we took occasion to enumerate its distinctive features. First and most striking is its superabundant vocabulary, with a vast array of obsolete words and forms of words, furnishing a glossary to our older literature, and with subordinate lists of compounds, as, *e. g.*, under *electric, fish, hand, ferric ferrous ferri- ferro-*, etc. These compounds, by the way, are usually united by a hyphen, though in practice they would mostly be separated; so that whoever consults the present dictionary for aid in this unsettled department of punctuation will be misled instead of helped. The analysis and subdivision of meanings are carried to an unusual extent. The synonyms are taken openly from Crabb. The literary references are numerous, and precise in their indication of chapter and verse, or, in the case of periodicals, of dates. Finally, the illustrations, while unpretentious, are useful and relevant—not simply pictorial. Some shortcomings in executing the scheme were inevitable. Names of persons and places are admitted on certain conditions. Foucault has a separate entry for the sake of defining his pendulum; but Galileo is omitted before his derivatives, so to speak. Faraday is not named before nor (except as "the discoverer") under *faradisation*, etc.; but *henwoodite* is said expressly to have been "named after the late W. J. Henwood, of Penzance." A dislocation is seen in placing *ferry-bridge* and *ferry-railway* under *ferry* the verb, instead of under the noun. Americanisms have been pretty well looked after, as in the representation of an elevated railway. It is needless condensation to say of Morse that he "did much" for the electric telegraph. And the American electoral college might have been described under that rubric.

—At the thirty-first annual meeting of the Wisconsin State Historical Society, which has just been held, the additions to its library during the last year were reported as 2,546 volumes and 1,845 pamphlets, making a grand total now in the library of 109,059 volumes and pamphlets. Among these additions were 465 bound volumes of newspaper files from the year 1605 to the present time, making that department now number 4,583 volumes. Few collections in the country can be more extensive. Well-nigh 200 Wisconsin newspapers are now annually presented to the Society by their publishers, and the State pays for binding them. The earliest issues in the Territory are to be found in the Society's archives. If some of them had been consulted when the American Antiquarian Society published its centennial edition of Thomas's 'History of Printing in America,' we should not read as we do concerning Wisconsin in that work (vol. ii, p. 167), "The Green Bay *Republican* was printed by W. Shoals in 1831 or 1832." The dates here are both wrong. So is the name of the paper and that of its publisher. So is the intimation that Mr. Shoals published the first newspaper in Wisconsin. Only two issues were made in that State before 1834. Those two were Nos. 1 and 2 of the Green Bay *Intelligencer*, not *Republican*, on December 11 and 25, 1833, not 1831 or 1832. Nor were these papers published by Shoals at all, but by Suydam and Ellis. The Green Bay *Republican* began to appear on October 10, 1841, ten years later than the date given by the antiquarian editor, and its publisher's name was not, as he gives it, W. Shoals, but Henry O. The atlases and maps in the collection amount to 957. The paintings in the gallery—consisting, to a great extent, of prominent State pioneers—are 129. Among the historical curios is a complete set of autographs of the signers of the Declaration of Independence. A unique exhibit is that of about 200 implements of unalloyed copper, all found on the soil of Wisconsin. These articles, some so massive as to weigh five pounds apiece, were all for use in war or art—not for ornament like the beads and trinkets which are picked up elsewhere. They include at least fifteen varieties of types. This feature of the museum is without a rival, except perhaps in Buda-Pest. In the department of Shaksperiana the Wisconsin library has lately taken a new departure. The volumes in this specialty are already no less than 700. Among them are Halliwell's quarto facsimiles, so many of which were burned, and his folio edition of 150 copies for subscribers. This Wisconsin copy, according to tradition, belonged to Edwin Forrest, but if so, he must have owned two copies, as it is understood that one copy of Halliwell's folio edition was burned in Forrest's house at Philadelphia. The Society has just taken possession of the new building erected for it by the State at a cost of $100,000. The new quarters will afford ample room and verge enough for more than twice the present number of books. But, judging the future by the past, before half a generation the Society will again say, "The place is too strait for me, give place to me that I may dwell!"

—The Modern Language Association of America, at its recent session in Columbia College, passed from its former chrysalis condition as a convention, and became a formal and permanent organization. Most of the colleges in which instruction in modern languages is prominent were represented by delegates. The character of the discussions showed a distinct advance over the meeting of one year ago. A programme of papers with educational subjects for debate provided a definite outline of work. Noticeable papers were presented upon "The college course in English literature: how it may be improved"; "How far may the latest scientific results be embodied in the text-book?" "Some unpublished letters by Jean Paul Richter"; "Aims and methods of linguistic study, with a plea for the study of literature for its own sake"; and elaborate investigations upon the "Factitive in German" and the "Genitive in Old French." The historical account of instruction in modern languages in New York city was unfortunately inaccurate in ascribing the date of the introduction of German into Columbia College to a date less than thirty years ago—a professorship having been established much earlier. The paper upon the "Progress of modern-language study in the South" was encouraging, although not advancing beyond the discussion of that subject already given in the *Nation*. A valuable analysis of the results of the requirements in French and German for admission to Harvard College showed that the number who failed was not greater in these subjects than in algebra and plane geometry, the number of failures decreasing from thirty-six per cent. in 1875 to twenty-five per cent. in 1883. The discussions naturally turned upon the question of the relative position of classical and modern literatures in college instruction. A wide range of difference was manifest in the attitude of various delegates toward this question. Many, while insisting upon the importance of French and German in any proper scheme of education, were not prepared to go to the length of those, more radical, who believed that the classics must give way before the onward march of the literature of to-day. The more pronounced views found expression at the evening session. One delegate had examined the results of the teaching of classics in his own college, and found that ninety per cent. of the students used "ponies," which, inferentially, would not be possible in modern languages. Moreover, he had placed the great ancients against the great moderns, and found the former inferior to the latter. The convention passed a seemingly superfluous resolution in favor of a "modern classical course" in our colleges. More practical was the appointment of a committee to examine the whole subject of the relation of the classics and the modern languages, especially in the requirements for admission to college, and to report at the next meeting of the Association.

—A proposition to unite with the American Philological Society in promoting the objects common to both organizations was rejected; the members seeming to fear that any coöperation with the older body would result in some indefinable injury to the new organization. The convention forgot the beneficial influence exerted by the American Philological Society and the American Association for the Advancement of Science in combining to protect advanced degrees from indiscriminate bestowal by the smaller colleges. The unity of aim of the Philological Society and the Modern Language Association would suggest that coöperation in establishing the position of languages in liberal education might be of essential advantage. A library might be maintained in common, and prizes offered for special investigations in particular branches of philology. The question of a journal to promote the objects of the Association did not come up directly for discussion, though the action contemplated by the above resolution had reference in part to the founding of a common organ. Some delegates desired a publication devoted exclusively to modern languages; but the cost of supporting such a journal, and the probability that it would lack an adequate constituency, have hitherto stood in the way of realizing this wish. An enlargement of the scope of the present *American Journal of Philology* so as to include pedagogics would seem practical, and obviate the necessity of any new venture. The generous patronage of the Johns Hopkins University alone has made possible the existence of the latter periodical. For the present it is probable that the transactions of the Modern Language Association will be published in an annual volume. The list of educational subjects prepared for discussion by the Association was hardly entered upon, owing to lack of time. This is to be regretted, since there was a serious effort to bring before the conventions matters upon which an opinion was needed. The Association will meet hereafter during the Christmas recess in some central locality.

—All friends of the higher education for women will be interested in the account by Walter Armstrong, in the January number of the London *Art Journal*, describing the recently completed Woman's University Building, in the vicinity of London. It is situated not far from Windsor,

and on an eminence which overlooks the great park and the undulating fields that stretch away to the Crystal Palace. The building is pronounced by Mr. Armstrong one of the most remarkable structures in Europe. It consists of two blocks, each 520 feet in length, and these are connected at the ends and in the middle by cross-buildings, so as to make a double rectangle. The two blocks are traversed, from end to end, by corridors ten feet wide, giving access to more than three hundred suites of rooms. Each student is to have a sitting-room and a bedroom, and the one is as large as the other. The appointments are in all respects declared to be the most perfect that could be devised. Though the building is to be warmed by steam, there are provisions for no less than 800 open fires. The architecture is French Renaissance, and the designer Mr. Crosland, a pupil of Sir Gilbert Scott. The work was begun in 1879, and has been completed for the contract price of £257,000. It stands in a park of ninety-six acres, the whole being the gift of Mr. Thomas Holloway, in memory of his wife. It is designed as a national university for women of the middle and upper-middle classes, and is believed by Mr. Armstrong to be "the most magnificent endowment ever made upon his country by a single man." The entire gift is said to reach, if it does not exceed, a million pounds sterling.

—The *Art Journal*, by the way, which was known of all art students of this passing generation, is entering upon a new series which has the name only of the old. The plan of the ancient journal is lowered, its importance diminished, and the quality of its illustrations inferior, in spite of all the improvements in the arts of reproduction. The frontispiece of the February number, for example, "Napoleon on the Bellerophon," by Orchardson, is as flimsy a piece of picture making as the English school has ever produced—neither pictorial nor historical; theatrical, poverty-stricken, and ill-drawn. The literature, too, is dejected. Mr. Wallis, in his article on Raphael, shows, it seems to us, little judicial quality in the way he dismisses Morelli's theory of the share taken by Timoteo Viti in the development of Raphael's genius, and, if we can judge, quite contrary to the evidence brought forward—rather, perhaps, in ignorance of it, as if he had not read it. The endorsement of the acumen and authority of the very subacute and constantly untrustworthy Crowe and Cavalcaselle, and his acceptance of the genuineness of the "Apollo and Marsyas" as a work of Raphael, are equally impeachments of Mr. Wallis's capacity as an art archæologist. No first-rate authority, even in Paris, accepts the "Apollo and Marsyas" as Raphael's, and no thorough student of art accepts Crowe and Cavalcaselle as authority in history or opinion in matters of art. The *Art Journal* wants editing perhaps more than anything else, for the selection of literary matter is certainly inferior to that of its earlier days.

—Macmillan & Co. have put into a portfolio a selection of the choicest woodcuts originally printed in the *English Illustrated Magazine*—twenty in number, carefully printed on Japanese paper and mounted on card-board in a *recherché* and attractive manner. As an exhibit of the state of wood-engraving in England to-day, the collection furnishes excellent material for the amateur of xylography. The English art has not in fidelity of interpretation reached the perfection of the American work, but the rendering of Rossetti's drawing for the "Early Italian Poets" is very delicate and faithful; less so, but still good, is that of his "Lady Lilith," while the "Loving Cup" utterly fails in rendering the head of the woman in the original, making it a piece of very gross flesh. "The Miller's Courtship" is evidently a faithful translation of a somewhat blotchy drawing, and, with the companion drawing, "In the Fens," shows the engraver, Octave Lacour, to have a skill not at all common in England, and by presumption Gallic. "Stitchwort," again, is very near the *Century's* and *Harper's* work, and the piano-case of Burne Jones is charmingly rendered. The figure work of the same engraver, however, shows his limitations to be pretty nearly those of our own school, and it is even weaker than our average work of the same kind; but nothing occurs in the series better than Lacour's work. To get really good head-engravers to-day, we are afraid we must go to Germany, the requisite artistic training and knowledge of drawing being above the standard of wood-engravers in general, either in England or America. One swallow does not make a summer, and a Cole or a Linton does not make a school. The great want of all our art is *training*. Every branch of art production is filled with people who show that the foundations of their art educations were not well laid, and the superstructure is flimsy. In this respect the Germans are more to be imitated than even the French; and a little Teutonic thoroughness in the schools we are establishing or going to establish would do them immense good.

—Every one has heard of Goethe's aversion to dogs, which appears to have been based on their noisiness at night. Kant changed his residence in Königsberg three times on account of the noises made by poultry, sailors, and the singing of convicts; and Schopenhauer adduces a number of considerations to prove a favorite theory of his that an abhorrence of noise is a necessary concomitant of advancing civilization and refinement. Church bells are often attacked in the newspapers, but they are harmless compared with that arch-enemy of the ear—the steam whistle. Statistics show that a large proportion of railway employees and laborers in machine foundries are hard of hearing. The physicians of Winterthur, Switzerland, have petitioned the authorities that the tones of the engine whistles may be lowered, and not so long-sustained; and there is hardly a city or village where the death-rate would not decrease if these sleep-murdering whistles were abolished. Musical people are not only more sensitive than others to the steam-whistle nuisance, but have a special reason to lament its existence. It is well known that the greatest living song-writer, Robert Franz, lost his hearing almost completely some years ago; but a writer in a late number of *Schorer's Familienblatt* has, for the first time, narrated the details of this catastrophe, and mentioned some peculiarities in the case that possess a great interest for students of physiological acoustics. The writer's mother was a pupil of Franz. One day, he relates, Franz, on commencing his lesson, complained that the piano was out of tune, and angrily departed, declaring that he could not play on such an instrument. He made three other visits, and in each house the piano seemed to be in the same condition. Then it dawned on him that the fault must be in his own hearing, and that the cause of it was a railway whistle that had lacerated his ears on that very day. From that time he carefully avoided the neighborhood of locomotives, going from Halle to Leipzig in a wagon whenever he wished to see Schumann or attend a Gewandhaus concert. About a decade after this event, in 1863, he once more had the misfortune to be surprised by a shrill whistle, the effect of which was to make him deaf to the notes above c'''. Some time later he complained that "now the b'' is gone too"; then followed g'' and a'', and so on, so that for a long time he could hear only bass notes; finally, those, too, disappeared, and now he is practically quite deaf. This gradual disappearance of the notes of the scale from the range of his hearing will doubtless be interpreted as adding new force to the view that the basilar membrane in the ear is a differentiating organ, tuned so as to mediate the perception of special tone-waves. The original theory was, that the fibres of Corti possess this function, but when the discovery was made that birds do not have these fibres, the basilar membrane was fixed upon as furnishing the requisite anatomical conditions. The arrangement of the fibres of this membrane, gradually increasing in length from one end to the other, somewhat like the strings in a harp or piano (and connected with the ends of the acoustic nerve), must make them sensitive to waves of different kinds; and we need only assume that in the case of Franz the degeneration commenced at the base of the membrane, and thence extended upwards, to account for the gradual loss of his hearing and at the same time to corroborate the latest physiological doctrine.

EUPHORION.

Euphorion. Being Studies of the Antique and the Mediæval in the Renaissance. By Vernon Lee. Boston: Roberts Bros.

It is difficult to find any *raison d'être* for a book like 'Euphorion,' except the rashness of youth in rushing in to solve the most difficult problems of the philosophy of history and art, and of an opinionated and crudely informed youth at that. Young people who have their ready solutions of all mysteries are not wanting to the experience of any one, and even as clever young people as Vernon Lee are not so rare as fortunately are their printed books. Should Vernon Lee ever arrive at complete education, she will most probably regret as much as any one can deprecate the publication of this collection of sophomorical dicta ("studies," in the true sense of the term, they cannot be called); and this not because the book is dull or uninteresting—such suppress themselves—for 'Euphorion' is clever with the cleverness of precocious and presumptuous youth, lively and amusing even in its pretentiousness. It shows the peculiar talent of a gifted young woman who has great faith in her notions, and is more anxious to talk cleverly than to study seriously; who has read much and reflected less, and is more bent on talking epigrammatically and authoritatively than on ascertaining whether what she says will bear investigation, or if it is new and worth the making of a volume. The result is a book filled largely with crude generalizations, cruder opinions, and ill-digested information gathered from an immense and heterogeneous reading, and which the author does not seem to know are, for the most part, neither new nor important, when true. Symonds's influence appears everywhere, and the color of Ruskin's old wine shows through her somewhat transparent bottle; but this older material is much mixed with the author's opinions.

Her passion seems to be in energetically formulating enigmatical conclusions which she takes for profound truths, but of which the only remarkable quality generally is their utter absurdity, when carefully considered—pretentious generalizations which only require reducing to logical form to be shown to be meaningless. Thus, in her essay called, with more than Ruskinian obscurity, "The Sacrifice," she says: "Sismondi asks indignantly, Why did the Italians not form a federation as soon as the strangers appeared?" Every intelligent school child knows that it was because the Italians had quarrelled and called in the strangers to help them against each other; but the author replies:

"The habit of security from abroad [when was Italy from the days of the Gallic invasions ever

secure ?] and of jealousy within ; the essential nature of a number of trading centres, made such a thing not only impossible of execution, but for a while impossible of conception [as if confederation among themselves against each other had never occurred]. Confederacies had become possible only when Burlamacchi was decapitated by the imperialists ; popular resistance *had only become a reality when Feruccio was massacred* by the Spaniards; a change of institutions was feasible only when all national institutions had been destroyed," etc., etc.

All which, in plain English, means that the Italians only began to fight after they had been utterly routed and dispersed—militarily, "cut to pieces." This is not the philosophy of history; it is the involution of nonsense.

Again : "Civilization cannot spread so long as it is contained within a national mould; and only a vanquished nation can civilize its victors." Of course there are no victors till the other nation is vanquished, and civilization cannot go abroad as long as it stays at home ; but the statement is about as important as to say that bread is not bread till it is baked. Greece civilized Rome because it was civilized earlier than Rome, and Rome civilized Gaul for the same reason. Men are progressive, and when they see a more advanced state of society with more desirable contingencies, they adopt them, as have the Japanese from us, without conquest. They take what suits them and leave what does not. What Vernon Lee, with the most consequential manner, places as a law, is contradicted by the whole history of civilization.

But it is especially in what is written of art that 'Euphorion' revels in ignorance. It would seem that the author has not the faintest conception of the nature of art, any more than a blind man of colors, or a deaf of harmonies of sound. She has moved among the works of great art without ever suspecting what they were, and calling them this, that, and the other, as a child makes a kerchief personate a princess and a rag-doll a hero: one does not recognize the originals in her irrelevant travesty. Not even in general observation or reflection is she intelligent. "Landscape,in the sense of our artists of to-day," she says, "is a very recent thing; so recent that even in the works of Turner, who was, perhaps, the earliest landscape painter in the modern sense, we are forced to separate from the real rendering of real effects a great deal in which the tints of sky and sea are arranged and distributed as a mere vast conventional piece of decoration." This is inaccurate in every statement of fact, and absurd in what is conclusion. Turner was the legitimate descendant of Claude, with a wider view of the field of art, and cared even less for the "real rendering of real effects," which, if it means realization, is a thing not to be found as the motive in any work of the painter. Nor is the author more accurate in noting the phenomena on which she descants: "But the sun has smitten the higher hills, and the vapors have partially rolled down in a scarcely visible fold to their feet; and the high hill, not yet rock or earth, swells up into the sky *as something real, but fluid, and of infinite elasticity.*" Mist never rolls down when smitten by the sun, but rises up; but what the high hill is supposed to be doing or becoming, passes our comprehension: "words, words, words."

In the essay called "Symmetria Prisca," it is almost impossible to read a section without encountering the evidence of this singular incapacity to understand anything that goes to the constitution of Art. Its very history is miswritten with a recklessness which can only be the result of such incapacity: "Painting, in the hands of Cimabue and Duccio, of Giotto and Guido da Siena, freed itself from the tradition of the mosaicists as sculpture had from the practice of the stone-masons, and stood forth an independent and *organic* art. Thus painting was born of a new civilization, and grew by its own vital force—a thing of the Middle Ages, original and spontaneous." Yet a little further on we read: "The most purely mediæval sculpture, the sculpture which has, as it were, just detached itself from the capitals and porches of the cathedral, is the direct pupil of the antique." She had only to read Perkins or 'L'Art Byzantin' (Bibliothèque de l'Enseignement des beaux-arts) to know that the latter was the truth (see 'L'Art Byzantin,' pp. 159, 161, 162); and even Crowe and Cavalcaselle, who seem to furnish her with all she knows of the history of art, should have taught her that painting in Italy was born of painting in Byzantium, and that there is absolutely no break in the lineage except from the irruption of some new genius from time to time. But, starting with a curious incomprehension of the very nature of art, the author never sees the falsity of any conclusion or generalization about it, but goes on with an airy assurance and irrelevance, discoursing nonsense, with here and there a fragment of ill-applied dictum of some painter or book on painting, which she makes equal nonsense by the way she puts it :

"Giottesque art is *not incorrect art*, it is *generalized art* ; it is an art of mere outline. The Giottesques could draw with great accuracy the hand : the form of the fingers, the bend of the limb, they could give to perfection its whole gesture and movement, they could produce a correct and spirited outline. . . . The difference between this spectre hand of the Giottesques and the sinewy muscular hand which can shake and crush of Masaccio and Signorelli; or *the soft hand with throbbing pulse and warm pressure of Perugino and Bellini*" ; etc.,

is eloquence, perhaps, but not philosophy of art ; and in the passage, "With Masaccio began the study of nature for its own sake, the passionate wish to arrive at absolute realization," the author shows again that she does not, in the least, comprehend the radical distinction between the artistic and naturalistic schools. Realization began with the Dutch schools, nor is there prior to Raphael anything in painting which even inexperience could confound with naturalism. Of the Pisani and Giottesques she says : "The *anatomical science* and *technical processes* of Antiquity were being used to produce the most intensely un-antique, the most intensely mediæval works." Now, considering that we know absolutely nothing about the technical processes of antiquity, and that the ancients knew of anatomy so little that they conceived the muscles only to serve as cushions to protect the bones, this is precocious wisdom. A characteristic dictum is the following, which is as magisterial as absurd : "First, then, we have the hostility between painting and sculpture, between the *modus operandi* of the modern and the *modus operandi* of the ancient art. Antique art is, in the first place, *purely linear art, colorless, tintless*, without light and shade ; next, it is essentially the art of the isolated figure without background, grouping, or perspective," etc., etc. It is clear that in the cool assurance of so profound ignorance both of the philosophy and results of art, it would be futile to hope for a cessation of this self-assumed function of art teacher. There is an ignorance which is so complete that it is beyond instruction, and this is always ready to lay down rigorously the law of taste because it is absolutely devoid of the æsthetic sense.

The essay on "Mediæval Love" is one which can only excite wonder at the predilection of Vernon Lee, a woman and still young, for studies in a class of literature which is simply so filthy that most students of mediæval literature either leave it aside or do not admit that they have read it. Only one thing is clear, that Vernon Lee knows little more about love, brave, healthy, and real passion, than she does of art. She does not even perceive that the human heart is in all ages essentially the same, and that love is the great regenerator at all times. She talks of Dante's love as necessarily a poetical fiction, not knowing that his experience is more or less that of every spiritually-minded man, and that no poetic fiction could approach its reality, so true is it that "he who loves is one step nearer heaven." One cannot say to Vernon Lee, "Heaven send thee a beard"; but we may say, Experience send thee modesty and sound study.

SOLFERINO AND SICILY.

Lettere edite ed inedite di Camillo Cavour, Raccolte ed Illustrate da Luigi Chiala. [Volume III. 1859-1860.] I Preliminari dell' Unità Italiana. Turin: Roux & Favale. 1884. Pp. cccxliv, 419.

THE verbal agreement between Napoleon and Cavour at Plombières on July 21, 1858, was kept strictly secret, yet, as the year wore on, there was an ill-defined presentiment in diplomatic circles that the relations among the Powers were becoming strained beyond the limits of peace, and that, somehow or other, the Italian Question was prominently involved in the impending crisis. This presentiment suddenly hardened into certainty, when, on New Year's day, 1859, Napoleon held his customary reception, and made the memorable remark to Baron Hübner, the Austrian Ambassador: "I regret that our relations with your Government are not so good as in the past; but I beg you to say to the Emperor [Francis Joseph] that my personal sentiments toward him are not changed." Within twenty-four hours every capital in Europe had heard this significant sentence, and had deduced from it that the French Emperor's inclinations leaned toward Sardinia. "It appears that the Emperor wants to go ahead," exclaimed Cavour, who also, according to the report of his friends, was surprised at the unexpected utterance. A little later, from Turin were spoken other famous words, which men immediately regarded as prophetic. On December 30, 1858, the Piedmontese Cabinet had drawn up the scheme for the address from the throne, to be delivered at the opening of Parliament on January 10, 1859. This rough draft was sent to Napoleon, who returned it with this striking passage added:

"Fortified by the experience of the past, we go, resolute, to meet the emergencies of the future. This future will be happy, our policy reposing on justice, on love of liberty and of country. Our land, small in territory, acquired credit in the councils of Europe because it is great in the ideas it represents, the sympathies it inspires. This condition is not bereft of perils, because, while we respect the treaties, we are not insensible to the cry of anguish which is raised to us from so many parts of Italy. Strong in concord, trusting in our good right, let us, prudent and decided,await the decrees of Divine Providence."

In a very short time the *grido di dolore*—the "cry of anguish"—became a watch-word among patriots throughout the Peninsula, who now felt certain that Piedmont heard every cry, and was the real leader of the national movement. Cavour, finding that Napoleon was in earnest in regard to helping the Italians, turned at once to prepare for the conflict. The first step in the proceedings was to conclude the marriage between Prince Napoleon and Princess Clothilde, the daughter of Victor Emmanuel. No union could be more deplorable than this proved to the pure, high-minded woman; but the sacrifice must be made, and the Princess, true to her Savoyard blood, was willing to make it. Europe perceived at last that war was approaching, and exerted herself to prevent it. For a time the contest lay between Cavour on one side and European diplomats on the other. He urged Napoleon to action; they intrigued for the maintenance of

peace in the interest of Austria. On January 15 he wrote to E. d'Azeglio at London: "While they are recommending moderation and calm to us, Austria is accumulating enormous forces. Lombardy is an entrenched camp; the troops are distributed and organized for an offensive movement. In contempt of the treaties Piacenza is occupied no longer by a feeble garrison, but by an army corps which directly menaces us. . . It is certain, at all events, that if the concentration of Austrian forces continues we shall be driven to reunite all our force before spring."

But while Cavour, by equipping troops, by negotiating loans, and by diplomatic overtures, was making ready for war, and was trying to win foreign sympathy for Piedmont, the advocates of peace almost overmatched him, and at the end of March he set out for Paris to bring his personal influence to bear upon the vacillating or slippery Napoleon. His persuasiveness proved so effective that on March 29 he was able to write to La Marmora: "Here is my impression. War inevitable. It will be delayed by two months at least. It will be waged on the Rhine as well as on the Po. In order that the war may have a happy result for Piedmont and for Italy, we must prepare to make the greatest efforts. The French, drawn in against their will, will never pardon us if the greater part of the weight of the enterprise fall on their back. *Woe to us if we triumph solely by means of the French.* It is only by fighting better than they, by putting under arms forces superior to theirs, in case of a general war, that we shall save our country."

Upon his return to Turin, matters hastened to a crisis faster than he expected, yet up to the last moment he was kept in a terrible suspense lest his antagonists should make Napoleon waver. But on April 21 Baron Kellersperg was sent by Count Buol with an ultimatum from Vienna. He reached Turin late in the afternoon of the 23d. Cavour read Buol's letter, and promised to give a reply at the same hour three days later. Piedmont was peremptorily called upon to dismiss all her volunteers. On April 26 Baron Kellersperg left Turin with a reply for the Austrian Minister, in which Piedmont promptly refused to accede to Austria's demands. "The die is cast!" Cavour exclaimed, when the envoy had departed. "We have made history, and now let us go to dinner." The last efforts of the courts of Berlin and London to compel a disarmament failed, and war was declared on the 29th. French regiments poured into Piedmont and were quickly despatched to the front, where was begun the most remarkable campaign since that of Waterloo. Of the important events of the war no mention need here be made, but it is pertinent to call attention to Cavour's marvellous activity at this time. He was really the Piedmontese Cabinet and the centre of the Italian movement at Turin. He discharged the duties of the Minister of War, as La Marmora was in the field. He was Minister of Finance. He corresponded with and encouraged the leaders of auxiliary revolts at Parma, in Tuscany, in the Marches. He superintended the levy of horses and provisions. He cared for the prompt transportation of troops. No modern Minister, unless it be Bismarck or Gladstone, has shown such capacity for work of every kind, from the shaping of the broadest policy to the strict performance of the minutest departmental detail.

On the 4th of June, the French and Italians defeated the Austrians at Magenta; on the 24th, the allies won another desperate victory at Solferino. On the day following the last engagement, Cavour started for the front, and, after an interview with Victor Emmanuel, returned to Turin. His amazement and consternation were unbounded a week later when the news reached him that Napoleon had commanded a halt, and that the war of liberation would be stopped with the work only half done. On July 8, La Mamora telegraphed Cavour: "The armistice is being concluded at this moment at Villafranca. . . . I am unable to state with precision how and by whom it may have been proposed." That same morning the *Moniteur*, the official organ of Napoleon at Paris, published a despatch announcing that a suspension of arms had been agreed upon. The following evening Cavour, still trusting that his influence might prevent the conclusion of a peace which would leave Italy unsatisfied, hurried to Monzambano, the headquarters of the allied troops. On his arrival he learned that on the following day, July 11, the two Emperors were to meet to discuss the terms of peace at Villafranca. Stormy indeed was the two-hours' interview which Cavour held with Victor Emmanuel, but what either said has never been authentically reported. Cavour felt that to pause then would betray the Venetians and the Central Italians, and would give the Piedmontese just cause for declaring they had been deceived. The King at heart rebelled no less vehemently than his Minister at this unexpected ending of the war; but he at least kept up a show of outward calmness. Cavour, having been refused an interview with Napoleon, who possibly did not wish to trust himself against the persuasive eloquence and just recriminations of the Piedmontese Premier, returned to Turin. His first act was to resign. After his life-long struggle for Italian independence, and especially after having arranged with Napoleon this war of liberation, he could not consistently consent to a treaty which betrayed his principles. Many weeks passed before he recovered from the terrible blow dealt him by the French Emperor's insincerity.

But though beaten down, it was impossible for him to despair. In a letter to Massimo d'Azeglio, of July 15, 1859, he wrote: "As for me—I speak as a simple Italian to you, not as a minister—as soon as my successor is appointed, for which I hope I shall not have to wait long, I will come and place myself under your orders as a simple soldier, to be killed for the defence of Italian independence." Four days later La Marmora succeeded to the Presidency of the Council, and Cavour retired to Switzerland, "to forget there among the wonders of Nature the misery of the affairs conducted by men." He purposed to withdraw so completely from public life that not even a suspicion should survive that he interfered with the policy of the new Ministry, of which Rattazzi soon became the leader; and he loyally abstained from embarrassing it by criticising what was soon seen to be its weakness.

"I am profoundly persuaded," he wrote on July 24, 1859, "that my participation in politics at this time would be harmful to my country. Its destinies were handed over to diplomacy. Now I am in bad odor with the diplomats. My resignation is so agreeable to them that its effect will be to render them more favorable to those unhappy peoples of Central Italy whose fate must be established. There are circumstances in which a statesman could not put himself far enough forward, there are others in which the interest of the cause he serves requires that he withdraw himself into the shade. This is what present circumstances exact of me. Man of action that I am, of my own accord I surrender myself to the power of repose for the welfare of my country."

Peace reigned again, but the rulers expelled from Tuscany and the other Duchies were not allowed to return. A conference convened at Zurich in the autumn of 1859 to decide the settlement of Central Italy. Instead of coming to an agreement then, however, Napoleon proposed that a European Congress should be summoned. The question arose as to who should represent Piedmont. The Piedmontese, indeed, we may say without exaggeration, the European public, recognized that only one man could fitly speak for Italy. Not to send Cavour to the Congress was equivalent to leaving the hero out of the play. But would Cavour consent to be the spokesman of a Cabinet whose policy he did not approve? The popular sense of fitness felt, if it did not say, that he must speak his own policy or remain silent. In November, 1859, he writes confidentially to La Farina that his conviction is only too strongly confirmed that the fate of Italy "is for the time being intrusted to persons little fitted to govern the state in these difficult times." Matters grew more critical, until it was generally conceded that Cavour must again guide Piedmont. But the Rattazzi Ministry, before its fall, formally appointed Cavour to represent Piedmont at Paris. Two days after his appointment, on Christmas, 1859, he wrote to Farini, Governor of Emilia:

"I will not relate to you the story of my election as our representative at the Congress. All the intrigues, all the basest subterfuges were put in operation to render it impossible. Dabormida and La Marmora are innocent of this. It will be easy for you to guess who were its authors. If they did not succeed in their purpose, they succeeded nevertheless in making more arduous my most difficult mission by revealing the antipathies, the envy, and the base jealousies with which I am honored by some persons. . . . In spite of this I have accepted, because by refusing I must have of necessity proclaimed a hostile antagonism to Italy, and by accepting I believe I have made the greatest sacrifice which a public man can make for his country—not only to consent to bear in silence cruel wrongs, but to accept a mission from a Government that inspires me with neither esteem nor confidence."

In less than a month Cavour was again Premier. The Congress never assembled, but by the end of March, 1860, the populations of Parma, Modena, the Romagna, and Tuscany, taking matters into their own hands, voted to annex themselves to Piedmont. Thus was formed the kingdom of Italy, numbering about eleven million souls. Hardly had this been achieved ere Nice and Savoy had to be ceded to France. Napoleon had made this an indispensable condition of his war upon Austria. He carried out only half of his contract, but he demanded payment in full. There were not wanting those who accused Cavour of treachery because he had agreed to this sacrifice. No Italian could see with pleasure a slice of Italian territory cut off and given to France. Most vehement in denouncing this transaction was Garibaldi, a Nizzan by birth. He openly reviled Cavour, who, however, was too true a patriot to allow his personal feelings to retaliate upon one who might be useful to Italy; and his shrewdness in helping Garibaldi during the Sicilian campaign is as commendable as his generous attempt to conciliate the honest but impetuous free-lance.

Cavour's management throughout that romantic expedition long ago took its place among the triumphs of diplomacy. He could not officially abet an attack upon the kingdom of Naples, with which Piedmont was nominally at peace; but how could he be blamed should a privateer elude the vigilance of the Piedmontese coast-guard and sail for Sicily? On April 24, 1860, Cavour, expecting to be forced to resign, owing to the odium the cession of Nice had brought upon him, wrote to Farini in regard to the formation of a new Cabinet; on the night of May 5 Garibaldi embarked with his "Thousand" on the steamers *Piemonte* and *Lombardi;* thenceforward there was no hint of Cavour's retirement. "You will remain a stranger to all that may refer to the landing of the Garibaldians," he telegraphed to the Piedmontese naval commander at Palermo; and these instructions summarize his policy during the following months.

It is unnecessary to mention, even briefly, Garibaldi's brilliant and victorious march from the time he landed at Marsala until, having con-

PUBLIC LIBRARY

quered Sicily, he crossed over to the mainland to put to rout the Bourbon King near Naples. The regular Italian army, having marched by way of Ancona, reached Naples in time to congratulate the red-shirted heroes upon their victory on the Volturno. Through the summer months Cavour prepared for the final result—the annexation of the Neapolitan kingdom. Yet he never felt sure that Garibaldi, intoxicated with success, would not attempt to establish a Mazzinian republic in the South.

"He has a generous character," Cavour wrote to an intimate friend on July 12, "and poetic instincts, but at the same time his is a savage nature upon which certain impressions leave ineffaceable traces. The cession of Nice has deeply wounded him; he regards it up to a certain point as a personal injury; he will never pardon us. His rancor is embittered by the recollection of the struggles he has had to sustain in Central Italy with Fanti and Farini. So that I think he wishes to overturn the Ministry as much as to expel the Austrians. The King (Victor Emmanuel) preserves a certain influence over him, but he could not use it in our favor. He would simply waste it, which would be a great misfortune, for this influence may prove to be our only anchor of safety."

Cavour very dexterously made his fear of Garibaldi's extravagance an excuse for sending the Sardinian army across Papal territory. On October 2, 1860, the Premier told the deputies in the Chamber at Turin: "Garibaldi wishes to perpetuate the revolution; we wish to terminate it." But fortunately common sense and patriotism prevailed with the hero of Sicily, who, upon meeting Victor Emmanuel, saluted him "King of Italy."

In this volume we look in vain for letters throwing light upon Cavour's private life at this time, but this was to be expected. From the day when he and Napoleon made their secret compact at Plombières until Bomba was expelled from Naples, Cavour's vast energy was directed to public affairs. Even during his months of seclusion, after the peace of Villafranca, his mind was too busy with Italy to allow him to write upon personal topics. He was, indeed, too busy to have confidences even for his most intimate friends. But, scattered through these letters, are occasional criticisms of his contemporaries, or reflections upon events, which make us regret that he had not time to devote himself to writing a chronicle of the great movement in which he was a chief actor. He calls Gladstone "the only statesman who has never sacrificed liberal and generous ideas to a mean patriotism, and to the prejudices of his own party." Of Gioberti, who dedicated his works to Cavour, he said: "Politically, although I have not always shared his opinions, although I have at times deplored a certain lack of practicalness, I have always admired in him the superior man, who, illumined by genius, knew how to indicate the only road that could lead our country to salvation." Again, he wrote to Buloz, editor of the *Revue des Deux Mondes:* "Please thank M. de Mazade for what he said pleasant about me in his last Review; assuring him that if I am really less revolutionary than the Clericals assert, I have not more taste for ministerial despotism, whatever they may say who do not understand the force one acquires when one sums up the sentiments and opinions of the great majority of the nation." Just before the outbreak of the Solferino campaign he wrote to E. d'Azeglio in these courtly terms about Massimo d'Azeglio: "He is, so to speak, the author and father of the Italian Question. His name exerts a great prestige. Several times the Emperor Napoleon, to persuade me, has cited passages from Azeglio's books. Count Walewski himself has sometimes invoked his authority to support his opinion. In England, Massimo is considered, so far as concerns the practical, infinitely superior to me."

SOME RECENT BOOKS ON GEOLOGY.

A First Book in Geology, designed for the Use of Beginners. By N. S. Shaler, S. D., Professor of Palæontology in Harvard University. Pp. 328. Boston: Ginn, Heath & Co. 1884.

The Student's Handbook of Physical Geology. By A. J. Jukes-Browne, of the Geological Survey of England and Wales. Pp. 514. London: Geo. Bell & Sons; New York: Scribner & Welford. 1884.

Geology and Mineral Resources of the James River Valley, Virginia, U. S. A., with Map and Geological Sections. By J. L. Campbell, LL.D., Professor of Geology and Mineralogy in Washington and Lee University, Lexington, Va. Pp. 110. G. P. Putnam's Sons.

In any scientific text-book for the use of schoolchildren there should be as much of clear demonstrable fact and as little of theory as possible. It is also of the first importance that everything which purports to be a statement of fact should be made with the utmost care, excluding all that is doubtful or merely hypothetical. What children learn at an early age they are apt to retain most tenaciously, and errors thus early imbibed are almost sure to prove most mischievous in later education. Professor Shaler has recognized both of these principles in theory. "It will not do," he says, "to force such conceptions [referring to glacial hypotheses]; for the youthful mind is more impatient of an illy-demonstrated conclusion than the trained logician." Again, in speaking of Mercator's projections, he remarks: "The world will always be out of joint to a person who has had them impressed on his mind in youth." Unfortunately he has not borne these principles constantly in mind. His book is crowded with theory, which limitations of space compel him to demand shall be taken on faith. The nebular hypothesis, the theory of evolution, the mechanical theory of volcanoes, and many more, form a rather large proportion of "illy-demonstrated conclusions" in 250 small pages. Then, again, there are many statements which are either altogether inaccurate or at best very doubtful. We can mention only a few examples of what the book unhappily abounds in. On p. 99 the statement is gravely made that half the earth's heat comes from the fixed stars—a doctrine which the astronomers and physicists at present reject almost unanimously, yet which is here given to children as if no one could possibly question it. Less glaring examples are very frequent, as the statements that the edge of the continental platform is a shelf built by the tide, that there have *certainly* been many glacial periods, and much of the chapter on ocean currents.

In its biological portions the book is especially weak. The old classification is retained, ignoring all that zoölogists have accomplished in the last half century. Sponges are put among the Protozoa, although their structure violates every item of the author's definition. The statement that sperm-whales are the degenerate descendants of bear-like forms should never be put in an elementary book, being something more than doubtful. Professor Shaler's way of dealing with evolution is singularly unhappy, as it constantly tends to the impression that animals advance in structure by *consciously* striving to improve their condition. On page 217 the scholar is told that pine trees first appeared in the Trias; in fact, they began in the Devonian, and were abundant in the Carboniferous forests. Fig. 103 purports to give the feet of *Tertiary* mammals, whereas all but one of the drawings refer to living animals—the tapir, rhinoceros, and bear. On the same page we find the remark that the feet of the early Tertiary ungulates "seem to be better fitted for tree-climbing than anything else," a statement which is simply ludicrous. On page 117 the scholar is told that Niagara Falls are receding at the rate of four feet per century, on p. 204 that the rate is fifty feet per century.

These defects are the more to be deplored as the book contains much that is good. The descriptions of the simpler phenomena of rain, wind, etc., the chapters on sand, mud, and pebbles, as well as the directions to teachers, are excellent. But the erroneous and doubtful statements are so numerous that we fear the book will prove more mischievous than useful except in the hands of unusually careful and competent teachers.

Mr. Jukes-Browne has attempted to write a trustworthy handbook of physical geology on a different plan and of more modest pretensions than the text-books of Geikie and Green. On the whole he has succeeded admirably, and has produced a book that will be useful to teachers and students the world over. The plan followed is simpler and more logical than those of the admirable works of Geikie and Green already referred to, and to that degree better for beginners. The treatment is also excellent for the most part, the chapters on the influence of surface agencies and on petrology being among the best we have ever seen in a text-book. As is altogether proper in a book intended for use in Great Britain, most of the illustrations and examples are taken from those islands; but, following the lead of Dr. Geikie, the author has chosen material from the geologically known world, instead of adhering to the time-honored custom of his country of ignoring all other lands and the work of all but British geologists.

Mr. Jukes-Browne has not succeeded in producing a book without some defects. He gives no theory of volcanic action, and, strange to say, omits almost all mention of geysers. The chapter on igneous rocks, written by Professor Bonney, is not nearly so clear and well adapted to students' needs as the corresponding chapter in Green's book. Finally, Mr. Jukes-Browne has adopted some of Mr. Fisher's views on the physics of the earth's crust without sufficient critical examination. The figures are for the most part badly executed, and the restoration of encrinites (fig. 62 b) positively misleading. However, in spite of all these drawbacks, the book is a most useful one, and can be earnestly commended to American as well as English teachers.

Professor Campbell's work consists of a survey along the line of the Richmond and Allegheny R. R., undertaken to show the mineral resources, chiefly in iron ores, of the James River valley. The work seems to have been well and carefully done, and shows that this region is very rich in ores and may well become an important iron-producing district. Besides this the survey is a welcome addition to our knowledge of Virginian geology, and is accompanied by a good geological map.

The Creoles of Louisiana. By George W. Cable. Charles Scribner's Sons. 1884.

Mr. Cable has, in this work, provided a background of fact for the remarkable series of fictions by which he has given the Louisiana Creole a picturesque individuality in our complex American life. It was very fitting that the same hand which gave us the 'Grandissimes,' 'Old Creole Days,' 'Madame Delphine,' and 'Doctor Sevier,' should now round out and complete the work by a history of New Orleans and the adjacent territory, which form the habitat of the Creole. If we miss in it the former sense of discovery, of introduction to a new world within our own borders, the loss is due to Mr. Cable's thorough treatment of his subject in the dress of fiction. With this latest addition, we have a complete series, such as hardly any other foreign ele-

ment in American life possesses—a series of fictions, treated with consummate art, and illustrating the inner life of the Creole, together with an excellent historical development as a foundation. The only drawback to our satisfaction is the apprehension that the appearance of this work is an announcement that the field in which the author won his reputation is exhausted.

New Orleans has already proved inviting ground for historians, and has been a puzzle to all of them. It is not easy to see why Bienville pitched upon this spot in 1718 as the site of the chief city of Louisiana. A location only ten feet out of the water at the river bank, sloping rapidly away from it to the sea level, subject to almost yearly floods, and fully a hundred miles above the mouth of a river whose current seemed to be an almost insuperable barrier to vessels until steam navigation was introduced—what more unpromising location could have been suggested for a great commercial city? All subsequent history has vindicated the foresight of Bienville; New Orleans has as yet no dangerous rival among the more favorably located cities of the Southwest. Her disadvantages, and her struggles against them, have only made her history more attractive. The story of the settlement of Louisiana, of its Indian wars, of its vicissitudes under Ulloa, Aubry, and O'Reilly, of its transfer from France to Spain, from Spain back to France, and from France to the United States, is told again by Mr. Cable, without any striking novelty, but with a grace of statement which comes more naturally from him than from Gayarré, Martin, or any other Louisiana historians who have preceded him.

Mr. Cable has succeeded in giving his work a value of its own by holding it closely to the governing idea of the entire series. As a history of the Louisiana Creoles, and only incidentally of Louisiana or of New Orleans, it occupies a field in which it will not find a competitor. The mingled sluggishness and vivacity of the Creole, his fanatical devotion to personal liberty, as he has understood it, his hopeless inability to comprehend the Spanish and American systems under which he has been forced to live, and the influences which have so completely stranded this race on the shore of an alien civilization—all these are topics whose discussion is to the author a labor of love, and he has left little or nothing for any gleaner. It is an advantage to him that he adds race difference to his natural genius for analysis of character, so that he is both outside and inside of Creole life, while he has an unusual power, as all his readers know, of making his readers see things as clearly as he sees them. In the form of this work he has secured another advantage by retaining as an historian much of the vividness which is the privilege of the novelist. There are not many histories, for example, in which we can find such a word-painting as this description of Louisiana scenery:

"In the last hour of day these scenes are often illuminated with an extraordinary splendor. From the boughs of the dark, broad-spreading live-oak and the phantom-like arms of lofty cypresses, the long motionless pendants of pale, gray moss point down to their inverted images in the unruffled waters beneath them. Nothing breaks the widespread silence. The light of the declining sun at one moment brightens the tops of the cypresses, at another glows like a furnace behind their black branches, or, as the voyager reaches a western turn of the bayou, swings slowly round and broadens down in dazzling crimsons and purples upon the mirror of the stream. Now and then, from out some hazy shadow, a heron, blue or white, takes silent flight, an alligator crossing the stream sends out long, tinted bars of widening ripple, or on some high, fire-blackened tree a flock of roosting vultures, silhouetted on the sky, linger with half-opened, unwilling wing, and flap away by ones and twos until the tree is bare."

Using all his advantages to the full, Mr. Cable has given us an exceedingly attractive piece of work. There is, nevertheless, a feeling of shortcoming, if not of failure, as he approaches and reaches contemporary events, in his careful avoidance of some topics which perhaps required delicate handling, though his hand does not lack the necessary delicacy. Such earlier episodes as those of Jean Lafitte and the Barataria pirates are well told. Parton's assertions that Gen. Benjamin F. Butler purified New Orleans and banished cholera and yellow fever from it for the time of his supremacy there are flatly contradicted, and apparently with good reason. Why could not Mr. Cable have hazarded the story of reconstruction? Hahn and Warmoth, William Pitt Kellogg, and Percy Bysshe Shelley Pinchback, embalmed to immortality in his pages, would have been a most valuable social authority to the future historian. Mr. Cable has, perhaps wisely, avoided such topics; and, as a history of New Orleans since 1861, the work is worthless. As a history of New Orleans down to 1861, it is useful and valuable. As a history of the Louisiana Creoles, it is unique and of the highest interest and importance.

It is to be regretted that the publishers have disfigured the book by giving it a binding which is a cross between the covers of the Bodley series and a severe attack of erysipelas. The intending purchaser will find the inside far better than the outside.

Letters of the Rev. J. B. Mozley, D.D. Edited by his Sister. E. P. Dutton & Co. 1885.

THE Oxford movement must be regarded as the purest religious revival of the century. It was involved somewhat intricately with matters distinctly intellectual, with questions of history, exegesis, evidence, and the whole varied region of the logic of theology; but at the core, especially if attention be fixed on the development of its great leader's character, it was a thing of the spirit. The memorials of those most closely engaged in it have thus an interest outside of the church circles to which they are more particularly addressed, and are a subject of intellectual curiosity, at least, to all who take pains to observe religious phenomena merely as such. Doctor Mozley, whose letters from boyhood to old age are published in this volume, was one of the inner circle whose members were affectionately bound to Newman; he was, in fact, his protégé, a faithful disciple, a son of his genius. The letters written under the influence of such a master at the time of exciting and now historic events, might be expected to throw light on the course of the movement, and to reveal its spirit with more certainty and clearness and warmth than any reminiscences such as Doctor Mozley's brother published some three years ago. This is by no means the case. The substance of the correspondence consists of the practical details, the external facts, what we should call the agitation. Of the religious experience and ardor which were the secret of Newman's personal power, and which one would think his young disciples ought to have shared to some extent, there is no positive sign. Throughout the whole volume, too, this is the general character of the letters; they are about affairs, not about thought, and although toward the end there is occasionally something intellectual, something of more interest than elections, examinations, gatherings of the black and red gowns, dinners, editorial perplexities, and the like, yet the correspondence, as a whole, concerns practical matters, such as made the staple of conversation at a table of Oxford fellows.

This is of itself not without significance. It has been remarked by some writer whose name escapes our memory, that the Tractarian movement was twin in high life to the Wesleyan revival in low life. There is some truth in the comparison made; and it brings out, by the fact that Newman came so long after Wesley and that as a propagandist he failed, the extraordinary immovability of thought and conscience in the mass of the clergy of the English Church and those nearest to them socially. Doctor Mozley writes in reference to George Eliot's delineations in 'Middlemarch': "I think her enmity to the middle classes must be partly from the fixity of their belief—being the class of all society least open to the disturbing force of new ideas, whether of belief or morals." He would not have put himself among these unchanging bondmen of the commonplace, but he nevertheless illustrates that fixity, not of belief but of nature and tradition, which has preserved England not only from the "red fool-fury of the Seine," but from the pietism of the Tiber. He had from a child the traits of his countrymen—a little slow, a little irascible, more than a little jealous for his individuality; but, in particular, he had a practical bent. He passed under the strong, direct, affectionate influence of a great spiritualist, and became one of the implicitly-trusted few, the recognized band that was to guard and spread the faith; and when the great division came, he parted from Newman and he diverged from the Puseyites. At the end he became an Oxford professor, and published volumes whose distinctive characteristic is the intellectual force of their theologizing, not any purity or insight or depth of spirit. The power exhibited is mentally the same shown in the administration say of a college; it is not religious power at all. The character of his own intelligence, its definiteness, grasp, and certainty, is hinted by his remark on Maurice: "Maurice, as I said, gives soirées which are generally attended by some twenty of the younger clergy. He sits at a table with a Bible, and is asked questions upon difficulties, etc. His general line is to resolve everything into vagueness." The tone is plainly one of tolerant and amused scorn. Perhaps Maurice was nearer of the two to Newman in his original religious endowment. But with such minds as Mozley's (with a tendency to drowsiness under sermons, we are told), so essentially practical that his letters through a lifetime show, speaking broadly, neither habitual devoutness nor ready and apprehensive intelligence except for logical distinctions—with such minds as Mozley's, we say, for the most promising converts in the leadership of a great spiritual revival, how could Newman find any other fate than the isolation of a rejected and sterile prophet? We mean no disrespect to Mozley's character: both in heart and brain he was of the kind called sterling; but he was not of the stuff to continue the work of a St. Francis or St. Dominic. He was merely typical, and is so referred to here; there was not in England any material for a Newman brotherhood. In going to Rome, Newman forfeited his peculiar mission—he was lost in the institution; but such a volume as this makes it clear that he was fleeing from a wilderness and solitude into the retreat of peace.

La Navarre Française. Par M. G. B. de Lagrèze. 2 vols., 8vo. Paris, à l'Imprimerie Nationale. 1881-2. Firmin-Didot.

THIS is one of the books which we rarely receive except from France—works which present the results of conscientious research, clearly and systematically arranged, with due attention to literary form. Tireless investigation among mouldy archives and dusty MSS. has not dulled the animation of the writer, and his book is fresh not only in material, but in manner.

The subject is one of rare interest, not only for the historian, but for the student of constitution-

al history, of legislation, and of social organization. Into this little kingdom, nestling between sea and mountain, there has drifted a strange admixture of races. There alone the primitive Iberian has preserved the purity of his blood and speech among the successive waves of Celtic, Roman, Gothic, Frankish, and Saracenic conquest, each of which has left its residuum behind. There first was constitutional monarchy discovered and established on so firm a basis of popular liberty that, in an age of despotism, the Navarrese could dare say to the most splendid despot of the time, Louis XIV.: "Chez nous le roi n'est que la créature de ses sujets." There, too, were tried experiments in jurisprudence so varied that not only had the kingdom its general *fuero* or body of customary law, but each town claimed the right to its own *fuero*, and even certain old houses enjoyed until '89 the privilege of special laws. As a Basque proverb says, "Each country has its laws and each house its customs." Such a body of legislation, running back to the Fuero Juzgo, or Romance version of the Gothic Code, cannot but contain much that is of the highest interest in illustrating the development of European institutions, the progress of civilization, and the history of morals and manners.

Accordingly, although M. de Lagrèze's first volume is attractive in its presentation of the geography, anthropology, and history of Navarre, it is to the second that the student will turn with greater eagerness, for there he will find the results of original researches into documents and charters, mostly unpublished, giving us a fairly complete picture of Navarrese institutions at successive epochs. The author has not contented himself with merely printing the documents: he has analyzed and coördinated them and arranged their provisions systematically, so that on any given subject we have all accessible information grouped together and presented clearly and succinctly. Thus there is a large amount of curious material brought before us which will well repay the investigator of politics and of sociology.

Turning, for instance, to the chapter on marriage, we meet with conditions wholly unexpected in mediæval Christendom. To the law, wedlock is simply a civil contract: the Church has nothing to do with it, no sacrament is required to give it validity, nor are the questions connected with it subject to the spiritual courts. A simple declaration in the presence of witnesses suffices; but, as in other contracts of the period, both parties give security for the faithful performance of the engagement entered into. Like other contracts, moreover, it can be broken, and a divorce obtained simply by paying a legal fine to the seigneur. There are traces, also, of the prehistoric custom of purchasing wives, in the payment made by the groom to the parents of the bride; while perhaps a survival of polygamy may be indicated in the custom by which the husband was not bound to fidelity beyond the confines of the town in which the couple resided. Other regulations of extreme crudity show to how late a period barbarism continued to dictate the relations between the sexes. It was not until the twelfth century was near its end that the Church made a serious endeavor to control the conditions and the celebration of matrimony. The struggle was long. At length it succeeded, when we find the payment for a bride replaced by the dower which she was expected to bring her husband, together with a *trousseau* the details of which were carefully prescribed.

Thus are passed successively in review all the leading features of civil and criminal law on which the structure of human society is based. As might be expected, much that is quaint and peculiar manifests itself in a jurisprudence which, as in that of all uncultivated peoples, is not content with laying down general principles, but seeks to provide for every special case. We may conclude with an illustration of the symbolical punishments so dear to the mediæval sense of justice. The penalty for the stealing of a cat directs the owner to tie around its neck a cord the length of the outspread hand, attaching the other end to a nail fixed in the ground, in the centre of a level space of which the circumference was nine times the length of the cord. The culprit was then obliged to cover the cat completely with newly-ground meal, which was divided in due proportion between the seigneur justicier and the cat-owner. If, however, the offender was too poor to furnish the meal, then the cat was suspended by a cord around his neck on his naked shoulders, and was smartly struck to incite it to lacerate him with claws and teeth.

A Skeleton Outline of Greek History. By Evelyn Abbott, M.D., LL.D.—*A Skeleton Outline of Roman History.* By P. E. Matheson, M.A. London: Rivingtons.

THESE skeleton outlines are in every way admirable compilations. Mr. Abbott's book (upon Greece), besides a very full chronology, contains tables of kings, an account of the calendar, and excellent sketches of the constitutions of Athens and Lacedæmon. We notice that he considers (p. 151) the four tribes and the three classes of Athens to have alike embraced the whole body of the citizens. We incline, on the other hand, with Curtius, to regard the *Eupatridæ* as consisting of all the members of the four Ionic tribes (being thus the equivalent of the Roman patricians), the *Geomori* and *Demiurgi* being the citizens of later origin, like the Roman plebeians. Mr. Matheson's book is exclusively a chronology: we wish very much that he had made it as large as Mr. Abbott's by the addition of a sketch of the Roman Constitution, for his brief notes show that he understands the subject. Even as it is, it will be found a very useful guide in the study of the Roman Constitution.

BOOKS OF THE WEEK.

Arnold, I. N. The Life of Abraham Lincoln. Chicago: Jansen, McClurg & Co. $2.50.
Blind, Mathilde. Tarantella: a Romance. Boston: Roberts Brothers. $1.50.

Clevenger, Dr. S. V. Comparative Physiology and Psychology. Chicago: Jansen, McClurg & Co. $2.
Harper's New Monthly Magazine. Vol. LXVIII. December, 1883, to May, 1884. Vol. LXIX. May, 1884, to December, 1884. Harper & Brothers.
Harper's Weekly for 1884. Vol. XXVIII. Harper & Bros.
Harper's Bazar for 1884. Vol. XVII. Harper & Bros.
Mailly, E. Histoire de l'Académie Impériale et Royale des Sciences et Belles-Lettres. 2 vols. Brussels.
Mombert, Dr. J. I. William Tyndale's Five Books of Moses, called the Pentateuch. A Verbatim Reprint of the Edition of 1530. Compared with Tyndale's Genesis of 1534, and the Pentateuch in the Vulgate, Luther, and Matthew's Bible. A. D. F. Randolph & Co. $6.50.
Plunkett, Mrs. H. M. Women, Plumbers, and Doctors; or, Household Sanitation. Illustrated. D. Appleton & Co. $1.25.
Proof Engravings from the *English Illustrated Magazine.* Macmillan & Co.
Rabbinowicz, Dr. I. M. The Part of Jesus and the Apostles. San Francisco: J. B. Golly & Co.
Reade, C. Under Which King? A Novel. Harper's Franklin Square Library. 20 cents.
Richards, W. C. Science in Song, or Nature in Numbers. Boston: Lee & Shepard. $1.
Rohé, Dr. G. H. A Text-Book of Hygiene. Baltimore: Thomas & Evans.
Smart, A. Tie and Trick. A Novel. Harper's Franklin Square Library. 20 cents.
Spear, S. T. The Law of Extradition, International and State. With an Appendix. Second Edition. Albany: Weed, Parsons & Co.
Stephen, L. Dictionary of National Biography. Vol. I.—Abbadie-Anne. Macmillan & Co.
Stormonth's English Dictionary. Parts 21-22. Unreprovable—Vultus est Index Animi. Harper's Franklin Square Library. 25 cents.
Thieme-Preusser: New and Complete Critical Dictionary of the English and German Languages. Hamburg: Haendcke & Lehmkuhl; New York: B. Westermann & Co. $4.75.
Thamin, R. Un Problème Moral dans l'Antiquité. Paris: Hachette; New York: F. W. Christern.
Wiermann, H. Fürst Bismarck. Siebzig Jahre. 1815—1885. Leipzig. New York: B. Westermann & Co.
Wilkinson, W. C. Edwin Arnold as Poetizer and as Paganizer. Funk & Wagnalls. 75 cents.
Wright, F. A. Architectural Perspective for Beginners. W. T. Comstock.
Zache, C. R. Hero and Leander: a Poem. G. P. Putnam's Sons. $1.
Zschokke, J. H. D. Meditations on Life, Death, and Eternity. In two volumes. Phillips & Hunt. $1.60.

Fine Arts.

THE WATTS EXHIBITION.—IV.

AN eminent characteristic of the art of Mr. Watts, as of that of all the really great artists (as opposed to painting naturalists), is the possession as supreme quality of what artists call, with a kind of significance that belongs to technical terms, "keeping," and for which no other single word that we know is an exact equivalent. Every work of a truly creative artist is an organic whole—you feel it altogether or not at all, and the student who attempts to attack it in its details to find out what it is, is in the same maze as an anatomist who should attempt to investigate the principle of vitality by the dissection of a dead hand. Owing to the inherent insufficience of all the appliances of art, as well as to the limitations of human life and labor, no work of the painter can be carried to completion in all its parts to the extent of making each part a perfect thing. It is difficult to explain the reasons for this to those who are not acquainted with great art in an intimate degree, but it probably lies in the fact that a painter of the true synthetic temper studies everything he does as a whole, and makes it a whole, and complete as such, from its very earliest stages. We remember to have heard Th. Rousseau say, that "if your picture is not complete in the first five strokes of the pencil, it never will be complete"; and another side of the matter is presented in a saying of Eugène Delacroix, that he "had painted that hand [in one of his pictures] four times, and when it was painted the best it was the worst"—*i. e.*, when it was best as a study of a hand it was incongruous with the picture as a whole. And it is invariably true that if a work of art invites attention and admiration for the beauty or fidelity of certain details, it will be found destitute of "keeping," and will not make the impression as a complete work which it ought; and vice versa, of a complete work, the details will not be felt.

No better instances among modern work can be found of the extremes of this general truth than the pictures of Bouguereau and J. F. Millet; the first owing all their charm to qualities of detail, the second none to detail, but all to the unity of impression, the perfect spontaneousness, the harmony of lines and the subordination of masses. The analogies between the sister arts of painting and music fail us entirely here: music presents its parts to us successively—each chord is made perfect as it is struck, and each movement has a certain completeness in itself, at least so far that it can be followed and judged partially, and the general impression is one of memory in part. Nobody but a mere *phraseur* will pretend to a separate completeness of a movement or part of the complete work, and no true harmonist will attempt to give such completeness, nor can a work be judged as a whole until it is all heard. The same interdependence is true of painting; but in the picture it is the completeness of the work which first strikes the intelligent student, and only a jarring tint or form would divert his attention; in the latter case the impression is one of simultaneity, in the former of consecutiveness. Of course no analogy of this kind can be perfectly followed out; somewhere we find that each art is a fragment of a great circle, and the gap remains to be filled by theory, if at all—missing links are not infrequent.

But a picture can no more be judged by a part than a symphony, for, as in Delacroix's case, the incompleteness of a detail may be, in fact often is, in great practice, indispensable to the unity of the whole; and this, we venture to believe, will be felt most strongly in the case of Mr. Watts's pictures, as the essentially vulgar and trivial nature of those of his

antithesis, Bouguereau, will be felt in his admirably painted detail, which leaves no impression of the vital qualities of art. Take, for instance, Mr. Watts's No. 119, "The Rider on the Red Horse," which we regard as the most satisfactory of the color compositions in the collection (although not as a study of other qualities superior to several others), and of which, often as we have seen it with intense delight, we can recall no detail save the two points of color on which the whole arrangement turns—the flame-colored plume on the horse's head, and the steely glint of the half-drawn sword; the latter animating the entire composition, and relieving the fervidly warm glow of the whole by a weird unexpectedness, as a sudden partial discord might heighten a movement, in full harmony, of music. The red is the key of the color of the picture, the tempered blue its anti-climax. We select this especially as the example of "keeping" in color, as we do the "Paolo and Francesca" for composition of masses, because, in the former, color is dominant in its impressiveness, as the movement and swing of the floating figures swept by on the wind of the Inferno are in the latter. And the scheme of color in the two varies as does the theme. Note, again, the power of the strange green of the quiver of the horseman in No. 124, the "Rider on the White Horse" of the Revelation, amidst the gleaming colors of the attendant figures, like notes of martial music. Then another in the same series, the "Rider on the Black Horse," is in the most sombre scheme of color consistent with color in the truest sense of the term, so that the wan yellow of the rider's sleeve and the gleam of blue gray in the sky seem to be positive colors; yet there is not a passage of absolute blackness, *i. e.*, colorlessness, in the picture. Then as an utter change, as complete as if another painter had done it, turn to the "Bianca," No. 101, a bit of brilliant blonde flesh and blood, with a power of color which reminds one of Rubens, and as vivacious and substantial as need be; though we prefer Watts's color when most his own and reminding us least of any other painter.

And in this respect, as well as for the study of "keeping" in execution—*i. e.*, the carrying *pari passu* of all parts of the picture toward that degree of finish which the painter judges fitting to his subject (in his own subject-pictures most elaborate in the least dignified subjects, *e. g.*, the dove picture, No. 136; while the more imaginative and loftier demand less, or even permit, any approach to realistic painting)—we shall find those of the pictures which are in an unfinished state giving their part of the value of the exhibition, while the "Paolo and Francesca" gives the full measure of realization which the artist thinks admissible in a subject which has all its value in the completeness and unity of its impression. And he shows throughout that determined avoidance of the display of facility which is nearly always characteristic of artists of the intellectual type, a contempt of the facile which it seems to us he carries in some cases, as in the "Love and Life," further than the subject demands—we should have been glad to see the Life carried further into the realm of realism, not like a nymph of Bouguereau, but nearer to solidity. That it was the artist's deliberate intention, however, to stop far short of this is clear, because he has shown elsewhere that he can paint flesh magnificently; but it is a question which the artist alone can determine, in what terms he shall express his ideas, and what compromise, if any, he shall establish between Art and Nature; and there is no doubt that a natural and explicable revolt against popular modes of execution has made Mr. Watts more determined than he would have been in other surroundings to avoid any appearance of leaning to them, even at the risk of a dryness which no one but an artist would entirely sympathize with.

Before leaving this subject of the harmonies we would note the "Diana and Endymion," which, in its lines and the disposition of its masses, reminds us of a Greek relief. The movement of the Diana, floating in the air, imponderable in spite of all its solid forms, is most remarkable. Kenyon Cox, in a recent admirable letter to the *Critic*, in alluding to Watts's drawing, says, "If he cannot draw as correctly as Gérôme, he can compose the lines of a figure much as Tintoretto might have done it," and this quality shows the nature of Watts's art just as his avoidance of Bouguereau's standard of execution does. He does not believe in the use of the model which Gérôme makes, nor could he ever have attained the quality of line which Mr. Cox rightly credits him with, if he had tried to find it in the model. Gérôme, or any other artist of his training and powers, would as vainly attempt to find the lines of the Diana or of the Paolo and Francesca by this method as they would those of the Lady of Beauty of Milo. It is a kind of drawing not to be got from the model, but from the kind of knowledge which is born of the pursuit of the ideal by the *aid of*, but not *in*, the model; and this is true of Millet's "Sower" and "Gleaner," as of the "Diana" and "Francesca," as it is true of all the great Greek work. Mr. Watts may be unable to draw a good academic figure—as to this we cannot speak, never having seen an attempt of his to do so—but that any attempt to do so in such pictures as these we mention, in the Orpheus, the Ariadne, the Eve pictures, and others of their type, would have been entirely destructive of the unity of his pictures, we are confident. Even in Greek sculpture this academic fidelity was never attained until the decline of art and the loss of the ideal faculties.

Mr. Cox has also said wisely of the allegory of those pictures, "It is not that that is the picture; it is rather a peg to hang the picture on." We must judge them as art, not as literature. But this is equally true, that to an artist of strong literary qualities, which Mr. Watts is, an intellectual theme may be the life-giving germ which his highest artistic faculties shall be enlisted to give form to—not merely the peg to hang the picture on; but in any case we judge the picture as such only. The good allegory of a bad painter has no value—if to a good painter it suggests a noble picture, it has done all that any theme can do. And one thing is certain, that no history, as history, or actual life as actuality, can be stated in terms of ideal art: the idealist, to find perfect liberty of treatment, goes to mythology—to classical life—to allegory—to absolute invention, if he is capable of it; anywhere out of the range and limitation of the actual, and the life of which we know the details and accessories. When we hear a critic decry the art which has no modern sympathies, and demand that it find its inspiration in the tubular-tile and straight-jacket garb of contemporary civilization, and maunder against "mediævalism" and heathen mythology, we may at once understand that he knows nothing of pure art or its relations to the ideal, and that he is not sufficiently advanced in study to distinguish between the peg and the art that is hung on it. The highest art is only found in perfect liberty, and that is very rarely consistent with contemporary subject.

Visitors to the Watts Exhibition will find the special catalogue with Mrs. Barrington's record of Watts's ideas on art a most useful guide in the exhibition. It is true, as Mr. Cox has said, that "whatever can be put into a catalogue is not the real subject of any picture worth painting"; but what an artist thinks concerning the subject of his own art, of his own pictures, or of the themes which suggested them, is always of interest to the genuine student of art. The museum authorities having refused to publish Mrs. Barrington's catalogue, the Committee to whom we are indebted for the exhibition has undertaken it at its own expense. The profits, if any, will go to meet the expenses of getting the pictures out and home again.

GOODHOLME'S DOMESTIC CYCLOpædia for Housekeepers. $2.50.
HENRY HOLT & CO., New York.

Newcomb's Analytic Geometry.

By Simon Newcomb, Professor of Mathematics in Johns Hopkins University. 12mo (*Newcomb's Mathematical Course*), $1.50.

*** *Although but lately published, the above work is already in use in such institutions* as Yale College, Sheffield Scientific School, Amherst, Cornell Univ., Wesleyan, Marietta, Vanderbilt Univ., N. C., Univ. Cala., etc., etc.

Examination copy sent to teachers, post-paid, upon receipt of 75 cents.

HENRY HOLT & CO.,
NEW YORK.

Perseverance Island;

Or, the Robinson Crusoe of the Nineteenth Century. By Douglas Frazar, author of 'Practical Boat Sailing.' Cloth, illustrated, price, $1.50.

"Every achievement here narrated is within the bounds of possibility, although many of them seem more marvellous than the feats of the genii of the Arabian Nights. The story is of absorbing interest, and teaches the instructive lesson to young readers to never despair under the most adverse circumstances. The book is handsomely printed and bound, and contains several full-page illustrations."—*Home Journal.*

"It is a marvellous tale, and there is a great deal of scientific ingenuity shown in the developing of the narrative, and in depicting the wrecked mariner's success in making an earthly paradise out of nothing."—*Boston Post.*

*** Sold by all booksellers and newsdealers, or sent by mail, postpaid, on receipt of price.

LEE & SHEPARD, Publishers,
47 Franklin St., Boston.

THE FEBRUARY
CENTURY
(FIRST EDITION, 180,000), CONTAINS
General Grant's
First War Paper, describing
THE BATTLE OF SHILOH
With many personal reminiscences. Profusely illustrated. Also,
THE CONFEDERATE SIDE,
Told by the son of Gen. Albert Sidney Johnston and a Confederate Staff-officer.

This is the brilliantly illustrated MIDWINTER NUMBER, containing many striking features, among them,
"ROYALTY ON THE MISSISSIPPI,"
By MARK TWAIN,
WINTER SPORTS IN CANADA, ETC.

SOLD BY ALL DEALERS. PRICE, 35 CENTS.
THE CENTURY CO., New York.

The Nation.

NEW YORK, THURSDAY, JANUARY 29, 1885.

The Week.

THE success of the dynamite explosion in London is raising the question in many minds, and among them, we are informed, that of the Chief of our own detective force here, whether there is not something wrong with the London police. They have made one good stroke, since the alarm about dynamite began, in the discovery of a criminal laboratory in Birmingham, but only one. Such daring crimes as the explosion in the Government offices in Downing Street, the explosion under London Bridge, and the explosions on Saturday in the Parliament houses and the Tower, are unquestionably the work of a body of conspirators containing more than one, two, or three members. Their number is probably considerable, and they are well supplied with funds. They are engaged, too, in crimes for which the whole police force of Great Britain has been on the watch for two years. That in all this time no detective should have been able to get track of them, although they belong to the very leakiest class of criminals in the world, is something marvellous. There is one difficulty which may in some degree account for it, and that is that against Irish conspirators only Irish detectives can be employed, on account of the accent. Englishmen for this particular service are worthless. So that one can hardly help asking whether the Government is able to procure faithful service in this matter from Irishmen—that is, whether the fear of assassination or secret sympathy of its Irish agents with the men whom they are sent to pursue, is not doing a good deal for the success of the criminals. The situation is undoubtedly the most puzzling one with which any civilized government has had to deal, and one can hardly help fearing that it may lead to outbursts of savage fury on the part of Englishmen against the Irish population of the English towns.

The bill introduced into the State Senate on Monday, directed against the criminal use of dynamite, is likely to be more effective than Senator Edmunds's, in that it makes it a felony "to contribute or solicit money or other property for the sale, transportation, or use" of explosive compounds, knowing or having reason to believe that they are intended to be used for the unlawful destruction of life or property. But why should it not be made a felony to solicit or contribute money for any unlawful purpose, outside the State? Why confine this provision to the purchase of explosive compounds, when money is and has long been openly raised in this State for the purpose of paying the expenses of assassins, or of defending them if caught? Of course we do not believe that the State Bill, if passed, will be any more operative than Mr. Edmunds's bill. Both, we presume, are intended rather to show people in England that Americans feel sorry for them, than to reduce Ford and O'Donovan to harmlessness.

Unfortunately, at this most puzzling crisis, American legislators receive little or no help from the English press. Most of what is written in London about the responsibility of the United States, is apparently written by men who have no knowledge of the laws or Constitution of the United States. Even those who have some idea of the way in which criminal jurisdiction is divided in this country between the Federal and State Governments, and of the nature of American criminal procedure, appear to be under the impression that in all parts of the country acknowledged defects in penal legislation are occasionally remedied by lynch law; and that if the American imagination in New York can only be sufficiently impressed with the atrocity of O'Donovan's and Ford's offences, they may be punished by riot. In fact, among a large body of educated Englishmen there is a slumbering and somewhat vague belief that nearly every official in the United States, occasionally and on a pinch, exercises despotic power. The *Pall Mall Gazette* alone among the London newspapers appears to have kept its head clear. It ridicules the notion that protection from the dynamiters can be secured by American legislation, or by anything but increased vigilance on the part of the English police. It deprecates especially all displays of frantic terror or rage on the part of the English public; a very shrewd remark, because this terror and rage are the very things the dynamiters seek to produce. But over and above all this, the English public need to comprehend the condition of American opinion about the Irish question. They must not take the horror inspired by these outrages, or the dislike of the Irish which is to be found among the well-to-do classes in the great cities on the coast, as indications that the great bulk of the American people think well of the way in which Irish grievances are met and dealt with.

We observe with much interest that all the leading Blaine papers of the late campaign, the *Tribune*, Boston *Journal*, Philadelphia *Press*, and Cincinnati *Commercial Gazette*, can hardly find words strong enough to express their abhorrence of the Irish wretches who are responsible for the dynamite explosions in London. They approve warmly of the action which the Senate has taken, and some of them go further and hope that the House will pass a resolution similar to Senator Bayard's. This action "would not be amiss," says the Philadelphia *Press*—"not that the judgment of any American body could be in doubt; not that there is any foundation for the charge that this crusade is fostered on American soil with American toleration; but these are crimes against civilization, and it is well that the universal abhorrence should find not only public but official utterance." Oh, yes, there is foundation for the charge that "this crusade is fostered on American soil with American toleration," esteemed contemporary, and it can be found in the columns of your own paper and in those of all your Blaine associates whom we have enumerated. Every one of you gave the crusade American toleration when you welcomed the coöperation of Patrick Ford and the *Irish World* in your effort to elect Blaine. You knew what he was just as well then as you do now. You knew that the business of his newspaper was the collection of money for dynamite outrages and for the protection of assassins. You knew that in the same issues of his paper in which he was supporting Blaine he was announcing every week contributions to his "Emergency Fund," and was openly avowing the object of that fund to be dynamite warfare on England. Knowing all this, you quoted from his paper with admiring comments. Mr. Halsted telegraphed long extracts from it to his paper in Cincinnati, and spoke of it as "doing splendid work for Blaine."

This was not mere toleration—it was direct encouragement. It was the first time in its history that the *Irish World* had received respectful recognition from decent Americans. Its editor was greatly delighted with it, and went forward in his dynamite work with renewed vigor. Who can say that these very London outrages, which are exciting the horror of Christendom, were not planned during the Blaine campaign—planned, too, with the expectation that Blaine would be elected and would adopt a policy which would be in sympathy with them? That his Irish supporters believed he would adopt such a policy as President, cannot be denied. That was the sole ground for their support of him, and the Blaine editors who are now rolling their eyes in horror were doing everything in their power to strengthen the belief. Blaine himself encouraged that belief, and after the election publicly thanked Ford and the other dynamite Irish leaders for "their strong and valuable support." Of all the demagogic proceedings of this prince of charlatans, this Irish phase of his campaigning was the most disreputable and unscrupulous.

The President has evidently made up his mind to abandon all further pretence of being a friend of civil-service reform. His appointments of Carpenter to be Governor of Montana, and Mr. Davis to be a Judge of the Court of Claims, are now followed by that of Andrew S. Draper as a Judge of the Court of Commissioners of *Alabama* Claims. Mr. Draper has no other qualification for the place than is to be found in his steadfast friendship for the President, and his zealous efforts to advance the latter's political fortunes. It begins to look as if the President were going to devote himself, during the closing weeks of his term, to putting his favorites into as comfortable places as he can find for them. The prospect is not reassuring, for, by delaying unreasonably, a large number of appointments he has now many vacancies awaiting action, and the samples of friends which he has already given us are not of the most encouraging character. This *Alabama* Claims vacancy has been existing for two months, although the President was aware that it was of the utmost importance to have it filled at

once. There are many other such cases, and the President's delay in filling them, coupled with the character of his appointments when he does take action, are calculated to detract seriously from what would otherwise be a very creditable administrative record.

The published testimony taken in relation to certain alleged improper allowances, in the office of the First Comptroller of the Treasury, of accounts pertaining to the Department of Justice shows, among other things, how utterly meaningless are letters of recommendation, and with what recklessness they are furnished by politicians to those seeking a Government place. It will be remembered that an open letter was addressed to the President last October by a Mr. Barker, who had then recently resigned a clerkship in the Treasury Department, containing charges of systematic frauds in the adjustment of accounts by the First Comptroller. Barker's evidence before the committee appointed to investigate the charges was very materially injured by proof of his bad reputation for truth and veracity. Among those who testified to Mr. Barker's bad character was S. J. Crawford, a former Governor of Kansas, who declared that his reputation had been such in that State for the past ten years that he would not believe him on oath. The ex-Governor had to admit, however, on cross-examination, that only last July he wrote a letter to the Secretary of the Interior to the effect that Mr. Barker would, without doubt, give good satisfaction and make an efficient officer if appointed a pension examiner. He added that this letter was written because he was led to believe that Barker was trying to reform; and when asked, "Reform from what?" he replied, "From a consummate liar to a man of truth, and from a thief to an honest man." The whole testimony of the witness is that in Kansas, where Barker had lived, he had never heard him mentioned but in an unfavorable way. The letter, as he took pains to point out to the committee, contained nothing concerning Barker's character. It would seem that, in Mr. Crawford's opinion, one need have no character to be a pension examiner. If he is active and efficient, and not, like the little girl student of the catechism, "past redemption," he will do very well.

The death in Canada of "Tom" Fields leaves Sweeney, at present wandering somewhere in Europe, and Oakey Hall in London, the only conspicuous members of the Tweed Ring who still survive. Fields was one of the boldest thieves of the lot. He entered politics through Tammany Hall early in life, and won a deservedly high reputation for ability to make large sums of money out of every office which he held. He served as Public Administrator of this city, Assemblyman, State Senator, Police Commissioner, Park Commissioner, and Corporation Attorney, and in each of these positions he added largely to his growing private fortune. It is said of him that he made the office of Corporation Attorney "worth" $100,000 a year. His most notorious piece of robbery was in originating and collecting, by means of bills passed through the Legislature by bribery, two sets of alleged "firemen's claims" which were entirely imaginary. Fields's share in this plunder was nearly $200,000. He was indicted for bribery in February, 1872, and when the trial came on in October of that year, he was not to be found. It was discovered that he had converted all his property into cash and negotiable securities, amounting to about $1,000,000, and had left the country and deserted his wife. He went first to Cuba, then to France, and then to Canada, where he lived in "princely style" until his death. Judgment was found against him by the city in 1873, for over a half million dollars, but his absence prevented any further action.

A professor of "fine work" in Chicago is an artist who handles election returns after the votes are cast, and makes the result more or less widely variant from the intention of the voters. The professors have been in practice a long time, with the view of finding out how much "fine work" the public will stand without resorting to a vigilance committee. Ordinary jury trials they have learned to despise, because ordinarily they make the juries themselves. But in the recent election they overpassed the line of safety by a hair, and the consequences have not been a vigilance committee and its attendant inconveniences, but, wonderful to relate, a legal investigation wholly beyond their control and outside of their comprehension. It appears that they had two jobs on hand last fall, one to elect Brand in place of Leman to the State Senate, and the other to secure by popular vote an appropriation of $100,000 for additional policemen—*i. e.*, for more places to be filled by their friends. The returns showed that the appropriation had been carried. The investigation of the Leman-Brand case led incidentally to a recount of the ballots cast for other persons and things, and the astounding discovery was made that the vote for the $100,000 appropriation was some 14,000 less than that returned for it, and that the majority was really against it. What else the investigation may show is not yet known, but it will probably show the doors of the penitentiary to some of the professors of fine work.

The Grand Jury investigation has yielded other curious results, not the least remarkable of which is the mathematical decision to bring in indictments against all judges of election whose returns vary more than 10 per cent. from the actual vote cast. Even after allowing this margin for pardonable error, indictments were found against sixty or seventy judges. The clerks of election were not indicted. There was much running to and fro among the election judges and their friends when the intentions of the Grand Jury became noised about, and strenuous efforts were made to save the more respectable of them from the disgrace of an indictment, but the Jury were inexorable. Any man who couldn't count votes so as to come within 10 per cent. of the true result, must pay a fine or stand trial, with the chance of going to jail. It is the common opinion that, except in a few glaring cases, the judges intended to do their work properly, but that they did it very carelessly, and that it is really necessary to "make an example" in order to secure better counting hereafter.

The deadlock in the Illinois Legislature, resulting from the attempt of Mr. Haines, the temporary Speaker of the House, to make himself permanent Speaker without the formality of an election, has been broken by his voluntary retirement from the chair, after presiding for two weeks over a pandemonium of his own making. Haines was elected as an Independent in a strong Republican county. Finding himself the balance of power in an equally divided House—the membership consisting of 37 Republicans and 37 Democrats, and Haines—he made his trade with the Democrats and was elected temporary Speaker by their votes. The understanding was that he should then vote for a straight Democrat for permanent Speaker. Both parties had had experience of him as a slippery customer in former Legislatures, and neither would trust him implicitly. But nobody had anticipated the full measure of his resources as the weasel of Illinois politics. Seated in the Speaker's chair, he coolly called in question the right of the House to make two elections of Speaker at the same session. According to his interpretation of public law and parliamentary procedure, the House had exhausted its powers in that behalf when it had elected one Speaker—an abstract proposition not destitute of force, but which was rendered laughable by reason of the source from which it came. The House wasted little time in discussing first principles with Haines, but took steps to get rid of him in a parliamentary way by making the place too hot for him. Motions to adjourn, to call the roll, and other proceedings, commonly called filibustering, were rained upon him from day to day by both parties acting in concert, until he was forced to resign, when the Republicans promptly moved that Mr. Cronkrite, the Democratic nominee for permanent Speaker, be elected temporary Speaker in place of Haines, and the motion was carried unanimously.

Underlying this protracted contest over the Speakership is evidently some intrigue regarding the Senatorship, but what it may be is not quite clear. The great majority of Republican members are determined to stand by General Logan under all circumstances, and in this they are wise. A dicker by which they might possibly elect somebody whom they do not want, and whom the people do not want, would do them more harm than the election of a Democrat. General Logan was sacrificed in the late campaign on the altar of his party. He did not want to be Vice-President. He preferred to remain a Senator if he could not be President. He obeyed the imperious order of his party when he accepted the second place on the ticket. The ticket was beaten by the nomination of Blaine, and the same weakness which carried down the national ticket lost the Legislature of Illinois. Under such circumstances the party cannot abandon him without producing widespread demoralization.

Senator Hoar, in the course of his remarks at the memorial services in the Senate in honor of the late Senator Anthony, said: "He was

fortunate in his life. He lived and took a great part in great historic events in a great age. His Senatorial service corresponded almost exactly with the term of power enjoyed by the great party to which he belonged." Mr. Anthony was as fortunate in his death as he was in his life. He entered the Senate in 1859, when the Republican party was on the eve of coming into power, and he died in September, 1884, on the eve of his party's departure from power. He was, during his twenty-five years of public life, a Republican through and through. The idea of opposing the will of his party was to him something monstrous, and the Republicans who under any circumstances followed such a course, were in his opinion worthy of the severest reprobation. While a man of strong convictions and irreproachable character, he believed with all his heart in keeping his party in power by the use of all possible partisan means. In Rhode Island he built up a political machine which for compactness and efficiency had no superior anywhere, and even his warmest admirers are forced to admit that he used it to put into office and keep there some men whose qualifications for their positions were at least very doubtful. His partisanship grew more intense with age, and if he had lived to see his party overthrown, and himself deprived of the power of patronage, his life would have been very unhappy.

In the beginning of 1879 the Clearing-houses of New York and Boston passed a resolution that all balances should be paid in gold or legal-tender notes, and that silver dollars should be received only from depositors who would agree to receive silver in payment of their checks. This resolution remained in force in both cities until the passage of the act for renewing the charters of national banks some eighteen months ago. In this a proviso was inserted, on the motion of Senator Beck, of Kentucky, that no national bank should be a member of a clearing-house at which silver certificates were not received in payment of balances; silver certificates, by the way, not being legal tender. The New York Clearing-house thereupon simply rescinded its resolution of 1879. The Boston Clearing-house went a step further, and voted to receive silver certificates. Some of her more experienced and far-seeing financiers protested against this policy, and predicted that a time would come when New York funds would command a premium in Boston, since silver certificates were made bankable by affirmative action in the latter city, while in the former the question of receiving them was still in abeyance. The condition predicted has come to pass. New York exchange commands a premium of seventy-five cents per $1,000 in Boston, although the express charges for shipping currency are only 40 cents per $1,000. Of course, there is great indignation in Boston. The Treasury Department has simply taken Boston at her word, and paid her in the funds which she has elected to receive. Silver certificates have not been forced upon New York, because the Department has decided to fight off the silver crisis as long as possible, hoping that Congress may suspend the coinage and stop the wasteful expenditure which it involves. Washington despatches indicate that the Secretary of the Treasury will take steps, not to bring on the crisis by requiring the New York banks to take silver certificates, but to minimize the difficulty in Boston by restricting the payment of silver certificates there. This is, by all means, the wisest policy. Of course, such a step merely postpones the evil day, but it is the duty of the Secretary to postpone it, and to give the Administration of President Cleveland the opportunity to bring about a suspension of the silver coinage if it shall be able to do so.

The Tenement House Cigar Act, which the Court of Appeals have recently set aside as unconstitutional, has been very often discussed, and has been before the courts for not quite a year. A bill was passed last session, within a week or so of the Oleomargarine Bill (which protects the dairymen's trades union), prohibiting "the manufacture of cigars or preparation of tobacco in any form on any floor, or in any part of any floor, in any tenement house," when family arrangements go on there too. The act in question was alleged to be, and probably was, a trades-union bill, favored by the workmen in the large manufactories in order that their work might not be undersold. They painted a terrible picture of the taskmasters who, to save a few pennies, turned small family living apartments into reeking workshops. And they were to a certain extent encouraged by the philanthropists of this city, who did not reflect that, as this labor was better paid than most others and had fewer expenses, so the tenements in which it was carried on belonged to the better class of such houses. And further, that any such law would drive industry to neighboring parts like Jersey City, where no such restrictions are imposed, and the sanitary arrangements are not so good as here. This sanitary question is of course the question at issue. Judge Earl decides that the Act is not a health-law, and is therefore unconstitutional. The main advantage to be derived from the wide publication this opinion of the Court of Appeals has received will come from its plain language, and the broad view it takes of the special class legislation of which there is now so much on our statute-books.

Mr. James Russell Lowell, in the discussion following his lecture on "Labor and Wages in America" before the Society of Arts recently in London, told the simple truth when he said that "what far-sighted Englishmen" now most fear as a menace to English industrial supremacy is the adoption of a free-trade policy in the United States. The absurd stories about the eagerness of the Cobden Club and British manufacturers to break down the American tariff, in order to get their goods into this market, do well enough for campaign thunder in this country, but they help to conceal the real truth of the situation. British exports to the United States, in spite of the enormous purchases of our food products, only amount to $155,000,000 in round numbers, out of a total to all parts of the world of $1,205,000,000, or about one-eighth. What far-sighted Englishmen fear is having to contend with the United States for the remaining seven-eighths of the trade all over the rest of the world, which they would assuredly have to do if, in addition to cheap food, Americans had cheap raw material and cheap machinery.

Colonel Burnaby's death appears to interest the Londoners more than any other incident of General Stewart's battle. He made himself also very conspicuous in the two fights before Suakim, where he served as a volunteer, and was very prominent in the slaughter of the defeated Arabs. This raised a question of casuistry in the press, whether a man not serving in the fighting force was justified in killing the enemy on the field. It was, however, decided in Burnaby's favor, even by the stricter moralists, on the ground that the army is the country, and that every Englishman is justified in helping it in action by such means as he may have at command. Burnaby first made himself known as a daring traveller in Central Asia, who turned his adventures to account by using them to fan the flame of Russophobia by which the Beaconsfield Ministry was then trying to live, and he was for a time one of the leading heroes of Jingoism.

The scramble for Africa is daily becoming more lively. Almost all the European nations are agitated by participation, or by a desire to participate, in it. France, not content with her vast Algerian possessions, with the recently occupied Tunis, with territories on the Senegal and the Gaboon, with points in Madagascar and islands adjoining it, with Obock on the Gulf of Aden, with the lands between the Ogoway and the Congo which De Brazza procured her by purchase and treaty, wrangles with the African Association for a portion of the south bank of the latter river. The Association itself is about founding a state of vast dimensions on both sides of the Congo, under the auspices of the King of Belgium. England, in addition to her numerous possessions on the Guinea coast and north of the Cape, temporarily holds Egypt and Nubia, fights on the upper Nile and the shore of the Red Sea, hoists her flag over St. Luisa Bay in Zulu Land, occupies Pondoland, and is about entering upon a contest with the Boers for the wilds of the Bechuanas. Germany has planted her flag in Upper Guinea, at the mouth of the Cameroons, in Namaqua and Damara Lands, and, according to late despatches, on points near the Senegal. Between this river and the border of Morocco, Spain is reported to have grasped some strips of territory. Portugal contends for her excessive old claims. An Italian expedition has just sailed through the Red Sea for the military occupation of the territory of Assab, near the Strait of Babel Mandeb and the French settlement at Obock, and all over Italy suddenly the cry is raised by the press that Tripoli must be annexed to the kingdom. And, last of all, an agitation has been begun by a powerful Moscow journalist, M. Katkoff, for the establishment of a Russian protectorate over parts of Abyssinia, in order that the great Slavic Empire may have its share in the spoils of the dark continent, and in the guardianship of the Red Sea, the naval highway between Russia's Black Sea coasts and her possessions on the eastern shores of Asia.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, January 21, to TUESDAY, January 27, 1885, inclusive.]

DOMESTIC.

MR. EDMUNDS introduced a bill in the Senate on Saturday to prevent and punish crimes by means of explosive compounds. It was a mere draft, but although imperfect he submitted it in order that it might be referred to the Committee on the Judiciary for early consideration and perfection. It may, he added, raise a question between the rights of the United States and the duties of the separate States, but the Committee would take the whole subject into consideration. The bill provides for the punishment of any one engaged in the manufacture, sale, or conveyance of explosive compounds with intent to destroy life and property in this or any foreign country.

In the Senate on Saturday Mr. Bayard introduced a resolution expressing "horror and detestation of such crimes against civilization" as that of which the Senate had just heard, with "indignation and profound sorrow," through the press despatches from London. The resolution was taken up on Monday. Mr. Riddleberger moved that it be referred to the Committee on Foreign Relations, but it was defeated by 2 to 55, the affirmatives being Messrs. Van Wyck and Riddleberger. Mr. Riddleberger then moved that further consideration of the resolution be postponed until next Wednesday. He declared that the Senate had not sufficient information upon which to base action of this kind. The body was asked to vote in a way which would be interpreted as sympathy with England and against Ireland. Mr. Hoar (Rep., Mass.) said the Senator from Virginia seemed to treat the occurrence in London as if it were a warfare adopted by the Irish people against England. He (Mr. Hoar) had among his constituents many persons of Irish descent, intelligent, brave, manly people. He thought he was justified in stating that the doctrine expressed in the resolution was their doctrine, as it was that of other American people. The making of war upon unoffending women and children was as repugnant to these citizens as to any other people. Senator Ingalls (Rep., Kan.) noticed in the papers that feelings were prevalent in England on Saturday in favor of bringing some pressure to bear upon America in this respect. He would vote for the resolution, not as an apology, not as an expression of sympathy, but as an expression of abhorrence for such crimes. The explosions on Saturday shook the foundations of every capitol in Christendom. Senators Hawley and Gibson spoke in favor of the resolution of condemnation. The motion to postpone was defeated by 1 to 62, and the resolution was passed by 63 to 1 (namely, Mr. Riddleberger).

In the House of Representatives on Monday Mr. Findlay (Dem., Md.) offered a resolution, which was referred to the Committee on Foreign Affairs, calling on the Secretary of State for information as to whether any citizen of the United States, or persons domiciled within the same, were concerned or participated directly or indirectly in bringing about the recent explosions in London.

The House bill for the retirement and recoinage of the trade dollars was reported in the Senate on Tuesday with amendments. It provides that until July 1, 1885, United States trade dollars, if not defaced, mutilated, or stamped, shall be received at the office of the Treasurer or any Assistant Treasurer of the United States in exchange for a like amount, dollar for dollar, of standard silver dollars of the United States. The trade dollars are to be recoined into standard silver dollars. The President is authorized to renew negotiations with the States of the "Latin Union" and with other foreign Powers, for the purpose of making treaties with them in order to secure such coöperation as may enable the nations agreeing thereto to open their respective mints to the free coinage of silver, with full legal-tender power, at an agreed ratio to gold. In case no such treaties shall be ratified prior to August 1, 1886, the coinage of standard dollars under the Act of February, 1878, shall be suspended.

In the House on Wednesday the Agricultural Appropriation Bill was introduced. It appropriates $546,290, being $152,820 less than the estimates. The Committee of Ways and Means reported a bill to authorize the establishment of export tobacco manufactures, and allowing drawbacks on imported articles used in manufacturing exported tobacco. On Friday both houses of Congress were presented with handsome silk flags by the Women's Silk Culture Association of the United States. The flags were made of silk raised in American homes, by American women and children, reeled, spun, dyed, woven, and mounted in Philadelphia.

Mr. Hurd (Dem., O.) offered in the House on Friday a preamble and resolution, reciting that certain bills appropriating money from the Treasury, originating in the Senate, are now on the Speaker's table, to wit, the Blair Educational Bill and many others, and that it is asserted that these bills are in violation of the privileges of the House to exclusively originate bills for raising revenue, and directing the Judiciary Committee to inquire into the power of the Senate to originate bills appropriating revenue, and to report to the House at any time. After a debate the resolution was laid upon the table by a vote of 127 to 123. A motion to take up the Mexican Pension Bill was defeated by 103 to 120.

The House Committee on Appropriations on Monday reported the Army Appropriation Bill. It provides for an appropriation of $24,429,053. The estimated appropriation amounted to $26,110,490.

The River and Harbor Committee of the House have decided to adopt the Eads scheme for the improvement of Galveston, Texas, harbor, appropriating $750,000 for the coming year, and giving Captain Eads $5,000 a year salary for supervising the work.

Mr. Randall is said to be disgusted with the action of some of his associates on the Grant Retirement Bill, and asserts that if he can obtain recognition on the second Monday in February, he will move for a suspension of the rules and the passage of the Edmunds bill in regard to General Grant.

A fire, on Monday morning, occurred in the House of Representatives at Washington, under the iron roof, among some books and papers. It was soon extinguished, and the damage was very slight. Electric wires are supposed to have caused it.

President Arthur on Friday nominated his political friend and henchman, Andrew S. Draper, to be a Judge of the Court of Commissioners of Alabama Claims.

A resolution was offered in the Assembly at Albany on Thursday morning by Mr. Barnum, directing a special committee to investigate the scandalous rumors connected with the last part of Mayor Edson's administration in this city. The general assumption is that it is a movement specially against Judges Truax and Beach.

In the Senate at Albany on Friday a bill was passed appropriating $250,000 for the temporary continuation of work on the Capitol.

In the Assembly at Albany on Monday night, General Husted introduced three bills for the preservation of the Adirondack forests. In the Senate, Mr. Gilbert introduced a bill to regulate the manufacture and sale of dynamite. It provides that any person who shall manufacture, buy, or sell, or bring within the limits of the State, any nitrate or chlorate explosive compound for the destruction of life or property in any place whatsoever shall be deemed guilty of felony and punished by imprisonment for a term of years. Any person aiding or abetting is to be treated as a principal, and any one contributing or soliciting contributions for the purpose is to be deemed guilty of felony. It also provides that no person shall manufacture, buy, sell, or transport the above compounds without an official permit; and that all persons who sell them must keep a record of such sales, including the kind and the amount of the explosive, with the date of sale. A similar bill has been introduced in the Massachusetts Legislature.

Speeches openly rejoicing in the London explosions, and advocating wholesale destruction of life and property, were made by the Chicago Socialists on Sunday.

The Wisconsin Republican legislative caucus on Wednesday night nominated John C. Spooner for United States Senator.

The coldest weather ever recorded at Mount Washington was experienced on Thursday morning, the thermometer registering fifty degrees below zero.

Reports from remote districts in Texas are coming in, to the effect that the loss of cattle by starvation and exposure has been very great. A prominent stockman estimates it at 5 per cent. of the 15,000,000 head of cattle in that State. Reports from Kansas and Nebraska are also very bad.

The creditors of Oliver Brothers have accepted the proposition for a five years' extension of time, with some slight modifications.

At a meeting of the directors of the Metropolitan Opera-house of this city on Thursday, it was resolved that Dr. Damrosch should be empowered to select a company and make arrangements for a season of German opera, to begin, probably, next November, and end early in 1886. It was also decided to increase Dr. Damrosch's salary next season from $10,000 to $12,000.

Two deaths from what is pronounced to be genuine cholera were reported in St. Louis on Wednesday.

Thomas Craig Fields, better known as "Tom" Fields, of Tweed Ring notoriety, died on Sunday of pneumonia, on his farm near St. Andrews, Canada.

FOREIGN.

London was startled on Saturday afternoon by three terrific explosions about 2:10 o'clock. It soon became known that an attempt had been made to blow up the Houses of Parliament. The first explosion was in the crypt of Westminster Hall; the second, three minutes later, was under the Peers' gallery of the House of Commons. Saturday being visitors' day, the building contained many sightseers. The western extremity of the House was totally wrecked. All the woodwork about the Peers' gallery was shattered and a wide hole was made through the floor. The gallery was displaced, and even the solid stone-work of the doorways was pulverized or shifted from its position. The gallery benches were overturned and broken, and the gallery generally dismantled. At Westminster Hall four persons were badly injured, including two policemen. A lady who was in the hall spied the infernal machine and called the attention of Policeman Cole, who was on duty at the time, to it. He rushed to the spot, seized the machine, and attempted to extinguish the fuse, but was not quick enough. The fuse burned so rapidly that the officer became alarmed and dropped the box. The explosion followed almost immediately after. One half of the hall was wrecked.

Almost simultaneously with these explosions a third occurred in the Tower of London. The place was filled with visitors. The explosive was placed in the inmost structure known as the White Tower. The report was terrific and was heard for miles along the Thames. Sixteen persons, including a number of children, were injured. The damage to the Tower itself was not very great.

Excitement throughout the city increased in intensity during the day. Guards of soldiers and police were stationed around all public buildings. A number of arrests were made.

The excitement on Monday and Tuesday was unabated, and there were threats of lynching the authors of the outrage if found.

All the people injured by the explosion are doing well. Cox and Cole, the injured policemen, recovered sufficiently on Sunday to make a statement which it is thought may lead to important arrests. Cunningham, a mysterious Irishman, who was arrested at the Tower on Saturday, was arraigned on Monday in the Bow Street police court. An inspector deposed that he examined the prisoner at the Tower; that he (the prisoner) was confused and gave contradictory answers to the questions propounded. The prisoner, the inspector said, first gave a wrong address as to his place of abode. He formerly resided in America. The prisoner admitted that the inspector was correct in his testimony, but refused to say anything further. He was remanded until February 3.

The official estimates made by the British Government inspectors place the amount of the pecuniary damage wrought by the explosions in Westminster Hall, the House of Commons, and the Tower at $70,000.

The *Pall Mall Gazette* on Monday, in an article on the explosions, said: "It is both undignified and foolish to scream about America. If O'Donovan Rossa were hanged to-morrow and the collection of money for the skirmishing fund made a criminal offence, it would fail to stop the outrages."

The Paris *Gil Blas* asserts that the whole conspiracy was hatched in that city, in an English printing-office, and that the infernal machines were manufactured in the St. Denis quarter.

General Lord Wolseley, on Wednesday afternoon, sent to the British War Office a despatch, dated "Korti, January 21, 3 P. M.," announcing a British victory in the Sudan. In the despatch he said: "General Stewart has had a heavy engagement with a portion of the Mahdi's forces near the Abu-Klea wells, about twenty-three miles this side of Metemneh. The rebels had collected from Berber, Metemneh, and Umderman. This last place, I regret to say, the prisoners report, was recently captured by the Mahdi, and thus the men were released from there to fight General Stewart. On Saturday, January 17, General Stewart endeavored to draw the enemy on to make an attack, but the rebels hesitated. In consequence of this General Stewart left all his impediments and camels under guard of the Sussex regiment and some mounted infantry, and moved forward, keeping his forces in the form of a square. All the men were on foot. The British army passed round the enemy's left flank, forcing them to make an attack or be subject to an enfilade fire. The enemy wheeled to the left and delivered a well-organized charge under a withering fire from our men. The square was unfortunately penetrated about its left rear, where a heavy cavalry and camel regiment were in position, by sheer weight of numbers. The admirable steadiness of our men enabled them to maintain a hand-to-hand fight with the opposing force, while severe punishment was being inflicted upon the enemy by all other parts of the square. The enemy were finally driven back under heavy fire from all sides. The Nineteenth Hussars then pushed forward to the wells, which were in our possession by five in the evening. The enemy left not less than 800 slain around the square. General Stewart's operations have been most creditable to him as a commander, and the nation has every reason to be proud of the gallantry and splendid spirit of her Majesty's soldiers on this occasion. Our losses were 9 commissioned officers killed and 9 wounded, and 65 non-commissioned officers and men killed and 85 wounded. General Stewart's force consists of about 1,500 men, all told." Among the killed was Colonel Burnaby, hero of the "Ride to Khiva." General Stewart's column immediately resumed its march to Metemneh.

It was reported on Thursday that General Stewart had occupied Metemneh, but this was not confirmed. On the other hand, it was asserted that the rebels held it.

There was great uneasiness in London on Friday because no news had been received from General Stewart since the battle. Private advices received late that afternoon from Korti asserted that the rebels had surrounded General Stewart in the desert, where he had taken up an intrenched position to await reinforcements from General Wolseley. Deserters from the rebel lines stated that the Mahdi's officers consider the affair at Abu-Klea wells a drawn battle. The Government discredited these reports. On Monday the anxiety was intense because no news had yet been received.

A rumor was circulated at Cairo on Friday that General Stewart's troops had been routed by El Mahdi. It was generally believed, and the natives assumed such a threatening attitude that ball cartridges were served out to the British garrison. The officials at the British War Office believe that General Wolseley may find it imperatively necessary to reinforce the troops operating against El Mahdi.

General Earle's column, thoroughly provisioned and equipped, comprising artillery, cavalry, and camel corps, started on Saturday from Hamdab for Berber. The march is to be made by way of Abu Hamed.

General Lord Wolseley telegraphed from Korti on Monday that he had received no further news from General Stewart. He assures the Government that in his opinion there is no cause for anxiety at this long absence of intelligence, for additional reports must come by camel couriers with a British escort. The first despatch was brought in by Bashi-Bazouks.

A large convoy was sent by General Wolseley on Monday from Korti to the Gakdul Wells, and it is to proceed in the direction taken by General Stewart with all possible speed.

Mr. Parnell, in a lecture at Cork on Friday night, said that the day was not far distant when the Irish Parliament would be restored.

Mr. Morgan O'Connell, second son of Daniel O'Connell, the great Irish agitator, is dead.

Minister Lowell presided at the meeting of the Society of Arts in London on Wednesday evening. In the course of his remarks he said that his position prevented his expressing an opinion on the subject, but he would say that many far-sighted Englishmen believed the adoption of free trade in America would give England dangerous competition in all the markets of the world, because many American fabrics were more honest than English goods of the same description. Free trade would enable America soon to equal England's mercantile marine, which had heretofore been impossible through the operation of the American navigation law and tariff. England would find America the most intelligent competitor she had yet met.

It was asserted by the *Pall Mall Gazette* on Thursday that the Cabinet had accepted the French proposals regarding Egyptian finances as a basis for negotiation, provided that no "multiple control" shall be instituted, and the coupon shall be taxed instead of cut. Germany and Russia will be admitted to representation in the Caisse de la Dette Publique. England will offer to guarantee a loan of £9,000,000, but is willing to discuss the question of international guarantee if the Powers are unanimous on this point.

The Paris *Mémorial Diplomatique* has expressed displeasure at the behavior of the American delegates to the Congo Conference. It attributes the delay in the conclusion of the labors of the Conference to the numerous proposals which have been introduced by those gentlemen, whom it styles the "godfathers of the newly-born State." Mr. Henry M. Stanley, it says, "speaks everywhere in genuine Yankee style, attacking and insulting the Conference of the Powers. The German proposals would have been accepted long ago but for American opposition."

Elections for Senators were held throughout France on Sunday. Sixty-seven Republicans and twenty Conservatives were elected; a gain of twenty-two Republicans.

Gen. Brière Delisle telegraphed on Friday to the French Minister of War, announcing that he has at least 80,000 Chinese troops before him, so strongly intrenched as to render any direct attack hopeless. He therefore suggests a complete change in the plan of the campaign; that the 12,000 reinforcements be sent to Pakhoi, and not to Haiphong, so that they can fight the Chinese army in the rear, while General Negrier attacks it in front.

On Saturday news was received that the French troops, under Admiral Courbet, who had attempted to seize the mines at Kelung had been seriously repulsed, with a loss of seventy-five men in killed and wounded. The fighting was very severe. The French troops are being organized for a combined attack on Kelung and Tamsui.

The first accounts of the French repulse at Kelung were exaggerated. Admiral Courbet telegraphs as follows: "A detachment of African light infantry imprudently attempted to carry strong Chinese earthworks south of Kelung, and was repulsed. Nineteen men were killed; twelve were seriously and fourteen slightly wounded. Reinforcements have since arrived and landed at Kelung in excellent health."

A severe anti-Socialist law has been introduced in the Austro-Hungarian Reichsrath. It forbids the formation of clubs; provides for Government control of charitable societies in order to prevent the covering up of Socialist plots; empowers the authorities to forbid any public meeting, and to confiscate Socialist pamphlets, whether printed in Austria or abroad. The last clause of the bill provides that persons accused of Socialistic offences shall be tried without jury. The act is to remain in force five years. The Explosives Bill also introduced allows punishment by death where culprits could foresee the fatal effect of their deeds.

An attempt was made by Nihilists on Saturday to assassinate a Police Superintendent in St. Petersburg.

A convention was concluded on January 12 between Russia and Prussia, and has been in force several days, providing for the extradition of persons guilty of murder, attempted murder, or of committing or preparing to commit acts against the German or Russian Emperors or their families, such as assassination, acts of violence causing bodily injury, abduction, or insults. The convention also provides that persons guilty of the illegal manufacture or storage of explosives shall be extraditable.

Emperor William has entirely recovered his health.

The German Reichstag on Friday, after a protracted debate, adopted by a large majority a grant of $37,500 to be used in exploring Central Africa. This is a success for Bismarck.

Many more villages in Italy have been overwhelmed by avalanches, and the loss of life is terrible. Most of the accidents seem to have occurred in the province of Cuneo, at Frassino, Valgrana, etc. The village of Rabasso is almost completely buried under the snow. Scores of people have been killed there, and over 200 men, women, and children are wounded and homeless.

The Canadian Minister of Agriculture has delivered a decision in the case of the Bell Telephone Company, declaring the patent void for the reason that the company or its representatives had imported the patented articles after twelve months from the date of the patent.

The Montreal ice carnival was successfully opened on Monday morning. The city is filled with visitors.

An infernal machine was recently sent to the President of Chili. It was arranged to go off when opened. The President endeavored to open the parcel, but became suspicious of its contents and did not proceed.

THE UNITED STATES AND THE DYNAMITERS.

THE explosions in London on Saturday are crimes for which civilized men do not need to express their horror. In fact, any formulated expression of it, like the resolution introduced in the Senate, seems to concede the necessity of removing some doubt as to the way in which American legislators look on the destruction of great works of art and of great historical monuments, and the slaughter of innocent people of all ages and both sexes. It is only that class of malefactors known as enemies of the human race who attempt such things, and we respectfully submit that the American Senate is hardly called upon to "express its horror and detestation of such monstrous crimes against civilization." What most concerns Americans in this matter is, not how to let the world know that they hate such outrages, but how to satisfy the world, and especially Englishmen, that they do not, by negligence either in legislation or administration, facilitate the perpetration of them. There is in England a strong belief, which we have no doubt prevails to some extent on the Continent, that the United States are in a greater or less degree responsible for the late dynamite outrages, owing to the failure of the officers of the law here to find out and punish the conspirators who prepare them on this side of the water. To the plea that the American law is not sufficient for the purpose, the answer is that it is the duty of a civilized and friendly nation to make it sufficient.

The bill introduced by Senator Edmunds on Saturday will be considered a reply to this demand. It makes punishable the sale or manufacture within the United States of all sorts of explosives, with the intent of using them for the destruction of life or property at home or abroad. It also makes punishable the forwarding, by land or sea, or the storing in any wharf, depot, or warehouse, of any such explosives with knowledge that their object or destination is criminal. The bill may have the effect of soothing English irritation, and so far may be of some use; that it will accomplish any other good purpose we greatly doubt. We venture to predict that not only will no conviction or even prosecution ever take place under it, but that it will not in the smallest degree abate the activity of the dynamiters on American soil. Some dynamite has doubtless been sent from this country, but, as a matter of fact, there is no good reason for supposing that one ounce of dynamite employed in outrages on life and property in England has ever been exported from the United States, or has ever been transported by any American railroad, or stored in any American wharf or warehouse. Not one particle of proof of anything of the kind has been produced on either side of the water, even when dynamiters have been caught and convicted. The reason is obvious enough. Dynamite is so easily manufactured anywhere, and is so powerful an explosive in small quantities, that economy as well as prudence forbids its transportation for criminal purposes over long distances.

There is an enormous quantity manufactured or transported for the legitimate and useful purposes of mining and other enterprises, some of the coal companies in Pennsylvania using as much as fifteen thousand pounds every month, and some of the copper mines as much as fifty thousand pounds in the same period. The New York aqueduct just begun will consume thousands of tons of it. The cost of copper and of coal depends very largely on the cost of the explosive used in mining. Any national law affecting even in a small degree the manufacture and transportation of blasting compounds would have its effect on their price to the consumers, probably for the benefit of the dynamite manufacturers, at the expense of the coal, iron, and copper producers.

There is, in fact, no lack of explosive material, nor of the means or opportunity to make it in England. The manufacture of nitro-glycerine is so simple that with a few iron or china pots and a running stream of water, a bottle of glycerine, and a jug of acid, all the explosives the dynamiters want can be readily made in Ireland or England without incurring the greater risk of carrying it from here. The manufacture is a much easier matter than distilling whiskey. The very high explosives are imported to this country, not exported from it. The ship *Erl-King* landed at this port lately from Scotland two tons of what is known as gelatine dynamite, which is one of the highest grades of nitro-glycerine compounds. All of the extremely high explosive gun-cotton came hither from England, until within the past few months when the Government experts have been able to produce it at Newport.

The Irish dynamiters use the United States, not as a factory for their explosives, but as a place in which to make their plans and collect money. In fact, it is quite safe to say that all the money necessary for their enterprises is raised here. It is with the contributions of Irish men and Irish women in this country that the expenses of the English explosions are paid, and it is here probably that the agents are selected, and hence that they are despatched to Europe to manufacture the dynamite and to use it. Now against this, Mr. Edmunds's bill will accomplish nothing. It will not touch the machinery of collection in the least. There are several Irish newspapers in this country devoted wholly or largely to the task of preaching the lawfulness of *all* modes of annoying or injuring Englishmen. These newspapers openly call week by week for money to pay the cost of attacks on life and property in England or Ireland, and to aid in the escape of dynamiters and assassins. They praise assassins in the highest terms, hold them up as examples of patriotism, and publish frantic rejoicings over such offences as were committed in London on Saturday. They print also with the utmost conspicuousness the boasts of persons claiming to have originated or participated in such offences. These papers circulate by tens of thousands all over the country. No such publications were ever before allowed in any civilized nation. They are a constant stream of moral and political poison for the poorer and more ignorant portion of the Irish population in this country, and they enable hardened villains to obtain from them large sums of money, of which in all likelihood not over one-half is applied to the purpose for which it is originally collected; the rest is stolen and spent in debauchery.

Though last not least, the immunity from all legal pursuit which these publications enjoy produces in their readers the impression that the American public is either indifferent to their horrible preachings, or secretly sympathizes with them. This impression is of course deepened by such incidents as the successful attempt last year to procure the unprecedented interference of the United States Government in behalf of the murderer O'Donnell, and by the open fraternization of the party in power during the late Presidential campaign with the leading dynamiters. These wretches were active and welcome supporters of Mr. Blaine, and were treated with much respect by his newspapers under the name of "Independent Irishmen"; and the Republican Committee, we think, will not venture to deny that the worst of their villanous newspapers in this State were heavily subsidized out of the Republican campaign funds.

In an interview with Mr. Blaine reported in the New York *Tribune* immediately after the election, we find the following significant passage:

> "I asked Mr. Blaine if he thought the Irish-American vote was organized at all, or had competent leaders. 'Yes,' said he, 'I was deeply impressed by the ability, the earnestness, and the sincerity of those whom I met. There, for instance, is Patrick Ford, of the *Irish World*. He is a man of the most unselfish devotion to any cause he espouses, possessing a great faculty for organization, with marked ability and untiring energy. General Kerwin, of the *Tablet*, has in large degree the same characteristics and is a far-sighted and able man, with a fine record as a Union soldier. The *Irish Nation*, edited by John Devoy, also gave us strong and valuable support."

Patrick Ford is, and has been for years, the principal collector of the murder funds, through his paper the *Irish World;* and John Devoy follows not far behind him in the *Irish Nation*. Ford admitted in court on Saturday that he had an "emergency fund" of over $40,000 on hand, and he makes no secret of its objects. As long as such men are allowed to collect money publicly for criminal purposes, to preach the laudableness of explosions and murder, or to publish the boasting confessions of the exploders and the murderers, the Irish will remain convinced that the American public does not severely condemn their peculiar modes of liberating their country. Whether any legislation against dynamite agitation as now conducted is possible, and whether if enacted it could be executed, are questions we do not purpose to discuss to-day. We simply wish to bring those who feel that the United States are disgraced by being made the scene in which the dynamiters hatch their plots, face to face with the real problem presented by the situation. No dynamite is sent from this country; but money to buy dynamite and pay those who use it, is sent, and is collected for this purpose without the slightest concealment. We do not say that this collection can be prevented by law. If it could not be done openly, it would probably be done secretly; but if it had to be done secretly the charges of negligence or connivance made by foreigners against the United States would be less plausible than they are.

ON THE FOURTH OF MARCH.

CAREFUL observers of public affairs are beginning to see that, on the fourth day of March next, President Cleveland may, and probably will, be confronted with problems of administration, demanding immediate solution, as serious and perplexing as any that have confronted any President on that day in March since the eventful year of 1861. To some of these problems it may be necessary, in the sense of the public safety, that there be allusion by President Cleveland, in the inaugural address which it has been usual for the new President to deliver on the steps of the Capitol after taking that most solemn oath "to execute the *office* of President" and "preserve, protect, and defend the Constitution."

What will be the actual condition of the Federal Treasury on the 4th of March next cannot now be clearly foreseen or foreknown—at least not by one outside the Treasury Department. It is, however, an open secret that the condition of the national finances is critical in many most important particulars, some of which have been indicated in this journal. Whether or not the President-elect will be told within the next month or six weeks what is the real numerical relation, in dollars, of gold in the Treasury vaults to outstanding greenbacks; of silver coinage in the Treasury to gold coinage; of each and both to silver certificates and gold certificates; of current Treasury expenditures to current Treasury receipts; of the relations between the Treasury Department and Associated City Banks of New York, and also what is the true condition of the public debt—we have no means of knowing. It is not very likely that anything in the way of very useful silver legislation will be done by this Congress, and, therefore, the problem of silver coinage will confront President Cleveland in all its portentous reality, and along with it the possible peril of an 85 or an 82-cents "silver dollar" as a legal-tender coin. It is not necessary now to ascertain or declare which political party has been the most at fault for the existing condition of the Treasury, its coinage, and its finances. What President Cleveland will have to deal with will be a feasible, safe, and immediate *remedy*, both in the sense of prevention and of cure. That problem of remedy will tax to the utmost, not only the faculties of the President, but of an experienced and well-equipped political economist and financier at the head of the Treasury Department. The new Secretary of the Treasury will have no time to "cram" for the work on hand. He will need to be not only a man really competent by experience, observation, study, familiarity with financial legislation, and by habit of mind, but a man known to the country to be thus competent. Public confidence in him will be almost as important as the fact of his competency.

In the Department of Foreign Affairs, problems will, on the 4th of next March, confront President Cleveland that are as serious and critical as those which will confront him in the department of coinage, currency, finance, and the public debt. There have been treaties negotiated by President Arthur, and now before the Senate, that make, or will make, if ratified, a "new departure" in our diplomacy. A series of commercial treaties that tie the hands of the Government in the future levy of duties on merchandise from all or a large part of the States and colonies on the south of us, must be of tremendous significance. The consequences of such treaties, for good or for evil, the country is only just beginning to appreciate, and does not yet fully comprehend. Fortunately, President Arthur has inserted in the Spanish treaty, and presumably in all the commercial treaties that are on the way, a stipulation that they shall not be exchanged and proclaimed as binding till not only the Senate, but the law-making power, has ratified them. If ratified by the Senate, those treaties must then by the President be submitted to Congress as a legislative body, and President Cleveland may be called on to approve or veto the doings of Congress thereon. Therefore, the responsibility of ratifying, exchanging, and proclaiming the Spanish treaty may, and probably will, rest, in the end, on President Cleveland. He will probably be called on to deal with the whole subject *de novo*. If he shall disapprove of the Spanish negotiation, will it not be fit and proper that he frankly indicate his opinion at an early day?

In respect to the Nicaragua treaty, his personal responsibility will probably be the same, and will be immediate, since it also must be ratified by the law-making power as well as by the Senate. He must decide whether or not the Clayton-Bulwer Treaty is now binding on the United States, or whether it is voidable at the will of the United States, and ought to be voided. If that treaty is binding, it is a part of the "law" of the land which the President must execute, on the peril of impeachment if he refuses or fails. Therein the United States stipulated *never* to "occupy, or fortify, or colonize, or assume, or exercise any dominion over Nicaragua." What if President Cleveland shall come to the conclusion that the stipulation is to-day binding on his country, and that the Nicaragua treaty repudiates the stipulation?

For what proposition Senator Edmunds is, in behalf of the Nicaragua treaty and the Administration, arguing in the Senate, neither the country nor the President-elect is permitted to know. It is, however, not understood that any one contends that both of the contracting governments deem the Clayton-Bulwer Treaty at an end. The treaty may, as we have said, be voidable at the will of the United States, but it has not yet been declared void by the President. The Senate cannot alone declare and make it void. Congress and the law-making power may make the declaration. Possibly President Cleveland can, by his own act, terminate it if he sees fit: there was an interesting discussion of that question in the Senate in 1855-6. But the Clayton-Bulwer convention has, we repeat, not yet been clearly and finally declared at an end by any adequate authority.

Even a glance at the situation makes it apparent that President Cleveland will, on the fourth of March next, be facing new and most critical international questions, which will put to a severe and immediate test the most intelligent and experienced diplomatist, lawyer, and statesman to whom the affairs of the State Department can be intrusted.

SPAIN AND CUBA.

THE suggestion, so diligently put forth by the promoters and advocates of the Spanish Treaty, that unless the negotiation at Madrid is speedily ratified by the American Senate and by Congress, there will be war between Spain and the United States, deserves, in one aspect, more consideration than it has received. The country is told that the war will come if the Spanish Treaty be rejected at Washington, and somewhat in this way: The first premise is, that nothing less than a ratification of the treaty can give such a revival of business, such a relief from grinding taxation, and such popular contentment in Cuba, as will prevent another insurrection, or a civil commotion, ending possibly in a war of races on the island. Such an insurrection against Spanish authority, or such an uprising of the black and colored races against the white race, would, it is said, appeal so powerfully to a certain class of opinion in the United States, that President Cleveland could not maintain the Government in the attitude of an impartial outsider. Hence a foreign war!

The circumstances of the first premise need to be carefully examined. That Cuba is, financially and politically and in every sense, in a very bad condition, cannot be denied; but whether or not an American ratification of the pending treaty will be any remedy, or the fittest remedy, may and will be very generally denied. What has been the cause of the evils in Cuba under which the island now suffers and groans? A proximate cause may be the long war that was waged in the island from 1868 to 1876, and the depression in cane-sugar industry brought about largely by beet-root sugar bounties in France and in German-speaking countries. A more remote but a very powerful cause, however, is the circumstances of the colonization of the island, its long-continued dependence on Spain as a crown colony, its military government, the existence of slave labor, the hostility of the races on the island, the antagonism between the native Creoles and the governing Spaniards sent out from Spain, and the repeated insurrectionary movements. Can the ratification of the pending treaty remove, or remedy, the evils caused by all those circumstances? Is it reasonable to suppose that the ratification will put good government in Cuba, and take away the existing inducements to insurrection and political disorder?

The population of the island may be a million and a half, or about as large as that of Georgia, with much the same numerical relation between the black or colored and the white races, but with the standard of morals and education very much lower, of course, as to all races in Cuba than in Georgia. Quite one-half are Africans and Chinese. The population is subdivided somewhat in this way:

1. Good and bad Spaniards holding office.
2. Creoles who are planters, agriculturists, business men, and professional men.
3. Free mulattoes and free negroes, made by law incapable of holding civil offices.
4. Slaves, or those recently in slavery.

Previous to the insurrection which, on the dethronement of Queen Isabella in Spain, began in Cuba on October 10, 1868, the total annual revenue of the island was not far

from $26,000,000, of which some $6,000,000 were each year sent to Madrid. But since the end of the insurrection in 1876, although taxation has been enormously increased on the island, and carried well up to the point of confiscation, the Cuban Government cannot pay its own expenses, and has been a beneficiary of the Spanish treasury at Madrid, notwithstanding the large sums borrowed in Cuba by the Governor Captain-General, and the emission of depreciated paper money by an arrangement with the Banco Español. What the last insurrection in Cuba, from 1868 to 1876, signifies, may be inferred from a statement made in the Cortes in Madrid in 1876, that Spain had, at that date and since 1868, sent to and sacrificed in Cuba over 145,000 officers and soldiers. Besides that insurrection in 1868, there was one in 1851, one in 1841, and another in 1829. The fact, so creditable to Spain, that she, by royal orders, put an end, or endeavored to put an end, to the slave-trade with Cuba in 1853, or thereabouts, and also, not long ago, by royal orders, put an end to slave labor in the island, has intensified the difficulties of good government in the island, for reasons which every one in the United States readily appreciates.

The seat of government for Cuba is practically more than 3,000 miles distant from the island. Would peaceful industry and social order have been easily possible in any of the Gulf States of this Union if, in 1865, after General Lee's surrender and the emancipation of the slaves, each of those States had been a crown colony of Spain, with no training in self-government, and ruled by an absolute military officer subject to the orders of a superior in Madrid? It is easy for us in New York to say that Spain should immediately change the system of government in Cuba; abolish the military and feudal régime of a Governor Captain-General ruling as over a besieged place; and introduce education, the ballot, and local self-government, under the lead of financiers and civilians who would insist on an honest civil service. But is not that easier said than done? Could even the Congress of the United States, if it had the right so to do, immediately put a sound system of taxation, currency, finance, and good government into Cuba? Could we straightway and successfully deal with that problem of races—their ignorance, indolence, and poverty? When confronted with the difficult problem, is not the pending treaty a very superficial and unsatisfactory makeshift, or something worse?

President Arthur referred to the treaty in his annual message in these terms:

"It has been the aim of this negotiation to open such a favored reciprocal exchange of productions carried under the flag of either country as to make the intercourse between Cuba and Porto Rico and ourselves scarcely less intimate than the commercial movement between our domestic ports, and to insure a removal of the burdens on shipping in the Spanish Indies, of which in the past our ship-owners and ship-masters have so often had cause to complain. *The negotiation of this convention has for a time postponed the prosecution of certain claims of our citizens, which were declared to be without the jurisdiction of the late Spanish-American Claims Commission, and which are, therefore, remitted to diplomatic channels for adjustment.* The speedy settlement of these claims will now be urged by this Government."

Little attention has been given to this indication by the President of his purpose concerning "certain claims by our citizens" against Cuba, for injuries inflicted during the late insurrection, and between 1868 and 1878. The claims are said to aggregate many millions of dollars, the payment of which the Government at Washington is demanding at Madrid. What relation, if any, exists between the pending treaty and those claims? What is the nature of the claims? Why were they outside of the jurisdiction of the late Commission? If they were outside of it, how and why are they now prosecuted by the Department of State, and how or why need the negotiation of the treaty have "postponed the prosecution of certain claims by our citizens"? May it not be that Spain will go to war with us rather than pay those "claims," and that the "claims" are the real source of disquietude in certain quarters?

The suggestion that such a condition of things may come to pass in Cuba, if the Spanish Treaty is not ratified, that President Cleveland may be unable to preserve the neutrality of the United States, will not give the country much uneasiness. The suggestion is really so absurd as to be quite unworthy of serious notice. But what can, or should, be done by President Cleveland to induce, or even compel, Spain straightway to put good government in Cuba, is a very different question. About the right and duty, under certain circumstances, Governor Marcy, when at the head of the State Department, wrote in 1853:

"For many reasons the United States feel a deep interest in the destiny of Cuba. They will never consent to its transfer to . . . any other foreign State. It must be to the United States no cause of annoyance in itself, nor must it be used by others as an instrument of annoyance."

President Arthur, in his last annual message, urges a strengthening of our neutrality laws, but whether as against Irish dynamiters or Cuban filibusters, he does not say. If it be that bad government in Cuba is the source of peril, then the obvious rights of self-protection and of good neighborhood will permit President Cleveland to make very serious and peremptory representations at Madrid about the internal condition of the island, and especially if that condition be offensive and the offence can by Spain be removed. To ratify the pending treaty, and surrender thereby many millions of our present annual revenue to Cuba and take no guarantees for the prevention of excessive taxation, official venality, and stealing by Spanish officials in Havana, as well as for the prudent introduction of self-government into the island, would be most improvident and altogether childish on the part of the United States.

SLIPSHOD LAWS.

THE assembling of the legislatures of the various States for their winter's work has attracted fresh attention to the machinery of legislation, and produced many suggestions on the subject. All of these rest generally on the idea that most legislative work in the United States is defective and slipshod, that the laws are badly drawn, that they are passed without proper reference to and comparison with statutes already in force, that they are frequently jobs disguised as statutes. Governor Hill, of this State, in his first message, recommended that a lawyer be appointed as permanent legislative counsel to draft bills, to advise the members and committees with reference to proposed legislation, and to inspect the various bills before their final passage, so as to detect errors and imperfections, and to suggest necessary amendments. The necessity of taking some such step, he thinks, is shown very clearly by the fact that, during the session of 1883 in this State, some forty-five bills were recalled from the Executive Chamber, after their final passage, for necessary amendment and correction, while during the session of 1884 there were fifty such instances. The critics of the Governor's recommendation can only say in reply to this that such work ought to be done by the legislative committees themselves; but the evil to be cured is the fact that the committees will not do it. The only machinery for preventing bad legislation at Albany is the veto of the Governor, and the Governor now has to do the work of legal adviser to the Legislature, through the veto power, in a very clumsy way; *i. e.*, he has in most cases to correct defects in bills by killing the bills, when, if the Legislature could have been properly advised at the outset, amendments might have been made which would have enabled him to sign them.

In order to understand the necessity of some professional assistance, it is only necessary to recollect how lawless, so to speak, our legislative system is. The Legislature, in the first place, meets on the first Monday of January each year, sits as long as it pleases, and transacts business as hurriedly or as slowly as it pleases. A large proportion of both houses are absolutely without experience. No laws are prepared in advance by the Executive, or by any responsible body, though they may be of course by secret caucuses or committees. The first days of the session are spent in "fixing" the committees behind the scenes, in the interests of corporations and others who may desire private legislation. No notice is given of what private bills are going to be introduced. As soon as business begins, a great crop of bills are introduced, most of which are designed to give some person or corporation a special privilege under, or exemption from, the operation of laws binding on the community. These bills are drawn up not by the legislators who introduce them, but by lawyers privately retained and paid by the special interests behind the bills, and who, naturally enough, as long as they get what their clients want, care very little what the effect on the general body of the law may be. When the bills, thus prepared, get into committee, there are no rules of any value governing the procedure with regard to them. Those interested adversely have not necessarily any notice to appear; there is no attempt to take proof judicially, but "counsel" are permitted to make any statements they please. Toward the end of the sessions bills are hurried through pell-mell, without any actual previous consideration at all.

Now, there is obviously only one way to remedy this state of things, and that is to have the proceedings in committee assimilated in practice as they are in theory to judicial proceedings. A private bill is like a lawsuit. There is always a petitioner who asks the Government for something; there are adverse interests affected (*e. g.*, to take the commonest case, those of land-owners whose rights

a corporation wishes to expropriate); there are facts in the case which need to be known and which are usually in dispute, and the committee is the court which decides in the first instance, and in most cases finally, whether and on what terms the concession shall be granted. In the same way, though for somewhat different reasons, the procedure in the case of general laws requires supervision. These laws change the existing law of the State, and are rushed through without proper examination, just as private bills are, especially toward the end of the session. They are frequently merely disguised jobs.

The adoption of the system introduced in England over half a century ago, to regulate Parliamentary procedure, is the only method of reform which those who have given their attention to this subject have ever deemed practicable. It has been already introduced in a measure in Massachusetts. It embraces: 1st, the treatment of petitions for private legislation as matters requiring judicial inquiry, and the separation of them from general bills—a duty which would probably devolve upon Governor Hill's "legislative counsel"; 2d, public notice of all private bills to be given, and, whenever practicable, actual notice to adverse interests; 3d, the expenses of private legislative procedure to be borne by those who profit by it, the fees to be sufficiently large to prevent frivolous applications and to give a fund for the employment of experts and counsel by the committees if necessary, and a bill of costs to be taxed to unsuccessful applicants; 4th, an obligatory code of committee procedure to secure a fair trial of each case.

For the introduction of such reforms in this State, a constitutional amendment seems absolutely essential. Whatever may be the case in other States, there is, in our opinion, little or no hope of the Legislature here introducing any such system of its own motion, as the English Parliament did. The whole disposition of the Legislature is too deeply colored by sinister interests to make any voluntary action on its part likely, and a new law on legislative procedure would be subject to constant change and amendment. The friends of the reform must agitate for a constitutional amendment, which ought to prescribe certain elementary rules of justice, such as the requirement of notice, a hearing, the introduction of testimony, and some decent interval between the close of the hearing and the passage of the bill. These requirements made obligatory, and reinforced by the Governor's veto, the courts would do the rest of the work by holding void all acts passed in contravention of the new rules.

One of the most curious and instructive additions to the recent literature of this subject is the report of Messrs J. T. Platt, C. E. Perkins, and J. M. Hall to the Connecticut Bar Association, on the subject of a proposed revision of the laws of that State. Revisions were originally periodical collations of the statutes of a State, for the purpose of making the law more compendious and certain. An excellent and well-known piece of work of this sort was the "Revised Statutes" of this State, a compilation now some fifty years old, which has been continually altered, but seldom to be improved. In progress of time, revisions in all the States have become more and more frequent, and also more and more careless, and now in many States they threaten to degenerate into mere jobs to give the Commissioners work. The Connecticut lawyers to whom the matter has been referred, report that the statute law of that State is its "most uncertain" department, and that this is due to a considerable extent to the "frequent revising" it has undergone, and they accordingly recommend that the statutes of that State be simply let alone. The fact is, as every lawyer and most laymen know, that what we want is not more frequent but better and less law-making. It is obvious, however, that one excellent way to prevent the necessity of frequent revisions after laws are passed is to have them submitted to the most searching criticism and revision before their enactment.

A JUST MEASURE OF WAGES.

A YEAR or two ago the Pope laid his commands on good Catholics to solve the questions of social reform on the principles of religion, and to adjust the reward of labor and capital according to the precepts laid down in the writings of the Apostles and of St. Thomas Aquinas. A German priest, Father Weiss, has taken these commands to heart, and has published a monograph for the solution of the wages question on true Catholic principles. There has been not a little discussion, of a more or less metaphysical kind, among recent German writers as to the inherently just and natural law for determining wages; and it is not at all surprising that an active-minded priest, who sees this sort of discussion going on all around him, should apply to the great problem the ethical ideas which seem to him the true and eternal ones. He bases his argument on certain passages in Luke, Timothy, Romans, and the writings of St. Thomas Aquinas; and upon this basis constructs a strict mathematical formula for determining what are "just" wages, and what is a "just" return for capital.

At the very outset he draws a distinction as to what he means by wages. He says that the necessaries of life are no part of wages—the laborer must have and is of right entitled to enough to enable him to live; true wages, he says, consists only of the surplus over and above the "cost of producing" labor. Similarly, the capitalist is entitled to the return of his capital intact, and to interest on it. It is only what is left of their joint product after sustaining the laborer and reimbursing the capitalist, that really constitutes the fund to which our author applies his principles of division. We need not follow him into these principles and their consequences in detail. An algebraic formula is given, of which the basis is that the capitalist takes his share of the surplus in proportion to the amount of his capital, as compared to the amount of laborer's "capital" which the latter puts in. This laborer's "capital," we are told, is the capitalized value of the cost of producing him. The cost of producing him consists of those necessaries of life—that minimum of food, clothing, and shelter—to which the laborer was declared to be entitled at the outset. Multiply the annual amount of the necessaries of life by the average number of years, say twenty-five, that a laborer can work, and you get the total cost of producing a laborer. This total cost represents the "capital" which the laborer brings into the business—a capital to which he seems to be entitled by the laws of nature and justice. In the proportion that the united "capital" of the laborers bears to the "capital" put in by the employer, in such a proportion should laborers and employers participate in the surplus which is to be divided between them.

One cannot but smile at the intricacies into which the honest priest follows his principles, which represent to his mind the moral rules, founded on Holy Writ, which all good Christians should observe in fixing the wages of their employees. When the ethically just and right wages are deduced after this fashion to an exact mathematical certainty, the absurdity of the whole method of approaching the problem becomes so plain that there is no need of showing how absurd the details are. Yet is not such a writer doing essentially the same thing that our trade-unionists and strikers are doing when they demand "just" wages, or that politicians are doing when they promise laws for securing "fair" wages, or that many kind-hearted people do when they protest against "starvation" wages? All talk of this kind is based on the notion that there is such a thing as an abstract principle of ethics, by the help of which one can decide what wages a man is justly entitled to. We never think of anything of this kind when we come to make a bargain with a man for his labor; neither has it ever happened, nor can it ever happen in a social organization like ours, that any such principles will determine wages. Wages are fixed by the quantity and efficiency of the labor offered, and by the quantity of reward, *i. e.*, capital, which the employer has at command to hire labor with. Of course, there is such a thing as morality, a right and a wrong way in dealing with laborers, as in dealing with anybody else. If an employer tells a laborer that he is worth little, and refuses to pay him more than a pittance, when the laborer is really worth a good deal; or if an employer says he is overrun with applications for employment when he is not; or if he says he has little capital at command, and nobody else has any more, when in fact he has all the capital he wants and knows that his neighbors have also—in fact, if in any way he takes advantage of the ignorance or want of shrewdness of laborers to pay them less than some one else would give them, then his action is morally wrong, as it would be if he were cheating and deceiving anybody.

But how much the laborer is entitled to ask and get is a hard question of demand and supply with which notions of justice have nothing whatever to do. There is not even any just claim for the minimum wages necessary to keep a man and his family from starvation—a form in which the principle of ethics is often put forward in these hard times, and one which makes its appearance in a peremptory way in the scheme of our German priest. A man may be entitled to a subsistence as charity, but not as wages. The State may owe him a subsistence, and may give it to him under such precautions as it sees fit; but as wages from an employer, a man is not entitled to an atom more than the employer is willing to give in a free market.

SARDOU'S "THÉODORA."

PARIS, January 13, 1885.

HAVE you seen "Théodora"? Such is the inevitable question which Parisians address to each other when they meet. "Théodora" is in everybody's mouth. In the absence of any real social life, the first representation of a new drama by Sardou has become an event; and the great event was, as usual, prepared with the greatest art, with all sorts of rumors: the scenery will be more splendid than anything that has ever been put on the stage; *Théodora's* mantle, embroidered in silk and gold, will alone cost 10,000 francs; *Théodora* is ill, she will not be able to play; *Théodora* is better; *Théodora* is in despair, she has fallen into a state of deep melancholy; Sardou has been able to bring *Théodora* back to her work, and so on. The modern Athenians like to be amused in this way. This sort of charlatanism acts like bitters before dinner, and is meant to increase the appetite. "Théodora" is the third great drama of Sardou; the number of his light comedies is legion, and just now the first he ever wrote (the "Pattes de Mouche") is being played at the Théâtre-Français. It is well played, but it is found that its texture is somewhat too thin for the place. Sardou was very poor, very little known, when he succeeded in bringing out this light "Pattes de Mouche" at a minor theatre. This little comedy, which has all his defects and all his qualities, is made out of nothing; it shows no characters, no types; it leaves no trace on the memory. But it is full of life, it moves, it runs, it flies; it is clever, ingenious; it is amusing. Sardou is a great master in dramatic intrigue: he likes to make confusion, and to bring it to an end by the most simple and ingenious means—all the more ingenious for being simple. He is a prestidigitator, who can tie the most extraordinary knots and untie them at the proper moment. In the "Pattes de Mouche," for instance, there is a dangerous letter—a letter which, if it was read by somebody, would cause much mischief. What shall be done with the letter? It goes from one hand to another, from one place to another; it is half-burned in the fireplace; it is hidden in a dozen places; it is thrown out of the window, picked up in the street, and so on. You follow with some pleasure the fate of the letter, but you never quite understand its origin or its importance. The personages disappear—they are insignificant; the letter is everything.

I have mentioned this little piece because it is very rare for an author not to betray himself in his first work. Sardou is a dramatist, he is not a novelist; in these two words he is almost explained. Let us look at what he considers his important dramas—"Patrie," "La Haine," "Théodora." These are not light comedies, made to last for a while, to flatter some transient feeling, to expose some folly of the day. In these three dramas Sardou has really given all he can give; he looks on them with complacency, they are his favorites. All the means which the modern theatre can place at an author's disposal have been exhausted in order to bring these dramas before the public. "Patrie" showed us the local color of the Netherlands during the revolt against the Spaniards; "La Haine" gave us the local color of Vienna in the middle ages; "Théodora" is a restoration of Byzantium during the reign of Justinian.

Sardou is a victim of the ruling passion of what we call bric-à-brac. He has surrounded himself at Marly with a complete museum; he collects, he instructs himself as to the minutest details of an epoch. This mania is innocent in an individual; it may even be useful when it serves to unite precious relics of the past. But what is the use of a pasteboard collection (and the properties of a theatre are nothing but pasteboard)? What is the use of all this local color, which is more or less false, and which adds absolutely nothing to the æsthetic beauty of a play? You can perhaps give me a Justinian resembling the real Justinian as much as one of Madame Tussaud's wax figures resembles the original. What is it to me, if he is but a doll, and is not the real Justinian in thought, in language, in sentiment? M. Sardou would probably say that he not only professes to give me the dress of Justinian, but that he has studied Procopius and others, and that he has made a real Justinian, a theologian occupied with subtilties, an Emperor married to an adventuress, a coward, a tyrant, and a slave at the same time. It is not enough; his *Justinian* has no life for all that; he has, so to speak, no identity. It is not enough to attach a few traits, or words, to a personage—you might as well do as was done in some old miniatures, paint a tower and a town and write beneath it: "This is Jerusalem." What I say of *Justinian* might be said of all the other characters. *Théodora* may resemble in dress the prostitute whom an imperial caprice placed on the throne: the ornaments she wears may be copied from the ornaments which are seen on the walls of Ravenna; you may cover her as much as you like with diamonds, precious stones, with barbaric ornaments—what is all that to me? Is the theatre a school of archæology? It will never give me but a second-hand and limited acquaintance with the past.

"Le moindre grain de mil ferait mieux mon affaire."

So it is with all the characters of the play. *Théodora*, with all her extravagant dress, is, after all, nothing but a Parisian lady of the *demi-monde*, transported to an exalted sphere, who sometimes has nostalgia for her former life. She is married to a Prince, but she loves a poor young man, and goes to see him incognita. The poor young man is named in the piece *Andreas*. He is a Greek, full of old Hellenic notions, and naturally wants to give free institutions to his country and to break the rule of *Justinian* and of the wicked *Théodora*. He conspires against the woman who comes in disguise to see him in his little garden on the Bosphorus.

That is really the whole piece, the whole drama. *Andreas* and *Théodora* sing (the word is not inappropriate when you think of the silvery voice of Sarah Bernhardt) long love duos, and you, the witness—you know that *Andreas* will sooner or later find out that his love is spent on the Empress, whom he despises, and hates, and wishes to destroy. Here certainly was a ground for a true drama; but the psychological element is too completely, too constantly sacrificed to the materialistic element—I can find no better word to express my thought. The natural play of human passions is never enough for Sardou; he is like a painter who neglects his picture and works too much on the frame. What a frame was not this! Must he not show us the palace of Justinian, with its mosaics; his court, with innumerable servants, eunuchs, priests; with his general, Belisarius, and his guards? Now we are in the apartment of the Emperor: we see the old lamps burning; gold glitters everywhere. Now we are in the Hippodrome: we see the long *spina*, with its columns and statues, the long arcade, against the blue sky. We see the iron bars of the cages of the lions; here come gladiators, and here the coachmen of the Greens or of the Blues. Now we see Saint-Sophia in flames, and we hear the noise of the populace in revolt, and attacked by Belisarius. We seem to be present at a representation in the Circus. The Emperor enters the imperial box, in his purple toga, and blesses the people, in the consecrated manner, with a corner of the purple toga in his hand. This would be all very well in an opera, though I doubt if even the finest music would not suffer somewhat from such a constant, such a dazzling exhibition. I can only speak for myself, but I doubt whether I should like "Esther" or "Athalie," masterpieces as they are, played with too much Oriental luxury. Do not distract my mind too much; let me hear in silence the divine verses:

"O mon souverain roi,
Me voici donc tremblante et seule devant toi."

When *Esther* recites these verses, I would think of nothing but her, I would see nothing but her; whatever takes my mind off the sublime heights to which the poet has lifted me, will only irritate me.

It is quite true that there are no sublime heights in "Théodora." I will not speak of the style—it has no style at all. The Emperors, Empresses, Franks (there is a Frank Caribert for the occasion, come to pay homage to Justinian), gladiators, Greek philosophers, all talk as people do between the Bastille and the Madeleine, in this year of grace 1885. The incongruity between their language and their costumes is at times almost painful. Sardou is evidently not in the least conscious of it. He is a Parisian and his audience is made up of Parisians. He cares not for words, but for action. If *Théodora* leaves the imperial palace and goes to see *Andreas*, does she not sufficiently show her love? Why should she try to analyze her feelings too much? They are extremely simple. So are those of *Andreas*; as soon as he sees the Empress in *Théodora* he abominates her at once; he is not at all upset by the consciousness of what he owes to her. So even love becomes thoroughly materialistic in this drama. Sarah Bernhardt and her lover seem to understand admirably this form of love, and they give an air of reality to their passion which is quite in harmony with all the rest; for as we have real gladiators, real instruments of torture against the conspirators, a real Belisarius, a real Justinian, why should we not have real love, love in a hurry, such as you might imagine it between Balzac's Mme. de Nucingen and her dear Lucien de Rubempré?

In the end *Théodora* is found out, and she is strangled by order of the Emperor. The true Theodora died in her bed, but history has been sacrificed a little here; for nobody knows how to die so well as Sarah Bernhardt. She presents her neck to the rope of the executioner with an inimitable grace. Without her, I doubt whether the piece could be played at all. She is always herself. She throws rays of poetry across all this materialism; without her this combination of the opera, of the Circus, of the Hippodrome, of Mme. Tussaud, of the Eden Theatre, would be unbearable for a person of taste, notwithstanding all the beauty and variety of the scenery, all the cleverness of the author, all the rapidity and movement of the action. It would only leave a sense of profound regret at the incongruity between such an effort and such an end, and at the progress of decadence in a country where the pleasures of the mind are so completely subservient to the pleasures of the eye.

THE GAINSBOROUGH EXHIBITION.

LONDON, January, 1885.

THE present exhibition, though very full of interesting examples of Gainsborough, disappoints at first many of his admirers by the absence of several of his best-known works, viz., the portrait of the two fascinating sisters, Mrs. Sheridan and Mrs. Tickle, that of Mrs. Graham, the lady Ligonier (the fair and false "Penelope" who won the heart of Alfieri), the full-length of the beautiful Miss Linley, etc. The familiar "Blue Boy" has the most conspicuous place in the west gallery (the principal room). We note the careful treatment of the satin costume—breeches, stockings, and shoes, all more highly

finished than usual with Gainsborough. The manner of this picture reminds us more of Vandyke, whom Gainsborough always sought to emulate, than any other work in the gallery. The harmony of blues, from warm full bluish green gradually fading into blue-white, is very delightful; the head is full of tone and solidly painted. Another highly finished example is Sophia, Lady Sheffield. It is full-length, standing in a landscape; dressed in blue and toned white. A large blue hat, very well painted, shades her face; the draperies are studied and arranged with care, and are not dashed in conventionally as in so many instances here. The portrait of William Pitt is a serious, well-studied portrait, which looks very life-like, but is conventional in the treatment of red-curtain background and less careful than the other portraits of Mr. Pitt. The portraits here show Gainsborough not merely a successful painter of pretty women, although for grace of pose and arrangement few have equalled him. His portrait of the famous Lord Chesterfield at the age of seventy-six is full of character and modelling; the lined face has a wicked character, the mouth a scoffing expression which well suits the man. He looks wizened and dried up. The color is severe and appropriate. The Dr. Johnson, on the opposite wall, in a snuff-colored coat, his head a little bent forward by age, is an example of excellent modelling, and brings before us far more vividly than the portrait by Sir Joshua Reynolds the cynical old doctor. The famous portrait of Garrick is here also (there is a print of it in the *English Illustrated Magazine* for December). It seems heavy in color—black about the coat and brown in the landscape; the face is clear and well modelled. The portrait of the artist is a very finely studied piece of portraiture; that of his wife is quite one of the best, the face is so full of expression, the color is so delicate in the half tints, and the look of a beauty already faded is so tenderly given. The hands even are better indicated than in most cases, the right being raised in the momentary action of holding back a black lace veil which encircles the head. They are wanting in bony structure, as indeed are *all* the hands and arms in the exhibition. The dress is of pink and white, the background brown. We notice in this two dabs of color on the nostrils to bring out the nose in greater relief, evidently added after the picture was finished and curiously rough in touch. These only appear when one looks carefully into the painting, but a still worse *repentir*, showing that Gainsborough could not have had much patience in repainting, occurs in the vivid, expressive head of a young man (John Viscount Bateman). The face is turned away; there is extreme individuality in the eyes and nose and excellent rapid painting. The brown locks prove that Gainsborough could paint unpowdered hair; but the line of the jaw has been hastily taken in by simply drawing a thick brushful of brown paint over it—this rough treatment strongly contrasting with the dainty collar and blue-satin jacket which finishes the work.

"Henry F., Duke of Cumberland," is a most harmonious little portrait: the bright red coat is so rich in tone, and contrasts so agreeably with the pale blue waistcoat, over which passes a broad blue ribbon with an order. The Duke holds a black three-cornered hat in his hand. In the portrait of Tenducci, the tenor, the lips are parted, the eyebrows uplifted as he looks at the music. The rich pale-olive complexion catches the eye at once, among so many English portraits. Very much in the worst style of Gainsborough is the portrait of Lady Eardley and her daughter. The lady stands holding a baby on a stone pedestal; it is badly drawn and carelessly painted. "Mrs. Walker," on the other hand, is one of the most admired of the portraits. It represents a plain, elderly woman, with a gray soft cap round her face, tied with a black ribbon. The dress is of darkest blue velvet, cut square, the neck entirely covered with a thick white fichu inside the velvet dress. The head is excellently modelled, and every detail most carefully painted, quite with Dutch-like precision. A most charming sketchy portrait, that of Mrs. G. Elliott, born Dalrymple, a lady whose life seems to have been sufficiently adventuresome, is most syren-like in its sweet voluptuous smile, complexion quite living in its downy blush, and strange fascinating eyes, with marked black eyebrows—an impression of a lovely woman very different from impressionist work of to-day. The painter's younger daughter, Mary, with head thrown back, playing a guitar, is in the same slight manner in which Gainsborough seemed to delight to paint handsome women, while he treated the plainer ones with more care, seeking to give modelling and individuality. There is also to be remarked the standing portrait of the beautiful Duchess of Devonshire, slovenly in the dirty-white draperies. A portrait of her when she was a little girl is admirable, and one of the best child-portraits shown. The little white cap, the fair hair cut over the forehead, the individual little face, the white dress with pink ribbons, so clean and pure in painting, and yet so unobtrusive, are very delightful. Another small sketch of this lady in grisaille seems to be a scheme for the famous stolen portrait. The equally famous "Colonel St. Leger" is conventional. The horse and landscape are fine, but the head is less studied than many.

In the east gallery, one of the most striking pictures is Lady M. Lindsay, a beautiful blonde with pale golden hair, in a black, admirably painted dress. She stands in a silver-gray landscape. The dress shows how Gainsborough could paint black without making it heavy. In this room there are several examples of a method of painting quite unlike his usual style—very pasty and bad in color, all of them. "The Cottage Girl" is the sweetest child-picture I have ever seen—so pathetic in its innocent expression and so admirable in color and detail; while the "Milk Girl" is very heavy in color throughout, in the girl's face especially, which is red and hot and brown.

We have many landscapes here, very different in artistic merit, the larger examples being the least beautiful. The figures and foreground are dark, the trees conventionally treated with much brown to suit much blue distance. They are harmonious in spite of impure color—the blues so green, the greens so blue, and the browns so warm, with just a splash of toned white for water (generally a brook), and sky, and a few reddish cows in the foreground. To these "The Harvest Waggon" is a notable exception, for it is very luminous. In Lord Tweedmouth's picture, a landscape with figures and cattle, the distance reminds us of Turner at his best. The smaller landscapes are much more realistic and very lovely in rendering effects of nature, as well as very varied, too, in subject. "A Study" represents a storm: the clouds are full of movement, the old oak on our left looks blown about and battered, and the herbs in the foreground (especially a hemlock) are beautifully painted. In a small landscape owned by Lord Clifden, only 9½ x 12 inches, the color is glowing: the road is bathed in sunset light, and the whole most luminous and true, and very carefully made out. The portrait of Thomas Sandby and his wife is a charming Watteau-like composition, very sweet in color and graceful in movement.

The water-color drawings of Richard Doyle are well known from the books in which they have for the most part appeared—elfs and fairies on mushrooms; charming sprites riding on bats through gray sky and landscape; witches driving large broods of young dragons; fairies and elfs flirting, and such like. The Hamelin Piper is one of the principal works. The Piper, followed by hundreds of children, is coming toward us, while the town, bathed in blue morning mist—a real German mediæval town by a riverside—forms an elaborate and beautiful background. The drawings of heads in pencil and in water-color are extremely weak and amateurish: the landscapes, too, when from nature direct, are weak in color and washy. The pen-and-ink sketches are full of character and humor, but the drawing is always defective, although the fantastic creations are full of beauty and poetry.

Correspondence.

VOWS IN THE EPISCOPAL CHURCH.

To the Editor of The Nation:

Sir: In the *Nation* for January 22d is an editorial paragraph which shows a curious misapprehension of the grounds upon which many in the Episcopal Church object to the "*Order of the Holy Cross*," and similar societies. When *you* are misled, it is reasonable to believe that the case is not as simple as many suppose.

No one questions Bishop Potter's motives, and it is very rarely indeed that there is any reason to question his wisdom. In this case, however, his earnest longing to use every weapon against the adversary, seems to have led him to snatch up a weapon which is likely to cut his fingers.

The practical view of the matter would certainly seem to be, as you say, that "any man who thinks that he can do good work better by taking a vow of some sort of self-denial, does well to take it, with whatever solemnities he thinks necessary." That is true, *provided* the vow does not conflict with the terms of some previous contract to which the man has agreed. In the case of the clergy of the Episcopal Church it happens to do so. Each one of them at his *ordination* took a vow of *subordination* to a written law to which he attached his signature, and to a constituted authority to whom he gave an audible oath. The gravamen of the charge against a priest who joins a new "order" is, that by doing so he is guilty of a breach of faith which he has pledged at his previous ordination. Of course he does not think so, but our contention is that, as an honorable man, he has no right to act upon his conviction until he has *to that extent* secured a release from his previous obligation. This release the Church so far has distinctly declined to give. The technical objection to the action of the Assistant Bishop is that it is *ultra vires*.

In the case of "sisterhoods" this objection does not hold, inasmuch as they are not hampered by any precontract. Nor is it accurate reasoning to use the officers of an army as an illustration. It is true they do swear "poverty" and "obedience" at any rate. But the true statement of the case would be this: Three army officers determine to constitute an "Order of the Field of the Cloth of Gold," we will say. Its purpose is to penetrate some particularly difficult lava beds and exterminate some specially untractable Modocs whom ordinary military operations have proven hopeless to subdue; and the society is to be a perpetual one for similar purposes. They take the vows of "poverty," "chastity," and "obedience," fortified by the sanctities of a *sacrament* (*i. e.*, a military oath). Their brother-officers—the whole service, in fact—objects. They say, "You may burn your pay and give away your emoluments if you see fit, after you once take them; but so long as you

remain in the service, we insist that you shall sign the pay-rolls and take your money like the rest of us. To do otherwise will tend to disorganize the service. As to the vow of 'celibacy,' we do not care a rap whether you marry or not, but *keep quiet* about the matter, and do not make of yourselves marked men whom it would not be fitting to employ upon certain delicate duties to which you may hereafter be assigned. The third vow, of 'obedience,' we simply will not tolerate. There is only one kind of obedience possible to an officer, and to that you have already sworn."

Now, suppose they persist, and organize the "Order of the Field of the Cloth of Gold," and get ready to proceed against the Modocs? When they returned from the expedition, they would find themselves broken for "conduct unbecoming an officer and a gentleman." Any army or navy officer can say whether or not this is correct.

Then, besides this, they would not be successful against the Modocs. It is the sincere opinion of those who are disturbed by the establishment of the "Order of the Holy Cross" (that is to say, by the overwhelming majority of the Episcopal Church), that the wish which lies so near to the heart of the noble Bishop Potter cannot be achieved by any such agency. The reason of their conviction is this: they have seen similar agencies tried, with comparatively so little results, and attended by so much confusion and trouble, that they are unwilling to have the Church's name (in which they have a property right) lent to the support of what they deem to be a mischievous experiment. They are disturbed all the more because the name of the Assistant Bishop of New York is such a tower of strength that it can sustain almost any weight which may be fastened upon it.

They are still further disturbed to find from the letter of the Bishop that in this case the vows are not to be received at their face value. By a private understanding, they are not irrevocable, but terminable at somebody's will. That is, instead of burning their bridges behind them in order to inflame their courage, they have only locked the gate, and thoughtfully left the key where they can lay their hand upon it if they should be too hard pushed. * * * *

PHILADELPHIA, January 22.

[We feel reluctant to argue with a clergyman upon questions of ecclesiastical law, but, taking our courage in both hands, as the French say, we will deny that the vows taken by the members of "The Order of the Holy Cross" "conflict with the terms of any previous contract to which the man has agreed," or, to be more particular, conflict with his ordination vows. The vow of chastity and poverty certainly does not do so. No clergyman is pledged to marry, or to get or keep money. The vow of obedience to the chief of the order is taken, we maintain under correction, subject to the vow of obedience to the Bishop. There is no monastic or quasi-monastic order, in the Protestant Church at least, whose ordained members claim exemption from episcopal authority. Our correspondent's military illustration seems to us all at fault. A good analogy would be a vow of implicit obedience to the commander of a corps of irregulars, detached, with the permission of the general-in chief, on special service. Nobody would think this vow inconsistent with the military oath.—ED. NATION.]

THE GREEK OF THE FUTURE.

TO THE EDITOR OF THE NATION:

SIR: In an article in the *North American Review* for November, 1884, on "Herbert Spencer's Latest Critic," by Prof. E. L. Youmans, is a comical illustration of what we might expect if the editorial views of the *Popular Science Monthly* upon classical studies should unhappily prevail. I have no intention of discussing the article as a whole, which is a defence of Mr. Spencer against an attack of Prof. Isaac L. Rice; I wish merely to show how certain people who decry the study of Greek as antiquated folly are compelled to get their knowledge of Plato, when they need it, and what kind of knowledge they get. Professor Rice had criticised Mr. Spencer for alluding to Plato as one who made "state-enactments the sources of right and wrong," and had said that, although such language was uttered by Thrasymachus in the 'Republic,' it was "exposed and castigated by the unpitying irony of Socrates the philosopher." None but a brave man would have ventured to dispute this statement; and, whatever Mr. Spencer may have meant by his casual allusion to Plato, he certainly did not refer to the doctrines advocated by Socrates in the first book of the 'Republic,' nor will he thank Professor Youmans for coming so valiantly to his rescue armed with the well-known argument by which Socrates there silences Thrasymachus.

Professor Youmans begins with the bewildering statement that "the dispute between Socrates and Thrasymachus is whether the 'just is something that is expedient' simply, or whether it is that which is expedient to 'the more powerful'; and that the disputants do not differ (!) with regard to the authority of the State is shown by a passage on the next page." How, now, does he get at his passage of Plato which is to establish this astounding opinion? The old-fashioned way would be, of course, to go to Plato and see what he says. But our new lights have a far better way of getting at Plato than by going to him, as they have long been preaching to us; and we need not be surprised that our reviewer, when he tells us that he "turns to the dialogue," really turns to a very different thing, Bohn's translation of the 'Republic,' which he (apparently without intended sarcasm) calls "a standard authority." From this he borrows the following precious argument between Socrates and Thrasymachus, which he publishes as "Plato":

"Tell me, do you not say that it is just to obey governors? Yes, I do. Are the governors in the several States infallible, or are they capable of error? Certainly, said he, they are liable to err. When they set about making laws, then, do they not make some of them right and some of them wrong? I think so. To make them right, then, is to make them expedient for themselves; and to make them not right (that is), inexpedient; or how mean you? Just so. And what they enact is to be observed by the governed; and this is what is just? Of course. According to your reasoning, then, it is just to do what is expedient to the stronger, while the contrary is what is not expedient; what say you? Replied he, I am of the same opinion as yourself."

After this, Professor Youmans has no hesitation in proclaiming his adversary vanquished.

Let us see, however, what Plato really says; and let it be remembered that the passage in question does not contain a single sentence or a single word about the meaning of which there can be the slightest dispute. It is found in 'Repub.' I., p. 339 B-D, where Socrates proceeds to reduce to absurdity the doctrine of Thrasymachus that justice is "what is for the good of the stronger," "the stronger" being "the government of the State." (I insert *S.* and *T.* to show the speakers, in place of "said I" and "said he."

"*S.* You doubtless say, further, do you not, that it is just to obey the rulers?—*T.* I do.—*S.* But are the rulers in the several States infallible, or are they liable to make occasional mistakes?—*T.* Certainly, they are liable to make some mistakes.—*S.* When, now, they undertake to make laws, do they make some rightly and some wrongly?—*T.* I think they do.—*S.* And is making them rightly making them for their own advantage, and is making them wrongly making them for their own disadvantage? Or how do you mean?—*T.* I mean just this.—*S.* And whatever they enact, the subjects must do; and this is justice, is it?—*T.* Of course it is.—*S.* According to your argument, then, it is just to do not only what is for the advantage of the stronger, but also the exact reverse of this, what is for his disadvantage.—*T.* What is this that you are saying?—*S.* It is, I believe, just what you say."

Mr. Rice had also called Mr. Spencer to account for naming the three parts of the human mind in Plato's psychology "reason, will, and passion," instead of "reason, high-spirit (the seat of indignation and similar emotions), and desire," corresponding to the three classes of citizens and the State—guardians or rulers, warriors, and common citizens. To help Mr. Spencer here, Mr. Youmans brings up the following explanation (?) from the same "standard authority":

"The Republic of Plato is a development of the analogy between the ideas of the perfect man and the perfect State. . . . He opens the inquiry with a kind of analysis of the human mind, which he divides into three parts—first, the rational or reasoning principle (τό λογ'στιδκόν); secondly, the spirit or will (τὸ Ινμίκὸν or Ινμοιβὲς); and thirdly, the appetite or passion (τὸ ἐπιδνμητικὸν); which last, however, indicates nothing beyond that vital impulse which leads from one sensation to another. . . . He then proceeds to classify the members or parts of his ideal Republics. These he classes under three heads or divisions, corresponding with the faculties of the soul—viz., 1, The βουλευτικὸν (counsellors), those who employ reason in the contemplation of what best suits the State; 2, The ἐπικουρικὸν, those who aid the βουλευταί with a ready will; 3, The Χρημᾶτιστικὸν who are bent on gain and selfish gratification."

We can hardly conceive of a statement less calculated to give anybody real light either upon the Platonic State or the Platonic psychology. First, Plato does not confine himself, in the discussions of the 'Republic,' to either the perfect man or the perfect State. Secondly, he does not "open the inquiry" with the analysis of the mind and then proceed to classify the parts of the State to correspond with the mental faculties; he follows just the reverse order, and makes the State the model in his psychology. Thirdly, the added explanation (?) of the third element in the soul effectually conceals what is sound in the previous clause. Fourthly, who would ever detect the military class in the State under No. 2 in the classification which follows? Fifthly, the account of the mass of citizens as "bent on gain and selfish gratification" is a strange reproach, especially upon the citizens of "a perfect State." The Greek is copied here *verbatim et literatim* from the *Review*; and we can imagine the malicious pleasure with which Professor Bowen might read it (with the help of the original Plato), reflecting on the ancient days when the *North American*, under his direction, was the glory of the American Athens.

We must all feel grateful to our reviewer for giving us this timely warning of what might be in store for us in the future; although it is a little hard to be thus "tormented before our time."

Yours truly,

W. W. GOODWIN.

CAMBRIDGE, January 22, 1885.

WEST POINTERS OF THE CONFEDERATE STATES ARMY.

TO THE EDITOR OF THE NATION:

SIR: Recognizing as I do my own humble obscurity, in comparison with the world-wide renown of the distinguished principals in the so-called Sherman-Davis embroglio, I do not presume to inject myself into that unfortunate controversy. But being a West Pointer, and having read in General Sherman's letters, in the reports of remarks of members of the United States

Senate, and especially in the editorials of some of the leading papers of our country which were inspired by the controversy in question, such words as "traitor," "treason," "treachery," etc., coupled with "cadet," "West-Point graduate," "former officer of the United States Army," etc., I feel that it is not presumption to beg a brief space in your columns to put myself at least right on the record. I do not claim to speak for any West Pointer but myself, yet I believe that I shall express the sentiments of the majority of those who cast their lot with the Southern States when I expose, as I intend to, my own.

I was graduated from the United States Military Academy in 1859. I am a Virginian by birth, but was reared from an infant in Alabama, and my parents resided in that State in 1854 when I was nominated to a cadetship by the Hon. Samson W. Harris. I have, therefore, always considered myself as an Alabamian. As a cadet at West Point I considered myself as much a representative of Alabama at the National Military Academy as my Congressman was her representative in the national legislature. When I was graduated, and commissioned a brevet second lieutenant of Engineers in the United States army, I considered myself as a part of Alabama's quota to the Federal army, for purposes of national defence. All this, with the doctrines of States' rights, State sovereignty, and the principles of loyalty, fidelity, and devotion to one's native State had been instilled into me from my earliest childhood. As noble a father as a boy ever had, believed these doctrines and principles to be not only sound but *constitutional*, and taught them to me. I had heard him discuss them and reiterate them a thousand times in public and in private. I had heard my Congressman enunciate the same principles in most eloquent terms in his campaign speeches. No wonder then that I was imbued with them.

So, when Alabama seceded on the 11th day of January, 1861, and I was informed of the fact by Gov. A. B. Moore, then Governor of the State, in a telegram which closed by ordering me to resign from the United States army and report as soon as practicable to him at Montgomery, my *duty* seemed perfectly plain. It was a terrible duty to perform. I well remember the bitter, sleepless night I passed in its contemplation before I could bring myself to its performance. My whole life's dream of honor, usefulness, promotion, and perhaps fame, as an officer of the Corps of Engineers, was rudely dispelled. I saw perfectly clearly that all that I had toiled for at West Point for five long, hard years, and all the bright anticipations of an honorable career in the army, which my two short years of army life had but made more bright, were gone for ever. And yet the *duty* had to be done. And on the 13th of January, 1861, I tendered to the President of the United States the resignation of my commission in the Corps of Engineers of the United States army. In that resignation I stated in effect that Alabama, the State from which I was appointed, having seceded from the Federal Union, I no longer had a right to hold a commission in the Federal army, and my duty to my State demanded that I should obey her call to return to her; and therefore, with the deepest regret, I tendered the resignation of my commission, to take effect on the 1st day of February, by which time I trusted that I should be relieved from all responsibility for public property in my charge.

My resignation was accepted, and an engineer clerk was sent to me, at my post, and to him I turned over all United States property and got a receipt in full. Then came the second hard trial in the beginning of this dreadful drama. I had charge of the construction of a fort on the coast of Florida. The first day of February, 1861, was a beautiful, bright, warm but breezy day. The broad "star-spangled banner" which floated from the flagstaff of the fort, stood straight out from its halyards, and as I looked up to it to bid it farewell, I thought it had never looked so proud, so bright, so beautiful before. With hat off, and tears in my eyes, I bade it "good-by," and started for Montgomery. And that was the saddest journey of my life.

Now, Mr. Editor, I have told you the "truth, the whole truth, and nothing but the truth" in regard to my leaving the United States army "to join in the rebellion," to use the official phrase. Did I act like a traitor plotting treason and treachery? Was I a cruel conspirator engaged in a deep-laid scheme to destroy the United States Government? Was I ever false to my oath to support the Constitution of the United States, according to my understanding of it? I myself feel that none of these charges can be laid at my door. I know that throughout the whole fearful ordeal, I acted strictly in accordance with the dictates of my conscience; and it was that consciousness alone that enabled me to go through with it in such a manner that I can say to-day that I did nothing but what I conceived to be my duty. There was no ambition, no self-seeking to support me and lure me on. On the contrary, it was a sacrifice of self from beginning to end, from a sense of duty. And such I believe were the feelings and sentiments of every West Pointer who left the Federal army to join the fortunes of the Confederate States. Some of them were much older than myself, and may have had much more decided political convictions than I. But I honestly believe that politics in the ordinary sense of the word had nothing to do with the actions of the officers of the army. They left the army because their States seceded, and they believed it was their duty to do so. Many of them, like myself, may have doubted the policy of secession; many of them, I doubt not, were opposed to secession; but when their States declared themselves out of the Union (as we believed they had a right to do), nothing was left for most of the Southern officers but to go with their States. Yet some of them remained in the army, and to those I give all credit for having acted in accordance with their convictions of duty. They took a different view from myself of the conditions and circumstances which made our case a peculiar one. They had a right to their views, and a right to act as conscience dictated. I have never harbored a harsh feeling against them, nor uttered a reproachful word about them. I can easily understand that it was not perfectly clear to every one that the course I and so many others pursued was the one which the highest duty marked out. The questions brought out by those terrible times were very hard ones to solve; many cogent and almost convincing arguments were found in favor of both sides of all of them. It is but the simplest charity, therefore, for all true Americans to believe that every man who was willing to risk his life in support of his convictions was, at least, honest in those convictions. And if honest, then he could not be a traitor, could not be guilty of treachery and conspiracy.

In fact, Mr. Editor, I do not believe there is a man in the United States who sincerely feels that Gen. Robert E. Lee was a traitor. If so, then Washington was a traitor, and not Arnold; for no man has lived in America since Washington who was more exactly his peer and parallel than General Lee. And this reminds me that Washington was the first great American rebel. As such he was known and styled for eight long, dark, and doubtful years, until he succeeded. Then even the mother country recognized him as a revolutionist. So that rebellion is but unsuccessful revolution. And such rebels we of the South acknowledge ourselves to have been, and only such. Even though we did not succeed, I trust I shall yet live to see the day when our Northern brethren will have the magnanimity to expunge that word rebellion from their histories of our great civil war. Nay, more, I do believe that, if I shall live to the span of life ordinarily allotted to men, I shall see our Northern brethren not only willing to cease from calling us rebels, but willing to acknowledge that what we fought for was worth fighting for. I freely acknowledge that what they fought for was worth all the sacrifices they so freely and nobly made. They fought for union, and strength, and the perpetuity of our glorious republic. We fought for liberty, self-government, and the autonomy of States. Both are foundation-stones of our government. Both are necessary for its preservation. Take either of them away from the foundation, and the grand structure erected by our fathers will topple and fall. "Liberty and Union, one and inseparable," is the true motto of our country.

Finally, in all that I have written, I have not intended to criticise any living soul, least of all to say aught against Gen. W. T. Sherman, whom I know personally, and for whom I have the greatest admiration and respect. I know, from favors received from him, that his big heart is brimful of kindness to us whose lives have been very hard because we were on the other side. I know that he is straightforward, honest, and upright in all that he says and does. I am sorry that he and Mr. Davis should have passed unpleasant words, for Mr. Davis, too, I think, is a good man. In fact, the two men are alike in many respects—both of strong character, strong convictions, strong impulses—and are only enemies because their convictions have carried them to extremes in opposite directions.

Respectfully, S. H. Lockett,
Class of '59, U. S. M. A.

[We print the above out of respect to the writer, and not because we can well afford the room, or think the discussion profitable at this date, either in or out of Congress.—Ed. Nation.]

PLAIN DEALING WITH "THE MASSES."

To the Editor of The Nation:

Sir: Doctor Holmes, in his recently published book on Emerson, says:

"Our Republican philosopher is clearly enough outspoken on this matter of the *vox populi*: 'Leave this hypocritical prating about the masses. Masses are rude, lame, unmade, pernicious in their demands, and need not to be flattered, but to be schooled. I wish not to concede anything to them, but to tame, drill, divide, and break them up, and draw individuals out of them.'"

The author then says:

"After reading what Emerson says about 'the masses,' one is tempted to ask whether a philosopher can ever have 'a constituency' and be elected to Congress? Certainly the essay just quoted from would not make a very promising campaign document."

And yet we know of a philosopher who had "a constituency" about whom he had said much harder things than the above-quoted sentiments of Mr. Emerson. John Stuart Mill has given in his 'Autobiography' an account of his candidacy for Parliament. He says, after referring to the address issued by him:

"My frankness on all other subjects on which I was interrogated, evidently did me far more good than my answers, whatever they might be, did harm. Among the proofs I received of this, one is too remarkable not to be recorded. In the pamphlet, 'Thoughts on Parliamentary Reform,' I had said, rather bluntly, that the working classes, though differing from those of some other countries in being ashamed of lying, are yet generally liars. This passage some opponent got

printed in a placard, which was handed to me at a meeting, chiefly composed of the working classes, and I was asked whether I had written and published it. I at once answered, 'I did.' Scarcely were these two words out of my mouth when vehement applause resounded through the whole meeting. It was evident that the working people were so accustomed to expect equivocation and evasion from those who sought their suffrages, that when they found, instead of that, a direct avowal of what was likely to be disagreeable to them, instead of being affronted, they concluded at once that this was a person whom they could trust. A more striking instance never came under my notice of what, I believe, is the experience of those who best know the working classes, that the most essential of all recommendations to their favor is that of complete straightforwardness; its presence outweighs in their minds very strong objections, while no amount of other qualities will make amends for its apparent absence."

Further on he says: "I was returned to Parliament by a majority of some hundreds over my Conservative competitor."

Perhaps, then, "the philosopher" whose words Doctor Holmes has quoted might have had "a constituency" and been elected to Congress, had he so desired, in spite of the harsh words he had written about the masses.—Respectfully,

S. Watson.

Nashville, Tenn.

MR. CABLE'S CREOLE DIALECT.

To the Editor of The Nation:

Sir: Apropos of the Note in your last issue on Mr. Cable's "Freedman's Case in Equity," I should like to call attention to the criticism of Mr. Cable's writings in the New Orleans *Times-Democrat* of January 11, 1885, continued in the same paper on January 18. This criticism is particularly noteworthy, since written by the greatest of Creole authors, Charles Gayarré. In it Judge Gayarré repeats a remark made by him to me some time ago, that Mr. Cable, just after the 'Grandissimes' appeared, acknowledged that *he was not personally acquainted with two Creole families.* Turning from this criticism, which is certainly one of the most scathing I have ever read, I should like to make two statements in regard to Mr. Cable's productions.

When about six numbers of 'Doctor Sevier' had appeared in the *Century*, in speaking of it to a friend, I said I found it strange that a negro should hold such a position as Narcisse occupies. "Why, you jack," said my friend, "Narcisse is supposed to be a white man." I had been living in New Orleans all my life, associating with Creoles as schoolmates and friends, and it was not until then that I learned that the language of an intelligent Creole, such as the bookkeeper of Doctor Sevier must have been, was that which I had never heard used except by the blacks, and even these might be limited to the fast-disappearing slaves of *ante-bellum* times. The date of the 'Grandissimes' is about the beginning of the present century. The characters speak this dialectic darling of Mr. Cable's. This broken English is supposed to be generally used. Now, it is certain that at that time fewer people in Louisiana—that is, of the Creoles—knew a word of English than can now speak Latin. Any one who has any idea of the amount of culture the average Louisianian has, will see at once the impossibility of this part of the 'Grandissimes.'—Yours very truly,

Charles B. Stafford.

Tulane University, New Orleans,
January 19, 1885.

A SUM IN UNITED STATES CURRENCY.

To the Editor of The Nation:

Sir: In a very entertaining and suggestive volume called 'Economic Problems,' recently published by Professor Sumner for the use principally of his students at Yale, the following problem is proposed. If any of your readers will take a pencil and work it out, I think they will not only be greatly surprised at the result, but will gain a fuller appreciation of the enormous losses which can be inflicted on the industrious masses by stupid or ignorant economic legislation:

"In 1880 the nickel in a five-cent piece was worth three cents. The silver in four quarters or ten dimes was worth eighty cents—'cents' being hundredths of a gold dollar. A, B, and C each paid a five-cent fare. A paid with a nickel five-cent piece. B gave a trade dollar which was taken for ninety cents. He received three quarters and a dime in return. C gave a gold dollar and received three quarters and two dimes. What value in gold did each pay for his ride?"

According to my arithmetic, the answer is three, twenty-two, and twenty-four cents, respectively. I. J. W.

Philadelphia, January 19, 1885.

Notes.

Mr. William A. Hovey, formerly editor of the Boston *Transcript*, has prepared a work on 'Mind Reading and Beyond,' which is now in the press of Lee & Shepard. It is largely a compilation from the reports scattered through the six numbers of the Proceedings of the London Society for Psychical Research, and will contain engravings illustrating the experiments described.

The Book Fellows' Club is the name of a little group of book-lovers here in New York who intend from time to time to print limited editions of the selected poems of their favorite poets. Last year they put forth their first volume, containing certain of the poems of Mr. Frederick Locker. This year they have issued 'Songs and Ballads,' by Edmund Clarence Stedman. The little book, beautifully printed by T. L. De Vinne & Co., contains just thirty poems, most of which are illustrated, not too successfully. The book is further adorned by an etched portrait of Mr. Stedman, by his book-plate, and by a graceful introductory poem written by Mr. H. C. Bunner at Mr. Stedman's request.

Mr. A. Lang's 'Ballades and Verses Vain,' published here last year by the Scribners, was in the main a selection from two English volumes, 'Ballads and Lyrics of Old France' and 'Ballades in Blue China'; it also contained the poems Mr. Lang had written since the latter publication. These new poems, with others still later, have now been gathered into 'Rhymes à la Mode' (London: Kegan Paul, Trench & Co; New York: Scribner & Welford), a dainty little volume intended solely for the English market, as it contains not a few of the lyrics included in the American 'Ballades and Verses Vain.' But 'Rhymes à la Mode' is made of interest to American readers by a delightful little vignette by Mr. E. A. Abbey, which serves as a frontispiece.

The growing series of "Classics for Children," issued by Ginn, Heath & Co., Boston, has been augmented by Kingsley's 'Greek Heroes,' edited with explanatory notes (too elevated in style) and some changes in the spelling of proper names, by John Tetlow; and Scott's 'Lady of the Lake,' edited by Edwin Ginn, with a life of Sir Walter, an abridgment of the 'Tales of a Grandfather,' notes, and a map of the Scottish lakes.

The 'Edwin Arnold Birthday Book,' edited by the poet's daughters (Boston: D. Lothrop & Co.), is disfigured by printing the famous births along the margin instead of under each date, in the usual manner.

The fourth of Mr. Howells's peculiarly American plays, "The Elevator," has been reprinted (from *Harper's Monthly*) by J. R. Osgood & Co. in pocket form.

Keats in a shape for the pocket, and in scrupulous conformity to the three editions of his work published during his lifetime and under his supervision, has hitherto been a desideratum. Mr. F. T. Palgrave has undertaken to supply it, and puts out, through Macmillan & Co., a handy, and in the main attractive, little volume of the poetical works, each line thrice compared with its several originals. A few explanatory and critical notes have been added, with appropriate extracts from Keats's letters. For completeness' sake, the posthumous poems are included in this collection, though lacking their author's *imprimatur*; and the whole is offered as "a companion for the fortunate moments of travel or the country."

With Part 23, Harper & Bros. conclude the serial publication, in their Franklin Square Library, of the eighth edition of Stormonth's 'Dictionary of the English Language,' so that the whole work unbound costs a little less than six dollars. The American appendices are enlarged by the addition of the Constitution of the United States, which must be regarded as a happy thought, since our charter is a good thing to have in the house, and cannot well be bound up with the family Bible. In the nature of things, the last well-edited dictionary should be, in many respects, the best of its class, the class here being neither the illustrated nor the encyclopædic.

Despite what we said the other day of the occasional foreign complexion of our leading monthlies, the two bound volumes (68 and 69) of *Harper* for the past year show a strong infusion of American nationalism. Mr. Bigginson's major history of the United States, which has been running in the magazine, needed to be illustrated with portraits, and so we have a remarkable gallery of Presidents, Vice-Presidents, and statesmen, coming down to the beginning of the anti-slavery movement. This array is offset by the monarchs and other great English personages depicted in connection with the papers on "The Great Hall of William Rufus," which the dynamiters have now done so much to "put in evidence." In the tours of the world which our magazines contrive to make annually, the readers of *Harper* for 1884 have been able to journey almost continuously from Victoria across the continent by way of the two northern lines of railroad, the great lakes, and the St. Lawrence, with liberty to touch at Queenstown, on the Yorkshire coast, at Biarritz or at Trouville on the French coast, in Holland (thanks to Mr. Boughton's artistic strolling), at Copenhagen, at Mentone on the Mediterranean; with the Nile and Sardis still to come. Emerson, Whittier, Tennyson, Charles Reade, Sidney Smith, J. D. Hooker, and Darwin (with a magnificent early portrait) are among the literary and scientific worthies here commemorated afresh. Wm. Black's 'Judith Shakspere' has been the principal serial.

The physiognomy of *Harper's Bazar* (Vol. 17) for the same period is not so readily described; but that of *Harper's Weekly* (Vol. 28) can be briefly outlined by naming as the subjects of its chief illustrations the floods of the Ohio and Mississippi Valley, the Cincinnati riot (how near and yet how far!), the Greely Relief Expedition, and the Presidential campaign, in which the editor and the caricaturist were signally in accord, and did such effective work in behalf of the better cause.

While Philadelphia is very far from being the first book-publishing city in the United States, it is the only one, we believe, in which a book-firm exists a hundred years old in the direct line of the founder. Lea Brothers & Co. celebrate, in a modest little retrospect entitled 'One Hundred Years of Publishing,' the rounding of a century since their great-grandfather, the celebrated Mathew Carey, began to print books as well as

periodicals. There came to his successors a time when the field of general literature, which they had so actively worked, became less profitable than a special department promised to be—that of medicine namely; and this is now well known to be the specialty of the firm of which Mr. Henry C. Lea was until lately the head, he himself making an occasional innovation by publishing his own remarkable historical studies. It is worthy of note that a division of the business of Carey & Lea in 1829 led to the establishment of another house, Carey & Hart, now Henry Carey Baird & Co., Mr. Baird being a grandson of Mathew Carey, and being likewise entitled to point to "one hundred years of publishing."

The annual report of the Light-House Board to the Secretary of the Interior for the year ending June 30, 1884, is adorned with a frontispiece reproducing an old engraving of the first light-house built within the limits of the United States —in Boston Harbor, namely, in 1716. Coming to the contents, we have been especially interested in the account of the trials experienced in building a light-house on the dangerous Saint George's Reef opposite Crescent City, Cal. The rock and the sea were obstacles enough, but this narrative also shows clearly the penny-wise and pound-foolish policy of Government in making niggardly appropriations for necessary public works, and in making them at the close of the session instead of at the beginning.

Little by little, private enterprise is doing the proper work of the Government in cataloguing and advertising and selling its own publications. Mr. John H. Hickcox, Washington, D. C., sends us the first number of his *United States Publications*, a monthly catalogue, which "will include publications of every description printed by order of Congress, or of any of the departments of Government, during the month preceding the date of publication." Twenty pages, 8vo, are needed for the January number. The entries are very intelligently made, the cross-references are numerous, and the typography tasteful and accurate. Such a periodical cannot fail to be appreciated by Congressmen, and will of course find its way into every library. Examination will reveal an unexpectedly large number of subjects having a public interest quite apart from mere legislation.

As January is the favorite month for new periodical enterprises, two other first numbers are before us—the *Collegian* and the *Spectator*. The *Collegian* is to appear monthly, being issued from No. 55 Pine Street, in this city, and is to be devoted primarily "to the interests of colleges and their graduates." A "Veterinary Department" seems a queer feature. A convenient chronological register of American colleges overruns the cover. The *Spectator* is a Boston enterprise, semi-political, semi-literary, with some not obvious connection with the Webster Historical Society (of which it gives a list of members). The intention of the proprietors is to make it ultimately a weekly. The place of publication is the Old South Meeting-house: a Boston notion, truly.

Outing for February is a very inviting-looking number, the illustrations being abundant and, as usual, of good quality. It opens with a paper on "The Mont Blanc of Our Switzerland," by J. R. W. Hitchcock, the mountain in question being known as Rainier to those who respect priority of discovery, and as Tacoma to purists. The ascent is difficult and perilous, and few have succeeded in it, and probably no two parties or individuals have taken exactly the same routes in coming or going, so that Mr. Hitchcock's narrative may safely be called fresh as it is readable. He does not appear to have reached the summit, his objective point being the glaciers.

At a late meeting of the London Society of Architects, papers were read describing a new plaster (Hitchin's), which can be set up dry; a new asbestos paint, which absolutely protects woodwork from burning, though it lets it char; and a new rock composition, called Hygeian, which keeps out not merely water, but all moisture. If we can protect our houses completely from fire and damp, and when building them do not have to wait for weeks while the plaster dries, the millennium of the building art must be at hand.

The Proceedings of the Royal Geographical Society for January contain a paper by R. G. Haliburton, a son of the historian, entitled "A Search in British North America for Lost Colonies of Northmen and Portuguese." The first part is devoted to an attempt to show that Vinland must have been the west coast of Newfoundland, the story of the grapes being an invention to attract settlers—a method practised successfully before by the Northmen in the case of Greenland. The rest of the paper is derived from a work by Señor Ernesto do Canto, of San Miguel, Azores, consisting mainly of "documents connected with the family of the Corte-Reals, the explorers and first governors of north-eastern America." From these it appears that the Portuguese, under one Fagundes, settled in Cape Breton in 1521, probably remaining some years. In 1567 they made a second attempt to found a colony on this island, while a third settlement was made by the Spaniards in the same place between the years 1580 and 1597. It is possible that some mounds at St. Peters, Cape Breton, which tradition says were there before the coming of the French, and in which an ancient gun was found some twenty years ago, are remains of these early settlements.

Teachers of history who wish to present the characters and customs of past times vividly before their pupils, will find Weisser's 'Bilderatlas zur Weltgeschichte' (Stuttgart: Paul Neff) very serviceable. It consists of fifty numbers, containing usually three sheets each—146 in all—extending from the earliest times to the French Revolution. It might very easily have been made better. In the first place it gives disproportionate space to ancient history—eighty-eight sheets, or ninety-five if we reckon those which depict the early Christian Church. This is probably because ancient history affords so much more abundant material than mediæval. A second fault is, that the plan has been to give a large number of small pictures rather than a few large ones. Consequently, there are a great many portraits of relatively insignificant persons, while the really great men have scant justice done them. A more serious fault is, that a great many of the illustrations are not historical except in their subject. The four sheets of Old Testament history, and the four of the life of Christ and the times of the Apostles, as well as several of Greek mythology, are composed of the designs of Michael Angelo, Raphael, and other later artists. With all these defects the work is of great value, containing portraits of all the most famous men of history, most of them fairly good, and some excellent; also illustrations of costumes, trades, armor, etc.; and, in the time of the Reformation, several interesting caricatures, *e. g.*, from the 'Passional Christi und Antichristi' of Lucas Cranach. Each sheet has a page of description. It is sold at the very low rate of 50 pfennigs (half a mark=12½ cents) a *Lieferung*, making the whole work cost 25 marks, or between six and seven dollars; so that, even if one could often wish it better, the purchaser will at any rate get ample return for his money.

The high importance of the drama in France is indicated by the number of *L'Univers Illustré* for January 3, 1885, which is almost wholly given up to the great event of the Parisian theatrical year, the production of M. Victorien Sardou's 'Théodora' at the Porte-Saint-Martin Theatre, with Mme. Sarah Bernhardt as the frail heroine. *L'Univers Illustré* gives us a portrait of the dramatist, a facsimile of his MS., a sketch of his library, and a view of the gates of his park, together with two full-page pictures of the chief scenes of the play, a page of costume-sketches, and a facsimile of the score composed by M. Massenet for one of the songs in the play. Among the literary contents of the paper is a translation of Irving's 'Rip Van Winkle,' made timely by the production in Paris of M. Planquette's operetta 'Rip.'

M. Victor Fournel has followed his excellent collection of the comedies of the "Contemporains de Molière" with another of the "Petites Comédies rares et curieuses du XVIIe Siècle" (Paris: Quantin; New York: F. W. Christern). Into the first of his two beautifully printed volumes M. Fournel has gathered seven comedies bearing on different points of literary history. One, for instance, is on the rivalry of beauty between the sonnets on Job and on Uranie, and another is on *bouts-rimés*. In the second volume are collected five other little plays, bearing rather on manners and customs. M. Fournel introduces each play with a brief biographical sketch of the author, and appends linguistic and literary notes at the foot of the page when needed.

—The February *Atlantic* continues its serial stories, of which the interest has been already noted, and among its "occasional" articles there is none preëminent. The *pièce de résistance* is the second paper on the Salon of Madame Mohl, which is more varied than was the former one, and more directly concerned with the Salon itself. The celebrities dealt with are Thiers in his youth; Julius Mohl, of whom a "portrait" is given; Jean Jacques Ampère, Chateaubriand Madame Récamier, and Loménie—all in brief strokes. Madame Mohl herself receives the largest share of attention; and the arrangements, the material simplicity and intellectual air of the Salon, and the mode of conducting conversation, are dwelt on with much effect, as the contrast with the general spirit of the Second Empire is strongly brought out. The nature article is an account of Boston winter birds by Bradford Torrey, in his usual vein, and it will prove a surprise to many Bostonians to find the number and kind of birds that haunt the Common and the Milldam. At least one catches the local touch in the author's remark, as he impersonates the promenader on a Sunday: "Yes, yes! English sparrows, of course; we haven't any other birds in Boston nowadays, you know." It appears that our faithful robin has been seen every month except February. The revival of the study of antique art is treated by Mr. Liscomb under one of the most extraordinarily inappropriate titles we ever saw, "The Quest for the Grail of Ancient Art"; and art, especially the feeling of the Renaissance, is also involved in the review of Vernon Lee, whose last work, however, receives no attention, being presumably reserved. Doctor Holmes contributes some pleasant paragraphs about his biographical labors and the curious identity that arises between the author and his hero in such employment, and a few words of farewell to the recently demolished Holmes house at Cambridge—a Revolutionary landmark of which the familiar sight was dear to many generations of Harvard men.

—*Lippincott's* for February has a predominantly foreign interest. This is marked in the new instalment of its vulgar serial, "On This Side," in which the English party is introduced to the reader; but in the other articles it is both more pronounced and agreeable. The oft-told story of the steerage passage between New York and Liverpool is again pleasantly written, and in "The Palimpsest of Paris" we have a semi-his-

torical travel-sketch; while more solid matter is furnished in the history of the gradual increase of popular representation in Parliament, and in the brief résumé of the principal points of the Prussian civil-service system. The concluding article is a suggestive inquiry as to whether there has been the same æsthetic development in children's nature, manners, education, etc., as in their garments. The scene, it is true, is on a hotel piazza, but it is not in such places only that one finds the children almost too lovely until they open their mouths to speak.

—Under the title "Pullman: A Social Study," Mr. Richard T. Ely, who has before written somewhat on socialism from the politico-economic standpoint, gives in the current *Harper's* an account of the community near Chicago, in which some people would fain foresee the model of the "industrial group" of the future. Here above 8,000 souls are gathered, and live under the supervision and largely in the employ of several independent but associated manufacturing companies. The annual product of their labor is reckoned in millions, and the owners, under the leadership of Mr. George M. Pullman, have endeavored to apply some part of this wealth beyond the necessary wages-fund for the benefit of the producers. A town has been built with attention especially directed to cleanliness, house-comforts, and a certain kind of beauty; there is a library, a theatre, a hotel—in a word, it is, in all its appointments, the best of the sort of towns that the history of the West has shown can be manufactured quickly and to order, and it stands single in its interest because the enterprise has been directed by one board of control, and has recognized as a chief end the good of the laborer. If any of our readers desire to know how Pullman looks externally, he will find its pleasantest features, without the glare and crudeness and "squattiness" that it shares with all Western towns, in the pictures and the text. Mr. Ely, in this part, had only to use his eyes and to buy photographs. But he found difficulty in getting at the interior of life in this community; the officers were slow to talk, and the employees and tradesmen also thought discretion the better part of conversation. In one way or another, however, he seems to have penetrated into the matter, and his report as a student interested in social experimentation is of much value, in spite of the obstacles in the way of investigation.

—The first point is, that philanthropy in this case is an investment, and, moreover, a paying one. Streets, houses, sewage, all things needful to a healthy, comfortable, and pretty town, were made economically but well, and rents so placed as to return ten per cent. on the outlay. The second point is, that there is, properly speaking, no civic life in the community, but, on the contrary, the citizens are taken care of on the patriarchal plan, under an arbitrary power in comparison with which that of Bismarck over Germany would be designated as democratic. Nothing is given to the laborers outright, because presumably it would be charity, and charity is corrupting to the manhood of the recipient; and nothing is left to the government or decision of the laborer, but the ruling power looks after his interests unassisted. There is no newspaper, for there is no popular judgment to be addressed, no criticism to be allowed. Churches must pay rent, and this, apparently, acts as a prohibitive tariff on public religion. Leases can be vacated by the owners on ten days' notice, without cause assigned. It is not necessary to enumerate more of such notable and significant features. If a wealthy corporation provides brick houses and wide streets and ornamental flower-plots, a theatre of real beauty, and a library-room (which is one of the most elegant that the writer has ever seen), it is a very creditable thing. Health, home, the opportunity for growth in intelligence, for amusement in pleasant surroundings, and for some cultivation, however rudimentary, of the sense of beauty, are among the things most ardently desired by friends of the workingmen everywhere. But if with these advantages goes the condition that the corporation shall have power to dismiss from employment, to turn out of the community on ten days' notice, to suppress individual initiative, criticism, and public expression of opinion—in fact, to govern without the least practical regard to the will of the governed—those who believe that the good of the laborer is indivisibly united with democratic institutions will think the philanthropy of material comfort, which, after all, pays ten per cent. interest to the corporation, incomplete. What do the workmen themselves think of it? Mr. Ely says they do not stay long in the place. In fact, an "industrial group" so governed is as alien from the republic in which it exists as is the Mormon "industrial group." It can no more become the social unit of the future than the national character can become Asiatic, a compound of tyranny and torpor. The great illustrative value of the Pullman experiment lies in its proving the feasibility and especially the financial economy of such expansion of the scope of capital in its relations to labor. The second step will be taken when the workmen, having developed, instead of suppressed, their powers of combination for administrative purposes, through the influence of democratic institutions, shall be able to place their own trustees in the seats of "the officers," and appropriate the ten per cent. rent to their own wages fund. Meanwhile, the town of Pullman, politically speaking, can only be regarded as a sort of Carlylese institution. A man, he said, should be as well taken care of as a horse; and that seems to be the ideal here practically achieved. The only sign of change is that workmen are now to be allowed to acquire titles on tracts of land adjoining the settlement. This is the first indication that the managers perceive that, though a town can be manufactured as well as a car-wheel, a social state must grow. The attempt to found a city and run it as a public institution, without regard to the underlying principles of our nationality bred into the race by a thousand years of ever-increasing popular liberty, is one of the strikingly characteristic phenomena of a machine-making age. It is not socialism: it is the complete autocracy of corporate wealth; and, as in all autocracies, the good done under the good tyrant must die when his successor is enthroned.

—The *Century* is fairly divided between literature and war. James, and Mark Twain, and Howells with a double portion, place the number on a high level of work, and Stedman gives a fresh study in his series on our American authors, in writing which he is so leisurely—the subject this time being Doctor Holmes. In attempting this critique Mr. Stedman faced unusual difficulties, for the place the venerable Autocrat fills is rather in the hearts than in the brains of his readers—in their kindly and truly social appreciation. His manner is that of talk, and criticism of it must always seem superfluous if not irrelevant. Mr. Stedman, however, has turned the corners cleverly enough. Much curiosity has been felt to see how General Grant would treat the military subjects upon which articles by him have been announced. There is always likely to be an exaggerated expectation of new light which is pretty surely doomed to disappointment. Badeau's 'Military Life of Grant' has been understood to have been prepared under the active supervision of the General himself, and the article upon Shiloh will strengthen instead of weakening this impression. The story is the same, with only such modifications as the rules of personal narrative would impose upon the author. The imputation of injustice to Halleck and of dilatoriness to L. Wallace are not withdrawn. The assertion that the arrival of Buell's army, while a welcome aid, was not a necessary condition of safety or even of victory, is reiterated. We do not notice any new presentation of facts bearing upon these controverted questions, though it is something to have the avowal of personal opinion from the chief actor in the scene. The circumstantial statement of Grant's personal movements upon the field, and his whereabouts at different hours, is, of course, authoritative, and will be useful in settling controversies which have turned on these points. The narrative is clear, unaffected, and simple in style, as well becomes such a man in writing of such events. The illustrations of scenery and the portraits have the double charm of authenticity and admirable execution which have characterized the series. The larger portraits of Buell, of Sidney Johnston, and of Beauregard will be every way worthy to stand as the final presentation of the true features of those officers; and the smaller ones of the two Wallaces, of Hardee, and of Breckinridge are hardly inferior. That of General-Bishop Polk in his Episcopal habit is also excellent, though the garb emphasizes the singular contrast between the functions of the man. The sketches of battle scenes are supposed to be necessary to complete the illustrations, but we think men "who have served" will generally find them painfully inadequate, almost as a matter of course. Col. Preston Johnston's article upon his father's part in the campaign of Shiloh is avowedly based upon his extended memoir; but it is none the less a model of literary handling in the choice of its points, its condensation, and its clever painting of the features of General Johnston's character which give dignity and attraction to his history. The *Century* has carried its purpose of hearing both sides so far as to add General Jordan's article as an antidote to the imputations upon Beauregard's generalship which are found in the article by Colonel Johnston.

—The *Law Quarterly Review* is the title of the latest addition to English professional periodical literature, published at Oxford (Charles C. Soule, Boston, is the American agent), and having among its contributors a number of well-known men. The editor is Prof. Frederick Pollock, and to the opening number Mr. Justice (Sir James) Stephen and Prof. A. V. Dicey also contribute. Mr. Dicey's article is of considerable interest to American readers, as it discusses the principles which underlie "Federal Government." He gives an excellent exposition of the actual working of our Constitution, and points out that in the Swiss Republic and in the Canadian Dominion the Federal principle seems to be at work producing results somewhat similar to those we see about us here. Mr. Dicey thinks that the position of the judiciary, and its established function of treating acts of the legislature in conflict with the Constitution as void, are the result of Federalism—that is to say, that they would never originate in a non-Federal state. Conservative Americans will perhaps find curious confirmation of the truth of this suggestion in the fact that the further we get away from Federalism—that is, the more centralized we become—the less willing the Supreme Court seems to be to exercise this function in critical cases. It was Marshall who outlined the Federal view of the judicial function, and he did the work when the Union was a nearly untried experiment. The legal-tender decision, establishing sovereign undelegated powers in Congress, seems to be a long stride in the direction of a "unitarian" government. It may, of course,

be said that there is really no necessary connection between Federation and the judicial control of the legislature. If the Union were split up again into sovereign States, would not the constitutional limitations upon legislative power be still applied by the courts in each one of them, just as they are now? It is the aim of the editor to make the *Review* include the discussion of current decisions not merely in Great Britain and her colonies, but in the United States as well, the consideration of topics of proposed legislation before Parliament, the treatment of questions of immediate political and social interest in their legal aspect, inquiries into legal history, antiquities, and institutions, Continental jurisprudence and legislation, and current legal literature. The next number will contain an American contribution on Early English Equity, by Judge O. W. Holmes, jr., of the Massachusetts Supreme Court.

HOLMES'S EMERSON.

Ralph Waldo Emerson. By Oliver Wendell Holmes. [American Men of Letters.] Boston: Houghton, Mifflin & Co.

THOSE who recall the graceful and felicitous tribute to Emerson uttered by Doctor Holmes before the Massachusetts Historical Society, need not expect to find in this book a prolongation of the same poetic treatment. That would be like asking Herrick or Andrew Marvell to compile another Boswell's Johnson. Nor can this memoir be tried by the standard of ordinary biographical works—those which tell us, for instance, a good deal about the life of their supposed subject. In truth, very little is here added to what we before knew of Emerson's career, while the greater part of what others have gathered is here omitted. Viewing the book merely as a memoir, the reader is disappointed; but taking it for what it is, a detailed review of the *opera omnia* of one man of genius by another, with running annotations, grave, gay, learned, and witty, it becomes both valuable and attractive. This is the form, evidently, in which Doctor Holmes has conceived his work—two-thirds of the pages (roughly estimating) being made of this sort of commentary. This is evidently done, to some extent, as task-work, though in a loyal spirit. There is a good deal that suggests the scissors and paste; and sometimes in the later pages, when the annotator comes back to the charge for the hundredth time, and says of an essay, "If I must select any of its wise words, I will choose," etc. (p. 299), the reader is disposed to recall little Alice's answer when Humpty Dumpty says, "If it comes to that, I can repeat poetry as well as any one"; and he is tempted to reply hastily with Alice, "O, but it needn't come to that." And yet, when we think how many capital sayings, how many delicious *obiter dicta*, are scattered through these four hundred pages—how many single phrases here occur that we should recognize as the Autocrat's if we came upon them in the desert of Sahara or the Congressional Debates—we are ready to pardon everything to the inexhaustible lapidary who thus fills our hands with gems.

Such phrases occur, for instance, when he compares Thoreau to one who insists on "nibbling his asparagus at the wrong end" (p. 86), and Bowen reviewing Emerson to "a sagacious pointer making the acquaintance of a box-tortoise" (p. 104); when he says that men describe themselves in the characters they draw, and adds, "One must have the mordant in his own personality, or he will not take the color of his subject" (p. 75); when he points out that "there is a kind of harmony between boldly-contrasted beliefs like that between complementary colors" (p. 133); when he compares Emerson to those "living organisms so transparent that we can see their hearts beating and their blood flowing through their glassy tissues" (p. 421)—but why go on with illustrations that simply prove the Autocrat to have preserved the freshness, not of his youth indeed, but that of his middle period of life, which was much better? It is delightful to find him even breaking a lance in behalf of Emerson's one mild approach to a debasing sensuality—pie. Holmes stoutly declares pie to be "a good creature, at the right time and in angles of thirty or forty degrees." He says that it is only in semicircles and quadrants that it is dangerous, and bids us observe that Emerson escaped dyspepsia, while eating pie, although Carlyle became a martyr to it on oatmeal (p. 269). And the same merit that attaches to the biographer's own scintillations belongs also to the good things that he preserves; as when he records—taking it from Professor Thayer's little book, to be sure—the commentary of the *Alta California* upon Emerson's lecture on Immortality: "All left the church, feeling that an elegant tribute had been paid to the creative genius of the Great First Cause, and that a masterly use of the English language had contributed to that end" (p. 267).

It is among the most conspicuous deficiencies of this memoir that it leaves us almost wholly uninformed as to two of the most important aspects of Emerson's earlier life—his relations to the anti-slavery agitation and to the so-called transcendental movement. In both cases there is an obvious lack of personal knowledge, not filled by any assiduous inquiry. In the days when Emerson was in his prime, Holmes was but lately returned from Europe, full of zeal for his profession and his art—medicine and poetry; the latter then belonging almost wholly to the department of *vers de société*. It is pretty evident from some of his verses of that period—for instance, those on Jean Paul, whom he called "a German-silver spoon"—that transcendentalism simply bored him; while toward the anti-slavery agitation he probably had the usual prejudices of his social and professional circle, though not in any acrid form. On these two important and almost controlling aspects of Emerson's life, therefore, he was as unsympathetic as Ticknor or Everett; and though he makes some slight effort to describe that part of Emerson's environment, the sketch has neither amplitude nor life. He deals with Emerson as literature alone, and scarcely alludes to his surroundings. Where he does he is often in error: for instance, he utterly underrates Emerson's relations to the abolitionists, with whom he says that he "had never been identified" (p. 304). It is impossible to say what Doctor Holmes means by being identified; Emerson no more merged himself in any anti-slavery society than in the "Saturday Club." But there is no doubt that from the day when his great address on West India Emancipation was delivered at Concord (August 1, 1844), the abolitionists, who were not at all given to claiming or even recognizing any half-converts, always accounted Emerson as their own. Doctor Holmes says of the Concord oration: "This discourse would not have satisfied the abolitionists" (p. 181), but he could easily have ascertained whether it actually did satisfy them or not by stepping into the Boston Public Library and looking at a file of the *Liberator* for 1844. He would then have perceived at once that the mere fact of Emerson's speaking at that time and place and on that subject was an act of self-identification with the unpopular party. The 1st of August was their day—a day of rejoicing, far more than the then incomplete and unsatisfactory associations of the 4th of July; it was their day, and nobody else celebrated it. As to the Concord meeting, they had tried in vain to obtain any church for it; but being refused, "to the disgrace of the town," as the *Liberator* said, they obtained the town-hall. The other speakers of the day were of the straitest sect of abolitionism—Frederick Douglass, Samuel J. May, and William A. White; and these assembled fire-eaters then and there unanimously asked a copy of the address for publication. After stating these facts, Garrison goes on to say: "All who were at the meeting, so far as we have seen, concur in praising the address *as a most satisfactory performance*"—the italics being ours. Which, now, is entitled to speak with authority as to the satisfaction of the abolitionists—Garrison at the time, or Holmes forty years after? As a matter of fact, the address satisfied them so well that Wendell Phillips for years kept a supply of the pamphlet to give to the more fastidious critics of the anti-slavery movement—"upper-crust scoffers" he used to call them—for the removal of their prejudices; and Emerson in return was sufficiently content with the abolitionists to be a contributor to the *Liberty Bell*, their annual volume. After he had also committed himself against slavery in a speech at Cambridge, and had there been heartily hissed by the Southern law-students—a fact which Doctor Holmes does not mention—there was no longer any doubt on which side Emerson belonged. Men with ropes around their necks generally know who are their friends.

Something of the same deficiency that mars Doctor Holmes's treatment of Emerson's anti-slavery attitude is likewise found when he comes to treat the "transcendental" movement. There is a disproportion almost absurd in giving six pages to the *Monthly Anthology*, because it was edited by Emerson's father, and only five pages to the *Dial*, into which Emerson put so much of his own intellectual life. Even of those five pages, nearly four are taken bodily from the Emerson-Carlyle correspondence, which is in everybody's hands. It is possible that the omission may be due to the fact that this period has already been well delineated in other volumes of the series. It is certainly a proof of the still living interest in that particular intellectual movement that four of the eight volumes of the "American Men of Letters" series have been devoted to its leaders; but, after all, each volume in the list should have a certain completeness in itself, even at the risk of some repetition. As a result of this want, we have Emerson isolated, whereas he can only be fitly viewed as the centre of a group.

As we go through the book, we find here and there some minor misapprehensions. Thus Doctor Holmes, like Matthew Arnold, makes the mistake of quoting in full (p. 187) Emerson's characterization of the Whig and Democratic parties of forty years ago, and assuming it as still valid of the Democratic and Republican parties of to-day; the fact being not only that the lines are changed, but the positions almost reversed. Another minor error we find where we should least have expected it: in the account of the *Atlantic Monthly* and the "Saturday Club." Doctor Holmes says, truly enough, that these two things were wholly distinct; but he leaves curiously out of sight a "missing link," which he can have only momentarily forgotten. He says that "the 'Atlantic Club' has been spoken of as if there was or had been such an institution, but it never existed" (p. 222). Yet this is only technically true. No formal organization ever bore that title, perhaps; yet it was a name often applied informally to a series of dinners held monthly at the Revere House while the magazine was yet in charge of Phillips & Sampson. Those who met at these dinners were, so to speak, the early staff of the *Atlantic Monthly;* and they included the men who were also the nucleus of the "Saturday Club"; thus, in a general way, connecting the two. They also included the Websterian presence

of Mr. Phillips, the senior publisher, and the jocund companionship of his ally, the best story-teller in New England, Mr. John C. Wyman. Mr. F. H. Underwood, then assistant editor under Lowell, organized the dinner and collected the dues. At only one of these dinners, we believe, were ladies present; the exception being an entertainment given to Dr. and Mrs. Stowe, in the year 1859. Other ladies were invited, but through some mishap none attended except Miss Harriet Prescott, afterwards Mrs. Spofford, who had just risen into fame through her first story, "In a Cellar." There were also present Holmes, Lowell, Longfellow, Whittier, Edmund Quincy, Higginson, Woodman, and a few more. A little shadow was thrown over the entertainment by the absence of wine—this exclusion being expressly stipulated by Mrs. Stowe. It was noticed that some glasses of water, sent out to be replenished, flushed with a suspicious hue on their return; and Longfellow privately suggested that the younger lady might be invited to send down into her cellar for some of the wines she had so well described, since the elder would allow none up stairs. Mrs. Stowe sat on Lowell's right, who was said to have endeavored to convince her that 'Tom Jones' was the best novel ever written; while Doctor Holmes taxed his lively wit in demonstrating to Dr. Stowe that all swearing really had its origin in the pulpit. There are those still living who can recall the astonished face of that reverend divine when his host gravely asserted that there were whole families in Boston upon whom the Fall of Man had never had the slightest visible influence—as, for instance, the Wares. We dwell on these details to convince our readers, and the Autocrat himself, if necessary, that if there never was an Atlantic Club, there were at least some very lively "Atlantic" dinners.

But all these deficiencies may be regarded as minor matters, since the main interest which will attract most readers to the book will lie in those literary estimates of which it chiefly consists. The very fact of the great difference in quality, if not in grade, of genius between the author and the subject will enhance this interest to the highest point. So remote, in truth, are the two men, that the book might almost be entitled 'Contributions to the Natural History of the Wood-Thrush, by a Canary Bird.' Sometimes, to our amazement, we find the two very dissimilar warblers singing the same note, as when Holmes endorses, with evident heartiness, Emerson's famous Divinity Hall address. Yet the divergence soon appears when the mystic bird of the woods sounds a note too high. Thus, Emerson's essay on "The Over-soul," in which so many have found, or thought they found, a jubilant delight, is to Holmes only a "rhapsody" (p. 172); and he speaks with what can only be called contempt of the "Essay on Immortality" (p. 292). But we must take a man, or a bird, for the notes that he can reach, not for those which do not properly belong to his genus or sub-order. On the whole, the criticisms on Emerson's prose, though they sometimes appear tame or perfunctory, are sympathetic as to the matter, and not unappreciative in respect to the manner; but it is when the critic comes to the poetry that we see how two fine minds may meet, despite all variations of temperament. Even here we find some criticism that is merely academical, as where Holmes complains of the redundant syllable in Emerson's line—

"By his own meek and incorruptible will"—

and calls it a "span-worm line," lifting up its back in the middle (page 329). One is led to suspect the critic of being rather led away and captured by his own stroke of wit, as will sometimes happen—for his span-worm objection would work destruction on many of Milton's finest cadences; and of Shakspere's—

"The multitudinous seas incarnadine"—

would leave not a trace.

It is a satisfaction to find, after this specimen, that when the same style of academical treatment is carried still further by Mr. Matthew Arnold, Doctor Holmes is all ready to protest against it, and declines, as it were, to allow any one else to prescribe for his venerated patient. He very neatly disposes of the main strength of Mr. Arnold's well-known criticism on Emerson's poetry by showing it to be vitiated at the outset by a misapprehension of Milton's phrase, on which it rests. It is a favorite rhetorical method of Matthew Arnold—and one which may, in time, become a mannerism—to take some weighty maxim or other statement of a favorite author, assume it as an axiom, and proceed to deduce propositions and corollaries. The plain limitation of the method is that the chain of inferences can never be stronger than the peg on which it hangs. In Emerson's case the axiomatic point of departure was Milton's supposed definition of poetry—"simple, sensuous, passionate." Holmes does not trouble himself about Arnold's chain of inferences, but strikes boldly at that which supports it, and down comes the peg. Milton, as he points out, never gave those three adjectives as his definition of poetry, and would have been very much at fault had he done so. These are Holmes's words:

"The passage containing this must be taken, not alone, but with the context. Milton had been speaking of 'Logic' and of 'Rhetoric,' and spoke of poetry 'as being less subtile and fine, but more simple, sensuous and passionate.' This relative statement, it must not be forgotten, is conditioned by what went before. If the terms are used absolutely, and not comparatively, as Milton used them, they must be very elastic if they would stretch widely enough to include all the poems which the world recognizes as masterpieces—nay, to include some of the best of Milton's own" (p. 315).

Arnold's dictum being thus neatly set aside, Doctor Holmes undertakes to make his own estimate, and begins thus:

"In spite of what he said about himself in his letter to Carlyle, Emerson was not only a poet, but a very remarkable one. Whether a great poet or not, will depend on the scale we use and the meaning we affix to the term. The heat at eighty degrees of Fahrenheit is one thing, and the heat at eighty degrees of Réaumur is a very different matter. The rank of poets is a point of very unstable equilibrium. From the days of Homer to our own, critics have been disputing about the place to be assigned to this or that member of the poetic hierarchy. It is not the most popular poet who is necessarily the greatest; Wordsworth never had half the popularity of Scott or Moore" (pp. 315-316).

He then proceeds to an analysis, not always admiring, perhaps not always just, yet sincere, faithful, and marked by that breadth which Emerson's admirers found wanting in the estimate of Arnold. When Arnold seriously said in his lecture that the whole body of Emerson's verse was not worth Longfellow's pleasing and rather tame little poem of "The Bridge," he did not really criticise Emerson, but himself; and assigned himself definitively to a certain school of poetry. No doubt, many another critic would prefer "The Lady of the Lake" to the *opera omnia* of Emerson, Longfellow and Arnold, could these all be brought together in a volume, like the "Coleridge, Shelley and Keats" of our early years. It is not really a question of preference, but of standard; and it is the supreme merit of Holmes's criticism that he shows himself able to go beyond the limitations of his own school, and do honor to a poet utterly dissimilar to himself. The reader can well forgive many a fault of omission and commission in a book that leaves to us the bequest of such generous praise for another. It is a fine act of self-abnegation when one who has so successfully cultivated his own well-defined field of genius expresses cordial admiration for a domain more vast, and recognizes the symbolic meaning of Virgil's simple maxim:

"Laudato ingentia rura,
Exiguum colito."

RECENT NOVELS.

Dorcas, the Daughter of Faustina. By Nathan C. Kouns. Fords, Howard & Hulbert.

Ramona. By Helen Jackson ("H. H."). Boston: Roberts Bros.

Fair Diana. By "Wanderer." Scribner & Welford.

Gladys Fane. By T. Wemyss Reid. Scribner & Welford.

Mitchelhurst Place. By Margaret Veley. Harper's Franklin Square Library.

The Lover's Creed. By Mrs. Cashel Hoey. Harper's Franklin Square Library.

The Mistletoe Bough. Edited by M. E. Braddon. Harper's Franklin Square Library.

The Children of Issachar. G. P. Putnam's Sons.

Le Mari de la Diva. Par Fortuné du Boisgobey. Paris: Dentu; New York: F. W. Christern.

Yvette. Par Guy de Maupassant. Paris: Victor-Havard; New York: F. W. Christern.

On the first page of 'Dorcas' we read of "Varus, who was terribly defeated in the forest of Teutoberg [*sic*] in the days when Tiberius was Emperor." It would be hypercriticism not to suppose that Tiberius was substituted for Augustus by an accident, for the great Emperor's mourning for the lost legions is of the "a b c" of classical story; but that such a mistake could pass to final imprint augurs ill for the writer's thoroughness of knowledge or for his full possession of his subject. There is nothing later in the book to remove this unfortunate impression. There is a good deal of heavy argument, borrowed directly from the early fathers, intermingled with episodes in which wholly modern types of feeling are displayed in most incongruous surroundings, and in which it is rather the sense of what his public will require, than his own taste, that keeps the writer within the proprieties. The preface tells us it is "a story of what I beheld as in a vision, in the subterranean darkness of the catacombs." Apparently Mr. Kouns has never heard of 'Fabiola; or, The Church of the Catacombs,' which was a familiar book in the fifties, or he would never have brought his slender outfit into comparison with the wealth of learning, the vivid imagination, the impassioned faith of Cardinal Wiseman.

As might have been expected, 'Ramona' contains many beautiful sketches. Southern California is a fruitful field for romantic subjects, whether the choice be from scenery, people, or modes of life. Mrs. Jackson has arranged her groups to present all the striking contrasts the situation can furnish. Spaniard, Mexican, and Indian all play their parts, with the old ranche, the Franciscan mission, the Indian village, the mountain cañon for background. The first half of the book is a series of most picturesque descriptions of summer life on a great California estate, in which are mingled, as episodes, traditions and incidents from the history of the missions in the days of their glory. The adopted daughter of the châtelaine (the Señora Morena deserves the title) falls in love with the head of the Indian band of sheep-shearers. That the man is a chief of his tribe, and that the girl herself is half Indian, makes no difference in the wrath of the Señora, so the pair fly to the mountains. Here begins the second half of the story, which contains the exposure of the wrongs the

Indian has suffered, the plea for justice to him which was widely advertised last year as the purpose of the book. The village of Alessandro, the Indian, had been destroyed, before his flight with Ramona, by the advancing American, and ever after he is driven from place to place, building only to have his home forced from him, planting only to leave the harvest to the merciless invader. His child dies for want of help from the hard-hearted Government surgeon. His own reason gives way at last, and he is shot dead by a miscreant in punishment for the mistake of a softening brain. Ramona is almost dying of fever when she is rescued by her cousin, the faithful Felippe.

It is all extremely well-meant. There is a pathetic grace about Ramona that is always appealing. Alessandro is chivalric in his love to his wife and his devotion to his people. But in spite of the harrowing details, the tale is just as effective, no more, no less, as one of Southey's fine-sounding metrical romances. Pleased as the reader may be by the fair landscape spread out before him, he cannot believe that the figures are alive, that either their sufferings or their joys are real. This may be explained by so simple a reason as the entire want of proper construction, understanding the word in the first place to mean simply the order of events. They are sometimes so reversed—as, for instance, the Señora's discovery of the lovers and Alessandro's declaration—that it takes a look at the numbering of the pages to convince us that they have not been misplaced by the mistake of the binder. A story that is only to be entertaining must be well planted—it must have times and seasons; how much more, then, if it is to be a convincing appeal to popular feeling. Such sweeping changes as the secularization of the church property, the crowding in of the gold-hunters, the occupation of the rich valleys for the wheat-growing, need, we will not say full explanation, but more than mere indirect allusion, to make the course of events clear. So loosely is the narrative put together that the only date given simply increases the difficulty of making the ages and positions of the personages agree.

It may be urged that a story could be so interesting that most readers would be unconscious of any such failings. Granted, but Mrs. Jackson has committed the far graver mistake of winding up her argument with a most unfortunate anticlimax. Any lawyer trained to address a jury could have told her better. Alessandro and Ramona stand for their race, and their wrongs are to appeal to our sympathy, to obtain justice for their people. The reader should be left oppressed with the burden of their sorrows. So far from that are we, that though the murdered Alessandro is left dead on the lonely San Jacinto, Ramona disappears in a halo of prosperity. It was not enough to hint that she married her cousin, but it is told in regular newspaper fashion: "The story of the romance of their lives, being widely rumored, greatly enhanced the interest with which they were welcomed. The beautiful Señora Morena was the theme of the city." There have been books written which stirred men's hearts to undo the wrong, to establish the right, but it was in no such fashion as this. Their moral force, their actual success, was in exact proportion to their simple reality, to their artistic literary merit.

'Fair Diana' being avowedly a hunting novel, technical expressions are in order. The slang of the hunting-field, race-course, and stable is abundant, but it is not so excessive as to depress a sensitive reader with a consciousness of his ignorance of his native tongue. The horse stands first in the affections of the author, who assumes humanity's moment of supreme ecstasy to be that of the dash forward to the cry, "Tally ho! Tally ho! Gone away!" His observations of men and women on their feet are not profound, and, infected by the atmosphere of the book, we can find no truly descriptive phrase for his characters except "a cheap lot." To do Diana justice, her cheapness is more of association than of nature. Her love affairs have a rashness which may be inseparable from her habit of flying fences and ditches as regularly and calmly as most girls go to church. In the management of her escapades after marriage the author excites sympathy for her, and raises his novel above the level of a hunting manual.

There is nothing very new in the story of a young girl driven to indiscretions by a stepmother's tyranny, or in the misery of a woman's love for a man who has already a wife carefully concealed from the public eye. Yet these materials form the backbone of the long novel 'Gladys Fane,' now in its fourth edition. Such incidents may manifestly be employed to illustrate the extreme either of virtue or vice, and choice is here made of the former alternative. In spite of her scorn of conventions, no one could be purer in heart than Gladys, unless, indeed, it be her lover, Rex Mansfield. The only obstruction to appreciation of Mansfield's nobility is the belief that he could, very properly and speedily, have obtained a divorce from an Asiatic woman married in his boyhood and separated from him for sixteen years through no fault of his. Chapters of gloom and a bitter end have, however, plainly been predetermined, and the author does not mean to be deterred from his purpose by a trifle. He flings much gratuitous contempt and cynicism at the world quite outside of the world with which he has for the time to do. Then he shows his extended acquaintance with vice by the introduction of the veriest blackleg of a prince, associated with a servile, lying Smyrniote, the brother of Mansfield's wife. Occasional episodes are rather remarkably well written, but they do not redeem a pervading falseness and absurdity, nor do they explain at all why the author is, in season and out of season, clamorously worshipful of the English nobility.

'Mitchelhurst Place' has a commonplace plot with a bright, natural heroine, and one or two forcible scenes. Harding's morbid ill-temper is more prominent than his proper pride, and a show of resolution in adverse circumstances would have won him more sympathy. The pathos of his love for Barbara is destroyed by his unnecessary discourtesy to her. She could hardly fail to misconceive his feeling, and, though there is actual cruelty in her attitude toward him at the last, the distinction between cruelty in fact and in intention is finely drawn.

In 'The Lover's Creed'—which is "One and one only"—there is no lack of incident cunningly fitted together, all captious objections being foreseen and provided against. A call to the Crimea separates Jack Basset from Mavis Wynn, and they are among the numbers upon whom the fatal mismanagement of the war entailed a great deal of wretchedness. In the events which keep them apart and finally bring them together, there is nothing to excite incredulity; but the development of a romance of Squire Basset's life through and with that of his son is a severe trial of faith. However, granting the circumstances, it may be conceded that the people preserve a consistent individuality throughout. Mavis Wynn is a heroine with just enough strength of character, and the Bassets, father and son, are attractive, manly figures. Add to these merits the pleasant bits of French domestic life, and Mrs. Hoey's style, familiar without vulgarity, if a trifle over-decorated with Latin, and we have a novel from which any one may extract a few hours' entertainment.

The twelve stories contained in 'The Mistletoe Bough' are an outspoken protest against an assumption of that Christmas joyousness which has long ceased to be spontaneous, in literature, at all events. Those which are not positively woful impress us as originally intended to culminate in despair, a cheerful dénouement being chosen only for the sake of variety. Not one incident is exceptionally strange, piquant, or amusing, nor is any one complete in itself. The people and circumstances would fit comfortably into almost any English society novel; and of short stories, as such, no more conclusive condemnation can be spoken.

Several attempts have been made to combine romance with a full, free, dispassionate exposition of the Reconstruction period, but the successful one is not yet. The best that can be said of 'The Children of Issachar,' viewed as a political essay, is that it presents forcibly but not completely what is already known about the iniquities of Republican politicians in the South during the years immediately succeeding the civil war. The position apparently taken by the author, that palpable wrong may be properly set right by the arbitrary action of a secret society whose authority is self-constituted, is not defensible. If the Kuklux represented the "children of Issachar," they were not, what they are reported to have been, wise men who knew what Israel ought to do. Considered as a story, the book is still more unsatisfactory. The love-tragedy does not grow out of the political situation in Georgia in 1867-'68. It is, moreover, an unpleasant variety of tragedy, not improved by the author's formal and pedantic manner. The classical love-making of Mr. Alfred Rowe has a musty flavor, and the young man in real life who may think of imitating him is warned against signing his own death-warrant. The local character-sketches, however, are decidedly strong, and suggest that, unhampered by politics or romance, the author might write something well worth reading.

M. du Boisgobey is not seen at his best in the 'Mari de la Diva,' which, although interesting enough in a way, is, after all, little more than a variant of the regulation Parisian novel. The Parisian novel may be divided into two broad classes: in the first there is an honest husband and a faithless wife; in the second there is a devoted wife and a faithless husband. The 'Mari de la Diva' belongs in the second of these classes. The diva is a model wife, while her husband is all that a husband ought not to be. She lets him waste her fortune and goes back to the stage again to make more; but on the night of her first reappearance as *Juliette*, in Gounod's "Roméo et Juliette"—a part in which she had once been unsurpassed—she sees him in the box of her hated rival; so in the potion scene she takes real poison and dies as the curtain falls. This is the chief effect, though there is a good duel afterward: M. du Boisgobey makes a specialty of duels. He is also nothing if not moral, in the old conventional manner. He shows that the best-laid plots may come to naught, and that a man may smile and smile and be a villain still; and that honesty is the best policy; and that vice is sure to be punished. In the 'Mari de la Diva' the punishment of vice is sufficiently original to deserve notice. There is a male villain and there is a female villain. To begin the just reward of their misdeeds, they are married off to each other. Then the male villain tries to drop the female villain down a crevasse in a glacier near Chamounix, but the female villain is wary and drags him in after her.

There is a sharp contrast in coming from the 'Mari de la Diva' to 'Yvette'; it is like passing from the fantasy of a fairy tale to the actuality of an essay in social science. M. du Boisgobey's dolls are stuffed with sawdust, while M. de Maupassant's men and women have blood in their veins. M. de Maupassant is the nephew and the

literary executor of Flaubert. He is also the chief of M. Zola's disciples, and perhaps the only one of them who is a man of real ability. His power no one will dispute who knows his volume of verse, modestly entitled 'Des Vers,' and now in its fourth or fifth edition, or the painful study called 'Une Vie.' He has more poetry in him than has Zola, more humor, too, both positive and negative, and a richer *esprit gaulois*. Though he is given to broad subjects, he has no liking for dirt as dirt; rather may it be said that he likes to paint the complete man, as does Walt Whitman. He rarely sinks to the sordid reality of Zola, and he is not fond, as Zola is, of holding an inquest on humanity in the presence of the corpse. In 'Yvette' a painful subject—the fate of a daughter of a leader in the *demi-monde*—is handled with sobriety and vigor. The situation is solved with inexorable logic, and although the outcome is sad indeed, it is the only possible solution according to the conditions.

A MODERN LITERARY LIFE.

Fifty Years of London Life. Memoirs of a Man of the World. By Edmund Yates. Harper & Bros.

Mr. Yates's memoirs are chiefly valuable, or will hereafter be chiefly valuable, as presenting an accurate picture of the career of a literary man of our day, of a certain well-defined type; though to become such a littérateur as Mr. Yates, is perhaps not within the power of a large number of clever young men, even if endowed by nature with a good constitution and capacity for work. In some respects he has gifts beyond the common. That peculiar kind of impudence and recklessness best known as "cheek," Mr. Yates excels in—in fact, he is rather a man of cheek than a man of the world—and he combines with this an air of bonhomie and easy *savoir-faire* which will, we fancy, take with a great many readers. He tells with great frankness the whole story of his expulsion from the Garrick Club, at Thackeray's instance, in such a way as to give the impression that he feels, and always has felt, that he was unjustly treated in the matter, and that it was one with which the club had no concern, although his offence consisted in publishing a little sketch of a fellow-member, in which he said (speaking of his lectures): "The prices were extravagant, the lecturer's adulation of birth and position was extravagant, the success was extravagant. No one succeeds better than Mr. Thackeray in cutting his coat according to his cloth. . . . Our own opinion is, that his success is on the wane." And speaking of his conversation, he added that "it was either frankly cynical or affectedly benevolent and good-natured." Club life has made so much progress since 1858, that there are, we presume, plenty of clubs in which a little "notice" of this kind by one member of another would merely cause a laugh at the latter's expense; but there can hardly be a question that, at the time, the rules governing the intercourse and behavior of members of a club like the Garrick positively forbade the publication of such sketches. Such was the view taken by the club, which Mr. Yates was compelled to leave in disgrace; and it was really a monumental piece of audacity to resort, after Thackeray's death, to the device of taking the public into his confidence as to this episode. Mr. Yates's artless tale convicts him out of his own mouth of being a man of matchless impudence, and eminently qualified for the high position which he now occupies as a "society journalist"—that is, as a vender of tittle-tattle, gossip, and scandal about titled people.

Few young men of letters could hope to reach the level obtained by Mr. Yates; but if they will read his memoirs they will clearly discover what a very hard life writing for money is, and how poorly literature "pays" in the commercial sense. Mr. Yates began as a poet, then took to novels, sketches, editing, newspaper correspondence, lecturing, and finally to society journalism. He went into literature as, we fancy, nine-tenths of the bright young men who take it up begin—not because he had anything of importance that he wanted to say, but because he was attracted by the idea of writing, liked the society of literary men, overrated the importance of "fame" in the world, and underrated the importance of money. If it were not for the generous ambition which leads young men to do this, careers would be chosen with more judgment, and there would be vastly fewer literary men in the world. Mr. Yates has managed, according to his own account, to make a living out of literature, as a man with his natural gifts would probably have made a living out of anything he undertook; but only after years of anxious toil, during many of which he could not have got along had he not derived a small revenue from the Post-office. He has written a number of novels, which curiously enough, whether on account of their badness or for some other reason, have found many readers; his lectures in this country were successful, and he has helped the circulation of his paper by getting himself sentenced to jail for its libellous character. He has left no stone unturned to get either notoriety or a cash equivalent for it; but the largest income that he mentions himself as receiving is only £1,200 ($6,000), and that for newspaper correspondence of the most arduous and wearing kind. Few men can hope to do as well pecuniarily in literature; few men would like to do as well in the same way.

It is really as a tolerably rosy picture of a not very rosy modern literary life that Mr. Yates's volume is interesting. He belongs to an altogether new species of writers, though to a very old genus — the hack. Singularly enough, he has evidently got out of literature what few people who are genuinely literary get out of it—a vast amount of substantial enjoyment. The society and friendship of literary men, the opportunity of being very nearly "one of them"—there is a boyish naïveté about his descriptions of his feelings on the subject which is perhaps the most attractive thing in the book—are nearest to his heart. His stories and anecdotes of them are sometimes good, though more often flat, and show more zeal and memory than discrimination. But his reminiscences of Dickens, Thackeray, and other of the distinguished men of his earlier days are often entertaining.

The Garrick Club episode throws a flood of light on the difference between Thackeray and Dickens which grew out of it, and which lasted all their lives. Yates was a friend of Dickens, and it is obvious that the latter did not see what there was in the little "sketch" that should make Thackeray so implacable. Nobody who reads these memoirs can fail to see that the root of the difficulty was that Thackeray felt himself to be dealing with a man who was not a gentleman in the acceptation of that term then prevalent—one who especially could not discriminate between deliberate insult and an unintentional slight. The difference goes to the root of breeding, and breeding in those days counted for a good deal more in "the society of gentlemen" than it does now. If Mr. Yates had accidentally trod upon Thackeray's foot in the club, an apology for his awkwardness would, in the then prevailing code, have wiped the whole affair out. Thackeray would have been bound to accept his apology. The difficulty with Mr. Yates's statement of his case is, that he appears to think the deliberate publication of insulting criticism for money stands on the same footing with an accident of this sort. He was perfectly willing to apologize and shake hands, and never could understand what hurt Thackeray so much. So utterly did he fail to comprehend the rancor he had excited in Thackeray's mind, that he attempted in later years to show that there was no feeling on his own side by sending a contribution to the *Cornhill*, when his enemy was editing that magazine. It is hardly necessary to say that it was returned by the editor's direction. Dickens does not seem to have understood much better than Yates did, and apparently took the view that there is a sort of absolute duty of forgiveness and forgetfulness, at any rate if your fellow-Christian apologizes—a view preached every day in thousands of Christian churches, but not, in Mr. Yates's early days, admitted in club life.

WEST-INDIA YACHTING.

The Cruise of the Montauk to Bermuda, the West Indies, and Florida. By James McQuade. 1 vol., 8vo. Thomas R. Knox & Co. 1885.

In the Trades, the Tropics, and the Roaring Forties. By Lady Brassey. 1 vol., 8vo. Henry Hall & Co. 1885.

When properly pursued there is none of the so-called manly sports more invigorating, physically and mentally, than the peculiarly Anglo-Saxon pastime of yachting. In England, its conditions are conducive to its development in its best form. The iron-bound coasts and stormy waters of the narrow seas render it a necessity that the yacht shall be a strong, able, weatherly craft, of which the first requisite is that it can hold its own against wind and water. Our coast, with its more sheltered cruising grounds, has developed a class of boats in which strength and safety are subordinated to speed, and yachting has had a tendency to degenerate into racing for prizes in regattas, lying at anchor at Newport and Bar Harbor, and even perhaps sometimes into coarse dissipation when relieved from the restraint of home and family. We are glad to notice within the past few years a disposition to a manlier development which promises to render yachting what it ought to be—an amusement which strengthens the nerves, hardens the muscles, and calls forth whatever reserve of power a man may have within him. Any one who, in a little boat, has contended with a cyclone in the Gulf Stream, will be the better of the experience, and will enjoy, with a sense of power hitherto unknown, the consciousness of man's ability to cope with the elemental forces of Nature.

It is somewhat strange, indeed, that our American yachtsmen seem, only within comparatively a few years, to have discovered what an unrivalled cruising-ground they possess in the Caribbean Sea. By keeping well to windward on the voyage thither, and making for Barbados as the first port, the yachtsman has at his command everything that an amateur sailor can ask for. He can reckon almost with certainty on a ten or twelve-knot breeze, steady in character and direction. He has before him the most charming climate, the bluest of water, rarely lashed into a heavy sea, and there lies within his reach, from Demerara to St. Thomas, a series of harbors where sea and land, mountain and tropical forest, are grouped in the most varied and picturesque loveliness, and among which he will rarely be obliged to haul his sheets close. If a yachtsman asks for more than this, he should be condemned to an eternal Malebolge of Newport dancing-parties on board his boat, with an infinity of Chinese lanterns and brass bands.

A knowledge of this delightful cruising seems gradually to be spreading, and the signals of the New York and Eastern Clubs are becoming known at Bridgetown and St. Pierre. It is to be hoped that the good work may go on, and our

yachts and their owners become better fitted for blue water, and less adapted and addicted to Long Island Sound. Such books as these before us will have a healthy influence in this direction. It is true that 'The Cruise of the *Montauk*' is somewhat painful reading, owing to its persistent jocularity. If the author had followed the example of Dr. Holmes, who tells us that he

"Never dared to write
As funny as I can,"

the function of reader as well as of writer would have been less laborious. Still, the record is one which will be followed with interest by all who are fond of sea experiences; and though the course of the cruise might perhaps have been altered to advantage, enough is revealed of the inexhaustible attractions of the Windward Islands to tempt other adventurous yachtsmen to follow the example of the owner of the *Montauk*. The volume would have been better without the stiff and somewhat harsh illustrations.

Everybody likely to read Lady Brassey's new book must already be familiar with her former accounts of sea travel, and will know what to expect from her enviable and tireless vigor of sight-seeing. Practice, we are glad to say, has given her greater facility with the pen and improved descriptive power. In 'In the Trades, the Tropics, and the Roaring Forties,' she takes us from Madeira to Trinidad, thence to La Guayra and, Caracas Jamaica, the Bahamas, Bermuda, and home by way of the Azores. There is thus ample variety of scenery and of civilization to relieve the monotony of sailing adventures, and the volume is full of illustrations, many of them of considerable artistic merit. The introduction of maps is a feature which might have been adopted with advantage in 'The Cruise of the *Montauk*'; while, as a matter of taste, one rather wonders to see her ladyship's portrait adorning the title-page.

The Empire of the Hittites. By William Wright, B.A., D.D. With Decipherment of Hittite Inscriptions, by Prof. A. H. Sayce, LL.D.; a Hittite Map, by Col. Sir Charles Wilson, F.R.S., etc., and Captain Conder, R.E.; and a Complete Set of Hittite Inscriptions, revised by Mr. W. H. Rylands, F.S.A. New York: Scribner & Welford. 1884.

Two groups of Hittites appear in the Old Testament: Canaanites, descendants of Heth, the second son of Canaan, who dwelt mainly in the mountains of Judah and Ephraim, and tribes beyond the borders of Palestine, who had kings of their own in the times of Solomon and his successors. To the first group, who were a leading people in Canaan before the Hebrew conquest, and are sometimes spoken of as representatives of the whole Canaanitish race, belonged Ephron the Hittite, of whom Abraham bought the burial-ground at Hebron; Beeri the Hittite and Elon the Hittite, whose daughters Esau married; the Hittites who fought Joshua at the waters of Merom; the Hittites on whom Solomon levied a tribute of bond-service; and probably the officers of David, Ahimelech the Hittite and Uriah the Hittite. To the other group belonged the Hittites for whose kings merchants of Solomon brought chariots and horses from Egypt; the Hittites whose presumed sudden descent for the relief of Samaria frightened away the besiegers of that city, under Ben-hadad; and probably the Hittites in whose land the betrayer of Luz built a new town of that name, as well as the Hittitesses mentioned among the foreign women who turned away Solomon's heart after strange gods. Who these independent Hittites were, whom the Pentateuch apparently ignores, and none of whose cities or kings are anywhere mentioned by name, was somewhat puzzling to former expositors; and to a few radically rationalistic critics they appeared somewhat mythical. But the Egyptological and Assyriological decipherments of our age have vindicated the Bible and restored a nation to ancient history. The Hittites of the books of Kings are the Kheta of the Egyptian monuments and Khatti of the cuneiform inscriptions, a warlike nation of northern Syria, against whom the great Pharaohs Thothmes III. and Rameses II. and the Assyrian conqueror Tiglath-Pileser I. waged obstinate wars before there was a king in Israel, and whose independence outlived the Israelitish kingdom of the ten tribes. Among their chief cities, made memorable by the boastful inscriptions of their Egyptian and Assyrian foes, were Carchemish, on the Euphrates, and Kadesh, on the Orontes. They succumbed to Sargon, King of Assyria, toward the close of the eighth century B. C.

So much is established almost beyond dispute, and it is now also generally assumed that the Hittites of Canaan and those of northern Syria were one people, the former being detached members of the main body. On this a lofty superstructure of Hittite history and antiquities has lately been reared by some Orientalists, chief among whom is Professor Sayce. The author of the book before us, who in 1872 succeeded in securing for the British Museum casts of the mysterious Hamah inscriptions, discovered by Burckhardt in the beginning of this century, pronounced the engraved stones Hittite remains. Professor Sayce reached the same conclusion, and for years he has been indefatigable in proclaiming and endeavoring to prove the Hittite origin of everything in the least resembling the Hamathite hieroglyph-like engravings that has been discovered between the upper Euphrates and the Grecian Archipelago—at Aleppo, at the presumed site of Carchemish, in Cappadocia, in Lycaonia, or in Lydia. On the ground of these discoveries the Hittites have been raised to the dignity of a nation remarkable for the successful cultivation of the arts both of war and peace, for whom no less is claimed than that they "had carried their arms, their art, and their religion to the shores of the Ægean, and that the early civilization of Greece and Europe was as much indebted to them as it was to the Phœnicians." Mr. Wright's book is, in the main, a manifold echo of this view of Mr. Sayce, with the addition of testimony from Captain Conder, Colonel Wilson, Dr. Isaac Taylor, and others. What renders this work chiefly interesting is its illustrations, comprising reproductions of the Hamah, Aleppo, Jerabis (or "Carchemish"), Ibriz, and Tyana inscriptions; of the Marash inscribed lion, Layard's and Schlumberger's "Hittite" seals, a cartouche from "Niobe on Mount Sipylos," Herodotus's Sesostris (near Sardes), the silver boss "of Tarkondêmos with Hittite and cuneiform inscriptions," etc. The inscriptions are all undeciphered and sadly forbidding in their obscurity, and the chapter contributed by Sayce, headed "Decipherment of the Hittite Inscriptions," is merely a tentative first step toward the discovery of a key. This attempt is characteristic of the Oxford professor's self-assurance in piling guesses and surmises upon conjectures and hypotheses.

The ardor with which the resuscitation of the Hittites is pursued is in part, especially with Mr. Wright, owing to a desire to vindicate and exalt the historical narratives of the Scriptures; but it oversteps the legitimate bounds of zealous inquiry. The haste with which in this field conclusions are formed and repeated is unworthy of serious investigators. Speaking of Hebron (in 'Fresh Light from the Ancient Monuments'), Professor Sayce adds: "Another Hittite city in the south of Judah was Kirjath-sepher, or 'Booktown,' also known as Debir, 'the sanctuary,' a title which reminds us of that of Kadesh, 'the holy city.' We may infer from its name that Kirjath-sepher contained a library stocked with Hittite books." Mr. Wright quotes this (page 47) without asking himself, Is there in all the Bible a warrant for calling Debir a Hittite city? Taking Sayce's guess for a fact, he says elsewhere (p. 71): "No doubt the name Kirjath-sepher, or Booktown, the name of a Hittite town near Hebron, has some reference to Hittite literature," and, in addition (p. 139), cites M. de Rougé as saying that "Hebron, the Hittite town of Palestine, once bore the name of Kirjath-sepher, or 'City of Books'"—in which, by some kind of slip or other, Hebron, which was also named Kirjath-arba, is substituted for Debir, or Kirjath-sepher. In the same manner Professor Sayce's incorrect statement (*loc. cit.*) that the Septuagint shows that in II. Sam., xxiv, 6 the true reading is not "to Gilead and to the land of Tahtim-hodshi," but "to Gilead and the land of the Hittites of Kadesh"—whereas the Septuagint shows no such thing, and the emendation is of recent origin—is not only copied by Mr. Wright without examination (p. 50), but enlarged by the equally incorrect statement that the correction is confirmed by "the best Hebrew manuscripts." On p. 80 the strange assertion is made that Aholibamah, the name of one of Esau's wives, was "doubtless" her older Hittite name, which, linguistically considered, is like saying that Andromache is doubtless a Semitic name, or Cleopatra old Egyptian. And the author adds: "This may explain the fact, which has so much puzzled commentators, that Esau's wives had double names." But what has puzzled commentators in regard to these ladies is not double names, but a whole chain of discrepancies (comp. Gen. xxvi, 35 with Gen. xxxvi, 2).

The English and Scottish Popular Ballads. Edited by Francis James Child. Part 2. Boston: Houghton, Mifflin & Co.

In a previous number of the *Nation* (No. 926, March 29, 1883) we gave, in a notice of Part 1, a general account of this great work. In the second part the same wide knowledge and the same thorough scholarship, in the highest sense of that term, are as conspicuous as they were in the portion previously published, and the unwearied industry which has forgotten nothing and overlooked nothing shows itself as before on every page. The number of ballads contained in this part number twenty-five. They are naturally of different degrees of literary merit, but in the light they throw upon popular beliefs and superstitions they are all of importance. The first three, dealing as they do with the Arthurian legend, are indeed, as Professor Child points out, a part of the equipment of the professional minstrel, rather than of old women whose duty it is to amuse children, or of young women whose pleasure it is to amuse themselves. Yet even in these there is much that gives insight into the sentiments of the past. The lofty conception of rigid propriety on the part of women which, in an age of general looseness, men delight to entertain as a sort of compensation for their own misconduct, is graphically pictured in the very lively ballad of "The Boy and the Mantle," with which this part opens. Here a standard of excessive purity is set up which no one ever desired or even thought desirable to attain; but it is, after all, the sort of ideal which men of loose lives are disposed to insist upon in the case of their female relations.

These Arthurian ballads form, however, but a small portion of the work. Some of the rest are thoroughly popular in the sense that they revel coarse and disgusting images; one of them—

the ballad of "Kempy Kay"—is, in fact, so thoroughly popular in this sense that the reading of it is almost sufficient to turn an ordinary stomach. Against such are to be set off many passages of great beauty, and one ballad in particular—that of "Tam Lin"—a ballad peculiar to Scotland, is one of the finest productions that the poetical genius of that country has given us. Poems of this kind are, indeed, so eminently an expression of the sentiments that sway great masses of men, that it is inevitable that in them both the wealth and the poverty, the elevation and the degradation, of human nature should be clearly manifested.

We seem to see that in this second part Professor Child has made more concession to the weakness of human nature than he did in the first. The introductions to the separate ballads give, in the portion of the work now under notice, the underlying plot, without breaking in upon the course of the narrative by pointing out during its progress the variations which the incidents have undergone in the different versions. This may be due to accident or design, but it would certainly be hard, in consequence, to find anywhere stories more entertaining or more charmingly told than some that are contained in these introductions. They will add greatly to the interest of the work in the eyes of the general reader; and as nothing is sacrificed by the manner of relation, they will be equally welcome to the special student.

In finishing our brief notice of this work, it would be unjust to close without saying a word as to the style in which it has been brought out. Too much praise can hardly be given to the publishers for the manner in which they have done their part. It is certainly satisfactory to find that one of the greatest achievements of American scholarship is fittingly embodied in work which reflects peculiar credit upon American typography.

The New Book of Kings. By J. Morrison Davidson (of the Middle Temple), Barrister at Law. Boston: Roberts Brothers. 1884.

WHAT Artemus Ward might have called the "king business" is, like many other industries, somewhat depressed at the present time. An Emperor of Russia who cannot leave his house for fear of being murdered is not well calculated "pour encourager les autres." If the Republic lasts a few years longer in France, it will be difficult to find anybody at the next Revolution with a title to the throne which is not ridiculous. When the German Empire coolly confiscated in Hanover the sovereign rights of one of the oldest dynasties in Europe, it adopted a course which is more than likely to return to plague the inventor. The theory has been tenaciously held in England, that the House of Lords is extremely popular with the nation, and that an Englishman "dearly loves a lord." During the agitation respecting the Franchise Bill, however, that faith has been rudely shaken, and there is strong evidence that the country is nearly prepared to make short work of that venerable institution. The Prince of Wales is reported, whether truly or not, to have said that he should be the last King of England.

The mainstay of royalty at present is the difficulty of finding a substitute. It is the old case of bearing the ills we have rather than fly to others that we know not of. Mr. Davidson is troubled by no such perplexing doubts. He has the ingenuous faith of the first French Revolution not only in the wisdom, justice, and common sense of the mass of the population, but in their capacity for transmuting these qualities into logical, efficient, and continuous action. What he hates is not so much individuals as individuality. Not the fiercest ward politician in the United States has a greater horror of one-man power. He delights in the abstract and abhors the concrete. He would amend Pope by reading, "Whatever is *not* is right." While he has not a good word for a single English ruler from William the Norman to Mr. Gladstone, he has real tenderness for Harold, the last Saxon King, apparently on the sole ground that he said to William: "My royalty comes to me from my people, and without my people's consent I cannot lay it down"—as if that was not precisely the pretext with which Louis Napoleon tried to blind the eyes of the French people and the world.

The catalogue of royal crimes which Mr. Davidson presents is no doubt very shocking; but to make the picture at all a fair one, it should be viewed not from the standpoint of the nineteenth century, but of the condition of the world and other governments at that time. Thus the reigns of Henry VIII. and Elizabeth seemed a golden age as compared with the calamities of the Wars of the Roses. It was the uprising of Europe against the horrors of the feudal system; and the same halo of glory rests upon the achievements of Richelieu and of Ferdinand and Isabella. What was meant by the absence of such rulers the Thirty Years' War in Germany sufficiently illustrated. Mr. Davidson's bitterest hatred is reserved for Oliver Cromwell, not because he was the worst ruler, but because he put a violent end to the government of the Commonwealth, which embodied Mr. Davidson's cherished dreams. We will give the organization in his own words:

"What the far-sighted statesmen of the Commonwealth strove ultimately to establish was biennial Parliaments, returned by the widest and most equal suffrage practicable. The House thus constituted was to elect a large Executive Committee for one year: this Committee or Council of State to choose its own President, monthly or otherwise, as it had a mind. By this means good administrators, irrespective of party, could be secured, and the reprehensible idolatry of Grand Old Men prevented. The Executive Committee, forty-one in number, under the Commonwealth, was divided into sub-committees for the different departments of State. These, after deliberation, reported first to the full Council and then to the House, and if their policy was affirmed, there was an end of the matter."

Bless him! he need not go back to the Commonwealth for that. We can show him a plenty of examples, identical in principle, in the State legislatures and city governments of this country; and if the results under the Commonwealth were anything like those arrived at here, there are, to say the least, two sides to the Cromwell question.

The truth is, that the problem which popular government has been trying for a century to work out is how to combine executive administration strong enough to hold society together, with responsibility to the will of the people exercised through their representatives. The attempt to solve this by placing all power in the hands of these representatives has repeatedly failed disastrously, leading through anarchy to despotism. That it will ultimately be successfully solved, we are glad, for the sake of our mental peace, that we firmly believe; but it will not be by the methods pointed out by Mr. Davidson.

Archbishop Leighton: a Short Biography, with Selections from His Writings. By William Blair, D.D. New York: A. C. Armstrong & Son.

A DAINTIER book than this is, in its external appearance, one would not care to see. Covers of white and gold enclose 250 pages of beautifully-printed matter, and on the title-page a tiny etching of Dunblane Cathedral lends an appropriate charm. For a long time Leighton has been known to all except a few only by means of Coleridge's 'Aids to Reflection,' which are made up very largely from Leighton's writings, a fact in itself ample testimony to their excellence. "It never rains but it pours," the proverb says; and it has been made good by the recent appearance of at least two other notable criticisms of Leighton, one by Principal Tulloch and the other by Dr. John Stuart Blakie. Doctor Blair's biography is written warmly, tenderly, but without disagreeable effusion. That Leighton was of a most gentle and forgiving disposition is shown by his allowing himself to be made a Bishop and afterward Archbishop of a Church that had subjected his father to the most cruel treatment—scourging, the pillory, mutilation, branding, and imprisonment until his death. Born in 1611, his father's sufferings made him a wanderer for many years, and it was not till 1641 that he was ordained a Presbyterian minister at Newbattle, a quiet parish six miles from Aberdeen. There he remained till 1653, when he became Principal of Edinburgh University. He continued in this position till after the Restoration, and then accepted one of four bishoprics established by Charles II. in Scotland, and chose Dunblane "because it was a little city." Doctor Blair does not make a vigorous defence of this astonishing proceeding. He admits that it was a serious blemish in a man whose character was almost wholly admirable. Certainly if this action had not something sordid in its character, it was one of the most heroic actions possible. In 1669 he was made Archbishop of Glasgow, without surrendering his bishopric.

The sermons selected by Dr. Blair as examples of Leighton's finest manner are three: "Christian Heroism," "Holiness," and "Follow Christ." "Discarding the method of multitudinous divisions," we are told, Leighton "made the text in its parts his keynote." He does not appear in these discourses and in the other matter selected —Commentary on First Peter, theological lectures, etc.—at such advantage as in Coleridge's brief quotations in his "Aids to Reflection." He has not that "wholeness of tissue" the lack of which Mr. Arnold complains of in Emerson, but he has in an eminent degree those qualities of "sweetness and light" which Mr. Arnold prizes most of all. The flow of the discourses is continually broken by the introduction of texts, not with chapter and verse in the usual Puritan manner, but by way of illustration, often aptly, but sometimes too ingeniously. If Leighton's preaching had the relative superiority that is claimed for it by Dr. Blair, the average of the time must have been low. It is not to be doubted that hundreds of sermons that are better than these are preached every week in England and the United States.

Reminiscences of Army Life under Napoleon Bonaparte. By Adelbert J. Doisy de Villargennes, former Vice-Consul of Italy at Cincinnati. Cincinnati: Robert Clarke & Co. 1884. Pp. 98.

THIS interesting little book contains the personal recollections of an old gentleman of eighty-four of his experience in the Napoleonic wars when a very young man. He is first sent to Portugal in Junot's expedition, being then in the navy. On his return, he obtains his commission as *sous-lieutenant* in the army, and takes part in the battle of Essling, where he is wounded, and subsequently in that of Wagram, in 1809. On the conclusion of peace, his regiment with many others is sent to Spain. Here it forms a part of the army under Masséna. At Busaco it is cut to pieces in Ney's reckless attack on the English position; and "a considerable promotion took place," he says, "in our regiment." In the weary

weeks consumed in waiting before the lines of Torres Vedras, the two armies seem to have got on the best of terms with one another. Some amusing stories are given of the courtesies which the soldiers, until forbidden, were fond of exchanging with their respective antagonists. Finally, at Fuentes de Oñoro, our author is taken prisoner, carried to England, and there interned till the close of the war. He has nothing but good to say of the English; he speaks highly of their military prisons, of the regularity and justice with which they were managed, of the excellent fare served out to the men. In Scotland, where he spent a good part of his captivity, he acquired the friendship or at least acquaintance of some charming people, and even dined with Mr. Scott, afterwards Sir Walter.

There are no details of battles in this little work; M. Doisy justly says that every circumstance tends to incapacitate the subaltern from filling faithfully the office of reporter. But of the profound admiration and affection felt by the old soldiers of the Empire for their great leader, this volume bears frequent and abundant testimony. On the one hundredth anniversary of the Emperor's birthday, the French citizens of Detroit celebrated the occasion with a dinner, at which the old veteran presided, and reiterated his devotion to Napoleon and to his house. "The strict sense of justice, the generosity of Napoleon toward those who had served well, or toward the families of those who had fallen; his paternal attention to those in hospitals; his severe surveillance over the conduct of contractors for the supply of the troops; the commanding influence which he unaffectedly exerted over his most distinguished generals—all these aroused the enthusiasm of our soldiers."

There are many fresh and amusing sketches in these pages, and we bespeak for them a wide perusal.

The Book-Lover. A Guide to the Best Reading. By James Baldwin. Chicago: Jansen, McClurg & Co. 1885.

THIS volume is really made up of a number of classified lists of books which the author thinks may serve either as the nucleus of libraries for home or school, or as guides to courses of reading in history, literature, theology, or political science. Between these lists are inserted passages of text which are meant to be helpful in the way of advice or stimulation. For the most part these consist of quotations very skilfully put together, and ranging from the oldest and most famous to the youngest and most obscure writers. The whole makes a small and useful volume, especially for such readers as have access to any public library. It is not easy to err in such a work, since, when so much ground is covered in so few pages, the selection has practically been already made by time. In his references to contemporary literature Professor Baldwin does sometimes slip; the books he recommends in this field seem to indicate an acquaintance too narrowly limited to the monthly bulletins of American publishers. If one neglects, however, what he has to say of the *Nursery* and the various literary "Boy's" series, which have not been preëminently successful, one sees that he would bring up his "book-lover" on such pabulum as is found in any ordinary American library. In fact, his little manual, though vitiated in this respect by a redundancy in the department of poetry, is an instructive index of the scope of the literary culture provided by our public libraries outside of the great cities.

Some parts should have been expanded and made more precise. In the chapter on the very important subject of the selection of school libraries, the author gives only a few paragraphs of commonplace with no definite hints. The notes on the courses of reading, too, should have been fuller. The lists for English literature are the best, as was to be expected, since Professor Baldwin is a professor in that branch; but outside of that he merely catalogues obvious authorities, without indicating any especial knowledge of the subject in hand. The fact that he includes Mrs. Browning in the twenty-five most important authors in the literature of all our civilization, ancient and modern, is a sufficient token of the defects of his critical faculty when he trusts to it for his conclusions.

Studies in History. By Henry Cabot Lodge. Boston: Houghton, Mifflin & Co. 1884.

ELEVEN essays are here rescued from the semi-oblivion of periodical publication and gathered into book form. All but two of them are on American subjects, and even the two exceptions have a quite distinct American bearing. All of them are good reading, and several of permanent value. Mr. Lodge's strong point is his cheerful disregard of the conventional spectacles through which most American historians and biographers are used to look at the events of our history. Sewall's diary, with its record of the sufferings of the early Massachusetts colonists through cold and hunger, leads Mr. Lodge to notice "the ferocious practice of baptizing new-born babes at church, in all weathers," and the consequent high percentage of infant mortality. It was "not only natural, but proper," that Cobbett should have been disliked because he was an Englishman, since "no people with an ounce of self-respect care to be lectured daily by a foreigner about their own affairs." Jackson regulating the finances and the currency was "like a monkey regulating a watch: he simply smashed everything, and then went out of office, leaving his successor to make the best of it." Webster, who saw nothing improper in accepting money presents from his personal and political friends, "protected his supporters' interests as the baron did his peasantry, and then levied tribute from them." Examples might easily be multiplied; but perhaps the clearest notion of Mr. Lodge's advantages and weaknesses might be gained by a parallel reading of his essay on "French Opinions of the United States" and Mr. Lowell's "On a Certain Condescension in Foreigners.' Mr. Lodge's scolding lacks the scholarly facility of Mr. Lowell's, but it has a colloquial energy, directness, and profusion of its own.

Mr. Lodge makes the curious assertion (p. 262) that prior to the year 1860 four men—he is careful to emphasize it by adding "and only four"—Morris, Hamilton, Gallatin, and Dallas, had acquired great reputations as Secretaries of the Treasury; and not one of these four was a native of the country whose finances he administered. Surely, Robert J. Walker, if his tariff of 1846 was sufficiently iniquitous to exclude him from the list, deserved rather to be condemned than to be so cavalierly ignored.

BOOKS OF THE WEEK.

Arnold, Katherine Lillian and Constance. The Arnold Birthday Book. Illustrated. Boston: D. Lothrop & Co. $1.25.
Bastian, A. Der Fetisch an der Küste Guinea's. Berlin: Weidmann.

The Civil Service
IN
THE UNITED STATES.
[*From the Reports of 1884.*]
Containing a Catalogue of all non-Elective Positions, with the Compensation of each, and full information in regard to the Open Competitive Examinations under the act of 1883; also, a Description of the Civil Service of the States of New York and Massachusetts, and their Municipalities, under recent laws. By John M. Comstock, Chairman of the U. S. Board of Examiners for the Customs Service in New York City. 12mo, $2.
HENRY HOLT & CO.,
NEW YORK.

Perseverance Island;
Or, the Robinson Crusoe of the Nineteenth Century. By Douglas Frazar, author of 'Practical Boat Sailing.' Cloth, illustrated, price, $1.50.
"Every achievement here narrated is within the bounds of possibility, although many of them seem more marvellous than the feats of the genii of the Arabian Nights. The story is of absorbing interest, and teaches the instructive lesson to young readers to never despair under the most adverse circumstances. The book is handsomely printed and bound, and contains several full-page illustrations."—*Home Journal.*
"It is a marvellous tale, and there is a great deal of scientific ingenuity shown in the developing of the narrative, and in depicting the wrecked mariner's success in making an earthly paradise out of nothing."—*Boston Post.*

"Constant reference to the pages of 'Burke' enables us to testify to its invariable accuracy."—*Court Journal.*

The Year's Art, 1885.

A Concise Epitome of all matters relating to the Arts of Painting, Sculpture, and Architecture which have occurred during the year 1884, together with information respecting the Events of the year 1885. Compiled by M. B. Huish and D. C. Thomson. Illustrated. 12mo., cloth, $1 25.

The History of Israel.

By Heinrich Ewald. Vol. VII. The Apostolic Age. Translated from the German by J. F. Smith. 1 vol. 8vo, cloth. $8 40.

*** Vols. 1 to 6 also on hand. Price $31.60.

Lives of the Most Eminent Painters, Sculptors, and Architects.

Translated from the Italian of G. Vasari. Vol. VI. Cloth, 12mo, $1.40.

*** Vols. I. to V. on hand; price, $7.

TO KAIRWAN THE HOLY; SCENES IN MOHAMMEDAN AFRICA. By Alexander A. Boddy. Numerous illustrations by A. F. Jacassey. 12mo, decorated cloth, $2.40.

THE CAT, PAST AND PRESENT. From the French of M. Champfleury, with supplemental notes by Mrs. Cashel Hoey and numerous illustrations. 12mo, cloth, $2.40.

*PALESTINE: ITS HISTORICAL GEO*GRAPHY, WITH TOPOGRAPHICAL INDEX AND MAPS. By Rev. A. Henderson. (Hand Books for Bible Classes and Private Students.) 12mo, cloth, $1.00.

*THE WORLD OF PROVERB AND PARA*BLE. With Illustrations from History, Biography, and the Anecdotal Table Talk of all Ages. With an Introductory Essay on the Historic Unity of the Popular Proverb and Tale in all Ages. By Edwin Paxton Hood. Royal 8vo, cloth, $4.80.

*** *The above books will be sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested. A New Catalogue of Music and Musical Literature also ready. New Catalogues of Rare, Curious, and Valuable Second-hand Books ready.*

SCRIBNER & WELFORD,

No. 745 Broadway, New York.

THE GREAT AMERICAN NOVEL

So long looked for and so frequently announced has at last been written.

Its title is

RAMONA:

A Story. By Helen Jackson (H. H.).

The *Atlantic Monthly* says of the author that she is "a Murillo in literature," and that the story "is one of the most artistic creations of American literature." Says a lady, herself an author, "To me it is the most distinctive piece of work we have had in this country since 'Uncle Tom's Cabin,' and its exquisite finish of style is beyond that classic." "The book is truly an American novel," says the *Boston Advertiser.* "Ramona is one of the most charming creations of modern fiction," says Charles D. Warner in the *Hartford Courant.* "The romance of the story is irresistibly fascinating," says the *Independent.*

Sold everywhere. If you cannot procure it, send the price, $1.50, to the publishers, who will mail it, postpaid.

ROBERTS BROTHERS, Boston.

A New Cheap Edition of Lewis Carroll's two delightful Books for the Young,

COMPLETE IN ONE VOLUME.

Alice's Adventures in Wonderland,

AND

Through the Looking Glass and What Alice Found There.

BY LEWIS CARROLL.

Complete in One Volume. 12mo, Cloth, 75 cents; Paper, 50 cents.

MACMILLAN & CO., 112 Fourth Avenue, New York.

NEW EDITION READY TO-DAY,

The Story of my Life.

By the late J. MARION SIMS, M. D. Edited by his Son, H. MARION SIMS, M. D. 12mo, cloth, 472 pages. Price, $1 50.

Under the simple title of 'The Story of my Life' Dr. Sims has in the most fitting terms narrated the origin and growth of those achievements in surgery which by the general judgment of enlightened men has stamped him as the benefactor of his race. The account of Dr. Sims's early struggles is of the deepest interest, and show that the path he trod to final success was not strewed with roses.

"But the story is more than an autobiography; it not merely illustrates the evolution of a South Carolina country lad into one of the most useful and conspicuous of modern benefactors; it is local history interpreting rural life in that section fifty years ago."—*New York Evening Post.*

"Few books possess the fascination of this autobiography of the late Dr. Sims. There is not a dull line in it."—*The Churchman.*

"One of the most vital and impressive works of the times. . . . Just why the book should be so fascinating it would be difficult to say. But much of it is due to the author's disinterestedness, to his candor, and to his transparent and refreshing simplicity."—*N. Y. Times.*

*** *For sale by all booksellers; or any work will be sent by mail, postpaid, on receipt of price.*

Ready in February:

The Religion

OF

PHILOSOPHY

OR,

The Unification of Knowledge.

A COMPARISON

of the Chief Philosophical and Religious Systems of the World. Made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God.

By

RAYMOND S. PERRIN.

Octavo, cloth, $4.

The Author says in his preface that "The problems of ethics are completely beyond the mind that harbors the belief in a special providence or a design in nature." "These enthronements of personal existence distort all the higher logical perspectives, and a morality that depends upon such an understanding of life cannot be a true inspiration."

G. P. Putnam's Sons,

27 and 29 W. 23d St., New York.

"S. DAVIS, JR.," Cincinnati,

Diamond Hams.

Since this season's supplies were ready, these hams have been ordered by patrons of *Massachusetts, Rhode Island, New York, New Jersey, Maryland, District of Columbia, South Carolina, Georgia, Florida, Louisiana, Mississippi, Tennessee, Kentucky, Ohio, and Illinois; also, Dominion of Canada.*

The Nation.

NEW YORK, THURSDAY, FEBRUARY 5, 1885.

The Week.

THE defeat of the Nicaragua treaty on Thursday in the Senate is on all grounds greatly to be rejoiced over. Whatever there is good in the scheme is thus handed over to the next Administration, which would have to superintend its execution in any case. Moreover, the delay gives time for some public discussion of it. The committal of the country to an engagement of such an extraordinary character in "secret session" is nothing short of an abuse. Though last not least, some consideration of the obligations of the Clayton-Bulwer treaty is now possible. How a lawyer as conservative and careful as Mr. Frelinghuysen came to consider that treaty as actually dead, and worthy of no further notice, even, on our side, has not yet been explained, and is difficult to understand. We need fuller discussion of this topic also. One of the oddest features in the existing political situation is the rarity with which the people is treated to a calm discussion of questions of this kind in the speech of a leading politician. In England, the views of any man of note on such a subject would have been known long ago to every newspaper reader in the kingdom, set out in the fullest manner. Here we know what Mr. Edmunds, or Mr. Sherman, or Mr. Thurman thinks only through vague rumors in the Washington correspondents' letters.

Secretary Frelinghuysen's response to the resolution of the House of Representatives asking information regarding the attitude of the United States toward the Congo Conference at Berlin, is in substance that Minister Kasson was duly accredited as a delegate to the Conference; that Mr. Henry S. Sanford was appointed as an associate delegate, and that Mr. Henry M. Stanley was introduced by Mr. Kasson in an advisory capacity, at the request of the Conference itself; that in taking part in the Conference our Government stipulated that it was to deal "solely with the commercial interests of the Congo region and of Western Africa, and that, while taking cognizance of such establishment of limits to international territorial claims in that region as may be brought before it as matters of fact, the Conference is itself not to assume to decide such questions, the object of the Conference being simply discussion and accord, the Government of the United States in taking part therein reserving the right to decline to accept the conclusions of the Conference." The report informs us, further, that Mr. Kasson has kept strictly within the lines of commercial policy thus laid down, and has been watchful that no expression should be found of record in the agreements of the Conference which might imply that its results are to be binding upon or to be respected by any Power which may not formally accept them. Mr. Kasson's latest report shows that the course pursued by him was so exceedingly cautious that it amounted to a powerful obstruction to the proceedings of the Conference, and must, we should think and hope, furnish a solemn warning to European Powers against inviting the United States to such conferences hereafter.

The shooting of O'Donovan Rossa is a fresh illustration of the contagiousness of sensational crime. The disgraceful acquittal of Madame Hugues the other day by a French jury, in the teeth of her own boastful confession, made in open court, called out from one of the few serious French journals, the Paris *Temps*, some weighty and suggestive comments on the effect which the publicity supplied by modern journalism is producing on the nervous system of the vain, the excitable, and the morbid of both sexes. The passion for notoriety is, in fact, being fostered by the press to the point at which, with people of certain temperaments, it is destructive of all scruple and all fear. To be the subject of everybody's talk, even for a day, in two hemispheres; to have columns of the newspapers filled with gossip about their life, and manners, and clothing, and food; to be followed in the streets by eager crowds, and to be dogged by inquisitive reporters, on account, not of great deeds, but deeds of any kind, has become to tens of thousands a dream of bliss. Unfortunately, too, the power which the new explosives and the revolver have put into the hands of the discontented or criminal in making attempts to destroy life and property, seems an easy and not very dangerous way of acquiring notoriety. There can, we take it, be no sort of question that the open discussion which is now going on in the most civilized countries of the world, of the desirability and justifiability of killing people and destroying houses, does tend to weaken or destroy that traditional respect for human life, and sense of the value of order, which are, far more than police or courts, the best defences of society. It is safe to say that no dynamiter, Nihilist, or Anarchist ever makes a speech or writes an article, and no minister or politician ever apologizes for him, without helping to sow the seeds of murderous intent in some weak head or faint heart, or without opening what seems a path to fame to the imagination of some drone, or crank, or fanatic.

In the case of O'Donovan the wonder is not that he has now received a dose of his own medicine, but that he has escaped so long. The long and dismal Irish quarrel has until the last year or two been confined to Irish soil. Irishmen have been attempting the redress of their wrongs by assassination for two centuries, but they have confined themselves till now to the assassination of Irishmen on Irish soil, and have in taking life generally aimed at the actual wrong-doers, and at the members of one small class—the landlords. The attempt to free Ireland which is now being made by outrages on Englishmen in England, by trying to bury innocent men, women, and children in the ruins of public buildings and railroad stations, will assuredly not long be allowed to go unavenged, simply because the wretches who light the fuses cannot be caught, or because American law cannot lay hands on the men who hire and despatch them. The scheme is something wholly new, and unprecedented in its atrocity. It has taken the English people by surprise, and thus far has puzzled and probably will continue to puzzle them, for they are a phlegmatic, somewhat good-natured, and immensely self-satisfied people. They are a people, too, who have long lived under laws so powerful and so justly administered that the habit, one might almost say the thought, of private vengeance has died out among them. But if the passion of retaliation once takes hold of them, there will assuredly be found among them plenty of fanatics who will see to it that the O'Donovans and Fords in this country do not live here in peace and security on "emergency funds," while filling every mother in London with alarm for her children whenever they go out on a holiday. Dynamite will be met with dynamite. We have probably, in Mrs. Dudley's attempt on O'Donovan's life on Monday, only seen the beginning of the trouble.

The Grand Street dynamite explosion is likely to strengthen public sentiment in favor of legislation throwing restrictions about the manufacture and sale of explosives. There is a perceptible tendency among the more ignorant of the working people to use dynamite as a redress for grievances of all kinds. Only a few weeks ago some strikers at South Norwalk blew up a building belonging to their employers, for the apparent purpose of frightening them into paying higher wages. It is easy to see that this use of dynamite might spread to alarming proportions unless something is done to check it. In small manufacturing towns, where the police force consists of only a handful of men, the opportunity to use dynamite without fear of detection is very great, and the destruction of property in case of labor troubles might soon be enormous. In the South Norwalk case, the insurance companies at once sent word to the threatened manufacturers that their policies did not cover dynamite risks, and other companies refused to give them policies on any terms. No property owner can afford to be put into a position of this sort. The best way to meet the emergency seems to be in the enactment of some such regulations as those which are incorporated in one of the bills introduced at Albany, requiring every manufacturer and seller of explosives to keep a book in which shall be registered the name and address of every purchaser.

A most eloquent silence is maintained by all our esteemed Blaine contemporaries concerning their attitude toward the dynamite Irish leaders in the late campaign. All our efforts to get an opinion upon Patrick Ford and his Emergency Fund, as illuminated by the London explosions, are fruitless. We have stirred up the *Tribune*, Boston *Journal*, and Philadelphia *Press* in vain on the subject. In the Cincinnati *Commercial* we find some very vigorous denunciation of dynamiters in general, and O'Donovan Rossa in particular, but no allusion to Ford. Yet, at the close of

two columns of indignation, there occurs this passage:

"The people of the United States—all civilized people—must join in the prosecution of the wretches who, in the name of independence and freedom, are destroying liberty, and, under pretences of sentimental patriotism, are making barbaric war upon civilization. They must do it because they must protect themselves."

Now the "wretch" who is doing more to carry on this "barbaric war upon civilization" than all other men in America combined, is Ford, with his *Irish World*. What we want to know is if the Blaine editors, including Mr. Halsted, are going to continue to encourage him in his work as they did during the last campaign, or are they going to join all other "civilized people" in prosecuting him? There was no Blaine disciple who expressed a warmer enthusiasm for Ford in the campaign than Mr. Halsted did, and his views about him now would be very interesting. Rossa was not a Blaine man, and he did not raise the money which blew up the London buildings and injured innocent people. Ford was a Blaine man, and, while he was supporting Blaine, was raising a fund for precisely what has happened in London. We put the case thus explicitly, and once more pause for the frank opinion of any Blaine editor upon it. Abuse of Rossa will not constitute a satisfactory response.

The visit of Speaker Carlisle to the President-elect has, we presume, no other significance than as it indicates Governor Cleveland's desire to possess himself of the views of representative men in his own party who want nothing for themselves, and who can therefore be relied upon for unbiassed opinions. Mr. Carlisle is one of these, and the most eminent of all, with the possible exception of Senator Bayard. Occupying already the second place in the Government, with reasonable certainty of continuing to occupy it so long as the Democrats hold a majority of the House, Mr. Carlisle can have no ambition to enter the new Cabinet. Therefore, any advice which he may give to Mr. Cleveland will be untainted with personal considerations, and will undoubtedly carry the weight which belongs to one who worthily fills the high position of Speaker of the House of Representatives. The gravity, impartiality, and fidelity to principle which have distinguished Mr. Carlisle's Speakership are in fine contrast with the turbulence and self-seeking of the Keifer régime. Mr. Carlisle was born and nurtured in the Bourbon school, but he has grown with the country's growth, and kept pace with the best political ideas of the times. He has made some mistakes, but withal he has impressed the public with confidence in his sincerity and in his desire to be serviceable to his country.

It is noticeable that all the Democratic statesmen who visit Mr. Cleveland come away strongly impressed with his honesty of purpose and his clear common sense. It is equally noticeable that they are all able to imitate successfully his capacity for holding his tongue. This persistent refusal to disclose the private conversations held between the President-elect and his party associates is, of course, very irritating to the press, especially to those journals which exerted all their influence to elect Mr. Blaine. There is a prudence and deliberation about this method of deciding upon questions of party policy which are not encouraging to people who are looking eagerly for factional quarrels and blunders in the new Administration. There have been many Democratic leaders at Albany during the past few months, but the only one who has gone away unhappy is "Johnny" McLean, the Cincinnati boss, who did his utmost to sell out his party to Blaine, and succeeded only in capturing the Republican Sheriff's advertising as a reward for his treachery. Every eminent Democratic leader has left Albany pleased with Mr. Cleveland and determined to do everything in his power to make his Administration successful. There is a good omen for the party in all this.

In response to our inquiry for information concerning the "many important cases" in which Andrew S. Draper, who has just been appointed a Commissioner on the *Alabama* Claims, was said to have been engaged, and for samples of his most conspicuous displays of a "judicial turn of mind," the Albany *Express* thus makes answer:

"Mr. Draper has had fair standing at the bar of Albany County for many years, has been a member of the State Legislature, and by the judgment of his associates one of the most useful members of it, has been President of the Board of Education of this city, and Chairman of the Executive Committee of the Republican State Committee. We have had no opportunity to confer with him in relation to the legal cases in which he has been employed, but do remember two of them which were considered important here; one of them was the celebrated case of Swinburne against Nolan for the Mayoralty of this city, in which he was associate counsel, and another was when he served as one of the Commissioners on the Viaduct Claims, also in this city. He has undoubtedly been employed in other important cases which we do not now remember. In any event his fellow-lawyers here will give him credit for being earnest, honest, and active."

That is about what we expected. The showing which the *Express* makes is not so impressive as to justify the belief that if Mr. Draper had not been the personal friend of the President, he would ever have been appointed to a judicial position of national importance.

The Committee appointed last December by the newspaper publishers of the West and Northwest to urge upon Congress the propriety and justice of reducing the postage on newspapers, have made a report of progress which is very encouraging. They found the members of the House Committee on Post-offices united in favor of reducing the postage from two cents a pound to one cent; and in order to facilitate the passage at this session of a bill making this reduction, the Committee said it would be necessary to have it incorporated in the regular Post-office Appropriation Bill. The sub-committee of the Appropriations Committee having the postal appropriations in charge have agreed so to incorporate it, and it will therefore be reported to the House. We trust that no member of Congress will object to the reduction. The present tax is a very onerous one, amounting to nearly two million dollars a year. It was put on in 1874, under the inspiration of certain men in public life who took this method of "getting even" with the newspapers for harsh criticisms received. One of the leaders in the movement was Mr. Hamlin, of Maine, and he was actuated by the belief that the large metropolitan newspapers would be the heaviest sufferers. As a matter of fact it fell most heavily upon the smaller weekly and rural papers. The great dailies avoided some of the expense by employing express companies to do part of the service at cheaper rates. In truth, a uniform postage of one cent per pound would result in giving the Government all of the business, and the result would in all probability be only a slight decrease in the present revenue. The tax at present levied is unreasonable and out of keeping with the postal policy of the Government. The reduction of letter postage to two cents ought to be accompanied with a reduction in newspaper postage.

The proceedings in the Wells failures at Galveston are fresh evidence of the necessity for a national bankruptcy law. Those creditors who are on the spot have rushed in with attachments absorbing a great part of the available assets. Under existing State laws, the prevailing practice is either a race of diligence by attaching creditors, or an assignment with preferences to a favored few. Such a state of law must of necessity breed distrust in commercial transactions, and it is probable that some amount of the present business depression is due to the want of a uniform law protecting creditors of all classes. Certainly the want of such a uniform law will retard the development of trade throughout the country in the South as well as in the North and West. There is much misapprehension of the real object to be accomplished by a general bankruptcy law, and a deep-rooted impression in some portions of the country that it would be mainly for the purpose of absolving delinquents from their liabilities. In fact, the great object to be accomplished is a fair distribution of assets among creditors. The old law, with all its faults, under proper administration accomplished some good and useful purposes, and Congress has had the experience of its working as a guide in framing a new one. The repeated petitions and efforts of merchants and financial institutions to have the bill now pending passed at the present session of Congress, are abundant proof of the need for legislation on the subject, and failure to act in the matter will show direct disregard by Congressmen of the interests of their constituents.

Bradstreet's correspondent in the Indian Territory furnishes an interesting résumé of the "boomer" controversy. The "boom" itself is a cunningly devised scheme for making money. "The real instigators," says this writer, "are those who sell certificates of colony membership at from $3 to $5 each, and the pretended colony surveyors who regularly go a few days ahead of each batch of deluded immigrants, and, upon the arrival of the latter, charge and receive enormous fees for making pretended descriptions by section, township, and range of any and all tracts selected by the colonists. Over 15,000 of these certificates have doubtless been sold at the prices named, and from $30 to $40 each are often paid to the 'surveyors' for locating a single quarter sec-

tion. When the military appear, the 'surveyors,' warned by past experience, take to the gulches and escape, and the victimized 'boomers' are arrested and marched out of the Territory sadder and wiser men. That these are swindles of the first magnitude is known to all men of general information on Indian affairs, and that all white settlements in Oklahoma are contrary to law is conceded by every disinterested and well-informed jurist in the United States. Besides this, the matter has been exposed over and over again. Presidents have issued proclamation after proclamation, warning all persons to keep off the Oklahoma lands, and informing them that the whole military force of the nation would be used, if necessary, in carrying out these declarations. But still the craze goes on. Dupes are deluded into buying these worthless certificates of Oklahoma colonists, and, backed up by those who see in this an entering wedge for opening the whole Indian Territory, and by the restless, discontented, floating population of the frontier, start for the Oklahoma land of promise, to be ignominiously expelled by the proper authorities as all their predecessors were before them."

Mr. Vedder has introduced in the Assembly another of those sapient bills for stopping stock speculation of which so many have been produced or threatened ever since the war. This one makes it a penal offence not to deliver stocks or give the number of the certificates on the day of their sale, unless the execution of the contract is fixed for some future day. Anybody who disobeys is to expose himself to fine or imprisonment. To the mind of some legislators it apparently makes no difference in the value of a law whether it can be executed or not. In the present case, suppose a man sells stocks to another without delivery, or without giving the numbers of the certificates, and the other is, as he generally is in such cases, another speculator; who is going to put the law in force and furnish evidence of its violation, particularly when neither thinks there is any moral wrong in the transaction? And is it not most ludicrous that any legislator should think his fines of $100 to $500 would be more operative in preventing speculation than the terrible penalties which befall speculators by the hundred every year, in the loss of their whole property or a large part of it? There is no folly in the use of money of which men can be guilty which is so severely punished to-day, by the mere nature of things, as stock speculation. Any addition which the Vedder bill proposes to make to this penalty is very like making murderers liable to a fine of $5, besides death on the scaffold.

North Carolina, imitating her sister State, Georgia, has begun to direct some penal legislation against the sale of obscene literature. There has been shown some opposition to the measure in the Senate of North Carolina, based upon the alleged difficulty of properly executing such laws. It was contended that an enforcement too rigid would throw Byron, Fielding, and Shakspere out of the North Carolina market, and lead to a narrow culture. We must confess that there is great likelihood of this, when we remember that in Atlanta, Ga., immediately following the conviction of a vender of the *Police Gazette*, a raid was made upon the picture and stationery shops, and every piece of art, expressed in its own language of nudity, was required to be taken away from the public view. For some time local excitement ran high, and it was to be feared that even the warm sensuous pen-pictures sent by one of its editors to the *Constitution*, from the sea-coast in summer time, might be interdicted. The proceedings in the courts under the Georgia anti-obscene literature law gave occasion to one of the ministers of Atlanta, who is also an art-lover, to write a series of discourses showing the true relation between law and art, which, it is to be hoped, have broadened somewhat the sentiments of the iconoclasts who compelled Pitchford to destroy the photographs of antique sculpture with which he tempted the public to his bookstore. The editor of the Raleigh *Chronicle*, who is, we are compelled to judge, ignorant of all the workings of the Georgia law, thinks that the broad common sense of the people will be the safeguard against such a strict enforcement of the North Carolina Act as leads to the banishment of Byron and Shakspere. But cases under such a law come before a court of limited jurisdiction and small dignity, provided generally with prosecuting attorneys almost as indifferent to the charms of literature as the jury—composed, it may be, and as in reality it was in Atlanta, in large part of ignorant negroes—which they address. It may be doubted whether the friends of this kind of legislation can rely upon "the broad common sense" of North Carolinians to preserve it from contempt, when we read that the Senator who most warmly favored it questioned "whether a healthier sentiment would not be produced by presenting statues of the great heroes and martyrs in the cause of truth and liberty than by nude figures of imaginary creations of artists."

Mr. John Bright has just delivered an address, doubtless paid for by the Cobden Club, urging the American farmers to buy their goods from the Lancashire and Birmingham manufacturers, because they would get them cheaper. The indecency of making such proposals to the people of a friendly nation we need not comment on. It may afford some consolation to those who are shocked by such propagandism of the Cobden Club in this country, however, to reflect that we are paying off the British by sending Henry George over to preach the confiscation of all the landed property in England. This is worse than anything the Cobden Club or its emissaries have recommended here. It is far worse, indeed, in our eyes than even trying to persuade people to buy things cheaply.

Mr. Goschen has long been known to be out of sympathy with the Liberal party in England, and, in fact, declined a seat in the Cabinet because he was not prepared to support the recent extension of the franchise. He has a dread of pure Democracy, which he makes no pretence of concealing. His lukewarmness or alienation has been considered a great misfortune, because there is no man in the Liberal party—perhaps no man in England—after Mr. Gladstone, who has the same mastery of finance. The speech which he delivered at Edinburgh on Saturday, therefore, has been long looked for with some eagerness, as he was expected to deliver himself freely on the existing situation, and especially on the condition of affairs in the Sudan, where it begins to be "a pious opinion" among many Liberals that Mr. Gladstone is shamefully slaughtering men whom he praised last year as "brave men struggling to be free." The speech turns out, however, to be simply a disquisition on the land question; but it shows, as far as we can judge from the meagre despatch about it, that on this subject he agrees with Mr. Chamberlain as to simplifying transfers, and forbidding the species of entail called family settlement.

The African International Association has been the means of bringing on a curious lawsuit in Brussels, which revives a very ancient laugh against the doctors. It had engaged one Roger to conduct an expedition into equatorial Africa. But Mr. Stanley, who had known Roger already in that region, wrote a letter describing his physical condition when exposed to the climate there. This letter the Association submitted to a doctor at Brussels, who gave an opinion thereupon, that if Roger went back his death was certain. The Association consequently cancelled his engagement. The crafty Roger, however, saw that the doctor had, by giving an opinion without seeing him, delivered himself into the hands of his enemy. He called on him, under an assumed name, represented himself as a resident of South America, who had contracted disease there, gave as his symptoms exactly those described by Stanley in his letter, and said that he was going to Africa for the Association, but that they demanded a certificate that this disease contracted in Brazil would not unfit him for service in Africa. The doctor examined him, pronounced him perfectly fit, and pocketed twenty francs therefor. Armed with this second certificate, Roger is now pursuing the Association in the courts, and all Brussels is laughing at the poor doctor.

Apropos of doctors, the English professional journals have been telling wonderful stories about the fees of English physicians. The *Students' Journal* says Sir Andrew Clarke makes over $75,000 a year, which the *Medical Journal* says is strictly true. Others add that Dr. Redcliffe used to make an average annual income of $35,000 a year, and Dr. Baillie $50,000; that Sir Astley Cooper took $5,000 in a single fee; that some other doctor got $10,000 for going to Pau from London; that Catharine II. of Russia paid Dr. Dimsdale $60,000 for vaccinating her. The Paris *Temps* thinks all this English boasting very immodest and unprofessional, and intimates that no French doctor would allow such facts about his pecuniary gains to become known. It observes, however, in order to give some idea of what French doctors could reveal if they chose, that it is within its personal knowledge that Nélaton on one occasion refused $80,000 to go to St. Petersburg to perform a very simple operation.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, January 28, to TUESDAY, February 3, 1885, inclusive.]

DOMESTIC.

THE United States Senate continued in executive session on Wednesday until 7 o'clock, discussing the Nicaragua treaty. Mr. Vance (Dem., N. C.) made a carefully prepared speech against the ratification of the treaty, his chief argument being that the Clayton-Bulwer treaty was still in force. He moved to postpone further consideration of the measure until after March 4. Mr. Bayard supported the motion, urging both friends and foes of the treaty to let it go over, and not seek to embarrass Mr. Cleveland's Administration. Messrs. Morgan, Edmunds, Conger, and Miller, of California, opposed the motion. When a vote was taken a majority of those present voted against postponement, but the roll-call showed that there was not a quorum present. The Senate adjourned without securing a quorum. In executive session on Tuesday the motion was defeated by 22 to 25. The Senate then voted, in Committee of the Whole, on Mr. Sherman's proposition for negotiations with Great Britain as to a modification or abrogation of the Clayton-Bulwer treaty. It was lost, 27 to 28. Afterward when it came up in the Senate, it was adopted by a large majority, the friends of the treaty hoping to placate its opponents by this concession. After a few brief remarks the vote on ratification was taken, and resulted 32 in its favor and 23 against. It required a two-thirds vote, or 37, in its favor. The treaty was therefore rejected. It will come up again on a motion to reconsider.

The Senate on Friday passed a resolution making arrangements for the electoral count on February 11.

The Union Pacific Funding Bill was called up in the Senate on Monday. There is an evident desire on the part of the opponents of the measure to postpone it indefinitely; Mr. Beck and Mr. McPherson indicating such a purpose. Mr. Hoar contended that the bill was drafted solely in the interest of the Government. The Senate decided to postpone the consideration of the bill till February 4.

The River and Harbor Bill as finally reported in the House of Representatives on Wednesday appropriates $11,243,700, exclusive of the Galveston Harbor appropriation of $750,000. The bill contains a provision for an advisory engineer to the Mississippi River Commission at a salary of $3,500 per annum, and James B. Eads is recommended to the President for that position. Taken in connection with the Galveston Harbor appropriation, this would make Captain Eads master of the river works from Iowa to the Gulf at a total salary of $8,500.

In the House of Representatives on Wednesday, the conference report on the six months' Naval Appropriation Bill was agreed to. The principal point of difference between the two houses was as to the repairs of wooden ships. As finally arranged, the repairs to the wooden ships are limited to 20 per cent. of the cost of a new ship of a similar class. Mr. Hewitt (Dem., N.Y.) attempted to call up the Mexican Treaty Enabling Act, but was defeated by a large majority. The vote is not considered very hopeful for the bill. On Thursday Mr. Hewitt made a similar attempt, but failed by 105 to 144.

The House Committee on Foreign Affairs on Friday referred the resolutions recently introduced in the House, calling upon the Secretary of State for any information at the State Department relative to any connection that an American might have had with the recent explosions in London, to a sub-committee consisting of Messrs. Eaton, Lamb, and Rice. In the discussion upon the reference by the full Committee, the opinion was generally concurred in that no action should be taken upon the subject by the House of Representatives.

The House Committee on Claims decided on Friday, by a vote of nine to four, to report a bill providing for the refunding of the tax imposed by the Government on the States and Territories as a war tax, under the acts of Congress of August 5, 1861, and June 7, 1862, and releasing those States which yet owe the tax. The amount imposed on New York was $2,603,919, on New Jersey, $450,134, and on Connecticut, $308,214.

President Arthur on Friday sent a message to the House of Representatives expressing the opinion that the *Alert*, of the Greely relief expedition, should now be returned to the British Government with thanks. He asks for the authority of Congress for such action. A similar message has been sent to the Senate.

James K. Jones (Dem.) has been elected United States Senator from Arkansas, after a long contest. He is now a member of the House of Representatives.

The decrease of the public debt during January was $9,420,046.

The Court of Claims on Monday decided the long pending case of the Union Pacific Railroad Company versus the United States. Among the significant points of the decision are the following: The United States are bound to pay for the transportation of their passengers (troops, etc.) from Council Bluffs to Omaha, over the bridge and between Council Bluffs and Ogden, the same rates paid by private parties—those rates being fair and reasonable. The amount allowed by the Treasury Department for carrying the mails is fair and reasonable. The company is required to pay into the Treasury of the United States each year 5 per cent. of its net earnings under the act of 1862, and under the Thurman Act since its passage, in addition thereto, so much of the $850,000 as, with said 5 per cent. and the whole compensation for Government transportation, will equal 25 per cent. of its net earnings. In stating the account to December 31, 1882, the Court finds *approximately* that the United States owe the company $2,975,700, and the company owes the United States $5,734,392. The United States therefore are entitled to judgment on their counter claims against the company of $2,758,692.

O'Donovan Rossa, the notorious dynamite advocate, was shot in the shoulder by an English woman named Yseult Dudley at about 5 o'clock on Monday afternoon. They met in the District Telegraph Office in the Stewart Building, in this city. They went out into Chambers Street together, and the woman, stepping behind him, fired five shots at Rossa with a revolver. Only one shot took effect, entering his back just below the left shoulder blade. The wound is not dangerous. Rossa was taken to the Chambers Street Hospital, while his assailant was arrested. She was perfectly cool, and said that she shot the man "because he was O'Donovan Rossa," and because he is the agent of the dynamiters. The woman is a hospital nurse, and has been in this country about five months. She is twenty-five years old, good-looking, and neatly dressed. On Tuesday she was arraigned in court and remanded to await the result of Rossa's wound. The Irish claim that she is an agent of the British Government. There was great rejoicing in London over the shooting. It appears that before leaving England Mrs. Dudley attempted to commit suicide.

A bill was offered in the Connecticut Senate on Wednesday, which requires yearly licenses from the County Commissioners for making, selling, buying, or exchanging dynamite explosives. Severe penalties are attached for any violations of the law. Any one selling without a license will be subject to a fine of $500 or imprisonment for from one to three years. Any person having dynamite in his possession unable to prove his purchase will be subject to the same penalty. Any person who with malicious intent causes loss of life or injury to person or property by the use of dynamite, will be subject to a fine of $100 or more, or imprisonment for one year or more.

A more stringent dynamite bill than the one reported last week was introduced in the Assembly at Albany on Wednesday.

The annual report of the Civil-Service Commissioners of New York State shows that the number of persons subject to the civil-service regulations is as follows: In the service of the State 3,600, in New York city 5,540, in Brooklyn 1,418, in other cities, estimated, 1,765; total, 12,323. The cities that have failed to comply with the statute of last year are Hudson, Watertown, Oswego, Rome, Elmira, Schenectady, Newburgh, and Lockport The Commissioners report a gratifying abatement of the practice of political assessments. They express confidence that the work of organizing the State civil-service reform system has reached a point where its usefulness can be tested, and conclude by saying: "It is only justice to the retiring Governor to say that the successful establishment of reformed civil-service methods in the State of New York during his administration, and the acceptance of the reform by the public, are largely due to his intelligent interest in the subject, his fidelity to its principles, and his prompt and courageous action through all the stages of its progress."

The three days' enrolment of Republican voters in this city, ending on Friday night, foots up about 18,000 names, or only about one-fifth of the number of Republicans who voted the Blaine and Logan ticket in November.

The Illinois Legislative deadlock was broken on Thursday by the election of Elijah M. Haines (Dem.) Speaker by a majority of 2. The Democrats believe that this is an indication that they can elect a successor to Senator Logan.

Twenty persons were seriously injured by the wreck of an express train on the Jersey Central Road, near Greenville, N. J., on Friday.

Private information received by the Surgeon-General of the Army from Panama is to the effect that the death-rate there from yellow fever is terrible, and that the facts have been concealed.

Gen. James Chestnut, who was United States Senator from South Carolina in 1860, when his State seceded from the Union, died on Sunday, in Camden, S. C., at the age of seventy. He was a member of the Confederate Congress. General Chestnut was a graduate of Princeton.

FOREIGN.

The long suspense and anxiety about the fate of General Stewart and his forces were brought to an end on Wednesday, when a despatch was received from General Wolseley by the War Office in London announcing that the British forces were strongly intrenched not far from Metemneh, and that General Stewart was in communication with General Gordon. The official despatches indicated that the march from Abu-Klea Wells, where a battle was fought on January 17th, had been a perilous one. Almost every foot of the way was contested by the Arab foe. For two days there was a succession of light attacks easily repulsed by the British. Finally on Monday, January 19th, the enemy appeared in great force in front of the British army, when they were within three miles of the Nile. A short and fierce battle was fought, during which General Stewart was wounded. Sir Charles Wilson then assumed command. Works were hastily constructed under the constant fire of the enemy's rifles. The wounded men and the baggage train were left under guard behind their quickly-built earthworks, while the rest of the force advanced in the face of the hostile fire to a gravel ridge some distance in front. Here a large force of the rebels had established themselves in a strong position. The British troops as usual were arranged in the form of a square. The rebel hosts to the number of 7,000, led by five Emirs, charged upon them furiously. Nothing could exceed the coolness of the Englishmen under these circumstances. Their fire was so rapid and effective that not an Arab

came within thirty yards of the square. They were shot down by hundreds, and were soon repulsed; their total loss in killed and wounded being 1,300. The British loss was twenty killed and sixty wounded. Among the killed were Lord St. Vincent, Mr. Cameron, correspondent of the London *Daily Standard*, and Mr. Herbert, correspondent of the *Morning Post*.

General Stewart's wound is not fatal, but will disable him for the campaign. General Wolseley in his despatches characterized General Stewart as the "ablest soldier and most dashing commander he ever knew," and recommended him to the Queen's most favorable consideration. Queen Victoria immediately sent a despatch to General Stewart expressing her personal sympathy, thanking him for his bravery, and promoting him to the rank of Major-General.

The news of the victory was accompanied by the gratifying report that General Gordon was safe at Khartum, and had expressed the opinion that he could maintain his position for several years.

After the retreat of the Arabs the British made the march to the Nile under a continuous fire from the Arabs in ambush, reaching the river at sunset, and encamping for the night. Early the next morning, January 20, scouting parties were sent out to reconnoitre, and they destroyed some empty villages, the inhabitants of which had fled to Metemneh. The British force then advanced through the villages around Metemneh, and on Wednesday, January 21, a reconnoissance of that place was made. This revealed the fact that Metemneh is fairly well fortified, and that the works are furnished with loopholes. Shots were exchanged, but the rebels kept out of sight. Metemneh is occupied at present by 12,000 men. Five of General Gordon's steamers, under the command of Nusri Pasha, with 500 soldiers and five guns, arrived at Gubat, where the English had intrenched, on this day, and all the troops and guns were landed and turned on Metemneh, without, however, producing any apparent effect on the rebels.

On Thursday a reconnoissance was made down the river to Shendy with four steamers which had arrived from Khartum. It was found that at Shendy, which is on the opposite side of the Nile, a short distance north of Metemneh, there is one small gun, and the town is garrisoned by a small force. General Wilson bombarded Shendy for two hours, and almost completely destroyed the town, but the occupants, of whom there were few, appeared to be unwilling to surrender. The steamers afterward returned to Gubat, where a number of forts have been erected. The British position at that place is considered impregnable. Sir Charles Wilson started on board a steamer to Khartum for a personal conference with General Gordon.

Some of the wounded rebels who were taken prisoners declared that the Frenchman, Ollivier Pain, is in command at Metemneh.

Advices received at Hamdabat at 8 o'clock on Wednesday night, concerning the expedition which left Korti for Berber on January 26th, under General Earle, stated that the Black Watch and Staffordshire Regiments arrived at the Kabd-el-abok cataract on that day. Before reaching the cataract the cavalry scouts, who were two miles in advance, exchanged fire with some hostile natives. The Arabs made the attack, but were soon driven back by the cavalry and the camel corps when these came up. Soon after this these two corps captured the village of Warag. The Arabs retreated in the direction of Birti. General Earle, after the capture of Warag, started for Abu-Hamed. He has 2,500 men.

General Earle occupied Birti on Monday, and the rebels have deserted their intrenchments. Two uncles of Suleiman, the murderer of Colonel Stewart, submitted to General Earle. Hussein Pasha, and a stoker on Colonel Stewart's steamer when it was wrecked and the party massacred, escaped from Birti and reached Earle's camp before the occupation of that place. The route is now clear to Abu-Hamed.

The British on Sunday made a reconnoissance in force from Suakim with two guns. They shelled the enemy's camp at Hasheen. The rebels, who hold a strong position, were very courageous. The British subsequently returned to Suakim. It is believed the rebels lost heavily.

James Gilbert Cunningham, now under arrest in London for complicity in the late dynamite explosions, was known, it is said, in St. Louis by the name of Michael J. Byrne. He came to America to escape punishment for the murder of an Irish landlord, in which he was implicated, so he claims. Before going to St. Louis he lived in Chicago, where he went by the name of James Gilbert and James Cunningham. He had also spent some time in New York and Philadelphia. He lived for more than a year in New York city, and received instruction in the making and selling of infernal machines from Rossa and the Russian professor, Mezzeroff. Cunningham was one of a coterie of Irishmen who have their homes in the northwestern part of St. Louis, and there planned outrages against Great Britain. One of his plans was the destruction of all the public buildings in London by 100 trained dynamiters.

The examination of Cunningham was begun in the Bow Street Police Court, London, on Monday morning. Mr. Poland, the Solicitor of the Treasury, appeared for the prosecution. In opening the case Mr. Poland said that the Government intended to prove that the prisoner was an active agent in the conspiracy which culminated in the horrible outrage at the Tower of London. Mr. Poland then narrated the suspicious facts in regard to the prisoner's movements at Liverpool and at London from the time of his arrival at Liverpool from America up to the date of his arrest at the Tower, a few minutes after the explosion occurred; his travelling under the assumed names of Gilbert and Dalton, and many suspicious circumstances connected with his stay in both the above cities. In conclusion, Mr. Poland asked that Cunningham be arraigned under the Explosives Act, on the charge of conspiracy, and said that he might possibly, at a later day, request that the charge be changed to one of high treason, so that the penalty of the latter crime could be meted out to him, as the dynamite outrages could be construed as acts of war of a rebellious people. This announcement made a commotion, as it indicated that the Government believed Cunningham to be a very important arrest. At the request of the prosecution Cunningham was remanded for a week.

Queen Victoria has conferred upon Constable Cole, who was so severely injured in the discharge of his duty at the time of the explosion at Westminster Hall, the order of the Albert Medal.

O'Leary, the Fenian, lectured to 4,000 persons at Manchester, England, on Sunday. He condemned dynamite outrages, but many in the audience strongly objected to his sentiments. Three cheers were given for O'Donovan Rossa.

The Paris correspondent of the London *Times* telegraphed on Friday an important despatch concerning the object of the coming meeting of Irish revolutionists in Paris. He alludes to the meeting as a congress of dynamite delegates, and says that the main purpose of their assembling in Paris is to endeavor to arrange for an affiliation with the regular Fenian organization which has its headquarters at present in the French capital, where it is still led by ex-Head-Centre Stephens. The main proposition to be made to the Fenians as the price of the union is, that the dynamiters will abandon the policy of attacks upon private property and public buildings, if the Fenians will join them in a dynamite war to be carried on for the destruction of the British navy.

A great Liberal meeting was held at the Town Hall in Birmingham, England, on Thursday. A speech was made by Mr. John Bright, in which he said that the question of disestablishment would not be an opportune one in the present century. The speaker ridiculed the idea of a colonial confederation without a system of free trade, and asserted that the next Parliament would probably grant free trade in land, meaning a removal of the hindrances to land transfers. Mr. Bright, in referring to the American tariff, said that farmers in the United States are not permitted to exchange their produce with artisans of Birmingham or weavers of Lancashire, but are compelled to exchange with protected manufacturers in their own country, who in some cases do not give half of what the farmers could get from the Lancashire or Birmingham manufacturers. Mr. Bright said he had no wish to reproach the Americans, who some day, he believed, would discover the right course.

The Rev. Stephen Gladstone, rector of Hawarden, and son of the Prime Minister, was married in Liverpool on Thursday to Miss Mary Wilson, daughter of Dr. Wilson, a rich retired physician.

Mr. Frank Mantell Adams, the London barrister who recently married Miss Mary Coleridge despite the strenuous opposition of her relatives, has begun an action for libel against his father-in-law, Lord Coleridge, Chief Justice of England.

Lord O'Hagan, member of the House of Lords and formerly Lord High Chancellor of Ireland, is dead at the age of seventy-four.

The Powers have come to a complete understanding on the Egyptian financial question. The basis of settlement is England's reply to the French counter-proposals.

The French man-of-war *Triomphant*, which had been lying at Hong Kong for some time, was not allowed to refit by the British authorities, and on Wednesday sailed away for Saigon, the nearest French port, with only enough coal and provisions to enable her to reach that place. The French are indignant at this strict enforcement of the neutrality laws.

The French are carrying on vigorous naval warfare at Amoy. They are busy destroying and sinking Chinese junks and making prisoners of the crews. The latter are transported to Kelung and there placed in chains.

The French forces on January 25 carried the Chinese works commanding the Kelung mines, after a severe but brief contest, and the loss of nine killed and fifty-three wounded.

M. Dupuy de Lôme, the eminent French engineer, is dead at the age of sixty-eight. He built the first swift French steamer in 1852, transformed sailing vessels into steamers by enlarging them, and conceived the idea of protecting men of war with iron armor. In 1877 he was elected a life Senator and took his seat in the Bonapartist group.

The Committee of the German Reichstag to which the Steamship Subsidy Bill was referred has finally rejected the whole measure by a vote of 14 to 7, on the ground that it lacked sufficient scope. The majority consisted of Conservatives, National Liberals, and New German Liberals.

The Governor-General of Canada, in his speech from the throne on the opening of the Dominion Parliament on Wednesday, referred to a bill the Government will introduce, placing all mutual and benefit life-insurance associations under Government inspection, and requiring all foreign associations of that character to deposit $50,000 with the Finance Minister for the protection of policy-holders. The Franchise Bill, which was introduced last year, is again promised.

THE NEXT ADMINISTRATION AND THE SILVER BILL.

THE recent silver convention at Denver, Colorado, was undoubtedly called and held for the purpose of checking the current of opinion, now running pretty strongly in the Democratic party, against the further coinage of silver dollars. The change was first indicated by the introduction of Judge Buckner's bill to suspend the coinage pending a new international conference, to which Mr. Warner, of Ohio, another pronounced silver man, gave his support. Following the presentation of this bill there came from Albany a rumor, pretty well authenticated, that the President-elect held the opinion decidedly that the stock of silver dollars on hand was ample for all purposes, and that any further supply would be considered an embarrassment to his Administration. Above all it was seen that the Democratic party, in power and responsible for the public finances, would be compelled to look at the silver question from a new standpoint. Making trouble for business interests under Mr. Cleveland's Administration would be attended with political risks much more serious than any that have been incurred hitherto. Moreover, the evils resulting from the silver coinage are cumulative in their nature. They grow apace. They multiply at the rate of $2,000,000 per month. They cannot be staved off much longer unless the arbitrary coinage is stopped. A monetary crisis coming in Mr. Cleveland's term would be charged up against the Democratic party, and retaliation at the polls would be the consequence. No where would the blow fall more heavily than in the State of New York, to which State, and especially to the mercantile classes thereof, Mr. Cleveland chiefly owes his election. The great business men's parade in this city on the afternoon of November 2 showed where the balance of power in New York lay, and how it would be used on the Tuesday following. The tremendous column that moved up Broadway and past Madison Square was composed of men who know on which side their bread is buttered. They have a perfectly clear conception that the Silver Bill means mischief to them and to all commercial interests. They look to Governor Cleveland and to the wiser elements of the party which he represents to save them from an impending danger, and we believe they will not look in vain.

The silverites of the Denver Convention addressed themselves to two individuals by name. One of these was Mr. Bland, of Missouri, and the other was Governor Cleveland himself. The former they flattered by designating the two-millions-per-month law as "the Bland Act," whereas it is not a Bland act at all, but an entirely different thing, drawn up by Senator Allison, of Iowa, and adopted as a substitute for Mr. Bland's measure against Mr. Bland's protest. Perhaps the Denver people apprehended that Mr. Bland himself needed to be stiffened up, and adapted their phrases to that end, making him the public champion of their cause by conferring upon him an honor which he never claimed. However that may be, their appeal to Governor Cleveland and to the Democratic party is not entitled to any force or value upon mere political grounds, since they gave all their electoral votes by largely increased majorities to Mr. Cleveland's opponent. The Democratic party owes nothing to Colorado, Nevada, or California. The question which the party has to consider is thus divested of any political encumbrances. There is nothing to lose in the silver-producing States; there is much to gain everywhere else.

It is commonly supposed that the South is ardently attached to the dollar of the fathers upon sentimental grounds, since her representatives in Congress have generally supported the Silver Act, and opposed all measures looking to a suspension of the coinage. The South has no other interest in the question than the common interest. She does not produce any silver. Her people are taxed for the purchase of silver bullion in the same proportion as the Northern people. She could not escape her share of the evils of a monetary crisis. She is bearing to-day her share of the suffering which proceeds from a want of confidence in the future. This want of confidence has more than one source, but not the least of the underlying causes of the present depression is the feeling, shared by capitalists at home and abroad, that there is no certainty what will be the standard of value a year hence. If that standard is to be something inferior to the present standard, if a dollar invested now is to be repaid with 85 cents at some future time, the investment will not be made. If the Southern people do not see this now, it is because their representative men have taken no pains to make them see it, but have simply drifted along with what appeared to be the current of popular prejudice. It is time for them to take a higher stand, and to become leaders instead of followers of public opinion. Of one thing they may be sure: if it shall appear to the Southern constituencies that the continued coinage of silver is a menace and a danger to the incoming Administration, that it will weaken Governor Cleveland in the places where it is necessary that he should remain strong, and eventually overthrow the party which elected him, the sentimental considerations which now sustain the Silver Act in the South will speedily give way to the more practical one of retaining the power won after the hard struggle of last November.

We have no information regarding Governor Cleveland's personal opinions upon these questions, but we assume that he does not desire to be vexed with a monetary crisis in the first six months of his term. The Administration of Martin Van Buren, entering office with the fairest prospects of success, was smitten by such a crisis at the beginning of its career, and was swept away as by an avalanche at the end of four years. It had committed no political offences, or none that were considered such at the time. It had dealt with the monetary crisis wisely and prudently. It was simply engulfed in the pecuniary distress of the people. The lesson ought now to be heeded. By stopping the silver coinage a chief obstacle to the return of confidence will be got out of the way, and the political situation will be correspondingly brightened. If this dark cloud is now removed from the financial horizon, the relief which it will extend to all business interests will be set down to the credit of Governor Cleveland's Administration, and it will be only second in importance as a financial achievement to the resumption of specie payments in 1879.

SOME TRUTH ABOUT CANALS.

Now that the Nicaragua Canal treaty is defeated, it will well repay those who consider a canal across the Isthmus of vital importance to the United States to think a little about interoceanic canals with seriousness and sobriety. Most of the pamphlets which have been written, and most of the speeches which have been made, about the Nicaragua Canal have so much passion in them of one sort and another that even their facts and figures can hardly be depended on, much less their conclusions as to its political and commercial importance. There is to be a little breathing space now, which ought to be improved by taking a calm and rational view of canals in general.

In the first place, the notion that there is some peculiar or mystic quality about a canal, above any other piece of water, which makes it a point of honor that it should be "owned" by the nation to which it is most likely to be useful, is a quaint delusion. If a waterway across the Isthmus had been made by nature, not one hundred feet, but five miles wide, and was called a strait instead of a canal, nobody would say that it was necessary to the national security and greatness that the United States should own it—that is, should hold the land on both shores in fee simple. We should, on the contrary, confine ourselves to rejoicing that Providence had provided mankind with such a fine channel between the two great oceans. We should not mourn because the United States Government or an American company had not had the job of digging it, and that it had not cost us $200,000,000. We should confine ourselves, in our concern about it, rigidly to the task of seeing that it was declared neutral ground, and we should perform this in the usual way, by trying to obtain a declaration of its neutrality from a congress of the great maritime Powers. This would prevent any fighting within its limits, or within a marine league of its mouth; or, in other words, would secure by peaceful pledge what it would take a larger navy than any two Powers now have to gain by force.

Why people think that narrow water communication between two oceans calls for different treatment from a wide water way; why they think we must "own" or control a canal, but need not own a strait or channel; why they think that it would be desirable to have a guarantee of neutrality from the maritime Powers for the whole Pacific Ocean, but that there would be something humiliating in having it for a passage only a hundred feet wide, it would be hard to explain in any other way than by ascribing it to the natural pugnacity of man. Even the most peaceful nation—even one as little prepared to fight either by land or sea, and as little fond of war as the American nation—seems still to set great store by any possession or claim which is likely to offend or provoke somebody, and thus lead to a fight, or show that it is not afraid to fight. There is no other apparent reason for wishing to charge ourselves with

the duty of keeping a canal open any more than of keeping a strait or channel open. On any other ground, it is as absurd to refuse to allow any other Power to guarantee its neutrality as it would be for a man who had built a fine house to refuse the protection of the law of the land for it, and insist on securing its safety through his own armed retainers. Such notions carry one back to the Middle Ages, when both nations and great men were loath to owe either peace or security to anything but their own weapons.

In the second place, it is to be observed that if our experience of interoceanic canals has taught us anything, it is that in default of a general declaration of neutrality such a canal is certain to be "owned" and controlled not by the Power which constructs it, or which charters the company that constructs it, but by the Power which makes most use of it, and has the largest navy to protect it. The Suez Canal is so complete and telling an illustration of this that the references made to it in the late discussion, as proof that the United States should own or control the canal across the Isthmus of Panama, fill one with wonder. The Suez Canal was constructed by a French company chartered by the French Government, with capital raised almost wholly in France. The scheme encountered from first to last the bitter opposition of the British Government, which prevented the promoters from getting any money for it in England. Lord Palmerston declared that its construction was impossible, or, if not impossible, useless. Now mark what followed—first in peace and then in war, The canal was opened in 1869, and from the very first the business came almost wholly from British ships. In 1882, the last year of which we have any record at hand, 2,565 British vessels passed through the canal, and only 165 French. The British tonnage, too, was 5,795,584, against 405,846 French, or fourteen times as much as the French. The ships of all other nations in that year numbered only 454; their tonnage was only 806,132.

Now as to war. When the Russo-Turkish conflict broke out in 1877, one of the first things the British Ministry of that day did was to send a despatch to the Russian Government declaring their intention to abstain from interference as long as the sphere of hostilities was not so extended as to involve or threaten the security of the Suez Canal. This, they announced, they would under no circumstances permit. The Russian answer was quite reassuring, and was addressed not to France, which had built and owned the canal, but to England, which had not put a cent into its construction. Moreover, France, far from taking umbrage at this, or thinking it foul scorn that another Power should protect the canal, acquiesced in it as the most natural thing in the world. Again, when the expedition against Egypt was sent out, in 1882, under Sir Garnet Wolseley, he without the smallest hesitation made the canal his base of operations, filled it with British war ships, stopped the traffic as long as suited his convenience, and, when M. de Lesseps remonstrated, laughed at him. Not one Power in Europe said a word by way of protest.

The reason why these pretensions of Great Britain to control the canal without owning it have been acquiesced in so quietly is the very simple one, that any interoceanic waterway inevitably falls into the hands of the Power whose maritime force enables it to hold the sea at each entrance. Such a canal, it must be remembered, though some people seem to forget it, is not particularly useful for internal navigation. It is valuable only as a mode of getting from ocean to ocean. The power of closing it is therefore worth nothing, as it is the mere power of destruction, which the feeblest can use by sinking a shipload of stones. Possession of a canal which we can only prove by stopping it up, is very like the possession of a locomotive without a boiler, or a watch that will not go, or a horse with a broken leg. True possession means the power of keeping egress and ingress free at both ends. This belongs, and must always belong, in default of neutrality, to the Power which can station at each end a fleet large enough to drive all enemies away.

Now, if we apply all these patent truths to the Nicaragua Canal, we shall reach results which must provoke a smile. In talking of the advantages of such a canal to us as a means of communication with the Pacific in time of war, no mention has been made of any increase in our navy, or of its strength in comparison with that of any of the great European Powers, or even of Chili. To the naval force of every one of these it is so far inferior that comparison is useless. The only additions to our navy now talked of are fast-sailing cruisers to cut up the enemy's commerce, not heavily armed and armored ships to stand guard off the canal, and drive intruders away. The probability of war with England is one of the strongest arguments in favor of our not making and owning the canal. Let us suppose that it has broken out, and we begin sending troops and ships to the Pacific Coast, through the canal, as per programme. When they arrive off Greytown, in wooden transports, convoyed by big wooden frigates, they will find a squadron of British ironclads, which will probably, from motives of humanity, not sink them, but warn them off. Astonished at this, the American Commodore will go on board the British flag-ship to know what it means. "It means war," the British Admiral will answer. "You cannot enter the canal. I have closed it." "But the canal is ours," the American will say. "It was built with our money and under treaty with Nicaragua; we have a two-thirds interest in it, and it was intended to afford a passage for our troops to the Pacific Coast at just such a juncture as this." "Very sorry," the British commander would reply, "but I have strict orders to prevent any one entering it just at present." And then there would probably be a hearty laugh, in which the American would join, over some brandy and soda in the cabin. If Chili were to take a hand in the fray, a similar comedy might be enacted at the same time at the Pacific end.

THE CIVIL SERVICE AND THE COMMON SCHOOLS.

THERE were in the common schools of this State in 1883 1,041,089 scholars; in the normal schools 6,270. There were, too, in the common schools in all 6,723 men teachers and 24,847 women. On its educational machinery the State spends over $12,000,000 annually. It would be difficult for a civilized community to give stronger proof of the importance it attaches to knowledge even in its elementary stage, as acquired in what is called a plain English or common-school education. The political importance of such an education has for a century been one of the commonplaces of political oratory. The comparison of the sums spent in popular education by the Northern States with those spent by the Southern States, and even by the most enlightened countries of Europe, was before the war a favorite illustration of the superiority of the free States in civilization. Moreover, in this matter, even the Fourth of July orators hardly ever were guilty of exaggeration. The proportion of the public revenue spent in teaching children to read and write, the pains taken to spread knowledge among the poor, and to honor and reward those who acquire it, *are* among the highest tests of civilization.

It seems to flow naturally from all this that the State should encourage and stimulate popular education by using places in the public service to reward it. In Germany, where great value—some think inordinate value—has long been attached to the higher education, all but the lowest places in the civil service are reserved inexorably for graduates of the universities or gymnasia. In England, in 1870, the establishment of common schools, supported by general taxation, was accompanied by the throwing open of the civil and military service to competitive examination, thus giving the sons of the poorest and humblest men in the country a fair chance of filling places in the Government service, which had previously been reserved for the younger sons of the gentry with such rigor that John Bright once called that service "a vast system of outdoor relief for the British aristocracy." Indeed, it was said that "in England the opening of the civil and military service, in its influence upon the national education, was equivalent to a hundred thousand scholarships and exhibitions of the most valuable kind."

The late change in the mode of admission to our own civil service, both Federal and State, is working in the same happy direction by heightening the value, especially among the poor and friendless, of common-school education. "Influence" has, during the last fifty years, been even more necessary to an American who wished to get a place under the Government and keep it, than it used to be to an Englishman, because the tenure in England, except during one brief period in the last century, has been permanent, while here it was most precarious. Consequently "civil-service reform" is one more triumph of real Democracy. The State Civil-Service Commission truly says in its second report:

"Our civil-service reformers have noted with pride and interest the statistics which have identified the competitive system, not, as was rashly predicted, with the higher collegiate education, which was confined to the few; but with the common schools, whose advantages were intended for the many. Governor Cleveland gave a seasonable reminder of the reciprocity of the two systems when he said, in his last annual message to the Legislature, that 'the children of our citizens are educated and trained in schools maintained at the common expense,

and the people as a whole have a right to demand the selection for the public service of those whose natural aptitudes have been improved by the educational facilities furnished by the State,"

"The pride and affection with which the people of the State justly regard their common-school system must be enhanced when they remember that the common school opens the way to the knowledge, the character, and the practical experience which will give to its pupils an equal chance to compete for employment in the public service, and will thus contribute to the excellence of the service, the comfort and interest of the people, and the dignity of the State."

Of persons examined under the Civil-Service Acts in this State, 72 per cent. were educated in the common schools only. Of those who have got places through competitive examination in the Federal service, 65 per cent. were educated in the common schools only. In fact, here as well as in England, the new laws operate to convert many thousand places in the public service into scholarships for the reward of diligent and capable pupils of the common schools of the State.

What is most singular about the history of this movement in the United States is not so much that it should have been opposed by the men who make their living out of politics, or who owed all their political influence to their success in office-jobbing, but that it should have been met, and should still be met, by the fierce hostility and ridicule of the editors of popular newspapers. Some of these have fought it, and still fight it, with arguments and illustrations which rest on the assumption that ignorance, not knowledge, is the basis of our institutions; that it is a disgraceful and absurd thing to give an American office to a man who knows how to read and write rather than to one who does not know how, or to a man who can speak or write his mother tongue correctly, in preference to one who cannot, or to a man who knows something of the history and geography of his country in preference to one who knows nothing at all. In fact, no Southern slaveholder denouncing "free society" and "free schools" before the war, no English Tory, preaching, as they all used to preach before 1832, the mischief done by education among people who had nothing to do with the laws but obey them, ever fought the battle of ignorance against knowledge with more fierceness than some of our own newspapers have of late done here, or with half as much devilish ingenuity in the way of falsehood, perversion, and misrepresentation.

THE COSTUMES OF THE "COMÉDIE HUMAINE."

To the happy law of nature by which force of imagination and delicacy of taste are generally bestowed in equal measure on great artists, Balzac—poor Balzac, as from this point of view we are tempted to call him—is a tremendous exception. With all his astounding dramatic power, there never was a more unpoetic mind, so far as "poetic" is synonymous with elevation and refinement; and it is a perpetual surprise that his immense range of observation can have been obtained from a standpoint so little lofty as his, and, indeed, chiefly by moving about among only material objects. He never looks at things as if above them: he is always on their level or even looking up to them. When he sees the stars it is because he is working in a mine. This lack of poetic quality, and also his lack of humor, cause his conspicuous defects of taste. And while it cannot be said that the points of resemblance between Balzac and Swift are numerous, yet in this they are alike—that their common extraordinary want of fineness, their ignorance of the more exquisite emotions, impair as greatly the enduring strength of their work, its permanent weight, as they do its immediate charm. A wide difference, however, between them exists in the fact that the *style* of Swift in his great moments does not suffer from this deficiency, while Balzac—"poor Balzac!" once more—in his most important, his most effective, his most characteristic, his most immortal passages, is still for ever stumbling into such clumsinesses as only genius can be guilty of.

And deeper even than manner, his thought, like Swift again, has frequently a terrible inelegance, a quite appalling tastelessness. But Swift's sins in this direction, while more odious in their muddiness than Balzac's, are yet in some degree associated with the quality of humor, which is essentially a cleansing power and of clarifying effect. In Balzac, as we just now remarked, humor was non-existent; he was totally deprived of its assistance. The "Comédie Humaine" has scarcely more of "comedy" in it than the 'Divina Commedia.' It is a presentation of the tragedies of the modern world not less than the poem is a presentation of those of the mediæval world. Balzac has been compared to Dickens; but the divergence of their minds as regards drollery is immense. Who ever, we will not say laughed, but even smiled, in reading Balzac? And how rapidly we turn the pages when we find ourselves immersed in one of his humorous (!) conversations. Of humorous *scenes* there is not one, we will assert, to be found in his volumes (barring the unmentionable 'Contes Drolatiques'), except such as arise from mistakes and mortifications in "society," from falls on the ice of "the world." And if in these scenes he be compared with Thackeray, the failure which comes from want of subtlety of conception and fineness of touch is apparent at once. We may also derive a salutary lesson from placing him by the side of Goldsmith.

But while declaring that no one ever smiled over Balzac's pages, we must none the less acknowledge that our immediate purpose is to excite the smiles of the reader with a few quotations from him illustrative of his ludicrous deficiencies in artistic perception and intelligence. It would be impossible by quotation to point out Balzac's want of taste in the delineation of character, to show the absurdities of the lovely, impassioned, broken-hearted ladies who, disregarding the laws of man, and ignorant of the laws of God, arrange themselves in the most fascinating attitudes in their brilliant salons or their dim boudoirs, and lift their eyes to heaven, or "to the cornice, . . . the kindest, most acquiescent, most gracious confidant women can find at those moments when they dare not look at their interlocutor." To Balzac "the cornice of a boudoir is an institution." But if Balzac's ladies are beyond the reach of quotation, their costumes may be detached from them, and these offer *en petit* delicious expressions of his taste. They give evidence, too, not merely of his personal taste, but of the overpowering fact that our century is not a time of taste in dress, that "great" dress has long been unknown to the world. In the few years that have made Balzac's day remote from us, Time has touched with a ridiculous air its "fashions," and given to Balzac's descriptions of them that comicality and caricature which belongs to the illustrations in antiquated, silk-bound "keepsakes."

He himself suggests this comparison, for he describes one of his heroines as being "slim and delicate as one of those sirens invented by English designers for their 'books of beauty.'" She is Modeste Mignon, a "blonde céleste" of twenty years, with hair the color of pale gold, as light in quality as marabou-feathers, and curling in long ringlets, and whose figure had the elegance of a young poplar waving in the wind. The evening she is first introduced to us she is attired in "a pearl-gray dress trimmed with cherry-colored gimp, with a long waist modestly outlining her bust, and a chemisette covering her still somewhat thin shoulders, so as to show only the first curves where the throat joins the shoulders." That may pass, perhaps, under the author's previous invocation of the name of Maddalena Doni, which can "carry" the half-high chemisette, though scarcely the cherry-colored "passementerie." But a few months later we have poor Modeste appearing on horseback in "a delicious bottle-green kerseymere riding habit, on her head a little hat with a green veil, on her hands doeskin gloves, and velvet boots on her feet, about which fluttered the lace trimming of her"—*caleçon!* Imagine Di Vernon riding in lace-trimmed *caleçon!* We must add that Modeste carried, on this occasion, a riding-whip costing seven thousand francs, the handle being a fox-hunt wrought in gold, and "finished" by a ruby of such price that it swallowed up all the "savings" of the devoted lover from whom it was an anonymous and unrecognized gift.

As a balance to the lace-trimmed *caleçon*, we are elsewhere told that a "femme comme il faut," when in street dress, does *not* wear "pantalons" "with embroidered ruffles puffed round her ankles," nor open-work stockings; but "you observe on her feet either cloth slippers with buskin fastenings (*à cothurnes*) crossed over an excessively fine cotton stocking or over a plain gray silk stocking, or else boots of the most exquisite simplicity." Her dress, we are assured, is "almost always" (!) in the fashion of "a long coat fastened with knots, and charmingly edged by a cord or an imperceptible thread." Here follows a marvellous deseription of the manner in which she envelopes herself in the shawl which she wears over this "long coat"—an arrangement which makes it seem a little unreasonable to sneer at the "bourgeoise" who "in winter wears a boa over a fur coat, and in summer a scarf over a shawl." These, however, it appears, are "pleonasms of toilette"; a shawl over a long coat is just perfection. But it is the bonnet which is perhaps the most interesting point: "it is of a remarkable simplicity, and has *fresh ribands*"! "*Perhaps* it has flowers, but the most able of these women wear only bows. Feathers need a carriage, flowers attract too much attention." This "able" woman "is always accompanied either by two very distinguished-looking men, of whom at least one is *décoré*, or by a servant in undress livery who follows her at ten paces distance." The unfortunate "bourgeoise," on the other hand, who has "to gather up her dress to cross a gutter," is accompanied by a child for whose sake "she is obliged to be upon the watch about the carriages; she is a mother in public, and talks with her daughter; she has money in her hand-bag, and open-work stockings on her feet." And we cannot but fear that she never wears "souliers à cothurnes."

But it is in the creation of his evening dresses that Balzac is most triumphant, and he did his utmost for Madame Rabourdin. On a certain Tuesday in 182--, about ten o'clock in the evening, she went forth to conquest in "a delicious mourning toilette. Her hair was dressed with bunches of grapes in jet of the most beautiful workmanship, an ornament costing a thousand crowns, ordered from Fossin by an Englishwoman who departed without taking it. [Let us observe, in passing, that there seems to have been a mysterious charm to Balzac in buying articles "order-

ed" by other people. Modeste Mignon's whip had been "made by Stidmann for a Russian who had not been able to pay for it." But to return to Madame Rabourdin's wreath.] The leaves were of stamped iron, light as real vine leaves, and the artist had not forgotten the graceful tendrils which were to twist among the ringlets, just as they catch on every branch. Her bracelets, necklace, and earrings were of Berlin iron, but these delicate arabesques came from Vienna, and seemed to have been made by those fairies who," etc., etc., etc. Her black dress, of which the fashion (*décolleté* to the last point) was the invention of a "divine dressmaker"—this enchanting dress was of "mousseline de laine, a material which the manufacturer had not yet sent to Paris, a divine material [worthy of the "divine" dressmaker] which later had a wild success. This success [here Balzac changes into the *commis-voyageur*] went further than fashions alone go in France. The positive economy of mousseline de laine [divine indeed !], which requires no washing, became so injurious to cotton goods as to revolutionize the manufacture at Rouen. [The costumer now speaks again.] Célestine's foot had a superior air in a finely-woven stocking and a slipper of Turk's satin, for her deep mourning forbade real satin. Célestine was indeed beautiful when so dressed" !

As a coiffeur, Balzac is unrivalled. Who can forget the head of Mademoiselle de Verneuil when, arraying herself in "the voluptuous garment of pagan priestesses" for a ball given by the "Chouans" in Brittany, "she twisted the long tresses of her hair so as to form at the back of the head that imperfect and flattened cone which gives so much grace to some ancient statues through a fictitious prolongation of the head; and ringlets retained in front fell on each side of her face in long shining curls? In this garb, her hair thus dressed [she added a wreath of holly above the curls *à l'anglaise !*], she offered a perfect resemblance to the most illustrious chefs d'œuvre of the Grecian chisel"!

We could wish to put in juxtaposition with these elaborate sketches and others like them a few of Balzac's studies of men's clothes, to show his talents not only as a dressmaker but as a tailor. He was equally "divine" in both businesses; and there are moments when the dressing-gowns of his heroes, or more especially their waistcoats, seem almost to outshine anything a woman could wear. It would be interesting also to select passages displaying the "momentary" *manners* of his men and women—their "dress" in words and looks, phrases and attitudes; it would all show the same pervading ignorance and inelegance. But our space is filled.

FOREIGN AND COLONIAL TROUBLES OF THE BRITISH GOVERNMENT.

LONDON, January 14, 1885.

Is a democratic country, or let us say, is a parliamentary country, unfit to have a foreign policy? Must it, however successful in adjusting its domestic quarrels before they reach a point dangerous to public tranquillity, be condemned to see its action in the larger world paralyzed by internal divisions of opinion and the timidity or hesitation of its Executive? This is a question which Englishmen have been accustomed to put when they have observed the behavior of France since 1870: her restlessness and uncertainty, the alternate fits of boldness and of reserve, the sense of weakness in Europe relieving itself by bullying weak and semi-civilized Powers in other parts of the world. It is a question which they have now been led to consider with more anxiety and less self-complacency by the ill luck which has attended them in almost every dealing they have had with foreign Powers since foreign affairs began (in 1876) to become an important part of their national action. Lord Beaconsfield's Ministry mismanaged the Eastern question, abandoning Turkey, whom it began by wishing to befriend and uphold, making itself ridiculous by the acquisition of useless Cyprus, engaging in an utterly useless and unjustifiable war with the Afghans, allowing one colonial Governor to commit them to an attack on the Zulus, and another to annex the Transvaal, which it has been found desirable subsequently to abandon. Mr. Gladstone's Government, which began with better auspices, because it had the decisive adhesion of the popular majority to the principles it announced in 1880, has, with the exception of the settlement of the Montenegrin and Greek frontier questions in 1880 and 1881, been just as unlucky as Lord Beaconsfield was in every enterprise beyond the limits of England. It has had a constant succession of troubles in South Africa with natives as well as with the Transvaal Dutch. It has sunk deeper and deeper in the Serbonian bog of Egypt. It undertook a short but sanguinary Red Sea coast campaign for which no adequate ground has ever been assigned. It is engaged in a hazardous expedition into Sudan which must cost some ten millions sterling. It has incurred the hostility of Germany and the suspicions of France, and while the latter checks every scheme for the resettlement of Egypt, the former seems to go out of her way to show her spite by annexing territories in Africa and the Western Pacific which the British colonies, seconded by a large body of opinion at home, were anxious to retain or acquire. Your readers know the facts in all these cases ; I am only concerned to state how they affect public opinion in England and the future of parties there.

First, however, there is one doubtful point to determine. Is it really true that Germany is hostile ? For a long time people in England refused to believe this, being unable to discover any reason for it. We have no dislike to the Germans, no interests opposed to theirs, no conceivable ground for a quarrel with them. We have, therefore, failed to understand why they should seek to quarrel with us, and have disregarded the frequently offensive language of their press. The fact, however, that this language has been so persistently used by journals known to be under the influence of Bismarck was beginning to surprise us, when the annexation of a large part of New Guinea—an act for which there seemed no apparent motive of interest on Germany's part—convinced most observers that Bismarck must wish to show himself unfriendly. Why, we are still in doubt. It can hardly be the personal aversion to Mr. Gladstone with which he is credited ; that seems too small a motive. It does not seem connected with the desire to set England and France by the ears, which has been pretty patent through his conduct in the Egyptian business. It looks like a deliberate purpose to irritate England, and let her know that she must not expect good will from the great Power of Central Europe. What is behind this nobody seems to know, but the general impression among politicians here and in France is, that the act marks the isolation of England from all friends in Europe, except Italy ; and this is, of course, made a charge against the conduct of the Ministry.

As Parliament is not sitting, as few members of the Government have lately spoken in public, and as they are always obliged to maintain much reserve in discussing the behavior of foreign Powers, their defence has not been heard. The London press does little or nothing for them, and most of its strong organs are openly against them. The newspapers in the great provincial cities are more loyal and hearty, but their advocacy consists chiefly in minimizing the importance of foreign affairs, in dwelling on the successful settlement of Parliamentary reform, and putting forward programmes of radical measures for the next Parliament. Thus the assailants have it all their own way for the present, and the lull in domestic politics which has followed the arrangement of the Redistribution difficulty has left the public at full leisure to listen to their continued invectives on the shortsightedness, the timidity, the clumsiness, etc., etc., of the present Cabinet. Respect for Mr. Gladstone, and the sense that weakened health may soon oblige him to pass from power into the retirement of private life, divert the brunt of the storm from his head to Lord Granville and Lord Derby, who are respectively responsible for Foreign Affairs and for the Colonies. The Radicals have never cared for either statesman, and do not trouble themseives with the defence of great peers whose places they would willingly see filled by more advanced politicians.

That there is a good deal of exaggeration in the censure bestowed on the Government, goes without saying. People always forget how many mistakes the best foreign ministers make, and the fathers of those who now recall with a sigh the wisdom and vigor of Palmerston, abused him just as roundly and quite as justly for his meddling everywhere, for his abandonment of the Ionian Islands, for his apparent breach of faith with Denmark in 1864. The Egyptian question has been of quite unprecedented difficulty, because the complications with the Powers of Europe, as well as with the Sultan, which various treaties have created, make it impossible for England to take any decided step without incurring the imputation, particularly odious to Mr. Gladstone, of violating our engagements. The recent conduct of it has harassed and worried him as nothing in his previous political life has ever done. He generally bears anxiety with the equanimity which comes of long practice, and is able to obtain relief by turning to other subjects. But this vexation has told on his health and sleep. As respects the difficulties with Germany, Angra Pequena, Santa Lucia, and New Guinea no great harm has after all been done. The first is a strip of barren coast, perfectly worthless to the Germans and to ourselves; so, however feebly our Foreign Office and Colonial Office may have behaved, English interests have not really suffered. As this was too small a thing to care about, so New Guinea was almost too large a thing to undertake. We have so much territory already unoccupied, and can so little hope to colonize tropical regions with our own people, that it may be doubted whether the Colonial Office was not right in refusing to declare the Protectorate which the Australian Colonies wished for. It is not therefore so much the harm done that has annoyed sensible men—the "Jingoes," as they are called, who seek only a pretext to attack the Ministry on every occasion, may be left out of account—as the notion that neither foreign nor colonial questions are in strong hands, and that if there were to be the least danger of a war arising from some complications like these, we should run the risk of again drifting into it, as we did with the Czar Nicholas in 1852, merely because our Ministers would not have soon enough known their own minds and spoken out the will of the country with decision. Besides, there is the mortification of feeling one's self either outwitted or bullied. To lose £50 by sheer accident is not so provoking as to be tricked out of 5 shillings through one's own stupidity.

Although this feeling prevails, and prevails so far that even sturdy Ministerialists when they make speeches in defence of the Government, say little or nothing upon foreign or colonial matters, and dismiss Egypt with the remark that though the Ministry may not have done very well, Lord

Salisbury would doubtless have done much worse, still it must not be supposed that the bulk of the voters are much affected. The class which cries out at little mortifications to national pride, the class which assumes that British interests are always to prevail against other interests (just as so many Englishmen expect always to get the best rooms at a Swiss hotel), the class which takes the whole ocean to be a British possession, and islands appanages of the English Crown, as the Popes of the fifteenth and sixteenth centuries claimed them to be appanages of the tiara—this class is and has for years been hostile to Mr. Gladstone and to advanced Liberalism. It includes very few of those who have helped to seat him in power. Its opposition may always be reckoned on, and this outbreak is, therefore, no desertion, no transfer of force to the opposite camp. The great bulk of the Radicals in the towns and in those manufacturing and mining counties which the Redistribution Bill makes so much more powerful, is usually almost indifferent to what happens outside England. I do not say that a great crisis, involving unmistakably the honor or the naval and colonial greatness of the country, would not rouse it, but discussions like the present do not. It is thinking only of getting good Radicals to fill the new seats, and of the reforming measures which will then follow. It is willing to believe that Lord Granville may be getting rather too old for such a difficult post as his, that Lord Derby has always been too timid and undecided, but it thinks nothing can go far wrong while Mr. Gladstone is at the helm, and calls the attacks of the London papers "Jingo nonsense." So far as one can see now, it would take greater mistakes than have been made, a far greater catastrophe than any which past mistakes seem at all likely to involve, to prevent the Redistribution scheme from bearing its natural fruits in a large Liberal majority at the next general election in January, and that is the point of time on which all eyes are now fixed.

Nevertheless, it must not be assumed that because the Radicals stand by the Government, therefore the Government is not damaged. The confidence of many moderate men, who mostly take no active part in agitation, but influence the public by their attitude even more than they do elections by their votes, has been seriously shaken. For instance, whereas five or six years ago people thought of Lord Granville as a probable Prime Minister, and of Lord Derby as a valuable member of a Cabinet, no one thinks so now. The fighting Tories are, of course, horribly mortified that the compromise on Parliamentary reform, with the passing of the Franchise Bill, has made it useless for them to try to throw out the Ministry. Both parties are now pledged to carry the Redistribution Bill; both parties feel that the general election of 1886 will decide their respective positions, and the Tories would have little or nothing to gain by winning office now if they were to be thrown out then, while they would find themselves confronted at once by these foreign complications which are now telling against the Government. Had the Franchise Bill not been passed, they might, by defeating the Ministry, have succeeded in postponing Parliamentary reform for a session or two, and perhaps settled Redistribution in a way favorable to themselves. Events have more than ever proved how little they are a match for Mr. Gladstone in Parliamentary tactics, while the Liberals plaintively murmur that it is a pity their leaders cannot show in foreign and colonial policy the same admirable skill with which they have played their game at home. Y.

Correspondence.

GENERAL JORDAN AND GENERAL JOHNSTON.

To the Editor of The Nation:

Sir: Your critic, in his review of the *Century* articles regarding the battle of Shiloh, can hardly have done me the honor to read more than cursorily my small share thereof of less than six pages; otherwise he would not have fancied that the *Century* "has carried its purpose of hearing both sides so far as to add General Jordan's article as an antidote to the imputations upon General Beauregard's generalship, which are found in the article by Colonel Johnston."

What I wrote consisted of brief notes of separate events or incidents connected either with the inception of the campaign or with the battle. In not one of them did I refer to the impugnment of Beauregard's generalship adventured by the writer who has undertaken to supply the readers of the *Century* with the Confederate story of the battle of Shiloh, as the pendant to General Grant's version of the affair. Nor, in fact, did I write a word, in my notes, of General Beauregard's generalship, antidotally or otherwise. I simply confined myself to certain matters with which I had been officially connected as Adjutant-General of the Confederate army that fought the battle in question, about which I had been specifically asked by the editors of the *Century* to write as compactly as possible. Not aware that Mr. Preston Johnston had found it seemly to avail himself of such an occasion to rake the grave for evidence with which to impugn General Beauregard's generalship, I certainly did not attempt to administer an antidote to a *bane* of whose existence I was ignorant.

I have only to add that probably the greater part of the readers of the *Century* have found an efficient antidote to Mr. Johnston's *bane* in what General Grant said of the Confederate generalship, pages 608 and 609 of the *Century*. Another antidote, however, military men generally will find in Mr. Johnston's article itself, in the fact that General Johnston received his death wound as early as 2 P.M., in the first day's battle, at the extreme Confederate right—extreme Union left—while, according to Mr. Johnston, in the act of leading a single brigade into action, at a time, be it noted, when the Confederates were in the full tide of success in all quarters of the field. Now, assuredly, it cannot be regarded as the office of the Commander-in-Chief of an army in battle to occupy himself exclusively, as Mr. Johnston studiously represents his father to have done, in leading isolated brigades, one by one, into action. To men professionally acquainted with the supremely momentous responsibilities which weigh upon the commander of an army in battle, and who must understand that it is his true part, as Shakspere tells us, to

> "——contrive how many hands shall strike,
> When fitness calls them on, and know, by measure
> Of their observant toil, the enemies' weight"—

I need not point out that a commanding general can only efficiently discharge his functions from some central position, carefully selected, from which he may give the constant continuous propulsion and direction to that tremendous aggregation of mental, physical, and mechanical forces which constitute a modern army. Therefore, the mere historical fact that General Johnston did not take such a position at any time during the battle of Shiloh, but, on the contrary, sought the very front edge of the battle, must show to military men conclusively that General Johnston, for some reason sufficient to himself, must have seen fit to abdicate to his "second in command" the conduct of the battle of Shiloh from the beginning of the combat.

The antidote, it seems to me, to any criticism adventured by Mr. Johnston of Beauregard's generalship must arise spontaneously in the minds of the *Century* readers generally, as they find this critic gravely representing his paternal hero parading *bareheaded*, just before he was mortally wounded, in front of a brigade, encouraging it with his "fine voice and manly bravery," with his "sword rested in his scabbard. In his right hand he held a little tin cup. . . . It was this plaything which, holding it between two fingers, he employed more effectively in his natural and simple gesticulation than most men could have used a sword."

Need I say that it is only on the melodramatic or comic-opera stage that a commanding general of an army upon a battle-field is made to brandish his sword, or carry that insignia of command otherwise than resting in its scabbard?

It is certainly far from my purpose to say or intimate aught in derogation of the soldierly capacity or personal worth of Albert Sidney Johnston, the right appreciation of whom, however, is, as I sincerely believe, not to be formed from the pictures of him on the field of Shiloh or elsewhere—so florid, overwrought, and fanciful—which have been so profusely presented by his son to the public gaze in the *Century* article.

Thomas Jordan.

New York, January 28.

RUSSIAN NOVELISTS.

To the Editor of The Nation:

Sir: I am glad that your Paris correspondent has called the attention of the public to Count Leo Tolstoi's magnificent novel, 'War and Peace.' I cannot speak as to the merits of the French translation referred to, as I have not seen it, but no praise can exaggerate the merits of the original in the directions pointed out by your correspondent.

It is time that the English-reading public should learn that Russia has produced other authors besides Turgeneff. The inimitable Gogol, whose tales Turgeneff declared that he knew by heart, and of whom he said, "We are proud of him as one of our glories," is as unknown here as is Count Leo Tolstoi; while Count Alexei Tolstoi is known only by a translation of his fine 'Prince Serebranny.' This, like the translation, from the Dutch, of Van Lennep's 'Ferdinand Huyck' (under the title of 'The Count of Talavera'), is absolutely incoherent in its abridged form.

But I fear we are not likely to see either Gogol or Leo Tolstoi at present. As in the famous case of Mr. Daddy Longlegs and Mr. Floppy Fly, opposite causes produce identical results. Mr. D. Longlegs could not go to court because of the length of his limbs, while Mr. F. Fly was forced to stay at home because his were too short. Gogol's inimitable tales are pronounced too short by the very publishers who would call Tolstoi's 'War and Peace' too long. Still, in case any publisher should feel inclined to venture on the latter, there are two mistakes which I sincerely hope to see avoided: 1st. If it be considered necessary to abridge the story, let the work be done with skill, that it may not prove a mutilation. 2d. And above all, let the translation be made directly from the Russian, and not through any French or German version, however good. No language can endure the double strain, and Russian least of all.

If Turgeneff be voted "dull" by the majority of people, and left on the booksellers' shelves, it is due, in part, at least, to the above cause, viz., a double translation.—Yours truly, B. H.

Boston.

A DISTRACTED HISTORIAN.

To the Editor of The Nation:

Sir: In your review of 'John Adams,' in the "American Statesmen Series," you note among Mr. Morse's qualifications as a biographer that he possesses "a considerable power of sympathy." Perhaps it is this "power of sympathy" with his subject which has led Mr. Morse to make certain statements in this last work which do not harmonize with those previously uttered by him. In his 'Life of Alexander Hamilton,' published some years ago, he touched upon some points of dispute and the general lack of harmony between Hamilton and Adams; in the biography of Adams he has had to deal with the same points a second time, and the statements made in the two biographies seem to me to warrant their comparison. On the question whether Pickering, McHenry, and Wolcott were guilty of any political or moral obliquity in submitting to Hamilton's judgment and dictation while they remained members of Adams's Cabinet, and in general of their relations to Adams, Mr. Morse says in

'Life of Hamilton.'	'Life of Adams.'
"If indeed the Secretaries betrayed Cabinet secrets, . . . they did wrong. Nor does any evidence of such conduct upon their part exist." (Vol. ii, p. 234.)	"They [the Secretaries] were in such a frame of mind that they betrayed all official discussions to Hamilton; they sought and followed Hamilton's advice. They did this for the purpose of gaining Hamilton's invaluable aid in their opposition to their proper chief." (P. 311.)
"Neither is it by any means clear that the Secretaries should have insisted upon retiring from office." (Vol. ii, p. 236.)	"According to received principles, fair dealing to Mr. Adams, even justice to themselves, would have led them to resign when they so utterly differed from him that their sole aim was to thwart him. But however this may have been, certain it is that any decent sense of propriety—nay, for the word must be used, of honor—would have led them to refrain from communicating Cabinet secrets for use against the President by his avowed enemy." (P. 312.)
"Nor does any evidence of such conduct upon their part exist. . . . Yet even to such allegations the lax custom of the day might be pleaded in extenuation, if not in full excuse." (P. 234.)	
"Three members of the Cabinet [Pickering, McHenry, and Wolcott] *had long been obnoxious to the President* as being more amenable to alien influence than to his own. They were now ejected in rapid succession." (Vol. ii, p. 296.)	"Pickering richly deserved unceremonious expulsion; but Mr. Adams courteously offered him the opportunity to resign." (P. 314.)
"Wolcott had made an admirable Secretary of the Treasury, nor would it be easy to fill his place. He was therefore retained a little longer until the matter could be arranged without prejudice to the public affairs, when he also was compelled to retire." (Vol. ii, p. 297.)	"*Wolcott* . . . had habitually spoken the President so fair that he *was regarded by Mr. Adams as a friendly adviser*, though very far from really being so. He now continued for some months to combine external civility and deference to the President with the function of Cabinet-reporter, so to speak—and to avoid the word spy—for Mr. Hamilton. In the following November, amid all the vexations which that ill-starred season brought to Mr. Adams, he sent in his resignation, leaving the President to look for an incumbent who would be willing to hold the office for two months." (P. 315.)

Again, in speaking of the probable rupture and consequent chasm likely to be opened in the Federalist party by the nomination of a Minister to France, the author says in

'Life of Hamilton.'	'Life of Adams.'
"Adams would not stand quite alone upon his side of it. Men who loved peace and economy at any price would probably adhere to him. His influence and position would attract others. *The bulk of the party would not go with him.*" (Vol. ii, p. 280.)	"In no caucus of the Federalist members of Congress could the Hamiltonians ever muster a majority against Mr. Adams. *Neither does there seem any reason to doubt that* upon a simple vote of all the Federalists in the country taken at any time during his administration, *much more than half would have sustained him.*" (P. 307.)

Other equally noticeable inconsistencies occur in the two books. It is not necessary to decide here which set of statements is nearer the truth. The comparison was made simply to show that the inconsistencies exist, and to illustrate the effects of a "power of sympathy" that is occasionally over-strong. In one work the author exhibits a tendency to uphold Hamilton at the expense of Adams, while in the other he favors Adams where the two men differ. Perhaps this is what might have been expected, and yet, in the case of a writer like Mr. Morse, whose opinions we have a right to consider authoritative, such a wavering of opinion—not to say contradiction of statement—is far from satisfactory to the reader.

George W. Knight.

Ann Arbor, Mich., January 27, 1885.

HAULING OFF ON THE WHIPSTAFF.

To the Editor of The Nation:

Sir: The English marine-novelist, Mr. Clark Russell, in a magazine article wherein he falls foul of Fenimore Cooper savagely, calls the phrase in Gulliver, "we hauled off on the whipstaff, and helped the man at the helm," a piece of meaningless nonsense. Per contra, the phrase is shown to exist in a respectable Seaman's Guide of that date, and the question arises what may it mean.

Russell says that the "whipstaff" is the stick from which the pendant (still called a "whip," I believe, by sailors) hangs, and which itself is lashed to the mast-head. Very good, but was that always its sole meaning? Now, it is to be noted that the build of ships has much altered since Swift's time. In his day, if a ship carried the fore-and-aft mizzen-sail, which we call a spanker, it at least did not reach to the poop, which was high and peaked, and furnished with an ensign-staff that doubtless went down as far as the deck, behind the man at the helm. Now, it is a feasible supposition that this went in those days by the same name, "whipstaff," which is now given to its smaller variety at the mast-head. If so, it gives ground for an intelligible explanation.

I remember once, in the long-gone days of sloops and pettiaugers, coming from down the bay in New Jersey with a strong wind abeam. The vessel heeled so, and made such way, that the man "could not hold up his helm," as the Guide says. So they got a block and tackle, hooked one block to the windward bulwark, fastened another to the tiller, and gave the helmsman the end of the tackle to haul on; thus helping the man at the helm. Now, what if in Captain Gulliver's ship they did substantially the same thing, only hooking the block (or blocks) to the whipstaff, and hauling at the helmsman's order? If so, the matter is very simple and reasonable.

One matter in which Mr. Russell pitches into Cooper is the incident, in the 'Pilot,' of a whale being killed off the Yorkshire coast. But this event seems hardly beyond that moderate license allowed to novelists *as well as* painters and poets. What is more objectionable, though I think Mr. Russell does not mention it, is the collecting a shoal of sharks round it in a few hours. And I conceive it is still more incorrect to have a large, vigorous whale killed by one wound of a harpoon. If so, Mr. Russell has fairly missed the pigeon and hit the crow.

Hartford, January 30, 1885.

BOHN'S TRANSLATIONS.

To the Editor of The Nation:

Sir: Professor Goodwin's letter (in the *Nation* of January 29) on a misrepresentation of Plato's 'Republic' is of value not only in showing up the immediate mistake, but in adding weight to the disesteem deserved in general by the translations in Bohn's library. So many persons unable to read the originals read these translations believing them to be faithful, at least to the author's meaning, that it is much to be desired that proof after proof should be given that this is not the case. Long ago Mr. Matthew Arnold exclaimed: "Think of the difference between the translations of the classics turned out from Mr. Bohn's library and those turned out from Mr. Nisard's collection!" using it as an illustration of the lack of literary *training* among the men who do such work in England. And though since then better scholars have occasionally done excellent translations which have appeared in Mr. Bohn's various series, yet much the larger number of "Bohn's" translations are comparatively worthless; and it is astonishing that readers with any literary training themselves can fail to see this—to *feel* it, even when they do not know the originals; just as one can tell whether a portrait is a likeness or not without seeing the person.

These thoughts are fresh in my mind, because very lately, in turning over the leaves of the translation of Goethe's 'Aus meinem Leben' and the 'Italienische Reise,' published forty years ago but reissued in 1881, I was struck with the constant outrageous absurdities of rendering, and not infrequent serious mistakes, which cannot all be charitably ascribed to misprints, though misprints are numerous, and often of a bewildering kind—as where we are told that the women of Verona "are well made and have a decided *pupil*, but are for the most part pale." The fact is they have an "entschiedene *Profile*." But one of the many serious mistakes is this. The translation makes Goethe say, in a passage describing ancient monuments: "Here a man in armor is on his knees in expectation of a joyful resurrection." The original is the exact opposite: "Hier ist *kein* geharnischter Mann"! Even if the edition used by the translator had the misprint, "Hier ist *ein*," not to perceive it to be wrong shows that he did not the least comprehend the context, with which the one statement is in unison, the other perfectly at variance.

As Baron de Grimm said, a hundred and thirty years ago: "If it were only for example's sake, I would have every such translator condemned to a month's confinement in a lunatic asylum." (I wish to confess that, not having the original at hand, I quote this sentence from a translation, an anonymous translation dated 1814; but such vivacious authenticity is in every line of the book, that I am ready to vouch for its essential truth, without comparing it with the original.)

Yours truly,

A Lover of Trustworthy Work.

WHITTIER'S FREMONT CAMPAIGN SONGS.

To the Editor of The Nation:

Sir: Your note in No. 1019 (January 8), relative to Whittier's missing campaign song of 1856, sent me to my Fremont campaign scrapbook. I found there words to the air "Suoni la tromba," but none by Whittier; nor do I remember ever to have seen his song beginning

"Sound now the trumpet warningly."

I found, however, a copy of his "Song, inscribed to the Fremont Clubs," after the election, bearing date November 10, 1856, and beginning,

"Beneath thy skies, November."

I do not find this song in the complete edition of Whittier's poems published in 1870. Is it also out of print?

James O. Pierce.

Memphis, January 29, 1885.

PRIMITIVE COLOR-PREFERENCES.

To the Editor of The Nation:

Sir: Those scholars who advocate the theory of the development of color-perception maintain that the ancients (as well as the savages of the present day) preferred red and yellow objects to those of any other color, on account of their

being more luminous. There is no doubt that red and yellow were favorite colors with them, but this explanation is not satisfactory. A savage of to-day will choose red, even if it be dull, in preference to a bright green or blue. Scientifically it can be explained as follows: Primitive man passed his life chiefly out of doors. The green of the vegetation and the blue of the sky almost constantly meet his eyes. As is well known, when the eyes grow weary looking at one color for a considerable length of time, they are immediately refreshed when the complementary color is presented to them. Accordingly, primitive man took the greatest delight in the complementary of green, namely red, and in the complementary of blue, namely orange (yellow and red).

W. O. SPROULL.

UNIVERSITY OF CINCINNATI, January 24, 1885.

Notes.

THE publishers of Lady Brassey's 'In the Trades' are Henry Holt & Co., notwithstanding the strange fashion in which their name got misprinted in our last issue.

The third volume of Schouler's 'History of the United States,' covering the period 1817-1831, will be published by William H. Morison, Washington, in May next. This will be welcome news to those who know the singular value of Mr. Schouler's work.

Charles Scribner's Sons publish this month a new edition of the late Geo. P. Marsh's works, with important additions and revisions; the fourth volume of Doctor Schaff's 'History of the Christian Church'—'Mediæval History'; an illustrated edition of J. G. Holland's works, in fourteen volumes; and 'Instructions in Rifle and Carbine Firing,' by Capt. S. E. Blunt, U. S. A.

D. Lothrop & Co., Boston, announce 'Southern Alaska and the Sitkan Archipelago,' by Miss E. R. Scidmore; and 'Philosophiæ Quæstor; or, Days at Concord,' by Mrs. Julia R. Anagnos.

Mr. Edmund Gosse, who returned to England on January 27 to resume his duties as Clark Lecturer on English Literature to the University of Cambridge, left behind him the MS. of the lectures on English Poetry from the death of Shakspere to the rise of Pope, which he delivered in the course of the Lowell Institute at Boston, at Johns Hopkins University at Baltimore, and in a circle of private houses in New York—for New York is wholly without the administrative machinery and the endowment which give stability and dignity to the lecture system in Boston and Baltimore. These lectures will shortly be published by James R. Osgood & Co.

Mr. George J. Coombes is about to publish a book likely to interest those who have taken delight in the excellent performances of the company of the London Lyceum Theatre. It is entitled 'Henry Irving in New York,' and is a revised reprint of the several criticisms of Mr. Irving's acting in this city, written from day to day by Mr. William Winter. The book will be printed with the utmost care, in emulation of the editions of M. Jouaust and M. Quantin.

Henry Holt & Co. will publish during February a volume containing a 'Choix de Contes Contemporains,' edited by Mr. B. F. O'Connor, Ph.D., Instructor in French at Columbia College, which is likely to be as interesting as it is useful. It will contain short stories by Alfred de Musset, Théophile Gautier, and Edmond About, now dead, and of Alphonse Daudet, François Coppée, and André Theuriet—all past-masters in the art and mystery of writing short stories. Mr. O'Connor will append such literary and linguistic notes as the tales may seem to demand.

The same publishers have brought out a substantial work on 'The Civil Service in the United States,' by John M. Comstock, chairman of the United States Board of Examiners for the Customs Service in this city. The very size of it (more than six hundred pages) is emphatic testimony to the permanence of the reform which it illustrates. In brief, it is a complete enumeration of the places in our present civil establishment—both the classified service, with competitive and non-competitive offices distinguished, and the unclassified, not subject to competition. Salaries are everywhere indicated. These schedules are followed by minute practical information as to the methods of gaining admission to the civil service, with specimens of examination papers in the several departments. Finally, the New York and Massachusetts State and municipal rules, fixed by the latest legislation, are given in full. This timely volume is therefore a landmark in American progress toward good government. The thoroughness with which it has been edited is a guarantee of its popular acceptance as the highest authority on the subject. It will be revised from time to time.

An arrangement of Federal offices by States perhaps warrants the continuance of 'The United States Blue Book' (Washington: J. H. Soulé), of which the fourth edition is before us. In all other respects it would seem to be superseded by the work just described.

The critic readily abdicates his function in presence of type so fine as that in which 'Webster's Condensed Dictionary,' edited by Mr. Dorsey Gardner, is set (Ivison, Blakeman & Co.). Though beautifully printed, no one ought to use it except for occasional and momentary reference, and even then with a *loupe*, if possible. It would, for instance, be ruinous to a schoolboy's eyes. The compression is got by omitting certain classes of technical terms and of compounds, and by a German arrangement of root-word and derivatives. Illustrations have been retained, and the etymologies have profited by the latest works on the subject. So far as we have tested this dictionary, it bears out the publishers' claim that it has been carefully wrought over, and is not a simple reprint.

The *Magazine of American History* for February is exceptionally even in the quality of its articles, though Doctor Vermilye's entertaining "Early New York Post-office" has a rambling character which belies the writer's age, and Judge Gayarré's illustrations of General Jackson's piety have a naïveté also suggestive of a past or passing generation.

Every visitor to the Centennial Exhibition of 1876 remembers the wonderfully effective screens of photographic transparencies, chiefly representing our Indian population. The New Orleans correspondent of the *Photographic Times* tells of like transparencies in the photographic department of the Cotton Exposition—brilliant, dazzling, elegant, splendid, stupendous, he calls them. He notices especially the Kentucky series, geological and scenic, and those illustrating Indian life in New Mexico.

The second leading article in *Le Livre* for January is a translation, by M. de Sainte-Heraye, of Mr. Pascoe's article on "The English Magazine" in the *Atlantic* of September, 1884. M. Champfleury, this journal announces, is at work on a new volume on Caricature. From the same source we learn that a committee of the Société des Gens de lettres has resolved that there should be a Literary Congress in Paris in 1889 (as in 1878) at the projected World's Exhibition. A sub-committee has been charged with drawing up a programme.

An English edition of R. W. Bucke's 'Walt Whitman' has just been published by Wilson & McCormick, of Glasgow. It differs from the American edition in having an appendix of twenty pages contributed by Prof. Edward Dowden, and entitled 'English Critics on Walt Whitman.' Professor Dowden summarizes the statements of some forty English critics who have in one way or another expressed opinions concerning Whitman's writings. A letter from Mr. William Bell Scott, printed in this appendix, gives an account of how copies of the first or Brooklyn edition of 'Leaves of Grass' reached England a few months after the publication of the book in 1855. A wandering book auctioneer brought copies from the United States to Sunderland in the summer of 1856. These copies were bought by Mr. Thomas Dixon, the cork-cutter, to whom Mr. Ruskin addressed the letters afterwards published with the title 'Time and Tide by Weare and Tyne.' Mr. Dixon sent copies to Mr. Scott, who writes:

"This is, I think, worthy of record, as, no publisher being interested in this first edition of the book, it might have been long enough before reaching this country, but for the travelling James Grindrod with his Dutch auction. Besides, his having a number of copies in his miscellaneous pack shows the small value of the book in America at its first appearance."

Messrs. Robert Boyle & Son, of London, have devised an arrangement for ventilating prisons which will be very inconvenient for those novelists whose plots demand that the prisoners in contiguous cells should be able to communicate with each other through the air passages. In their plan a single horizontal shaft drains the air from ten cells, but they are all isolated, for a metal plate or partition extends from the opening of any one cell along the shaft and past the openings of the next two. To deafen the plates near the opening, they are made double, and the space between the two is packed with sand, and the horizontal shaft is similarly deadened as it passes through the cells.

The flag-staff on the roof of the Capitol caught fire on January 26 from a spark. The autograph messages of the earlier Presidents, and many messages to Congress in the handwriting of the members of the early Cabinets, were stored close to the fire. Congress was alarmed at the thought that these had a narrow escape. It would be well if Congressmen would remember that a considerable part of the National Library is stored in the same upper story, and that the whole is not too far distant to be destroyed if a fire once got a good hold upon the building.

We note with pleasure that Doctor Story has lately published, in the Johns Hopkins University Circular, No. 36, for January, 1885, a list of the models of mathematical surfaces for facilitating geometric instruction, which the University has been accumulating within the past two years. The models are in wood, card, thread, and plaster, and were made by J. Schröder and L. Brill, of Darmstadt. Doctor Story classifies this valuable collection of models under three heads, the first of which, representing simple solids, comprises forty-one wood models, the second, surfaces, including 123 models chiefly in plaster, and the third, descriptive-geometry models, of which there are fifty.

The Congo bids fair soon to be as well known as the Rhine. In addition to elaborate maps by the English, French, and Portuguese, there has been recently published one on a still larger scale by Asher in Berlin. It is in twenty-five sections, on a scale of 1.1 geographical miles to an inch, and plots with great minuteness a strip of country, averaging twelve miles in width, through which the expedition sent out by the German Government under Major von Mechow passed. He followed down the Quango nearly to its junction with the Congo above Stanley Pool.

The sharp contrast existing between the position of the drama in France and the position of the drama in England and America is shown by

a comparison of the theatrical year-books of the three countries. In France the drama is an art, having its necessary mercantile side overshadowed by the æsthetic, and the *Almanach des Spectacles* is as dainty and beautiful a little book as one can find anywhere. In Great Britain and the United States the drama is a speculation, having only occasional relations with art—and the British *Era Almanack* and the American *New York Clipper Annual*, the issues of both of which for 1885 lie before us, are the year-books of a prosperous trade. The *Era Almanack* has as its chief object of interest a collection of facsimile autographs of famous actors and actresses of the past, and a series of views of old provincial theatres. The *New York Clipper Annual* is disfigured by a vulgar chromo-cover. The sporting chronology and record are both fuller and more accurate than the list of "dramatic notabilities."

A hitherto inedited treatise of D'Alembert's, "Réflexions sur l'état de la République des lettres," written in 1760, is appended to Brunel's 'Les Philosophes et l'Académie Française au xviiie siècle,' recently published by Hachette. The intrigues of the philosophers, especially D'Alembert and Voltaire, to overthrow the rule of the "Throne and the Altar," and establish freedom of thought and speech in the place of despotism, political and religious, is the special subject of Brunel's scholarly study.

The French periodical *Bulletin Astronomique*, whose inception we noted some months ago, has now completed its initial volume of between six and seven hundred pages with the number for December, 1884. The journal has been so far exclusively devoted to the publication of the observations and original researches of the French astronomers, as was contemplated from the outset, and there appears to have been no lack of material of the first order. The pages in each number which have reviewed the astronomical publications and magazines of other nations have been prepared in a thoroughly satisfactory manner, and have added an international element greatly desired. It will be remembered that the editor-in-chief of the *Bulletin* is M. Tisserand, of the Paris observatory.

The 200th anniversary of the liberation of Vienna from the Turkish siege of 1683, in which the Polish King John Sobieski played so famous a part, is made the occasion of the publication of a bibliography entitled 'Sobiesciana.'

The fresh light thrown upon the life and times of Lorenzo de' Medici by late research and the discovery of new documents has induced Herr Reumont to bring out a second edition of his biography of the Florentine prince. For the new edition, Reumont has profited in a great measure, says the *Archivio storico italiano*, by the letters of Lorenzo, which have lately been restored to the archives of Florence, after a disappearance of many years.

Mr. Christern sends us the prospectuses of several important works: 'Saint François d'Assise,' a literary and artistic monument to the founder of the Franciscan order, illustrated in various styles (including color), after the great masters, miniatures, etc., etc. (Paris: E. Plon); a German translation, the first ever made, of the Babylonian Talmud, with note and comment (Innsbruck); and 'Deutsche Drucke älterer Zeit, in Nachbildungen,' edited by Dr. Wilhelm Scherer of the University of Berlin (Berlin: G. Grote). This interesting series of facsimiles of rare early-printed German works will find a ready sale among all book-lovers. The 'Biblia Pauperum,' Brant's 'Narrenschiff,' the so-called first edition of the 'Germania' of Tacitus, 1470; the 'Faust' of 1587; Fischart's 'Gargantua'; Luther's 'Geistliches Liederbuch' (containing his "Ein' feste Burg") and 'Passional Christi und Antichristi'; 'Reinke de vos,' 1498; selections from Hans Sachs's 'Bildergedichte'; 'Ritter vom Turn,' 1493; 'Volksbüchlein vom Kaiser Friedrich Barbarossa,' 1519; Ulrich von Hutten's German writings, etc., etc., are a part of the long list. Only 300 copies will be printed of each work.

We learn from the *Athenæum* that Dr. Alexander Schmidt is preparing a new edition of his incomparable 'Shakspere Lexicon,' which is out of print. It will be some years, however, before the work can be printed.

German scholars are diligently cultivating the domain of old British literature. Prof. J. Schipper, of Vienna, has lately placed himself in the front rank of workers in this field. In 1882 he began the publication of a work on 'English Prosody' (Bonn), the first volume of which is devoted to 'Altenglische Metrik.' Last year he followed it with an extensive monograph on William Dunbar, "the darling of the Scottish muse," the most considerable British poet between Chaucer and Spenser. Of this work we shall shortly speak somewhat at length. Its critical analyses have been received with marked applause in Edinburgh, and its translations by competent criticism in Germany. It may be remarked that the diction of the same Scottish poet is the theme of another critical monograph by a German writer, Dr. Johannes Kaufmann, but composed in French: 'Traité de la langue du poète écossais William Dunbar, precédé d'une esquisse de sa vie,' etc. (Bonn, 1873).

The historical treasures of the Vatican archives were never as freely accessible to scholars of all nations as they have been during the Pontificate of Leo XIII. Shortly after his accession German, French, Spanish, and other investigators of the past flocked to Rome to enlarge the histories of their respective countries from the new sources. In Hungary, the highest Roman Catholic clergy, under the lead of Cardinal Haynald, Archbishop of Kalocsa, instituted a systematic course of research in the light of Pontifical reports, which promises most ample historical results. Bishop Ipolyi and six learned canons formed a committee for the elaboration of the plan, and Canon Fraknói, Secretary of the Hungarian Academy, was sent to Rome as a critical compiler. The first fruit of these labors is two quarto volumes of 'Monumenta Vaticana Hungariæ,' published in Buda-Pesth at the close of last year. The theme of the first is the elevation of the House of Anjou to the Hungarian throne early in the fourteenth century, and of the second, which bears the sub-title 'Relationes Oratorum Pontificiorum 1524-1526,' the political decay and anarchy which prevailed in the last years of the Jagellonian dynasty down to the fatal battle of Mohács, which subjected Hungary to the sway of the Sultans for 160 years. The reports of the Papal nuncios throw a great deal of fresh light upon the period preceding the catastrophe.

—We appreciate the flattery implied in the bodily transfer, without credit, to the literary columns of the Philadelphia *Evening Item* of our recent review of Johnson's 'Oriental Religions.' Persistence in such practices, however, will, we warn the editor, be highly injurious to his moral sense, however much his readers may profit by his obliquity.

—We have received from Mr. Thomas H. Dudley a copy of his speech on the operations of the Cobden Club and kindred subjects, delivered at Astoria, L. I., during the recent campaign, together with a letter explaining what he meant by saying that the Club had issued a pamphlet "for members of the Club alone." Mr. Dudley insists that such a pamphlet was issued, and that he has a copy of it. We inferred from Mr. Dudley's speech, as reported, that he intended to convey the impression that the Club had issued a secret pamphlet giving a statement of large expenditures in the United States for the promotion of free trade; and such, we think, would be the inference which most persons would draw from the speech which he sends us. Still, it is fair to say that Mr. Dudley did not make that statement directly. The truth is, that the Club makes an annual business statement "for members of the Club," but it is in no sense a secret or confidential statement. It is merely such a business statement as all clubs make to their members annually.

— A note from the conductors of the *Magazin für die Litteratur des In- und Auslandes* assures us that in following the *Academy* in our issue of January 1, we did injustice to the *Magazin*. A writer in the English journal pointed out what seemed to be a piece of gross ignorance, on the part of a reviewer in the *Magazin*, in regard to Laurence Oliphant. This, we are t ld, was a typographical error (*einen Druckfehler*), and further, that the writer in question, who is described in no flattering terms, is ever on the lookout to discover flaws in a journal to which he formerly contributed till cut off for incompetence by the present editor, Mr. Eduard Engel. Dr. Fr. Hirsch, who on April 1 will resume editorial charge of the *Magazin*, has meantime replied to this critic in its columns. The shocking misprinting of English verses in the number for January 10 cannot, we fear, be explained away.

—A pamphlet entitled "A Sketch of the University of Virginia" has recently appeared, from which we learn, with some astonishment, that of the gifts it has received since its establishment in 1819, amounting to $719,700, $653,600 have been contributed since the war—a fact of which the moral does not need to be pointed out. This total of $719,700 is exclusive of the gifts constituting part of the fixed endowment of the University, yielding revenue which amounts to $282,600, all of which, except $2,600, have been also given since the war. Virginia has always been liberal to its University—"the glory of the Commonwealth"—allowing it at first $15,000 a year, and latterly $40,000. Probably nothing could better illustrate the reverence felt for it by the people of the State than the fact that when the Readjusters came into control and secured a majority on the Board of Visitors, not only was no change made by them, though political passion urged it, in the faculty corps, but they filled vacancies occurring therein entirely regardless of political bias. That the University deserves this consideration is made clear by the pamphlet before us. In Mr. Jefferson's day the schools of Virginia were, to use his own words, "paltry academies." He is said to have spoken mournfully on one occasion of the fact that of the students at Princeton one-half were Virginians, obliged to obtain outside of the State even a moderate education. Since the organization of the University, Virginia has become the dispenser of liberal education to the South and West. It has to-day more of its alumni in the Senate of the United States than has any other college in the Union. About 200 of its alumni occupy professorial chairs, while many others are conducting first-class academies.

—Those who are especially interested in the question raised by Mr. Bright as to the condition of the rural population of England under the system of free trade, are likely to find much that is of interest and value in the elaborate articles of Henri Baudrillart, which have been published in the *Revue des Deux Mondes*, on the "Rural Population of France." The number for November 15 was devoted to Brittany, that portion of the country which in point of soil and climate is most like England. The object of Baudrillart is to measure the general progress of the region during the last century, and to point out the

condition of the agricultural holders and laborers at the present time. Perhaps no part of France has resisted with more energy the introduction of labor-saving machinery. The first ploughs of a modern pattern introduced into the region were broken by the peasantry, as were also the first threshing machines, and it is only recently that the peasants have denied themselves the luxury of carrying the products once a year to Paris in their own wagons. So we find the laboring classes here less affected by civilization than almost anywhere else. The allotments of land are very small, the farms ordinarily containing only about twenty acres. The largest farm in one of the departments has only thirty hectares, or seventy-five acres, while there are hundreds of not more than a tenth of that area. The region in the time of Arthur Young was the poorest in France; but under the tillage of this century it has become so productive that the arable lands are worth in the market from $100 to $300 per acre. Such as are tilled by leaseholders bring to the owners a rent of about four per cent. of their estimated value. The writer enters into a careful comparison and analysis for the purpose of showing how far the condition of the peasant has improved during the past hundred years. The improvement, he thinks, has been considerable, but the present condition of the peasants is not far from wretched. The food of farm laborers, he says, may be correctly described as about the following: Soup two or three times a day, a little bacon, black bread (of wheat, rye, or barley), with a little butter, oatmeal porridge, and potatoes. His drink is cider, which he takes to excess, with a little distilled liquor on Sunday. The board of a male farm hand is with some uniformity reckoned at 200 francs a year, that of a woman at 150 francs. The wage of a farm hand is about $40 a year, besides board. Day laborers on the farm command from 75 centimes to 1 franc 50 centimes, without board. Laborers almost invariably sleep in bunks ranged one above another, in a small room in which there is often neither window nor port. Though the population is already very dense, it is increasing with considerable rapidity, every man considering it his first duty to leave children behind him. We have no space to analyze the interesting details given, but economists will find ample opportunity for instructive comparisons between the methods of France here presented and those of England.

—The February number of the *Magazine of Art* is an unusually interesting number, and the illustrations are a considerable advance on anything it has hitherto produced. The frontispiece is a curiously faithful reproduction of a black chalk drawing with a tint of red in the cheeks, a profile of Lady Maria Waldegrave, after John Downman, R. A. The "In School," from a German picture, is, with some slips, an excellent example of good, honest line wood-cutting, a style which Mr. Barnett energetically (and we think one-sidedly, if not unfairly) advocates in a review of Linton's work on wood engraving. The notice of Vedder by A. Mary F. Robinson is an interesting example of the feminine gush which seems to pass for criticism in ill-edited art journals; but Miss Robinson hardly shows enough knowledge of art to have been able to perceive that Vedder is not matter for her capacities. But empty as is her screed, there is nothing worse to be said against it. Jane G. Harrison, on the contrary, in "Pompeii in Black and White," shows what it may be permitted to call relatively a positive ignorance of art—especially in the dogmatic and absurd statements that,

"Illustrations are a modern monstrosity, unknown to Greek art, nay, more, unknown to all good art at all [*sic*]. I would not be misunderstood. For scientific purposes illustrations are necessary. . . . I do not say that a poet and a painter cannot both be inspired by the same thought, the same situation, the same story; but I do say advisedly that they cannot illustrate each other. . . . I have said elsewhere, and need not repeat at length here, that the ancient vase-painters never *illustrated* the poem of Homer. They conceived of and embodied myths they had in common with him, but by separate, independent inspiration. Here, as elsewhere, they felt by instinct the truth we ascertain by analysis."

What the writer of this superlative rubbish knows by analysis is hardly worth cumbering magazines of art with, if this article is an example. The curious statement we quote not only is untrue in its assertions and singularly misrepresents the general ethics of art, but is diametrically opposed to the opinions and practice of the best artists who have ever lived. Michael Angelo, Botticelli—in truth, the whole of the Italian, German, and Dutch religious art, is simply a course of illustrations of the Bible. Miss Harrison must permit the entire body of artists (including the Greek) to judge what they can do lawfully.

—Americans have been thought to be sufficiently forgiving and tender-hearted toward those persons who have been so unfortunate as to be guilty of little peccadilloes that brought them within the reach of the law; but no American city has been quite so considerate as Paris. Nor was it to be expected; for Paris is the centre of civilization, and of course the gradual softening of manners that is characteristic of modern life would have its highest expression there. No languishing in deep, damp dungeons, lighted only by a faint ray from the top, where straw is the only bed and rats the only visitors—in fact, no stone walls, no bars, no locks even. The prisoner chooses his own prison—a sanitarium at Passy, for instance, or Dr. Beni-Barde's hydrotherapeutic establishment at Auteuil. Prince Napoleon chose the latter; so did Mlle. Marie Colombier, when the correctional police found fault with her stupid 'Mémoires de Sarah Barnum.' Certain prison reformers of the last century advocated solitary confinement as the sovereign remedy for crime, and sure to cure the most hardened patients. Perhaps Mlle. Colombier did not want to be reformed; certainly she did not choose to be solitary. She sent word to all her friends where she was to be, and invited them to come and see her. They came in flocks, to the disgust of the concierge. They were admitted to see the "prisoner," as a matter of course, till at last the other patients, provoked at this invasion of their quiet, protested, and compelled the doctor to send away Mlle. Colombier as soon as her term of detention was over, though she would gladly have stayed. If we should introduce some such system of imprisonment as this, it might save many of our bank cashiers the trouble of a journey to Canada at inclement seasons of the year.

—M. Salomon Reinach pays a tribute in the *Revue Critique* to his friend Charles Tissot, of whose 'Géographie comparée de la province romaine d'Afrique' he has just published the first volume and is carrying the second through the press. Tissot was an enthusiast. In the eyes of the world, his work was as Consul at Corunna, at Salonica, at Adrianople, as Secretary of the Embassy at London, and then as Chargé d'Affaires there during the Franco-Prussian war, as Ambassador at Morocco, at Athens, and at London; and all this work he did well, as his constant advancement shows. But in his own eyes, setting aside his duty to his country, this was merely his pot-boiler; his real interest was in his discoveries in the north of Africa. He was an Africo-maniac. From 1853, when he made his first excursion in the Regency of Tunis, till his death, July 2, 1884, fresh from correcting proofs of his first volume, all his spare time was given to explorations in that neighborhood or to study of the ancient authors who have treated of it, and the modern authors who have misunderstood these predecessors. According to M. Reinach, his zeal has been rewarded with success. Without pretending that everything is settled, or that what Tissot has affirmed can always be maintained, he declares that a very great advance has been made in the identification of ancient sites, and many long-established errors uprooted. Unfortunately, not the least interesting part of the projected work—a complete account of the Roman administration of the Proconsulate—remains in the state of detached notes utterly unfit for publication. M. Tissot had given special attention to the ruins of Carthage; M. Reinach has also made excavations there; and "it is pretty to see," as Pepys used to say, how the former despises the work of Dureau de la Malle, of Beulé, and of Nathan Davis, and how the latter tries not to speak disrespectfully of the theories of his friend. The disagreement of doctors is nothing to the divergencies of antiquarians. In the present case M. Reinach has already shown our readers on what secure basis his own identifications rest.

—It would be a work of supererogation to discuss at this late date the significance of Eckermann's 'Conversations with Goethe.' Yet it will not be amiss to call the attention of our readers to the latest edition, edited by Heinrich Düntzer (3 vols., Brockhaus, 1885). Although the sixth, the present edition is probably the first to be put into practical shape. The text, it is true, has been left as Eckermann wrote it. For this we have the guarantee of his son and literary executor, Karl Eckermann (see p. 5 of vol. i). Would that James Boswell's heirs had had like foresight! We should then have escaped Croker's dismal vagaries, bought too dearly even with Carlyle's analysis of Hawkins's entire and Piozzi's ginger-beer, and the other pennyswipes and alegar. But Eckermann, like every other biographer, needs elucidation, and this has been supplied by the veteran Goethe-scholar whose name alone is an assurance of accuracy. Düntzer's introduction, twenty-six pages, treats at length the peculiar relations between Goethe and Eckermann, clearing up many current misconceptions, and placing the biographer in a somewhat novel and more favorable light. The notes (at the end of each volume) explain personal and literary allusions very satisfactorily, so far as we have had occasion to test them. The index to all three volumes has been revised, and is complete with respect to names of persons, but its topic-references are scarcely full enough to justify the subtitle of *Sachregister*. We congratulate ourselves and all other lovers of Goethe upon this re-acquisition of Eckermann.

—Professor Bartoli, the literary historian, while examining in the Laurentian Library at Florence the Ashburnham MSS. lately restored to Italy through the efforts of Senator Villari, came upon a paper codex of the early part of the fifteenth century, containing the Canzoniere of Petrarch, together with various Rime by Dante, Fazio degli Uberti, and others. Turning over its leaves, he was suddenly struck by the canzone, *Spirto gentil*, having these words, written in red, above it: *Mandata a messer Busone da Gubbio essendo senatore di Roma.* The question of the person to whom this famous canzone was addressed has long been a burning one among the historians of Italian letters. The earliest commentators of the poet stated that it was written to a Senator of Rome, giving him no name, but from Vellutello (1525) down to De Sade (1764) writers on Petrarch generally agreed that the person was Cola di Ri-

enzo. De Sade was the first to assign this honor to Stephen Colonna. His theory was warmly supported, in several essays, by Salvatore Betti, and espoused by both Ginguené and Cantù; but the majority of critics—Voltaire, Zefirino Re, Papencordt in his life of Rienzo, Bulwer Lytton in his romance, Reumont, Gregorovius, Fracassetti, and lastly D'Ancona—have adhered to the old hypothesis. The poet Carducci, however, who is the foremost of modern Petrarch commentators, in an argument marked by great erudition and subtlety, opposed the pretensions of both Rienzo and Colonna, and endeavored to prove that the poet had in his mind Stephen Colonna the younger, who, like his father, was Senator of Rome.

—The discovery made by Professor Bartoli makes it not improbable that the canzone was inspired by a man whom no one has hitherto indicated—namely, Busone of Gubbio—of an old Italian family, and, like Petrarch, a poet, a scholar, and an adherent of the Empire. He had been podestà of Arezzo, Petrarch's native town; was subsequently appointed by the Emperor, Lewis the Bavarian, to be his vicar or governor in Pisa, and in October, 1337, was elected Senator of Rome. It was in January of that year that Petrarch paid his first visit to Rome, and witnessed the condition of misery to which the city and the adjacent districts had been reduced by wars and misgovernment. After his departure Busone entered upon his office, and, if the new supposition be correct, his accession gave Petrarch the hope that a better era might now open for the city of his affection. In some respects, this latest candidate for the honor of Petrarch's praise and prayers answers, better than his predecessors, to the slight hints given in the canzone. He was *un cavalier*—which Rienzo was not—and is so styled in the dedication to him of Armannino's "Fiorita"; he was Senator of Rome at the time when the poet, fresh from a sight of Roman woes, was most likely to portray them vividly—which neither of the Colonnas then was. Petrarch, moreover, states that he never saw the person he addresses, which certainly is not true of the Tribune or the Colonnas, while there is not the slightest evidence that he ever met Busone. Professor Bartoli declares that he does not wish to be considered the special champion of the new claimant, but he calls attention to the fact that the testimony of a manuscript of so early a date is not to be hastily set aside, and that Busone—whose name was not so famous as to be still fresh in the minds of men after the lapse of two or three generations—answers perfectly, in his quality of Senator of Rome, to the simple indication given by Antonio da Tempo and Filelfo, the two oldest of Petrarch's commentators.

—Bismarck's seventieth birthday, on April 1st, will no doubt be celebrated with great enthusiasm, and cannot fail to occasion many additions to the already abundant Bismarck literature. Undismayed by the difficulty of saying anything new on a subject that has been so thoroughly exploited, Dr. H. Wiermann publishes a small volume, 'Prince Bismarck, Seventy Years, 1815-1885' (Westermann). It is nothing more than a summary of the great events in which the German Chancellor has acted so conspicuous a part, and rehearses once more the most familiar anecdotes, from the smoking scene in the Federal Council at Frankfort to the interviews with Favre and Thiers. The only new story is, that at a reception in February, 1881, in speaking of a letter of his which had been unjustifiably published, Bismarck said it reminded him of a statesman who, on being informed that one of his letters had been sold for thirty thalers, said that for one thaler he would gladly write thirty such letters. The political vagaries of the most recent years not having been so exhaustively discussed as the other notable episodes of the Prince's career, afford more opportunity for saying something new; but on this subject the author is discreetly reticent. Perhaps he recognizes the great contrast between the brilliant achievements of Bismarck as a diplomatist and the failure of his domestic policy; a contrast which pointedly illustrates Matthew Arnold's remark that the talents of aristocracies are for wielding the force of their country against foreign Powers with energy, firmness, and dignity, but not for the work of making human life natural and rational. If we subscribe to this theory, and remember that by inheritance, training, and innate bent Bismarck is the typical aristocrat, his career ceases to be a puzzle and is seen to be a symmetrical, logical whole. The good he has done will live after him, and the evil will be interred with his bones. An almost comical feature of Dr. Wiermann's book is its rudimentary index, which kindly translates for us such phrases as "advocatus diaboli," "vogue la galère," "rocher de bronze," etc., and gives condensed biographical information concerning Coriolanus, Cromwell, and other distinguished persons.

—Some months ago, in the Berlin *Gegenwart*, the well-known philosopher Eduard von Hartmann called the attention of his countrymen to the alarming diminution of German interest in good books. He thinks that Germany's scientific preëminence is in danger; for although the Empire still produces more books than France and England together, yet there is a steady decline in the demand for solid works, whether in science or belles-lettres. Several causes are assigned for the growing evil: the diminished leisure of the educated class, causing distaste for any reading that requires concentration; increasing absorption in politics, which drives out of mind all other intellectual interests; increasingly frequent changes of residence in the cities, making the possession of a library burdensome; the increased wages of book compositors, with consequent rise in the price of books; the multiplication of cyclopædias and other books of reference, cheap editions of the classics, gift-books, novels of the season, etc., rendering it possible to make a show of being a lover of books and the owner of a library without really doing any reading. The final count in Hartmann's indictment, and the one to which he himself evidently attaches most importance, deserves to be given in his own words:

"The habit of reading journals and newspapers destroys the taste and the capacity for reading connected works, and already the time is drawing near for us Germans when the 'leading article' will be thought too heavy a tax upon the power of concentration, and will be hashed up into a mosaic of *entre-filets*."

—The evils to which Hartmann calls attention are not a new discovery, nor are they confined to Germany. His description applies with depressing precision to this country, and doubtless explains some of the humiliating differences between the German, French or English, and the American book-markets. Every person who has need of the best scholarly literature on any subject will understand at once what we mean. In scientific publishing (using the word "scientific" in the broad sense of the German *wissenschaftlich*) we are simply not "in the race." Our publishers say they cannot afford to handle such books as are printed yearly in large numbers on the other side of the ocean. We have been disposed to believe, and there are certainly indications, that a better day has already dawned upon this country, and that we shall henceforward move, slowly perhaps, but unfalteringly, toward the position occupied by Germany. And now comes Hartmann saying that Germany is moving rapidly toward the position occupied by us. Everything in his article, and not least of all his prophecy of coming catastrophe to the German editorial, points to that conclusion. America rather than France is the true land of the *entre-filet*. One might think that this dark outlook is only a part of the general badness which a pessimist is professionally bound to see everywhere. But the true pessimist has no answer to the question: What are you going to do about it? Hartmann, however, has a remedy, or rather a number of them. He proposes heavy subsidies to city and State libraries, and a law compelling publishers to deliver books to these at bottom trade prices. As a means of dodging the middlemen he suggests a Book-buyers' Association (*Literaturbezugsverein*), or better a Book-distributing Bureau, to be managed as part of the postal service. His chief hope lies, however, in fighting the newspapers. The young must be taught that to read the journals of the day is to "sell their souls." Adults must learn to despise the newspapers, and speak contemptuously of them, or, looking upon the press as a necessary evil, they must favor the little papers and frown on the great ones. Finally, young men must have nothing to do with politics until they are over thirty years old.

JOHN WILSON CROKER.

The Correspondence and Diaries of the Late Right Honorable John Wilson Croker, LL.D., F.R.S., Secretary to the Admiralty from 1809 to 1830. Edited by Louis J. Jennings, author of 'Republican Government in the United States.' Three vols. London: John Murray; New York: Charles Scribner's Sons.

People have long looked forward with considerable expectations to the publication of the Croker Papers, and now that Croker's 'Correspondence and Diaries' are before the world, readers who have anticipated either historical revelations or interesting anecdotes will find themselves bitterly disappointed. Mr. Jennings's book contains no information which may not be obtained from sources which have long been open to every student. His hero, it is true, was the acquaintance or friend of many eminent persons; but Croker had none of the Boswellian faculty for portraying the character and conversation of his associates, and it is also probable that Croker, who was constantly lecturing every one, great or small, with whom he came in contact, and whose own conversation became at last, to judge from his letters, no better than monotonous variations on the well-worn theme of "I told you so," did not contrive to elicit much either of brilliancy or of confidence from the companions who had the misfortune or the advantage of his acquaintance. To "the Duke," indeed, Mr. Croker was compelled to listen, and the few anecdotes of interest to be found throughout Mr. Jennings's three volumes consist of stories about Wellington's career told by Wellington himself. The best remark of the Duke is one of which Croker does not appear to have appreciated the full bearing or humor. The vehement opponent of the Reform Bill wrote to Wellington explaining at length the grounds which made his seeking a seat in the reformed Parliament an impossibility. The reply ran thus: "I have received your letter. I am very sorry that you do not intend to be again elected to serve in Parliament. *I cannot conceive for what reason.*" The words underlined are an inimitable example of the terseness with which the Duke exposed the follies of a friend and admirer. Croker treasured up the letter; he liked to be snubbed by the Duke.

The letter, and the way in which Croker took it, curiously illustrate a side of Croker's character which must be appreciated if we are to do

justice either to Croker himself or to Croker's enemies. Never was a man better hated, and one cause, at least, for the abhorrence which Croker excited in men of genius such as Macaulay, Thackeray, or Disraeli, was his brutal toughness and obtuseness. He was cursed or blessed with the hardest and coarsest nature which ever fell to a man who obtained any eminence in literature. We do not wish to dwell on what Mr. Trevelyan well describes as the "unsavory portions of that gentleman's private life." One would fain believe that the correspondent of Scott, the adviser of Peel, and the friend of Wellington was not the base and unscrupulous sycophant whom Mr. Disraeli has painted under the name of Rigby. But to any one who carefully studies Mr. Jennings's own account of the relations between his hero and Lord Hertford, one thing is clear—no impartial critic can ever, as regards the gravest charge against Croker, give a more favorable verdict than "not proven"; and even this modified form of acquittal can be gained only by an apologist who frankly admits the moral coarseness or want of delicacy which, perhaps, explains conduct that, in any person endowed with the ordinary sense of what is becoming and of good report, would argue the most disgraceful turpitude. We can just believe that Mr. Croker's relation to Lord Hertford was not disgraceful, because we are fully convinced that he had not the capacity to perceive all the discredit which must rest on any man of average respectability who thrust himself into Lord Hertford's service, and took thousands of pounds as a legatee under Lord Hertford's will. There is no one among Croker's assailants who could, without a blush, have appeared, as did Croker, in the witness-box to prosecute Lord Hertford's courier. And it is, we think, more than possible that Disraeli and Macaulay mistook abnormal coarseness of feeling for disgusting baseness of conduct.

The permanent interest of Croker's letters and diaries lies in circumstances independent of the rumors or slanders which still cast a dubious hue over his private character. Croker was a moral and political survival. He died in 1857; he was intimately known to many men still living, and was seen and spoken to by persons who are now not far past middle age, but he remained essentially the man of 1800. Amid a changing world, in the age of Cobden, of Bright, and of Louis Napoleon, he retained unaltered the sentiments natural to a stanch Tory official who remembered Pitt, and who had served under Perceval and Liverpool. He was the incarnation of official Toryism as it flourished during the Great War and the Regency. Some gift or defect of nature made his mind armor-proof against influences which moulded and transformed the policy, if not the character, of Peel, and which told upon the conduct of the Iron Duke himself. In Croker one can see, not indeed the heroism—for of everything heroic he was absolutely devoid—but the strength and the virtues, no less than the weaknesses and the faults, of the Tories who resisted with unequal success the attacks of Napoleonic France and the advance of social and political reform. It is well worth while to take Croker as the representative of a class, and to note his typical excellences and his typical faults, as far as may be, with equal impartiality.

The Toryism of Croker was something much more than a political doctrine. It may almost be described as a political, a social, and a religious faith. To men who remembered the Reign of Terror, and who saw it much in the light in which it is again revealed for the present age by Taine, the Revolution was little else than the outburst of the powers of hell, and Napoleon was the devil who ruled the new pandemonium. Grant, as every rational person now must, that this view of a world-wide movement was partial and distorted; grant, as, even with the pages of Lanfrey before them, most calm judges will concede, that Napoleon, and still more the work of Napoleon, presented a good as well as a bad side, yet the fact remains that the Tories of the Revolutionary and the Napoleonic era did in very truth regard the Revolution as the work of the devil, and had far more cause for so regarding it than a generation who know the "Terror" only as a matter of history are apt to think. The conviction, further—which was ultimately held by Whigs like Lord John Russell and Sydney Smith as firmly as by Tories like Perceval or Liverpool—that French aggression would, unless resisted, be fatal to the national independence of England, and in fact menaced the independence of every state throughout Europe, gave to the Toryism which flourished during the Great War, not only an impress of patriotism, but a good deal of sympathy (in the case, at any rate, of Spain and Germany) with what a later generation called "the cause of nationalities." Under the inspiration of political zeal and patriotic fervor, Croker, and hundreds better or worse than he, did a great work. They manned the ship of state, and carried it through a storm which wrecked vessels as noble and apparently as strong as that which carried the fortunes of England.

The best trait about Croker was his strenuous work at the Admiralty. That he got fair day's wages for the day's labors may well be admitted; but it must also be borne in mind that he threw his whole heart into the task before him, and gave to the country a kind of unremitting toil which cannot be bought for mere money. What is true of Croker was, we may be sure, equally true of hundreds whose names are now forgotten. A party which holds power for nearly half a century is certain, in Anglo-Saxon countries at least, to become corrupted by its own success. But it is not in virtue, but in spite, of vileness and corruption that a great party controls for more than a generation the destinies of a great state. It were curious to trace the mode in which "character," which has always told for more in England than talent, has passed at different times from one party to another. For our present purpose it is enough to note that between 1784 and 1820 the Tories possessed a repute for moral worth which did not belong to their opponents. There were hundreds of Tories whose public and private character did not deserve any special respect; there were scores of men among the Whigs who represented the highest moral feeling of their age. But no candid reader of history can deny that during the earlier part of the century the Tories were, on the whole, the moral and religious party. Most good men were Tories, and this fact gave currency to the utterly erroneous notion that all Tories were good men, and that persons who were not Tories were bad men. This was the undoubted creed of Croker and of far better men than Croker, such as Walter Scott. And one cannot doubt that the identification of political prejudices or principles with the cause of morality did lend to the Tory party an amount of force and of earnestness which both caused, and, within certain limits, justified, the success and triumph of Toryism.

With parties, however, as with men, their strength is also their weakness. Toryism displayed the bigotry, narrowness, and blindness no less than the fervor of a religious creed. The tacit assumption that a Tory was a good man, accounts for the tolerance or favor with which Scott and Peel regarded Croker. That any one endowed with Scott's nobility of nature could have failed to be shocked by the mean side of Croker's character, and the odiousness of what one may call Crokerism, is inexplicable, unless one allows for the fact that Croker was, in Scott's eyes, a soldier fighting manfully for the cause of virtue; and according to a Tory standard, Croker was, it must be admitted, the stanchest of fighters. He never missed giving a blow, fair or unfair, at a Whig; he never, like Lyndhurst, dallied, to say the least, with Liberalism; he never, like Canning, was carried away from his Tory standing-point by rhetorical enthusiasm for freedom; he never, like Peel, was shaken by the force of argument; he never, like Wellington, acknowledged the necessity of yielding to the logic of facts. He was one of those blind leaders of the blind who step out with all the boldness of a guide gifted with the clearest foresight, who, when kept by wiser heads from irreparable disaster, turn round and swear at the friends by whom they are saved, and who, when they and their followers fall into a ditch, lay the blame of their mishap on everything except their own blindness. Croker, who never failed to mistake the patent signs of the time, asseverated with such good faith the dogma of his own infallibility that he persuaded a generation of Tories to believe that he never was wrong. Yet every fact showed him to be gifted with neither insight nor foresight. He knew Peel with intimacy for years; he had watched him closely and had studied every turn of Sir Robert's sinuous, not to say tortuous career. He would, one would have thought, have soon perceived that the essential difference between his own and Peel's views of statesmanship must at last lead Peel away from the path of rigid Toryism. Yet Croker, at a time when every Liberal perceived that Peel was tending, and rapidly tending, toward free trade, made himself the political surety for the Prime Minister's steadfast adherence to protection. Let us grant, as we are afraid must be granted, that Croker was the dupe of his hero, and concede that Sir Robert set an example of political casuistry which has done so much harm to the public life of England as to constitute an immense set-off to the services which he rendered to the country. But when every concession is made, Croker's tremendous blunder can be explained only by the fact that Croker was, as a judge of character, the dullest of men.

But persons who cannot discern traits of individual genius, may occasionally be good judges as to the general course of politics. Such, to take a notorious instance, was Burke. We doubt whether he ever estimated a friend or a foe with fairness; but as regards events, he was endowed with a gift which amounted to prophetic foresight. Not so Croker. His reputation for statesmanship was staked on his judgment of the Reform Bill. By that test his credit must stand or fall. Now, it is a simple matter of history that at every stage of the reform movement Croker's judgment was at fault. He maintained in 1831 that there was no genuine demand for reform, and that the cry was created by the intrigues of the Whigs. We now know, by every kind of evidence by which an historical fact can be proved, that the popular feeling in favor of reform was so strong that lengthened resistance would have produced revolution. Reform would, he was convinced, be itself the immediate precursor of revolutionary change.

"If it be carried," he writes (5th April, 1831), "England no doubt may be still great and happy, but it would be under a *different* form of constitution and administration from that which has raised her to her present greatness and happiness: no king, no lords, no inequalities in the social system: all will be levelled to the plane of the petty shopkeepers and small farmers; this perhaps not without bloodshed, but certainly by confiscations and persecutions. 'Tis inevitable, and this is to be perpetrated by a set of men, like Lambton and Johnny Russell, whom a club in Regent Street would not trust with the management of their concerns."

More than half a century has given the lie to

Mr. Croker's predictions. To conceal this fact by saying, with Mr. Jennings, that Croker "exaggerated the immediate effect which the bill would produce," is simply to mislead students. Croker and Croker's friends did not assert that there was a gradual tendency in the course of events to produce democratic institutions, but confidently asserted a totally different thing—namely, that reform was the harbinger of immediate revolution. On the truth of this prediction the wisdom of the Tory guide and his followers depends. The prediction has been absolutely falsified by events. The only honest course to pursue is to grant that Croker and those who believed in Croker totally mistook the signs of the time. Croker himself avoided all necessity for admitting that he was in the wrong, by a very singular course of action. The reformed Parliament was, according to his predictions, to turn out an assembly of Jacobins and levellers, in which a good man like Croker could find no room. Events did not verify his prophecies, but Croker acted as if his forebodings had turned out true. He withdrew from the House, which, if good enough for Peel and Wellington, was no fit place for the prophet of Toryism. The reign of revolutionists was to commence, and since the era of lawless violence in fact never dawned, Croker consoled his self-love by detecting Jacobinism at least as late as 1852 in some proposal made by that most respectable of country squires, the late Mr. Henley. His political career ended, in truth, with the passing of the Reform Bill, and from that time he employed his critical energy in spheres for which it was far less well suited than for the rough-and-ready, not to say brutal, party contests which marked the reign of George IV. and his successor.

Mr. Croker as a literary critic is only less out of place than Mr. Croker as a writer on matters which concern the Church and, to a certain extent, religion itself. One can in a measure pardon the political pugilist for taking a part in ecclesiastical controversy when one finds that Samuel Wilberforce (who, by the way, found old Lord Lyndhurst an agreeable and impressive supporter of orthodoxy) used to correspond with Croker on Tractarianism, on Newman's sermons, on the Hampden controversy. No doubt the Bishop addressed himself rather to the editor or guide of the *Quarterly Review* than to the hardened political controversialist. Still, the friendly communication between the two men on matters of religion is not a very pleasant trait in the character either of Wilberforce or of his correspondent. Here, however, we touch upon one of the points on which Croker was, as on so many others, the representative of his party. The Tories to whom he belonged were, as part of their political creed, guardians and protectors of the Church. They stood toward the Church of England much as French Conservatives now stand toward Roman Catholicism; they looked upon religion (when it assumed a respectable form) as an ally of the State, and treated the cause of the Church as part of the general cause of social order. To suppose that men like Croker professed to be religious men in the sense in which the term might be applied to Newman, or Maurice, or Arnold, or Zachary Macaulay, would be to impute to Croker and his associates a kind of hypocrisy of which he was entirely guiltless. But unfortunately Croker, who admired George the Fourth, and who served Lord Hertford, was, like other men of his type, the official defender, so to speak, of religion and of the Establishment. This was, take it all in all, the worst side of the Toryism which flourished during the Regency. It was this official connection with religion which roused the moral indignation of men who themselves made no pretension to fervent religious convictions, but who hated cant. "I might add," says Macaulay with reference to Croker, "a hundred other charges. These are things done by a Privy Councillor, by a man who has a pension from the country of £2,000 a year, by a man who affects to be a champion of order and religion." When we weigh the full meaning of this language we can well understand why, in 1830, all that was youthful and generous in the spirit of England condemned ruthlessly the whole régime of which Croker was the representative.

AN ARCHÆOLOGIST IN MEXICO.

Report of an Archæological Tour in Mexico in 1881. [No. II. of the American Series of the Papers of the Archæological Institute of America.] By A. F. Bandelier. Boston: Cupples, Upham & Co. 1884. 8vo, pp. 326, with maps and illustrations.

In the present volume Mr. Bandelier has given us the results of a trip which he made to Mexico in 1881, under the auspices of the Archæological Institute of America. His stay was but short, lasting only a few months, and was chiefly passed at Cholula, where he devoted himself to a study of its antiquities and of the manners and customs of the Indians who still live in that neighborhood. He seems, also, to have found time for a brief visit to Mitla and the other ruined pueblos in that vicinity, which are described at some length; and under the heading of "Notes about the City of Mexico," he gives an account of several of the idols and other carved stones which have been discovered in that city, and which have, we trust, found a permanent resting-place in the National Museum of the country.

Although his visit was made in the interests of archæology, Mr. Bandelier did not go, as do so many of our "practical" explorers, spade in hand on a wild hunt after curiosities, but rather as a trained and careful observer, whose object it was to see these remains precisely as they are, and to interpret, as far as may be, the story which they have to tell. Accordingly, he has produced a work which, while it does not startle us with accounts of the discoveries of artistic treasures, does contain a very satisfactory description of the present condition of these ruins, with pertinent suggestions as to their origin and use, based upon a thorough knowledge of the mode of life and of the artistic and industrial development of the tribes that dwelt in Mexico at the time of the Conquest. In adopting this method of investigation, Mr. Bandelier is but following the plan which he found so effective in other fields, and which, we are satisfied, is the only one that promises certain and durable results. Obviously we can never know whether a piece of work, be it a so-called palace, a statue, or a simple earthen pot, was executed by the ancient Mexicans, unless we first know whether they had arrived at that stage of progress in which it was possible for them to build houses, carve statues, or manufacture pottery; and this knowledge, we may observe, is only to be attained by a careful study of trustworthy records; or, possibly, in a few instances in which aboriginal customs and industries have survived the contact with a higher civilization, it may be gained by an investigation into the condition of the tribes themselves. Be this as it may, there can be no doubt that it is essential to the formation of a correct opinion, as it not only acts as a check upon wild theories and speculations, but furnishes us with a basis of known facts from which, by a safe logical process, we may hope to reach the unknown.

This is the method of the school of which Mr. Bandelier is an acknowledged leader, and, applying it to these remains, it has led him to the conclusion that they do not indicate a higher civilization than that which the natives of Mexico, at the time of the Conquest, are known to have reached. Thus, for instance, in regard to sculptures like the statue of Huitzilopochtli and the Stone of the Sun, formerly known as the Calendar Stone, which our author thinks may have been the one described by Duran as that on which prisoners were made to fight, we are told that while the art displayed was "considerably above that of the Northern Village-Indians, it is still not superior to the remarkable carvings on ivory and wood of the tribes of the Northwest Coast, and often bears a marked resemblance to them." So, too, in reference to the large buildings in the valley of Tlacolula. Instead of the ruined palaces of which we have heard so often, our author sees nothing but the remains of communal houses in which the sexes found shelter in different apartments; and he tells us that life in these communities "differed from the communal life of the Indians in other regions only by the exigencies of another climate and of varying natural resources." As to the pyramid, or, as he prefers to call it, the mound of Cholula, he thinks that it may have been the site of a fortified pueblo, its topmost point a centre of worship, and the "plateaux and aprons around it covered with houses, possibly of large size, like those of Uxmal and Palenqué, or on a scale intermediate between them and the communal dwellings of Pecos and many other places in New Mexico." This is certainly a pregnant suggestion, and in the picture which it presents of the pueblo as restored, we are forcibly reminded of the account given by La Vega of the origin and use of the truncated mounds of our own Gulf States. Exactly who were the builders of this immense work is unknown, and our author wisely declines to speculate on the subject. He is very positive, however, that it could not have been the Nahuatl tribes found here by Cortes, though there is no reason why they may not have destroyed it, for "destroyed" it seems to have been. At least this is the testimony of tradition, and it is borne out by the fact that, when the Spaniards first arrived, it was already deserted save and except the summit; and this was occupied not by the shrine of Quetzalcoatl, the tutelar god of Cholula, but by the "medicine lodge" of Nine Rains, an inferior deity, whose cult "was practised in sight of the volcanoes from which Quetzalcoatl," who presided over the winds, "was supposed to carry the beneficial moisture over the parched and arid plain."

Thus far we have confined ourselves to the archæological results of this tour, though it is not in this part of the work that our author is seen to the best advantage. His forte, if we may be allowed the suggestion, is in ethnology, and those of us who are familiar with his former publications will find much in the present volume to remind us of the method of critical research of which he has elsewhere made such effective use. Especially is this true of that part of the "Reconnoissance into Mexico" and of so much of the "Studies about Cholula" as refer to the present condition of the native tribes. Of them he has evidently made a very close study; and after eliminating, as far as practicable, everything that savors of European influence, he finds a phase of civilization that harmonizes well with the pictures which the early authors have left us of the ancient Mexicans. Nor does he stop here, for, though he does not expressly say so, yet, to any one who will read between the lines, it is very evident that he does not intend to limit the assertion as to this uniformity of development to the early Mexican tribes when compared one with another, but that he is quite ready to admit it as between them and the Indians east of the Mississippi, especially those belonging to the Iroquois confederacy. Differences may and must have existed between them in some of their cus-

toms, their industries, and perhaps in their mode of worship or their social organization; but these are not probably any greater than can be found to-day in different sections of our own country, and hence they are not believed to indicate the existence of different phases of civilization. This is but one of the inferences that may be drawn from Mr. Bandelier's premises, and, however opposed it may be to the usually received opinion, it is believed to be as true in fact as it is simple and satisfactory in theory.

There are many other matters in these suggestive pages to which we would gladly call attention did time and space permit. As it is, we can only refer approvingly to the statement that "the aboriginal population of Mexico has increased within the past three hundred and sixty years," the Spanish Conquest having resulted in a displacement rather than in a diminution of their numbers. We may also add that there is abundant food for thought in the assertion that "as soon as the commotion of the Conquest was over, the men of the 'sword and gown' were gradually supplanted by tillers of the soil and by mechanics," who, we are told, "rapidly prospered." This will be news to many of our readers, though we do not see how it can be doubted in the face of facts and figures. The truth is, that we have never gone into this matter very critically, for the reason that, whenever it was necessary to approach the subject, we have been so busy covering up our own sins by abusing what a recent writer calls "the diabolical atrocities" of the Spaniards, as to leave but little time for anything else. Horrible enough these undoubtedly were, though it is probable that in many instances the accounts are too highly colored. But even if they are not, and the statements as to the destruction wrought by the Spaniards are literally true, it would ill become us to single them out for condemnation, since there is not an "atrocity" attributed to them, from the deliberate murder of prisoners down to the deportation and enslavement of captives, that does not find a parallel in the first hundred years of our own history. Human nature in the sixteenth and seventeenth centuries was probably much the same everywhere just as it is to-day; and it would be as reasonable to expect to gather grapes of thorns and figs of thistles as it would to find that the Spanish conquerors, or the English colonists, had been actuated by a spirit of justice and humanity in their treatment of the Indians.

A Greek Grammar for Schools and Colleges. By James Hadley, late Professor in Yale College. Revised, and in part rewritten, by Frederic De Forest Allen, Professor in Harvard College. D. Appleton & Co. 1884.

A PROFESSOR of physiology, not long ago, seeking advice about the purchase of a Greek lexicon for his son, told his friend that he had always supposed the Greek language to be a thing as fixed and settled as anything could be in this world, but that it now appeared the changes and advances in Greek studies were almost as great and constant as in modern physiology. The comparison suggested is not without point. It may, we suppose, be assumed that the physical constitution of man has undergone no changes of moment since the scientific study of physiology began. But advances have been made in that study, and further advances are to be expected. Even so with Greek studies. Probably a good many classical teachers would wish to see truth in the saying of another professor—one of the shining lights of one of our great centres of enlightenment: "With Greek it is different; you either know it, or you don't know it; and if you know it, that is all there is to it." But, for the plaguing of their indolence, there are always some men who will study; and even the most modest schoolmaster is called upon from time to time to accept a revision of the familiar statements.

Hadley's 'Greek Grammar' has been well known and widely used for almost a quarter of a century; and, in spite of all that has come and gone, the appearance of such a book in a new edition better adapted to present needs is an event of some importance to a great many people. Scholars should be grateful to Professor Allen for the care and tact and wise moderation with which he has used the results of the eager and fruitful studies of the last decades. The traces of learned reconsideration appear throughout the book, and the changes are very numerous and important, but there is no sign of a hankering for mere novelty. In his preface Professor Allen says, with reference to the explanations of the origins of inflectional forms:

"I hope no one will suppose that this book professes to embody the latest results of comparative grammar. These results are at present partly in a very chaotic condition, partly very ill suited to be set before a learner. Much that in Professor Hadley's time was thought certain has been entirely upset or become very doubtful, and in many cases nothing positive has taken its place. All that can be demanded of a school-grammar in this respect is that its classifications and analyses shall not be at variance with *well-established* facts of genesis. I have occasionally gone a trifle further than Professor Hadley in these historical statements; but oftener, I think, have retrenched or modified explanations which he gave, and have been entirely content to leave much unexplained."

This might almost seem to an impatient critic to be the language of an extreme conservatism. But the true interpretation is, that the only purpose to which scientific grammar is to be applied in this book is the practical purpose of helping learners to a practical command of the language. This purpose G. Curtius, in his efforts for reform in the teaching of Greek grammar, kept steadily and chiefly in view. A schoolboy has a right to the simplest and most rational statements possible in the existing state of knowledge; he has also the right to be left undisturbed by discussions which, however important in themselves, can only burden and delay him while striving for his immediate goal. On this point the fair-minded critic must be disarmed when he examines such statements as those of pp. 8-9 upon "Strong and Weak Root-Vowels" (λείπω, λέλοιπα, ἔλιπον), a fine specimen of judicious innovation.

More important, and perhaps a trifle more venturesome, is the experiment of presenting to schoolboys the present-stems of verbs in such forms as λεγ°|ε. We are glad to see this experiment tried. It is tried here with skill, and we can think of no reason for doubting its entire success. In the classification of verbs the changes are considerable. Seven classes are given in place of the old nine. We should hesitate about adopting the sharp distinction made between the "variable-vowel" class and the "strong-vowel" class. Surely there is no fundamental difference of formation between λέγω and λείπω; both have the "variable vowel," and both have the "strong vowel." We should hesitate also to classify the reduplicated verbs, of which the "weak vowel" is characteristic, with λέγω and its kind. By the way, the note about the reduplicated verbs is rather misleading: "In γίγνομαι and ἵσχω the present has the reduplication." But this is made right in the catalogue of verbs (p. 157), so that the danger of mistake is perhaps slight. The doubts we express here, however, are intended rather to indicate the difficulty of the subject than by way of finding fault with Professor Allen's handling of it. In the paradigms a good example of regard for genuine Attic words and forms has been set. Here so much has been done that we almost fear some few teachers may lament the loss of old familiar errors. But it was high time they should be discarded, and it is hardly likely that any scholar competent to judge will think Professor Allen has gone too far. We could have wished to see the form βασιλῆς, which is shoved aside into a note, treated with more respect, but that is a trifle.

Touching the statements of syntax, it would, of course, be possible to make endless suggestions; but as no teacher can teach much syntax unless he knows some himself independently of his class-book, a reviewer can hardly do anything more profitable than to call attention to the general merit of the presentation as a whole. Still, at the risk of seeming to propose mere subjective views of a possible further perfection, we shall offer a few notes. In the treatment of case relations we could wish more distinct adherence to some probable theory of the origins of usage, even though the theory were still open to debate, as any theory of this most difficult subject must be. We are sure that a practical gain could be made in this way. We should like to see a sharper sundering of the instrumental and locative from the true dative constructions, and a clear recognition of the fact that the true dative is, in Greek, a *personal* case. And we should like to see a similar thing done for the genitive. Why should it not be a help to a boy who knows Latin to be taught to regard the genitive of comparison as an *ablative* genitive? By the way, it is at least a doubtful (and hardly helpful) theory which treats κάλλιστος τῶν ἄλλων as an inexact expression, or which recognizes a partitive genitive in μόνος τῶν ἄλλων. In the syntax of the verb, ample use has been made of Professor Goodwin's well-known statements, and this is a decided gain. It would have been well, we think, to give more heed to certain papers by Professor Gildersleeve published in the Transactions of the Philological Association and in the *American Journal of Philology*. For example, the treatment of conditions expressed by εἰ with the future indicative and the treatment of πρίν might, after a careful weighing of those papers, have been made less curt and perhaps somewhat more exact. Among the examples of usage quoted there are, of course, not many of a kind directly calculated to provoke dissent. Now and then it might be a good joke upon puzzled schoolmasters if the book could be sent out with this or that statement unaltered and a perfectly legitimate substitute for the example. Perhaps a few cases may occur where the weary teacher, pinning all his faith upon his book, might find it hard to escape from a quick-witted tormentor quoting the example given. Thus, in section 900, where "the supposition relates to the future, but no expectation of its being realized is implied," one of the examples (and a perfectly typical example of the construction under discussion) is this: εἴ τις κεκτημένος εἴη πλοῦτον, χρῷτο δὲ αὐτῷ μή, ἆρ' ἂν εὐδαιμονοῖ. Why should not a boy say that when anybody conceives a case of that kind he not only has an expectation, but an absolute certainty in his mind—that the conception has been realized in the past, and is realized in the present, and will be realized in the future? Shall the teacher take refuge in the saving words "is implied"? He may manage to do so if he knows how, but there is danger the boy may learn to think the whole business a little uncanny. In our judgment, the statement that "no expectation is implied" in sentences of this kind is at least no better warranted than it would be to say that no futurity is implied. It would be worth the while of some investigator of syntax to count the cases in which a simple present or past condition or a "general" condition could be substituted for the form under discussion without serious disturbance of sense. To complete his experiment, he should try to see how often he could make the same substitution,

with the same degree of harmlessness, in conditional sentences having the future indicative in apodosis. Possibly he might then reach the conclusion that the difference between the two forms in respect to futurity is even more decidedly characteristic than that in respect to "expectation." In the example quoted, the conception seems to us to have presented itself to the speaker's mind without definite reference to any one of the spheres of time. But, as we have already hinted, dissent in occasional details is not a damaging form of criticism upon such a performance. It would serve no purpose to enumerate felicities of the revision in this part of the work; a single specimen is the remark (sec. 683, b) that "the real office of the reflexives is to emphasize the *identity of the person* with some one named in the sentence."

The chapter upon versification has been both extended and simplified. In its present form it is all that so brief a treatment of so large a subject can be. Another gain is the doubling of the matter given in the chapter on word-formation. It is greatly to be wished that all teachers might be brought to see how much time may be saved by giving a good deal of time to this subject. We think the book as it has left Professor Allen's hands richly deserves to retain all its old friends and to win new ones.

On Tuscan Hills and Venetian Waters. By Linda Villari. Illustrated by Mrs. Arthur Lemon. London: T. Fisher Unwin.

THE charm of Italian life is as inexhaustible as inexplicable, and they who have enjoyed it for years are those who find its magic most irresistible and its ramifications most complex. Is it in the sun and the sky; the olive orchards and stone-pines, with their dreamy rest and their quaint majesty: the impress—the all-pervading impress—of human thought and sentiment on the hills and valleys; the serenity of a civilization which has no disquiet for further progress—or is it all these together and heightened by associations of a golden antiquity, that so enchant the foreigner who has once come under the charm? They who fly from Venice to Palermo, see all that Murray and Baedeker prescribe, and even as much more as ingenious and enterprising Yankeedom can discover with all its prying, still know little of Italy—less than one who will become domiciled in thought and habit in a single province. All the world knows the history of Rawdon Brown, who went to Venice in search of the tomb of an historical personage, and found there his own, unwilling, like many others, again to throw off the enchantment (Circean only in its force) which bound him there. And if Venice, with its drawbacks of fogs and east wind, the nauseous odors of its canals and their monotony, is so entrancing, how much more Florence, with its blue crown of hills and its infinite valley recesses, and the unbroken shell in which the Renaissance grew and died, still standing in its delusive perfection. Could human progress so far penetrate the Tuscan hills as to make the municipalities understand sanitation, and chase away the malaria which broods in the drainage and cesspools of the cities, Tuscany would become the sanitarium and paradise of the intellectual life.

No wonder that when one lives in the city of Dante and Boccaccio one takes to bookmaking, or, as the common saying is there, that every foreigner who comes takes to painting or to literature! Every hill and villa and stone-pine has a story, and every opening in the surrounding hills leads to fields of pictures with the accessories all ready. And for an English woman like Signora Villari, sharer of the labors of her illustrious husband, not to make books would be inexplicable. The service we outsiders must demand—that of expert exploration of what, among all the attractions of the country, has not yet become hackneyed and guide-book matter—is what she renders us in 'Tuscan Hills.' Her description of Barga is the history of a nook in the Apennines whose existence is a summary of the history of Italy in the middle ages, and her sojourn in the Abetone (a resort scarcely known yet to foreigners) will be found of positive utility to those who like Italian life, and find the summers of the peninsula unbearable from the heat and foul smells of the cities. An example taken almost at random will show the perceptive and descriptive powers given to her work by Signora Villari:

"Then there is a delightful bullock track winding through the recesses of the forest to the lower crags of the Libro Aperto—the double peak on which winter snows rest in the semblance of the page of a half-opened book. From this track one can branch off into hidden glades, where the secret of the woods is revealed to the solitary wanderer. The incommunicable trees begin to persuade us to live with them and quit our life of solemn trifles. Looking out from the dense shade of the firs, the strong summer sunlight transforms the clusters on the crest of steep banks into screens of gleaming emeralds. On all sides is a fascinating dance of light and shade—now of pure white sunshine, and then, toward evening, showers of gold fall on the lichened trunks. The air is full of bird voices, and their songs are accompanied by the buzz of innumerable unseen insects. But there come moments of utter stillness, when all nature seems hushed to sleep; then suddenly the spell is broken—birds and insects awake; there are mysterious cracklings and rustlings all about you; the woodpeckers tap more noisily than before; a brown or black squirrel darts up a tree close beside you and frisks from branch to branch; a family of tomtits flutters down in short playful flights, and you fancy the mother bird is peeping from the nest overhead to superintend the children's sports. Suddenly, at touch of wind or wing, a shower of fir needles rains down, and the timid tomtits disappear."

With Venice Signora Villari is less familiar, though still an habituée, and some of her driftings about the lagoons will have novelty to most visitors to the city. But why should she adopt the unfounded attribution by Ruskin of the juvenile pictures of St. Albise to Carpaccio? She had better authority to consult on that matter than Ruskin, and ought to know that in the opinion of the best judges of Italian art in Italy (among others C. F. Murray, *facile princeps* of them) the so-called Carpaccios are simply blundering imitations by a later painter. What, however, is refreshing throughout the book is that, unlike most of the *litterati* of the Florentine school, the author does not pretend to be an art oracle, and launch out into disquisition in what is generally regarded by them as no-man's-land, and like a blank sheet of paper fit for anybody's scrawling—the philosophy of art and the merits of the Renaissance. If now and then she is led, in the way of writers of padding articles, to diffuseness and inflated diction, she at least never talks of what she knows nothing about.

The Life of Abraham Lincoln. By Isaac N. Arnold. Chicago: Jansen, McClurg & Company. 1885.

MR. ARNOLD was an almost life-long friend of Lincoln in his own home; and when the war came, he went to Congress, and while there saw the President with the frequency and intimacy natural to old acquaintances. He desired to write down his impressions of the great man he had known so well, and in this large volume he has done so. Unfortunately, he was not content to confine himself to the facts of his own knowledge, out of which he might perhaps have made a personal biography of Lincoln, or have contributed something to it; his imagination was impressed by the great work Lincoln did, and the way of his doing it, rather than by the personal qualities that made up the strong, patient, and temperate character of his hero. Consequently, his 'Life of Abraham Lincoln' is a history of the public affairs in which Lincoln bore a hand in his early career, and of the great events both civil and military of the Rebellion: it is a history of Lincoln's political life almost exclusively.

Biography which rests on the theory that a man is what he does has long been out of fashion, and any one used to modern methods will recognize at once the incompleteness of Mr. Arnold's presentation of Lincoln. In a general and rather discursive manner he writes a history of events, with little regard to the doubtfulness of details, and thus traverses ground already gleaned to the last straw of the stubble. Hence the contents of this book for the most part merely duplicate what may be read in hundreds of others. The portion which deals with Lincoln's personality is, on the other hand, very small, and the new material meagre—hardly more, in fact, than Mr. Arnold's own impression of his friend. One would have expected, not perhaps new anecdote, but some account of how Lincoln's character expressed itself in private life, in the little matters of his own domestic or friendly or business circles, in which the quality of his nature must have shown itself as frequently as in the large sphere of his national relations; but of such fresh knowledge there is nothing exact and definite. Upon this friend, it would seem, Lincoln made the same impression as upon many others—that is, an essentially public impression, as of a resolute, faithful, God-trusting patriot, a statesman wise through the temper of his mind, a man born for his deed. But as a man apart from his task, he made, so far as this book shows, no distinctive impression at all. The volume is consequently disappointing; it fails through being too ambitious. It is, too, a provincial book; it sets Lincoln not by himself, but merely as one of a group of extraordinary men—the head of it, truly, but still not dissociated from it. There is thus a certain lack of perspective. Lincoln himself seems lessened by the fact that Mr. Arnold takes so many members of the Illinois bar into the same horizon. They were strong men, but their strength was of a different kind; it led to eminence, forensic or intellectual or political, but eminence is a position far below greatness, and Lincoln, though he included their might in his powers, was lifted to his place in both the memory and the imagination of mankind by other qualities than they were noted for. To put it briefly, Mr. Arnold sees in Lincoln too much the Illinois man, and recognizes scarcely at all his national character as "the first American." It is a great pity, or else a great good fortune, that no fine observer with power of moral interpretation seems to have known Lincoln. Mr. Arnold's book does nothing to supply the want. Lincoln was "one of Plutarch's men," we know, but, must we, too, wait for a Roman decadence before our Plutarch shall be born?

Old St. Augustine: A Story of Three Centuries. By Charles B. Reynolds. St. Augustine: E. H. Reynolds.

IT is hardly necessary to have seen the quaint old town of which Mr. Reynolds writes, to feel interested in his narrative of its "changing fortunes"—"unstable as the shifting sands of its harbor bar." He tells us graphically of its founding in 1565 by the Spanish bigot Menendez, who enforced his claims to Florida by that terrible slaughter of French Huguenots which gave name to Matanzas inlet. Many were the vicissitudes of massacre, sack, conflagration, and siege, to which different foes, the Frenchman, the Englishman, the Indian, the Boucanier (Buccaneer), subjected St. Augustine before it was ceded to Eng-

land in 1763. During our Revolutionary War it was loyal to the British crown, but the enterprising Englishmen who had infused new vigor into it received a poor reward for their loyalty, when its retrocession to Spain in 1783 compelled them to seek other homes. From that date St. Augustine remained in Spanish hands until Florida passed into the possession of the United States in 1821. All these changes are exhibited by our author in a series of well-selected historic pictures, on which he has succeeded in throwing a strong light. Various characters of greater or less note enliven his pages, from Admiral Sir Francis Drake to Coacoochee and Osceola, heroes of the Seminole war. The story of Fort Marion—of the first building of San Juan de Pinos, of its destruction, its rebuilding, its resistance as San Marco to obstinate siege, its rechristening as Fort Marion—is an interesting one.

The book is graced by various illustrations, some being copies of drawings made three centuries ago, and the remainder mostly artotypes of old buildings, the Cathedral, City Gate, Fort Marion, etc. A list of dates and a full index add to the value of the little volume.

BOOKS OF THE WEEK.

Ancient and Modern History. [Catholic School Book.] Wm. H. Sadlier.

Blind, Mathilde. Tarantella. A Romance. Boston: Roberts Brothers. $1.50.

Clingman, T. L. The Tobacco Remedy. O. Judd Co. 25 cents.

Ewing, Juliana H. Daddy Darwin's Dovecot. Illustrated. Boston: Roberts Brothers. 35 cents.

Flatland. A Romance of Many Dimensions. By A. Square. Illustrated. Boston: Roberts Brothers. 75 cents.

Gardner, Dorsey. A Condensed Dictionary of the English Language. Chiefly Derived from Webster's Unabridged. Supervised by Dr. Porter, President of Yale College. 1,500 Illustrations. Ivison, Blakeman, Taylor & Co.

Gosse, E. The Works of Thomas Gray, in Prose and Verse. In 4 volumes. A. C. Armstrong & Co. $6.

Holcombe, W. H. Letters on Spiritual Subjects, in Answer to Inquiring Souls. Philadelphia: Porter & Coates. $1.

Jones, B. W. The Peanut Plant; Its Cultivation and Uses. Illustrated. O. Judd Co. 50 cents.

Miller, Mrs. F. Fenwick. Harriet Martineau. [Famous Women Series.] Boston: Roberts Brothers.

Sanders, Dr. D. Ergänzungs-Wörterbuch der deutschen Sprache. Berlin: Abenheim.

GOODHOLME'S DOMESTIC CYCLOpædia for Housekeepers. $2.50.
HENRY HOLT & CO., New York.

The Civil Service
IN
THE UNITED STATES.

[*From the Reports of 1884.*]

Containing a Catalogue of all non-Elective Positions, with the Compensation of each, and full information in regard to the Open Competitive Examinations under the act of 1883; also, a Description of the Civil Service of the States of New York and Massachusetts, and their Municipalities, under recent laws. By John M. Comstock, Chairman of the U. S. Board of Examiners for the Customs Service in New York City. 12mo, $2.

HENRY HOLT & CO.,
NEW YORK.

Ready in February:

The Religion
OF
PHILOSOPHY
OR,
The Unification of Knowledge.
A COMPARISON
of the Chief Philosophical and Religious Systems of the World. Made with a view to reducing the categories of thought, or the most general terms of existence, to a single principle, thereby establishing a true conception of God.

By
RAYMOND S. PERRIN.
Octavo, cloth, $4.

The Author says in his preface that "The problems of ethics are completely beyond the mind that harbors the belief in a special providence or a design in nature." "These enthronements of personal existence distort all the higher logical perspectives, and a morality that depends upon such an understanding of life cannot be a true inspiration."

G. P. Putnam's Sons,
27 and 29 W. 23d St., New York.

Wadsworth, Howland & Co.,
IMPORTERS AND DEALERS IN
ARTISTS' MATERIALS
And Architects' and Engineers' Supplies of every Description.
84 WASHINGTON STREET, BOSTON.
☞ Catalogues free on application.

COMPLETE SETS OF "THE RIVERside" and "Our Young Folks"—these were the predecessors of "St. Nicholas" and strictly form a part of a set of that publication. For sale by A. S. CLARK, 34 Park Row, New York City.

Latest and Best Physiology for the Young.

Our Bodies
or How We Live. An Elementary Text-Book of Physiology and Hygiene for Use in the Common Schools, with special reference to the effects of Stimulants and Narcotics on the Human System. By Albert F. Blaisdell, M.D.

A brief, suggestive, and interesting text-book. Entirely new; written in a crisp and pointed style, from the standpoint of health and simple experiments. A chapter of plain and homely hints on every-day matters of health. An entire chapter devoted to a systematic series of practical experiments, with full explanations, hints, and helps. Questions on the text; supplementary notes; review topics; blackboard exercises and diagrams; glossary; index; numerous illustrations.

285 pages, well printed, fully illustrated, and handsomely bound in cloth. Price 60 cents.

☞ A copy will be sent, postpaid, for examination upon receipt of price.

LEE & SHEPARD, Publishers,
No. 10 Milk St., Boston.

G. P. Putnam's Sons,
27 and 29 West 23d Street, New York,
HAVE NOW READY:

I. *AMERICAN ORATIONS.* From the colonial period to the present time, selected as specimens of Eloquence, and with special reference to their value in throwing light upon the more important epochs and issues of American History. Edited, with introductions and notes, by Alexander Johnston, Professor of Jurisprudence and Political Economy, College of New Jersey. Three volumes, 16mo, uniform with 'Prose Masterpieces,' $3.75.

RECENTLY PUBLISHED.

II. *BRITISH ORATIONS.* A selection of the more important and representative Addresses of the past century. Edited, with introductions and notes, by Charles K. Adams, Professor of History in the University of Michigan. Three volumes, 16mo, uniform with 'American Orations,' $3.75.

*** Putnam's new catalogue sent on application.

Unmounted Photographs
OF ANCIENT AND MODERN WORKS OF ART,
Embracing reproductions of famous original paintings, sculpture, architecture, etc. Price, cabinet size, $1.50 per dozen. Send 6-cent stamp for new catalogue. 5,000 subjects.

SOULE PHOTOGRAPH CO.,
Publishers, 338 Washington Street, Boston, Mass.
Please mention the *Nation*.

CRITICAL AND SOCIAL ESSAYS.—Reprinted from the *Nation*, and in some measure supplying the place of the first two volumes of the paper, now very scarce. Cloth, 12mo, price $1.50. Sent, postpaid, on receipt of price.
HENRY HOLT & CO., New York.

Works by the
Rev. R. HEBER NEWTON,
Rector of All Souls' Protestant Episcopal Church, New York City:

I. *THE RIGHT AND WRONG USES OF* the Bible. 16mo, cloth, 75 cts.

"It is impossible to read these sermons without high admiration of the author's courage, of his honesty, his reverential spirit, his wide and careful reading, and his true conservatism."—*American Literary Churchman.*

II. *THE BOOK OF THE BEGINNINGS.* A Study of Genesis. With an introduction to the Pentateuch. 16mo, paper, 40 cts.; cloth, $1.00.

"He has read the best books intelligently, and stated their results clearly, in a not unattractive style and in a reverent spirit. These 'talks' will be acceptable to the general public, who wish to see on what grounds the critics base their conclusions respecting the Pentateuch."—*The Nation.*

III. *WOMANHOOD. Lectures on Woman's* Work in the World. 16mo, cloth, $1.25.

"No woman, young or old, can read these lectures without great profit. . . . We wish they might find a place in every home where mother, wife, or daughter dwells."—*National Journal of Education.*

*** Putnam's new catalogues sent on application.

G. P. Putnam's Sons,
27 and 29 W. 23d St., New York.

The American Historical Association,
President, ANDREW D. WHITE,
Secretary, HERBERT B. ADAMS,
HAVE NOW READY:

I. *REPORT OF THE ORGANIZA*tion and Proceedings at the Saratoga Meeting. Octavo, paper, 50 cents.

II. *AN ADDRESS ON STUDIES* in General History and the History of Civilization. By Prest. Andrew D. White. Octavo, paper, 50 cents.

For advance payment of $4.00 subscription, the monographs composing the first volume, comprising about 500 pages octavo, with general index, will be forwarded as published.

G. P. Putnam's Sons,
NEW YORK AND LONDON.

Large Catalogue
of Rare, Choice, Standard, and Curious Books just sued. Sent on Application.

W. E. BENJAMIN,
Importer and Bookseller, 744 Broadway,
New York.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 12, 1885.

The Week.

THE story of Gordon's romantic career and unhappy fate will long hold a leading place among the records of English prowess by land and sea. He was a genuine survival of another age, and not the age of chivalry either, but of the age of Naseby and Marston Moor. Burnaby was as restless and as fond of adventure as Gordon, if not more so, but his impulses came from high health and overflowing animal spirits. Gordon roamed the world sword in hand, as one of Cromwell's "russet-coated captains" might have done, seeking out the Lord's work and doing it, and considering himself, under whatever sky, whether in peace or war, "the humble instrument of a wonder-working Providence." There probably has not been in England for two hundred years a more genuine Puritan. With his Bible he never felt alone, and amidst the thickest rain of bullets he never felt in danger, so sure was he of the divine protection. There was mixed in with this religious zeal, too, a strong dash of the professional longing for great things to do with little means, which has been bred in the British army by a century of conquest among barbarous races against great odds. His professional interest, like that of, one might almost say, a majority of British soldiers in our day, and very unlike that of Continental officers, lay not so much in grand strategy as in the art of making great successes out of small and desperate ventures, and imposing the English will on inferior races as a kind of missionary influence. And the British Empire, spread as it is now over a vast area of semi-civilization, and covering so many tribes and nations which move uneasily in the strong cage of British power, keeps alive, among all men in uniform, a restless ambition from which even a man whose temper was so religious as Gordon's was not exempt. He was a fanatic, and he was undoubtedly superstitious, but he was also a soldier of the stuff out of which Clive, and Wellington, and Havelock, and Lawrence, and Nicholson were made. He probably never rose from his prayers without feeling impelled to cry:

> "Blow, blow the clarion, fill the fife;
> To all the sensual world proclaim,
> One crowded hour of glorious life
> Is worth an age without a name."

Of the effect of his death on the war there is little doubt. It, of course, makes the capture of Khartum and slaughter of thousands of Arabs certain. Hecatombs of these poor savages will be sacrified to Gordon's memory, and yet they are probably engaged, as Mr. Gladstone has acknowledged, in as good a cause as any in which men have ever drawn the sword. They are struggling to be free after long and patient endurance of shameful oppression. Of the Mahdi there will probably be little left, *quâ* Mahdi, by the time the war is over. Whether he be an arrant impostor or honest fanatic, his power will be gone when his armies have been slaughtered and he has himself been driven back into the deserts of the far south. Of the effect of it on the Ministry it is more difficult to speak. If Khartum had fallen under a direct assault of the Mahdi's forces, or had succumbed to famine after a long struggle, Mr. Gladstone would probably have fared worse than he is likely to do now. Treachery was one of the dangers to which Gordon was exposed from the hour of his arrival in the place. It has been a constant wonder ever since that he escaped it so long. It was something, too, from which neither Wolseley nor anybody else could have saved him. But Gordon himself evidently did not fear it, and nobody on this point was half so good a judge. This will, in the acrimonious debate which will doubtless take place when Parliament meets, help to neutralize the charge of delay which will appear in the forefront of the attack on the Ministry, and then there will be the old reluctance "to give the Marquis of Salisbury a blank check," as Mr. Goschen said, which has served the Ministry in good stead before now. Public attention, too, will be absorbed by the further progress of the war, and, all things considered, it is probable that the "Grand Old Man" will once more escape with an admonition to be more careful another time.

The mission of General Gordon to the Sudan is commonly thought to have been the result of a piece of brilliant journalistic insight on the part of Mr. Stead, the editor of the *Pall Mall Gazette*. We have excellent grounds, however, for believing that it originated in an entirely different manner, and this fact, which has not been made public before, is of special significance at the present moment of uncertainty regarding Gordon's own fate. General Gordon, it will be remembered, was about to visit England prior to his journey to the Congo in the service of the King of the Belgians, and it was stated, and commonly believed, that he was met at Southampton by a despatch from the editor of the *Pall Mall Gazette*, requesting him to receive a representative of that paper with a view to discussing the Egyptian question and his own peculiar qualifications to attempt the task of settling it. Gordon is supposed to have assented with much reluctance, and the *Pall Mall Gazette* then started that cry of "Gordon to the rescue!" which at last grew to such proportions as to compel the Government to send him to the Sudan. The "truth about Gordon"—to borrow our contemporary's own peculiar phraseology—we believe to be, that Gordon telegraphed in the first place to the editor of the *Pall Mall Gazette*, suggesting himself as the man to solve the problem, and asking whether the editor would support him. An affirmative answer was sent, the editor "represented" the paper in the famous interview at Southampton, and the two or three articles which were supposed to be expressing the demand of the people were written by Mr. Stead in Gordon's own study, and submitted to him in manuscript before being sent to London. We wonder whether Gordon sought divine guidance on that occasion by his usual method of tossing a halfpenny. If so, his fatalism betrayed him at the crisis of his life.

The English press has not shown much more Roman gravity and fortitude under the news from the Sudan than some of the more mercurial of our own papers would show in like circumstances. The *Times*, which seldom gives way to emotion, screeeches at the Ministry and at Wolseley in the most hysterical fashion. The fact seems to be that had Gordon managed to avoid the treachery of his subordinates a week longer, the Ministry would have been held to have done the right thing at the right time, Wolseley would still have been the luckiest and most skilful of commanders, and the wisdom of choosing the Nile route would have been fully demonstrated. As matters stand, the delays of the Ministry have been most culpable; Wolseley ought not to have believed Gordon's own account of the security of his position, and, instead of taking the long Nile route, ought to have taken the Suakim route, which was well known in every newspaper office in London to be the only safe and quick one. Yet Wolseley is beyond most generals a great master of details, and both studies and prepares them with extraordinary care. There has probably seldom been a question of strategy more minutely investigated than the comparative merits of the Nile and Suakim routes, although, to read the English newspapers to-day, one would suppose that it was only now after the disaster that the authorities were looking into it. Their own files of a year ago, however, would amply expose the folly of all this. The Suakim route is 250 miles long, through a howling desert, with but two wells, and those poor. Most of it, too, runs through a very difficult mountainous country, admirably adapted to guerilla fighting, in which it would be very hard to manage or protect long baggage trains. There are no maps or charts of the region, or, indeed, anything but memory about it to rely on.

We do not profess to know any more about Mr. Cleveland's Cabinet than the rest of the world, except on one point. We know that the expectation which many people entertain, and which has been making a prodigious amount of talk during the last week or two, that Mr. W. C. Whitney is to be Secretary of the Treasury, is without foundation. Mr. Whitney is one of the ablest and most promising of the younger generation of Democrats. He is high, and deservedly high, in Mr. Cleveland's confidence. It would be a mistake for Mr. Cleveland not to turn his administrative talent and political sagacity to account in making up his Cabinet. But nobody would oppose Mr. Whitney's being put in charge of the Treasury more strenuously than Mr. Whitney himself—and, of course, nobody's opposition would be more effective—for the simple reason that the Secretary of the Treasury,

as every one who wishes well to the new Administration sees, must be somebody whose capacity and experience in financial matters are known not only to his friends, but to the whole country. In short, he must be a man whose name, when announced, will explain to all the world of politics why he was appointed. The length of time which has elapsed since the Democrats held office, the attitude which some of their prominent men, as well as some of the Republicans, have occupied toward the currency, and the popular uncertainty about their financial policy, all render it necessary that there should not be for one moment either ignorance or doubt in the public mind about the management of the Treasury. We venture to predict that there will not be, and that in filling the Secretaryship worthily President Cleveland will have in Mr. Whitney one of his soundest and most sagacious advisers.

Senator Morrill, in his speech on the pending Silver Bill, drew attention to the peculiar dangers threatening the wage-workers of the country from the establishment of a silver standard, or from any depreciation in the value of the money with which they are paid. This is a matter of great importance to workingmen as a class, and if they could be made to see it they would demand the cessation of the silver coinage in tones much louder than those with which they have ever called for an eight-hour law or a discontinuance of prison labor. The continued coinage of silver must eventually bring about a change from the gold to the silver standard—that is, it must cause a depreciation of 15 or 20 per cent. in the purchasing power of the money in everybody's pocket. The time within which this depreciation will take effect may be longer or shorter, but come it will. Whether it be slow or sudden, its effect will be to lower the wages of every workingman in the United States. Every person receiving a fixed income will suffer in the same way. Wages and fixed incomes are payable in dollars, and if the dollar of to-morrow has less purchasing power than the dollar of to-day, the man who receives it is by so much the worse off. The employer can and must advance the prices of his goods to make up for the lessened value of the money he receives. The laborer cannot advance his wages without going through the doubtful experiment of a strike. Before a strike would be resorted to, the laboring man's loss must be sensibly and keenly felt. But the losses consequent upon a depreciating currency come insensibly and by slow degrees. They are not felt till they have been for some time in operation, and even then the causes which have produced them are only dimly perceived.

Efforts have been made by Republican journals to show that the River and Harbor Bill this year is an almost unprecedentedly bad one, and that it is the first grab of the Solid South upon the Treasury. As a matter of fact, the most indefensible items in the bill were those known as the Eads appropriations, and these have all been erased. They were much more in the interest of Captain Eads than of the Solid South. The Hennepin Canal scheme is not a Southern one; neither is the Sandy Bay, Mass., harbor-of-refuge project, which would cost from $8,000,000 to $10,000,000. The worst River and Harbor Bill in the country's history was passed by a Republican Congress and vetoed by President Arthur. Every bill of the kind is more or less filled with "jobs" for the improvement of creeks and streams which are unknown to geography, and for the excavation of "harbors" which never had any commerce, and never will have. One party is as bad as the other in supporting these annual raids upon the Treasury, and the abuses will never be completely eradicated until the President has authority to veto single items in the bill without killing the whole measure.

There are twenty or thirty "permanent appropriations" on the national statute-book—*i. e.*, appropriations which do not require to be annually passed upon by Congress. They are exceptional and peculiar in the fact that Congress has lost control over them. All other appropriations of public money are subject to yearly scrutiny, first by the proper committees of the two houses, then by Committee of the Whole, and afterward by the two houses and the President. Inasmuch as government in the last analysis is simply the power to tax, it is fitting that a free government should never relax the power, or abdicate the duty, of passing upon the public expenditures and voting yes or no upon them from time to time. Two or three years ago this anomaly was taken up in the Senate, and a bill was passed repealing all permanent appropriations except those for the salaries of the President and of the Judges of the United States Courts, and for the interest on the public debt. When the bill reached the House it was discovered that among these permanent appropriations was one for the purchase of not less than $24,000,000 worth of silver bullion each year to be coined into standard silver dollars, and that if the repealing bill should pass, an annual appropriation would be necessary in order to continue the coinage. The war-whoop was raised against the bill and it was tomahawked.

Is it not time that Congress should resume control over an expenditure of $24,000,000 per annum which yields no other result than that of keeping the entire business community of the United states in a shiver of apprehension? If the silver-men dare not submit their claims to Congress annually, they must confess their own weakness and insincerity. They must acknowledge that continuance of the silver coinage depends upon the clandestine character of the appropriation for it. They must admit that they dare not bring to public vote and discussion each year an appropriation of many millions for the purchase of bullion, plus the appropriations required for new storage vaults, and for transporting the stuff from one vault to another. We are led to believe that some action is contemplated in the House to bring the subject to a vote, with a view to putting appropriations for silver on the same footing as appropriations for the army and navy, for rivers and harbors, for pensions and Indians, for public buildings, for the survey of public lands, etc. Mr. Abram S. Hewitt, in an interview with the *Herald's* Washington correspondent, is reported to have said that the subject would come up when the appropriation for new storage vaults should be reached in the Sundry Civil Bill. He did not indicate in what way a remedy would be sought, but, looking at the state of the public business and at the rules of the House, it is evident that the only measure which has any chance of passing at the present session is one repealing the permanent appropriation for silver bullion. This will be germane to the Sundry Civil Bill, and will be a measure reducing and not increasing public expenditures.

Admiral Shufeldt had a letter in the Washington *Post* of Tuesday week which strikingly confirms the view we have taken of the folly of supposing that making the Nicaragua Canal with our own money, and calling it ours, will give it any special value to us, either for military or commercial purposes. Common sense, we have no doubt, as the discussion goes on, will rapidly get the better of sentiment. Admiral Shufeldt was one of those who originated the naval surveys of the canal routes at Tehuantepec and Nicaragua in 1870, though afterward compelled to abandon the work through ill health. He thinks the generally received estimates of the cost of the canal are much too low, and then goes on to say:

"As to its commercial advantages, I submit that a canal across Nicaragua or any other part of the Isthmus will operate to the very great disadvantage of the commerce of this country. The United States now holds, by virtue of its railroads, the right of way across this continent, and has, or ought to have, the commercial control of the Pacific Ocean. To open a canal would be to throw into the hands of England and the other European Powers this commerce; or, in other words, we would build a canal through an American isthmus for the benefit of foreign commerce, as the French built the canal at Suez for the benefit of English commerce.

"The first result of this canal would be the domination of England, or Germany, or France in the Pacific; and the first victim to fall into the hands of either one of these Powers would be the Sandwich Islands, which, in a military or naval point of view, are essential to our supremacy on our western coast. The construction of a canal, therefore, from a commercial standpoint, is merely a matter of sentiment. I have no idea that England would object to it on account of the Clayton-Bulwer treaty, as it would redound to her very great commercial advantage, and I can fully understand why Captain Bedford Pim, R.N., the author of 'The Gates of the Pacific,' should be so earnest an advocate for its construction; but I cannot understand why the people of the Pacific slope should be in favor of a project which must inevitably shunt San Francisco off on a side track, and confine that emporium of the West to her exports alone of wheat and wine. In my opinion, California should look for a market in the Great Orient, teeming with population, which must eventually consume everything which she can produce."

Looking at the canal from the naval and military point of view, Admiral Shufeldt considers that it promises us "portentous evil." He says that to hold it in time of war, we should have to reach it by railroad communication through Mexico, Guatemala, Honduras, and Nicaragua, and "dominate" these States for that purpose. He holds, as we pointed out, that each end of the canal would in time of war be blockaded by a superior naval force, and the canal would be "utterly useless for naval purposes, and even worse than useless, because it would require an ad-

ditional navy to protect it." "No single man of war," he says, "could go from the port of New York to San Francisco in time of war with any degree of certainty. The voyage would be one continuous running the gauntlet through an enemy's fleet." That these considerations, obvious as they seem, should be made public only now, after the canal treaty has been rejected, shows what an escape we have had, and what an abuse the discussion of such a matter in secret session is.

At the conclusion of their notes on the question of the Egyptian finances, the Governments of Germany, Russia, and Austria have called England's attention to the subject of the neutralization of the Suez Canal, and it will be well for American advocates of private inter-oceanic canals to give close heed to the matter. In January, 1883, England having put down the revolt of Arabi and being in undisputed possession of Egypt, Lord Granville called the attention of the Powers to the question of the neutralization and free navigation of the canal, inviting their coöperation to that end. His proposals aimed at constituting the canal, as it were, an arm of the sea, through which ships of all nations, whether vessels of war or trading vessels, and whether under belligerent or neutral flags, should be entitled to pass freely in time of war as in time of peace. This sort of neutralization would, of course, be for the advantage of England, as it would give her the unquestioned right to send her war vessels through the canal at all times. All other Powers would have the same right, subject, however, to the chances of their being able to reach and depart from the three-mile limit which bounds the two ends of the canal. England could be reasonably sure of effecting her entrance and her offing at all times, not by virtue of her possessing control of Egypt, but by the strength of her ironclads in the Mediterranean and the Red Sea.

No action was taken in response to Lord Granville's suggestions at the time, and England was left to manage the canal as she saw fit. Now, however, the three Powers have indicated their desire to take up the subject, and settle the principles of public law applicable to the canal, in the sense of securing "perfect freedom of the canal and the unimpeded transit through it, in time of peace as in time of war, of all European Powers without distinction." No country proposes to have its own private canal. Nobody asks for an unimpeded right of way to the canal or from it. They recognize as an established fact that the only thing open to negotiation is the treatment to which the ships of all nations shall be entitled when they have once got within the canal or within a marine league of its entrance. And here they are in substantial accord with Lord Granville. The London *Times* thinks that there ought to be little difficulty in coming to an agreement. It must strike the advocates of the Nicaraguan treaty as remarkable that England should be willing to relax any hold which she now has on the canal, and that France, whose subjects built the canal and own the greater share of it, manifests rather less interest in the question than any other Power concerned.

The Illinois Legislature has been relieved of its deadlock by the election of Mr. Haines as Speaker, but the question who shall be Senator is as far from being settled as ever. The Democrats have a majority of one in the House, and the Republicans have a majority of one in the Senate. The joint Convention stands 102 to 102. General Logan has received the Republican caucus nomination and Mr. Morrison the Democratic. But there is a handful of bolters on each side. Three Democratic members have announced that they cannot support Mr. Morrison on account of his tariff record. Two Republican members absented themselves from the caucus without assigning any reason, or giving any indication of their preferences. Both parties appear to be determined to adhere to their respective nominees. In the Republican caucus it seems to have been made an article of faith to stand by General Logan under all circumstances. The prospect of an election is, therefore, very remote, and the question has been raised whether the Governor can appoint a Senator in the event of the Legislature adjourning without electing one. The constitutional provision for filling vacancies in the Senate by Executive appointment provides that "if vacancies happen, by resignation or otherwise, during the recess of the Legislature of any State, the Executive thereof may make temporary appointments until the next meeting of the Legislature, which shall then fill such vacancies." It is extremely doubtful whether the natural expiration of a Senator's term is a "vacancy" within the meaning of this proviso. But even if it be considered such, the vacancy must be one occurring during a recess of the Legislature. General Logan's term will expire on the fourth of March, at which time the Legislature of Illinois will be in session unless a forced adjournment takes place. The Governor has the right to adjourn the Legislature in cases where the two houses are unable to agree upon a time for adjournment, but the contingency contemplated for the exercise of this power by the Governor was that of a Legislature which had finished its ordinary business, and had fallen into some disagreement respecting its separation.

The Board of Directors of the Columbia (S. C.) Seminary recently elected successors to fill the chairs made vacant by the resignations of Dr. Boggs and Dr. Hemphill, the sympathizers with Dr. Woodrow, but determined not to fill for the present the "Perkins chair," formerly occupied by the last-named gentleman. It is to be supposed that great caution will be used in making the selection of a professor to lecture upon the relation between revelation and science. No specialist with Heidelberg training will again be sought. To judge the temper of Southern Presbyterians by the speeches made in the various synods against Dr. Woodrow, it is clear that they will not tolerate any scientific teaching that cannot be supported throughout by the Bible. Dr. Woodrow, it is said, has suggested as a suitable man for the place the Rev. John Jasper, of Richmond, Virginia. The Rev. John Jasper holds to astronomical theories long since exploded, but he can and he does cite Scripture to sustain them. We have heard that in the Georgia Synod a very indignant elder exclaimed: "Tell me I came from a monkey. I didn't, didn't, didn't. I can prove it by the Bible."

Bishop Bedell, of Ohio, is President of the Ohio Divorce Reform League, an organization which has collected some valuable statistics with regard to the marriage system of that State. The League reports that Ohio granted 873 divorces in 1865, which is as far back as the divorce statistics run. In 1870, 1,008 were granted, and in 1883, 1,965. Since 1870, the number of divorces granted annually has increased 95 per cent. The number of marriages has increased 29 per cent., and the population about 30 per cent. The ratio of divorces to marriages in 1883 was 1 to 16; in Ashtabula County it was 1 to 4; in three counties in the northern part of the State it was 1 to 5; in nine counties, mostly in the north and west, it was 1 to 7; in 43 counties, scattered throughout the State, the fewest being in the southeast, it was 1 to 10. The League asks that the Ohio law allowing divorce for the vague cause of "gross neglect of duty" be repealed, that "the immediate marriage of the guilty partner" be forbidden, that counsel shall in all cases be appointed to represent the defendant, and that a commissioner be appointed to take part in an inter-State Convention. These facts and suggestions of reform show that the existing Ohio laws leave something to be desired. The Bishop is in favor of Congressional legislation, if necessary, and this, preceded of course by a Constitutional amendment, is what an inter-State conference might lead to.

The *Irish World* has reopened its columns to the acknowledgment of receipts of contributions to its Emergency Fund, but with many signs of uneasiness. It precedes the list with a new statement of the object of the fund, which is in a very different strain from the old one. The object is now said to be "to assist the Irish people in their noble efforts to regain self-government"; and instead of the former declarations that all means were justifiable and dynamite a divine agency, the subscribers are now told that "while the inspiring motive is good, there are limitations which ought to be respected"; that "the fact that England and the United States live on terms of diplomatic friendship ought to be noted"; and that "under existing conditions men who try to serve Ireland must be as discreet as they are brave." After this mild proclamation, about forty contributions are acknowledged, but their total is not given, neither is the previous amount received for the fund mentioned. Last week's total was, in fact, much larger than any for many previous weeks, being over $172, and the grand total of the fund is now over $15,675, exclusive of the $26,000 or more transferred to it from the former O'Donnell Defence Fund. It is evident that the editor does not care to have himself brought within the range of our present penal laws against raising money on false pretences, or of the proposed new laws making it a felony to raise money here for the destruction of life and property abroad.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, February 4, to TUESDAY, February 10, 1885, inclusive.]

DOMESTIC.

THE United States Senate on Wednesday substituted the Cullom Inter-State Commerce Bill for the Reagan bill, and passed it by a vote of 43 to 12.

In the Senate on Thursday Mr. Bayard strongly opposed the redemption of the trade dollars at their face value, and advocated the suspension of the Silver Coinage Act.

The Senate on Saturday adopted an amendment to a private pension bill providing that hereafter all widows receiving pensions at the rate of $8 per month shall be paid $12 a month, and another increasing from $8 to $12 a month the pensions of all dependent fathers and mothers now on the rolls. On Monday, Senator Cameron (Rep., Pa.) called up a resolution that "the Committee on Finance be directed to inquire whether it would be expedient to expend the surplus revenue of the United States, or any portion thereof, for the purpose of reviving the shipping and export trade, by allowing a rebate from tariff duties on foreign goods imported in ships built and owned in the United States, and by also allowing a premium on American-grown products and articles of American manufacture exported in American vessels, and report by bill or otherwise." Mr. Cameron made a long speech in support of his resolution, which was referred to the Committee on Finance. The Anti-Silver Coinage Bill was taken up and debated.

The House Committee on Rivers and Harbors voted on Thursday to strike out the provision for employing Captain Eads to oversee the Galveston harbor improvement, to reduce the appropriation for that work to $500,000, and to permit it to be prosecuted by the United States Engineers, and to strike out the provision turning the Mississippi River improvement over to Eads at a salary of $3,500; it reinstated the Commission in charge of the work.

In the House on Friday Mr. S. S. Cox offered an amendment to the River and Harbor Bill directing the United States Harbor Board, provided for, to report a plan and estimates for obtaining a permanent channel sufficient for the wants of commerce over the Sandy Hook Bar entrance into New York Harbor. Adopted. Mr. King, of Louisiana, offered an amendment appropriating $15,000,000 for the improvement of Sandy Hook channel, and advocated its adoption as benefiting the commerce of the entire country. Rejected.

Mr. Randall gave notice on Friday that on Monday he would be ready to go on with the Post-office Bill, and that the Legislative Bill would also be ready, and followed soon by the Sundry Civil Bill. He gave notice, too, that he expected to have all the appropriation bills in the Senate not later than February 25. If his programme should be carried out, the Senate would have only five working days in which to clear up the business sent to it by the House.

The House had its usual row on Monday. Mr. White, of Kentucky, a disturbing element, was ruled out of order by Mr. Blackburn, the acting Speaker. The Sergeant-at-Arms was sent to seat him. That officer forgot his mace. Mr. White resisted, as the officer had no badge of authority. The mace was secured, and, when it was no longer needed, Mr. White was seated. For an hour there was turbulence and wrangling over this, but Mr. Blackburn triumphed. The supporters of the River and Harbor Bill were not able to hold the floor after 12 o'clock. This is interpreted to mean the defeat of the bill. There was a marked determination to pass the general appropriation bills. The Post-office Appropriation Bill was taken up.

There was another disorderly scene in the House of Representatives on Tuesday over the White incident of the day before. The Republicans insisted that the personal rights of a member had been infringed by an officer without a badge of office, and that the journal did not accurately state that fact.

President-elect Cleveland arrived in this city on Wednesday night, and remained at the Victoria Hotel until Saturday, receiving prominent members of the Democratic party, and Independents, and hearing their political advice. On Sunday he visited Samuel J. Tilden at Greystone.

In his conversations Mr. Cleveland said his civil-service letter meant exactly what it said, no more and no less, and that those who were undertaking to read between the lines would find themselves mistaken. He did not, he said, propose to remove any Republican officer who had been faithful to his duties, and whose administration of his office was satisfactory to the public immediately concerned. When the terms of such officers expired, he expected to fill their places with good men of his own party if they could be found, which he did not doubt. There might be reasons in some cases why this position should not be adhered to, but under all ordinary circumstances it would be the rule.

A bill was introduced in the Senate at Albany on Friday for the protection of gas consumers. It provides that every gas company in New York city shall furnish consumers, through burners consuming five cubic feet per hour, gas of sixteen-sperm-candle power, at a cost not to exceed $1 50 per thousand feet. No compensation shall be charged for gas of less illuminating power than that specified above. The Mayor shall appoint a gas-meter inspector to test all gas furnished. A similar bill was introduced in the Assembly providing for inspectors in all cities in the State of more than 20,000 inhabitants.

In the Assembly at Albany on Wednesday a resolution was adopted referring to the Judiciary the question of the advisability of an investigation of Judges Truax, Andrews, and Beach because of their acts in connection with the late change of administration in New York city.

The Assembly has ordered the investigation of the Emigration Labor Bureau requested by Mr. Hooley, on behalf of the Trades Assembly. Mr. Hooley alleges that there is evidence to show that the Bureau is managed in the interest of manufacturing companies in this and other States.

Mayor Grace's bill for spring elections in this city will be presented to the Legislature this week. It provides that the President of the Board of Aldermen and the Aldermen to be elected next fall shall hold office till January 1, 1887, and that, on the first Tuesday succeeding the first Monday in April, 1886, there shall be elected a Mayor, a President of the Board of Aldermen, and a Board of Aldermen. The terms of the Mayor and the Aldermen who are elected in April, 1886, are to begin on January 1, 1887, and are to end at noon on June 1, 1888.

Judge Freedman, in the Superior Court Special Term on Tuesday, in this city, gave a very elaborate opinion and decision in the proceedings brought by Theodore Roosevelt and others against Franklin Edson, ex-Mayor of this city, upon the motion to punish for contempt of court for disobeying the order of injunction granted by Judge Beach last December, to restrain him from making any nominations for Commissioner of Public Works or Corporation Counsel. Judge Freedman finds that ex-Mayor Edson is guilty of contempt of court, and he directs "that for the wilful disobedience and the contempt of which the defendant stands adjudged guilty, he be imprisoned in the County Jail for the period of fifteen days, and that, in addition thereto, he pay a fine of $250."

John A. Logan was renominated by acclamation for United States Senator by the Republican caucus at Springfield, Ill., on Thursday night. Congressman W. R. Morrison received the Democratic caucus nomination on Wednesday night.

Director-General Burke, of the New Orleans Exhibition, on Saturday submitted the following statement respecting the Exhibition: Receipts from stock and donations, $584,168; United States Government loan, $1,000,000; installation receipts, $93,984 39; gate receipts, $73,292 60. Total, $1,751,444 99; expenditures, $2,070,831 94; deficit, $319,386 95.

At a meeting of railroad presidents in this city on Friday the resignation of Commissioner Fink, of the Trunk Line Pool, was not accepted. He was, however, granted leave of absence for a trip to Mexico and California.

A great snow blockade existed on many Western railroads on Monday and Tuesday. Throughout the Eastern and Middle States considerable damage was done by freshets.

The Board of Overseers of Harvard College on January 28 approved the report in favor of printing the Quinquennial Catalogue in English instead of Latin. At a meeting on Thursday, twenty-one members being present, the question was reconsidered. In the discussion of the main question President Eliot and James Freeman Clarke expressed themselves as distinctly in favor of printing the catalogue in English. Edward Everett Hale was in favor of printing the catalogue down to the class of 1880 in Latin and the remainder in English. Nine overseers voted to rescind the resolution, while but seven voted to sustain it. It is believed that this will not be accepted as a final disposition of the matter. The statute requiring students to attend public worship on Sunday morning was repealed.

At the annual meeting of the members of the Metropolitan Museum of Art, at the Museum in Central Park on Monday, John Taylor Johnston was reëlected President; William C. Prime and Daniel Huntington Vice-Presidents; and L. P. Di Cesnola, Secretary. Mr. Di Cesnola received thirty-one out of the thirty-five votes. R. Hoe, jr., G. W. Curtis, and W. R. Ware were elected trustees for the term ending in 1892. The trustees reported receipts during 1884 to the amount of $45,642 45, all of which had been disbursed except $109 81.

Richard Short, the man who stabbed Captain Phelan in O'Donovan Rossa's office, was on Monday released on bail.

FOREIGN.

London and Great Britain were startled on Thursday morning by the announcement in the *Chronicle* that Khartum had fallen into the hands of El Mahdi, and that General Gordon was probably a prisoner. The other morning papers soon issued extra editions with the same report, but it lacked official confirmation until 12:30 P. M., when the War Office issued the following: "Telegrams from General Wolseley announce that the fall of Khartum took place on January 26. He says Colonel Wilson arrived at Khartum on January 28, and was greatly surprised to find that the enemy were in possession of that place. He immediately started on his return down the river, and proceeded under a heavy fire from the rebels. When some miles below the Shublaka Cataract, Colonel Wilson's steamers were wrecked, but he and his whole party managed to reach an island in safety, where they are secure. A steamer has gone to bring them back to the British camp near Metemneh. General Wolseley says he has no information regarding the fate of General Gordon, and does not know whether he is dead or alive."

A native reported that the Mahdi had 60,000 men in the vicinity of Khartum, and that he introduced a number of his emissaries into the city. These emissaries mingled freely with the native troops under General Gordon, and by bribes, threats, and working on their religious feelings induced them to mutiny. Seven thousand of the garrison deserted to the rebels, leaving General Gordon only 2,500 faithful soldiers. With this small force he attempted to hold the city against the Mahdi's great army,

but, after severe fighting, in which a large number of the rebels were killed, he was compelled to surrender. General Wolseley telegraphed in the afternoon that he did not consider the British position at Gubat in any immediate danger.

Meanwhile the excitement throughout the British Isles was intense. On every side were heard condemnations of the Ministry for their dilatory course in starting the relief expedition. It will be remembered that Gordon arrived at Khartum on February 18, 1884, and that the relief expedition did not start until September, 1884.

A council was held at the British War Office on Thursday evening. It was decided to advise the Government to despatch 3,000 troops to Suakim immediately. General Stephenson telegraphed that 5,000 men would be needed to clear the road to Berber, as the news of the fall of Khartum would induce the central tribes to join Osman Digna.

The comments of the London papers on Friday morning were doleful but patriotic. The *Daily News* said: "Seldom in the memory of living men has news been received of such a disaster to England. The cry of 'too late' against the Government is unjustified." The *Times* said: "No words of ours are adequate to express the mingled feelings of dismay, consternation, and indignant disgust which have been universally evoked by this news. The present situation is the lamentable result of a long course of disregard of the elementary maxims of statesmanship. The country is obliged to confess that everything has been done that could be done to add to the risks of defeat. Advice has been spurned, time wasted, and opportunity lost."

An important meeting of the Cabinet was held on Friday morning. It was decided to give Lord Wolseley *carte blanche* to take any measures which he might deem necessary for the rescue of General Gordon if alive, and to make use of such military operations as he considered advisable to regain the ground lost in the Sudan by the fall of Khartum. Among the alternatives suggested to General Wolseley are the immediate recapture of Khartum, and the employment, if necessary, of Indian troops to reopen the Berber route. He has been instructed to take all measures necessary to the successful operation of the campaign. The Government will give him any assistance he may need by despatching troops from Suakim to Berber. Another Cabinet Council was held on Saturday. The news from General Wolseley grew more discouraging. His latest advices from Metemneh were that El Mahdi was ready to attack Stewart's little army in great force.

Cairo telegrams received on Sunday in London reported that a council of war had been held at which General Stephenson was present. He advised a retreat of the troops from Metemneh on Korti, and the concentration of the entire force toward Berber, and after the capture of Berber to await the expedition coming to Suakim before making an advance on Khartum. Military authorities estimate that this plan involves a delay in the advance upon Khartum until autumn. The hot weather, which begins next month, will make it impossible for the English forces to endure the marches.

General Lord Wolseley telegraphed on Monday: "The advance guard of General Earle's column, consisting of a squadron of cavalry under the command of Colonel Buller, surprised a large body of the Monasir tribe under Suleiman Wad Gamz, the murderer of Colonel Stewart, encamped at Shakoob Wells. The cavalry charged the encampment, and the enemy fled in every direction, leaving behind thirty men killed, a large number of camels and cattle, and many Remington rifles. Colonel Buller also captured six prisoners."

A despatch from Gakdul Wells, dated February 5 and received on Monday, stated that Colonel Sir Redvers Buller, with the Royal Irish Regiment, had arrived there from Korti, and was to start on the following day for Gubat.

At the request of General Wolseley nine battalions of troops, about 8,000 men in all, were on Monday ordered from England, Malta, Gibraltar, and India to Egypt. They will, it is said, go to Suakim and operate between that place and Berber to keep the route open. They will then effect a complete junction with the British forces on the Nile, both above and below Berber. A naval demonstration in the Red Sea, to coöperate with the land movement, has been arranged for, and the despatch of several British men-of-war to that locality is imminent.

General Newdegate will command the British expedition to Suakim, and Colonel Greaves will be his Chief of Staff. The Suakim campaign will open, it is calculated, on the 8th of March. Orders have been sent throughout the country bordering on the west and south coasts of the Red Sea for the purchase of camels for the use of the new expedition.

A despatch from Korti was received on Tuesday, dated February 9, saying: "Lord Charles Beresford has returned in safety to Gubat, bringing with him Colonel Sir Charles Wilson and party, who were stranded on an island some distance up the Nile, as they were returning from Khartum. Some difficulty was experienced in fetching away the stranded party. The rebels on the river banks kept up a constant firing, and shortly after the party had embarked, a bullet from a rebel's rifle pierced the boiler of the steamer. It was necessary, therefore, to anchor under fire and make repairs. The British fire, however, now took effect, and the rebels were repulsed. Immediately after reaching Gubat, Colonel Wilson started for Korti, where he has now arrived to report in person to Lord Wolseley the details of his reconnoissance of Khartum." General Wolseley praised highly the pluck of Lord Charles Beresford and his men. On Tuesday Wolseley started for Korti from Gubat with all the troops except parts of two regiments. He asks that the advance from Suakim be made within a month, seeing no necessity for waiting until autumn.

It became known in London very late on Tuesday that Colonel Wilson had brought with him to Korti the news that General Gordon had been killed on the morning of January 27. The details of the assassination are as follows: On the day of the capture of Khartum General Gordon's attention was attracted by a tremendous tumult in the streets. He left the Government building, in which he had made his headquarters, in order to ascertain the cause of the disturbance. Just as he reached the street he was stabbed in the back and fell dead. The tumult was caused by the Mahdi's troops, who had gained access to the interior of the town through treachery, and who were soon in complete possession of the place, including the citadel. A fearful massacre of the garrison followed. The scenes of the slaughter are described as surpassing the Bulgarian atrocities and the Sepoy mutiny. The Mahdi has fortified Khartum so that it is almost impregnable.

Italy has replied formally to the protests of the Porte against the occupation of Egyptian ports along the Red Sea by Italian forces. She admits the claims of the Sultan to suzerainty over the Red Sea, but declares that she had felt herself obliged to occupy certain ports in order to protect her Italian subjects, who were imperilled by the withdrawal of the Egyptian garrisons. "Italy will," the reply concludes, "allow the Egyptian flag to remain side by side with the Italian flag at every occupied point."

Italy, on Saturday, was reported as ready to send 35,000 troops, if necessary, to aid England in Egypt. Statesmen and people saw a chance for Italy to assert herself among the Powers, and there was a universal sentiment in its favor.

It was reported on Monday that Signor Mancini, Italian Minister of Foreign Affairs, had decided to limit the action of the Italian troops and marines on the Red Sea littoral to the coast near Massowah. The departure of the second expedition to Egypt will be hastened, but the force to be sent will not exceed the number originally decided upon. On the other hand, a despatch from Massowah on Tuesday said it was reported that the Italians were about to set out on a march to relieve Kassala and Senheit, coöperating with the English expedition to open the Suakim and Berber route.

In an interview in London on Saturday between Earl Granville and Fehmi Pasha, the Turkish envoy, the former told the latter categorically that the English Government intended, for political and financial reasons, to evacuate Egypt, but that it was impossible to specify an exact period for the withdrawal. He added that the proposed Turkish expedition to Suakim was inopportune, and assured Fehmi Pasha that the Sultan's sovereignty over Egypt would be respected. Earl Granville counselled the Porte not to raise a question with Italy in connection with the annexation of Beilul. Italy's commercial interests in Assab compelled her to extend her authority over the adjacent district.

The recommendation of Earl Derby, the British Secretary for the Colonies, in favor of the acceptance of the proposals of the United States Government looking to a reciprocity arrangement with the British West Indies, has been practically rejected by the British Cabinet. The majority are opposed to the acceptance of the proposals, on the ground that the advantages offered the British West Indies are doubtful, in view of the probability of similar treaties being concluded by the United States with Cuba and Brazil.

The mysterious prisoner who was arrested on February 3 in Whitechapel, London, with Cunningham's missing brown box in his possession, was arraigned on Friday in the Bow Street Police Court. He was formally charged with complicity in causing the explosion at the Tower. The prisoner gave his name as Harry Burton, said he was twenty-six years of age, and by occupation a cabinet-maker. The police say they have no doubt that Burton was Cunningham's accomplice in causing the Tower explosion. His arrest was accomplished through the aid of the cabman who removed Cunningham's brown trunk of American manufacture from the Prescott Street lodgings, where a brown box of similar shape and size was substituted for it.

Evidence has been found connecting Cunningham with the underground railway explosions, as well as with the Tower of London plot. The description of him tallies almost exactly with the appearance of one of the two men arrested in Halifax on October 17, 1883. They had 100 pounds of powerful dynamite in two valises, together with infernal machines. It was supposed that they intended to blow up the British ship-of-war *Northampton*, then in the harbor. Holmes and Brecken were the men's names. Cunningham is believed to be Brecken, who has assumed the name of a prison friend of his.

Cunningham and Burton were again brought into court on Monday. Much excitement was created by the withdrawal of the charge of conspiracy, and the substitution of high-treason felony. Testimony is to be produced showing that the prisoners were prime-movers in a conspiracy which was hatched in America. After hearing several witnesses, the hearing was adjourned until February 16.

Philip Newbold, the alleged dynamiter who was arrested on January 30 in Derby, Eng., and charged with sending letters threatening to blow up the Town Hall, had an examination on Friday, and it resulted in his being discharged. Nothing of an incriminating nature could be found against him.

THE CAPTURE OF KHARTUM.

Of all the extraordinary things which have happened in this British adventure in the Sudan, the fall of Khartum is the most extraordinary. The place is practically impregnable against the attack of any force which does not command the rivers and has no heavy artillery. It lies on the point of the promontory formed by the junction of the Blue and White Nile, both of them wide and deep streams; and any force which can patrol them to the southward has an indefinite extent of fertile country to draw supplies from. It was reasonably to be expected that, when the Mahdi's rising first began, he would obtain possession of the place through the sympathy of the garrison, who were all Egyptians, Turks, and Circassians. Gordon's reaching the place as he did, alone and unattended, was a surprise to the whole civilized world. His being able to hold it ever since, and keep a Mussulman force faithful to him, a solitary infidel, apparently cut off from the rest of the world by a thousand miles of desert, during a whole year, has been a still greater surprise. Most of the other garrisons which Wolseley's expedition was intended to rescue, had either joined the Mahdi or been captured by him. There seemed to be no good reason why that of Khartum should not do the same thing. As a matter of fact, it did not do it. Gordon, too, had five or six steamers fortified against musketry with planks backed by thin sheets of iron, and manned by faithful and plucky blacks, commanded by Turks, which moved up and down the river at pleasure, and kept the Mahdi from making himself comfortable anywhere on the banks. It was believed that if the worst came to the worst with him, if his supplies began to fail or his men began to waver, he could embark on these steamers and make his way southward to the Congo country. Stanley has said repeatedly that he would have no difficulty in making his escape by that route.

The situation as it now presents itself to the British Government and to Lord Wolseley is well fitted to shake the courage and confidence of the wisest and boldest. Nothing like it in point of difficulty has been encountered by British statesmen since the rising in India in 1857. To retire foiled, leaving not only Gordon but Khartum in the enemy's hands, would damage British military prestige in a way which would exert a very unfortunate influence on the various complications with foreign Powers, and especially the Egyptian complication, in which the Gladstone Ministry is plunged, and would deeply wound the national pride. But the opposite course is one of which Wolseley might well say, as Wolfe said when before Quebec, that "its difficulties are enough to appall the stoutest heart." The Mahdi has come into possession of a considerable quantity of military stores, and of some heavy guns, and of a very strong position; and the success will probably inflame the courage and fanaticism of his followers, and bring large reinforcements to his standard from all the surrounding country. It is well, too, if it do not raise the tribes along the line of Wolseley's communications down the river, and make it for a good while as much as he can do to keep his little force alive in that vast wilderness. The more one examines the problem, indeed, the sorrier one feels for both the statesmen and soldiers who have to solve it.

Mr. Gladstone, in particular, must to-day more than ever long for his well-won repose. What the effect of this event on his Ministry will be, it is almost useless to conjecture, because the extent of popular confidence in Gladstone himself is an unknown quantity, which has of late spoiled all prophecy about his political fortunes. He will, if he remains in power, owe much, however, it is quite safe to say, to the absence on either side of any other man even distantly approaching him in power and resources. He has a people behind him who, more than any other in Europe, make desperate crises easy for their rulers. English courage—the courage never to submit or yield—always rises highest when the days are darkest. It is emphatically what Napoleon called a "two o'clock in the morning courage." But what a warning the whole story of the Sudan against the dangers of a "brilliant foreign policy" is! Disraeli's war in Afghanistan cost enough to have bought out every landlord in Ireland, and have honestly and forever settled the Irish question. This Sudan expedition will, before it is over, cost enough to extinguish pauperism in East London, and give to tens of thousands of starving wretches a chance to start afresh under kindlier skies, to say nothing of the burnt villages and the slaughtered peasants abroad, and of the weeping widows and desolated homes and fatherless children in England.

It is but fair to say for Mr. Gladstone that he is the victim not so much of his own want of foresight as of the popular hindsight. He inherited, but did not originate, the tradition, old as the Indian Empire, that no foreign Power must be allowed to get a foothold in Egypt. When the Khedive piled up an immense debt, mainly held in France, and became unable to pay the interest, and there was imminent danger that the bondholders would force the French Government to take forcible charge of Egyptian finances, Lord Beaconsfield, in obedience to this tradition, proposed in 1879 a joint financial control with France, in order to forestall exclusive French interference. This was the beginning of a series of blunders. It is now plain that it would have been better to take the ground at once that the Egyptians should not be compelled by foreign force to pay a debt contracted by an improvident ruler, any more than any other community, and that the Egyptians had as much right of repudiation as any one else, and should be allowed to exercise it.

Mr. Gladstone thus did not originate the joint control; he inherited it. But, in obedience to the anti-Jingo sentiment which restored him to office in 1880, he did not attempt to alter or extend it. It broke down in 1882 under Arabi's rebellion, which expelled the English and French agents from the country, and put the lives and fortunes of the resident foreigners in danger, and—what was of more importance—threatened the security of the Suez Canal as a means of communication with India. Some European Power was sure to interfere with this state of things if it lasted long. France would have done so if England had not, and English sentiment undoubtedly demanded English interference. What Englishmen wanted, however, was only a little interference—that is, just enough to extinguish Arabi. They did not foresee, when Alexandria was bombarded and the battle of Tell el-Kebir fought, that it would bring the whole fabric of Egyptian government down in a heap of ruins, and that England would in fact, if not in form, have to take charge of the country and administer it.

Here again Mr. Gladstone was careful not to go too far. He set the Khedive up and tried to rule Egypt through Egyptian functionaries. He determined not to try to put down the rebellion in the Sudan, which had carried everything before it, but simply to withdraw the garrisons from that region and let the Sudanese take care of themselves. When Gordon offered to go to Khartum and do it all by his personal influence, he let him go. If it could be done by the risk of one man's life, it was better than by the risk of thousands. He occupied Suakim in order to have a base of operations on the Red Sea, if the occasion for them should arise. When Osman Digna came too near the place at the head of his hordes, in an exultant frame of mind, the British went out and gave him two thrashings, apparently for the purpose of showing him how much harder it would be to deal with them than with the Egyptians, if he chose to make more trouble. Mr. Gladstone tried, when most of the garrisons had surrendered or gone over to the Mahdi, to get Gordon to leave Khartum while he could, and give up an enterprise which was plainly hopeless; but Gordon refused and set him at defiance, and the British public then began to worship Gordon as a plucky martyr, he being clearly a half-crazy fanatic. When everything else was shown to be useless, the present unfortunate expedition was sent to rescue Gordon, with what result we now know.

All through this business, in fact, the Ministry have in their movements faithfully reflected the condition of the English mind, which may be described as one of perpetual halting between two opposing causes. The great bulk of the people have become alarmed at the immense size of the Empire and the weight of expense which it involves, and are opposed to the policy of further extension. But they are equally opposed, in obedience to traditions of which they are very proud, to any curtailment of it. They want it kept as it is, with as little expense as possible, so that they may give their time and strength to home reforms. In order to carry out this sort of policy they put Mr. Gladstone in office. What is now dawning on them is, that it is a policy which neither Mr. Gladstone nor any other man can carry out. An empire so vast, which covers or touches so many barbarous and discontented races, and meets civilized competitors at so many corners of the globe, cannot be made stationary or economical. The smallest disturbance at any point is liable to develop into a war. The smallest movement in defence of either dignity or prestige is likely to make a vast accession of territory a mere measure of self-preservation. It is a policy, in fact, which English Liberals, with their humanitarianism and cosmopolitanism and volunteer army, are utterly unfitted to carry out. They

must be frankly conquerors, or frankly philanthropists. The rôle of the conquering philanthropist is one which is in our time forbidden to a democracy, and a democracy modern England is. Mr. Gladstone is probably about to be sacrificed, laden as he is with years and honor—the greatest statesman of the régime of peaceful progress which any modern country has produced—to the last attempt of the English people to preach the gospel from behind Martini-Henri rifles and Gatling guns. The first really Radical Ministry will have to choose between comfort and imperialism.

THE RAILROAD PROBLEM.

DECIDEDLY the strongest argument that has been advanced in favor of some legal limitation on railroad construction in the United States is to be found in the pamphlet of Mr. Marshall M. Kirkman, of Chicago, entitled 'The Relation of the Railroads in the United States to the People and the Commercial and Financial Interests of the Country.' Mr. Kirkman writes from the standpoint of a railroad man and expert. His aim is to provide that railway property shall yield fair returns to the owners. He finds an obstacle to this in the competition of capital —that is, in the excessive multiplication of lines and in the paralleling of old lines by new ones. If the practice goes on unchecked, no lines can yield fair profits, if indeed any profits. The thing must be stopped for many reasons. It is not for the interest of the community that railroads should become bankrupt any more than that merchants and manufacturers should become bankrupt. But they will be so sooner or later if unlimited competition goes on. The only power that can arrest this agency of destruction is the Legislature. Therefore, it must be invoked to do what European governments do —set bounds to railway building, and allow no new roads to be built except after a fair hearing and determination in each particular case.

The readers of Mr. Kirkman's pamphlet will be impressed by the fervor of his argument and by the copiousness of his knowledge, but will hardly be convinced of the effectiveness of his remedy. Let us take the most glaring illustration which our railway history affords of the evils of unregulated competition—that of the West Shore versus the New York Central. Suppose that the projectors of the West Shore enterprise had been required, four or five years ago, to go before the Legislature, or any railroad commission established by it, to prove that a new road on the west bank of the Hudson River to Albany, and thence to Buffalo, would be a work profitable to the investors and of public utility. If profitable to the investors, its public utility would be taken for granted, because the mere fact of profit in a new line would imply the existence of more traffic than sufficient for the New York Central, and would point to the dangers of monopoly. Would any stronger argument be required by the Legislature than was required by the private individuals who were asked to furnish the money to build the road? Would not the Legislature have concluded at once that if A, B, and C were willing to risk their private means in the enterprise, the State might well afford to risk a charter which costs nothing? Would not the question of the profitable character of the enterprise have been considered as settled and concluded by the very fact that A, B, and C, who had gone over the ground carefully, had become so thoroughly convinced of it that they were ready and eager to put fifty or sixty million dollars into it? These are questions which answer themselves. The Legislature would have granted the charter with far less difficulty than the promoters found in getting the money. Therefore, Mr. Kirkman's remedy is no remedy. Repealing the general railroad law is merely relegating the question to a tribunal which would deal with it very much as it is dealt with now.

The West Shore enterprise has brought its own punishment in the shape of a fine of some thirty million dollars upon the mistaken capitalists who invested their money in it. An equal punishment has been visited upon the New York Central, if the decline in market value of its shares is to be taken as the true measure of the infliction. Both properties together are worth no more, if as much, as one of them was worth three years ago. This is a great evil to the owners of both. Is it an evil to the public? This question cannot be answered off-hand, nor do Mr. Kirkman's numerous and rather voluble arguments furnish a satisfactory answer. It is not helpful to say that—

> "Tariffs can never be reduced below the amount needed to meet expenses and interest on the combined properties. If so reduced, the community thus attempting to relieve itself at the expense of the carrier will suffer greater loss from the stagnation that must ensue from the presence of so large a body of unproductive capital, than would follow the payment by it of rates sufficient to afford the needed money. If the business of a railroad is superabundant and profitable, rates may be reduced within the limits necessary to return a fair rate on the investment, but the reduction must ever be dependent upon these conditions. If a business only able to sustain one line is divided among several, each must receive from it the income required to meet necessary wants, and thus the community, instead of being benefited by the construction of unprofitable roads, must make up the difference between a remunerative and an unremunerative traffic."

It is not true that "tariffs can never be reduced below the amount needed to meet expenses *and interest* on the combined properties." The West Shore Road is a standing proof of the contrary proposition, for its tariffs are a long way below that figure now. It is struggling to meet expenses only. It is not paying interest, and does not expect to do so at present. Nor does the presence of a large body of unproductive *fixed* capital necessarily imply or lead to general stagnation. All the old and disused canals in the country represent unproductive capital, yet they do not cause stagnation. If the builders of the West Shore Road had employed their funds in constructing marble monuments to the heroes of the late war, the same amount of unproductive capital would have been in existence, but it would not have led to stagnation. Again, "If a business only able to sustain one line is divided among several, each *must* receive from it the income required to meet necessary wants," says Mr. Kirkman. There is really no "must" about it, nor is it clear what is meant by "necessary wants." A railroad generally wants all it can get. Its only *necessary* wants are operating expenses. If it cannot get these, it must stop.

The railroad problem is something deeper than Mr. Kirkman imagines. It involves all that we see going on in other branches of business under the law of competition, and something more. Capital badly invested in manufacturing or trading can be transferred. If badly invested in railroads, it can only be lost. An ideal solution of the problem would be the ownership of all railroads by the Government; but the practical realization would be attended with difficulties far greater than any now known, since Congress would forthwith become a "pool" for the adjustment of rates from everywhere to everywhere, and nobody would be satisfied with anything. The railroad question, instead of being a minor part of the political questions of the day, would engulf politics altogether. The nearer Government ownership should come to an ideal state of justice and economy, the nearer would Government approach to the likeness of a despotism, since arbitrary power alone is competent to decide the multifarious and interminable disputes that would arise.

General consolidation, if that were practicable, might yield many of the advantages without the disadvantages implied in Government ownership. Experience has proved that consolidation, so much feared by the public in the beginning, leads to reduction rather than to increase of rates. It enables railways to economize by running no more trains than are needed to do the business. If two trains are sent from New York to Buffalo simultaneously to carry a certain number of passengers, when one train would answer the same end, there is a clear loss of the expense of running one train—a loss which the companies or the public must bear. Therefore, consolidation is economy. But general consolidation, even of the great trunk lines, is impossible. The interests of individuals, of cities, and of sections are too widely variant to permit it. If consolidation and Government ownership are alike impossible, and if legal limitation upon railroad construction is unattainable, there is no alternative but the law of competition and survival of the fittest.

TRAVELLER'S DIARIES.

"ALMOST all books [of travel]," says Lady Mary Wortley Montagu, "are either defective or fabulous. I have observed that the only true intelligence of distant countries is to be had from those who have passed [time in] them, without a design of publishing their remarks." This observation is hardly as accurate now as when it was made, a hundred and thirty years ago; but it is still perhaps true that the less "the design of publishing their remarks" has been in the minds of the writers, the more lively is the interest the remarks excite. The only question is whether any such unconscious mind, such unintentional writer, exists in these days of universal "publishing." And this suggests the thought that a delightful Handbook for Italy (or other countries) might be made by bringing together the observations and impressions of famous and remarkable men and women as recorded in their informal letters and diaries. What could be more entertaining than to travel in company with Petrarch, Montaigne, Milton, Evelyn, Horace Walpole, and Gray, the Président de Brosses and his five "spirituel" companions, Mme. de Staël, Goethe, Shelley, George Sand—the list may be made of any length? It would be talk like that which

was had in Pepys's parlor on that evening of a Lord's day, when "came Mr. Andrews and Hill, and we sung, with my boy, Ravenscroft's 4-part psalms—most admirable musick. After supper, fell into the rarest discourse with Mr. Hill about Rome and Italy: but most pleasant that ever I had in my life." This was discourse Pepys was fond of. He records elsewhere how on another occasion he "lay in bed" with "Mr. Brisband, who is a good scholar and sober man, . . . getting him to give me an account of Rome, which is the most delightful talk a man can have of any traveller; and so to sleep." How one would have liked to read with Pepys Montaigne's incomparable description of Rome!

And even if one were inclined to go back to the far older writers, it would be full of interest to be reminded by this companionable Handbook who had been where—to recall Marcus Aurelius, or Ovid, on the banks of the Danube, and Horace at the spot where

> "Incipit ex illo montes Appulia notos
> Ostentare mihi, quos torret Atabulus. . . ."

Murray's Handbooks attempt in some degree to do this incidentally; but our purpose would be to have quotations and references the only contents of the volume. Mr. Longfellow has collected for us the poetry associated with foreign lands; and some one should arrange the almost more valuable prose which is scattered through many not often opened volumes. These passages would be found full of suggestions from the characters of the writers and the conditions of their times.

But not less noteworthy than what they say about what they observe, is what they do not say and what they do not observe. Goethe, in his diary of his sixteen-days' visit to Venice, makes not even an allusion to—much less gives any slightest description of—St. Mark's and the Ducal Palace, except in so far as he has a paragraph on the four horses, as specimens of Greek art. He had drunk Palladio till he was intoxicated, and could see no piece of architecture truly. Lady Mary Wortley Montagu, fifty years earlier, "went to see the ceremony of high mass celebrated by the Doge, on Christmas eve. . . . The Doge's niece (he having no lady) met me at the palace-gate and led me through the palace to the Church of St. Mark, where the ceremony was performed"; but Lady Mary was apparently as one blind, and was alive only to those things which made her "quite satisfied with my treatment in this town"—fêtes, opera-boxes, masked balls, "a magnificent collation" on board the *Bucentaur*, and a regatta, "by far the finest sight in Europe, not excepting our own coronations."

Evelyn, examining, with a scholarly attention equal to and equalled by Goethe's, the same things which Goethe saw a hundred and fifty years later, shows a quicker eye for architecture, which was one of the strongest interests of their sight-seeing days to them both. He was only twenty-three when he set out on his travels, but he, too, had studied (and quotes) Palladio; yet he remarked immediately at Abbeville that "the principal church is a very handsome piece of Gothic architecture," and afterward he discourses more or less well on the various churches, and abbeys, and cathedrals, and other great buildings of France and Italy. Nevertheless, at Venice, "the first public building I went to see was the Rialto. . . . Next day I went to their Exchange; . . . thence my guide led me to the Fondigo di Todeschi, . . . hence I pass'd thro' the Merceria"; then he saw "that admirable Clock, celebrated next to that of Strasburg; . . . and so we enter'd into St. Marc's Church." And "so" he describes it at very considerable length, but concludes: "After all that is said, this Church is in my opinion much too dark and dismal, and of heavy work."

M. de Brosses, in 1739, was of the same mind: "It is a church in Greek style, low, darkened, in miserable taste both within and without, covered with seven domes lined inside by mosaics on a golden background, which make them seem much more like cauldrons than cupolas." And, like Goethe, he was of opinion that the four horses were "the only thing in all this building which is really worthy of admiration." Yet the President was not as thoroughgoing an admirer of Palladio as Goethe. He thought it *en règle* to give him a page at Vicenza—"in talking of Vicenza, one must always say something of architecture and Palladio"; but what he last says is: "After having seen the public works of Palladio, we went to see his own house, where we perceived that in a very small space he had massed together, without, all the architecture possible, and, within, all possible inconveniences."

Lady Mary, on the other hand, was, in her own half-accomplished way, a devout disciple of Palladio. "Is it not enough," she asks, "that I say they are most of them the design of Palladio?" when writing of the palaces at Genoa, of the Strada Nuova—"perhaps the most beautiful line of building in the world." And consequently, at Nuremberg, though she declares herself to have seen "all that is remarkable in this place," it is quite evident that it was impossible—and not less so at Brunswick—for her to see the peculiar effectiveness of the picturesque houses and warehouses.

But "picturesqueness" was an unknown thing in those days. It is difficult to recognize fully, in spite of the now frequent comments on the fact, that, till within the last century, *orderedness*, whether in Art or Nature, possessed the strongest charm for cultivated minds, so that not only was architecture judged by a very different standard from ours, but what we now call "fine scenery" was to travellers in general, and especially to English travellers, "frightful," and merely frightful. Evelyn, describing his passage of the Simplon, speaks of "mounting again thro' strange, horrid, and fearfull craggs and tracts, . . . the horizon being terminated with rocks and mountains, whose tops cover'd with snow seem'd to touch the skies, and in many places pierced the clowdes." Lady Mary was terrified quite as if she were like other women in passing "by moonshine" among the "dreadful rocks" of Saxon Switzerland; while Mr. Wortley was fast asleep by her side. And the best she can say of the ascent of Mt. Cenis is, that "the prodigious prospect of mountains covered with eternal snow, of clouds hanging far below our feet, and of vast cascades tumbling down the rocks with a confused roaring, would have been entertaining to me, if I had suffered less from the extreme cold that reigns here."

Horace Walpole's impression of the four days he was in crossing the Alps by this same pass is conveyed in the exclamation: "Such uncouth rocks and such uncomely inhabitants! My dear West, I hope I shall never see them again. . . . When we came to the top [of Mt. Cenis] behold the snow fallen! and such quantities, and conducted by such heavy clouds that hung glouting, that I thought we never could have waded through them." As the modern traveller is rushed through the tunnel let him remember the discomforts of his precursors over his head. It was the day before wading through these "glouting clouds" that Mr. Walpole "had a cruel accident." He had with him a little black spaniel, "the prettiest, fattest, dearest creature"; suddenly "there darted out a young wolf, seized poor, dear Tory by the throat"—and good-by to poor, dear Tory! Evelyn met with a less tragic but similar loss. At La Charité, on the Loire, "I lost my faithfull spaniel [Piccioli] who had follow'd me from Rome: it seems he had been taken up by some of the Governor's pages or footemen, without recovery, which was a greate displeasure to me because the curr had many useful qualities." It was at this time that "we had the great poet, Mr. Waller, in our companie, and some other ingenious persons."

So one may go on, hither and yon indefinitely, with one or another "ingenious person," through this world of literature—this land of books, this country where, as in Italy herself (as Gray reports Walpole as saying), "Our memory sees more than our eyes." Memory reads between the lines, but the words suggest thoughts that would not otherwise be ours. It is through literature only that "sight-seeing" in Europe becomes a valuable education. It is only a mind imbued with literature that can feel with Goethe, "When one beholds what is two thousand and more years old, so variously and completely altered by the changes of time, yet still the same soil, the same mountains, often, indeed, the same columns and walls, and in the people still traces of the old character, one becomes a boon-companion of the great decrees of Fate."

ENGLAND.—THE PROGRESS OF DEMOCRACY.

LONDON, January 24.

WE have all been reading, this Christmas and New Year, Croker's Correspondence, a book whose value for recent history has been equalled by few publications of this generation. It contains the letters written and received by a man who, though he had been almost forgotten since his death, some twenty years ago, or remembered only as the object of ferocious attacks by Macaulay and Disraeli, played a prominent part in his own time as the trusted friend and adviser of Wellington, Peel, and other Tory leaders, and as the moving spirit of the *Quarterly Review*, whose political and literary force was greater than now, when it has the brisk rivalry of so many monthlies to contend with. These letters give a lively picture of the state of politics and political opinion from 1812 down to 1860. It is a long period, a period full of great events and large changes. One feels how different was the England which Croker left after the Crimean War from that in which his career began during the struggle with Napoleon: how much stronger the middle classes had become, how much weaker the aristocracy and the Crown. Yet the sense of this contrast is hardly so strong as that of the change from 1860 to 1885. Even the later parts of the correspondence read like ancient history, so vast is the interval which seems to separate us from them. Disraeli, who appears there, is but just gone. Mr. Gladstone and Mr. Bright are still among us, yet the world of Mr. Gladstone's age seems a wholly different world from that of his middle life. Croker and his friends held the rule of the landed aristocracy, the influence of the Crown, the exercise of substantial power by the House of Lords, the maintenance of great landed estates, of the Corn Laws, of the privileges of the Established Church, to be essential to the welfare of England, the extinction of any one of which must bring revolution, anarchy, spoliation, national humiliation in its train. Now, the Crown, except to some slight extent in foreign relations and ecclesiastical appointments, is powerless; the House of Lords dreads the extinction of its power too much to venture to exert such power as it retains; the Established Episcopal Church has been dethroned in Ireland and is menaced in England; the landed aristocracy sees its younger members schooling their tongues to talk the language of democracy. Everybody admits that the mass of the people is henceforth to rule, and nobody ventures publicly to deny that this is the just and

rightful system. The old Toryism is all but extinct among us, and the new Toryism speaks with so many different voices that we cannot yet tell what its programme will be.

To examine the causes which have hurried opinion along so quickly during this quarter of a century will be an interesting occupation for the philosophic historian of the future, who will judge better than one can do now how much is due to general European forces, and how much to the personal action of Mr. Disraeli and Mr. Gladstone, unquestionably the men who have chiefly affected the march of events. My present task is to endeavor to indicate the aspects the democratic movement now wears, and the ideas which animate it.

As respects the control of Government, the masses of the people have now got all they can desire. Numbers reign. The suffrage has been so widely extended that the proportion of the upper and middle classes to the poorer class is extremely small, and the establishment of universal suffrage, though it would increase the number of voters, and would render elections more costly and more uncertain, would make no sensible difference to the relative power of different classes. The humblest class, being omnipotent already, can obtain no further increase of power. Such authority as the upper and middle classes may henceforth exert will depend not on voting power but on social and intellectual influence, on wealth, on their position as employers or landlords. England is, therefore, now a pure democracy in theory, except in so far as the House of Lords may be able to restrain a majority acting through the House of Commons. Now the House of Lords, though in point of law just what it has been for the last three centuries, is practically dead as a restraining power. It may still be able to modify the details of small measures ; it will no longer attempt to arrest large ones.

Not only has our Government become democratic, but people have wakened up to see that such is the fact. The results of the Franchise Bill of 1867 have never been fully felt till now, because the old habits remained, and because the suffrage had still remained restricted in the counties, so that the work of democratization remained incomplete. Now that it has been accomplished over all the country, and that the allotment of seats to population has diminished the influence which rich and locally important men exercised through the small boroughs, men's eyes have been suddenly opened to see where they stand. The result is seen in the new tone adopted toward the masses. Their sovereignty is owned, and they are addressed as sovereigns. As in despotisms where a new king comes to the throne, every one hastens to salute him, and criticism is suspended in the eagerness to obtain his favor, so now we hear little as to the probable merits and conduct of our new rulers, because everybody's wish is to announce his loyalty. There is some little danger that the language of submission may degenerate into flattery, and that candidates in particular may forget, or appear to forget, that the gift of political power does not forthwith make its possessors wise and good, capable of exercising directly those functions which they have hitherto left to the governing classes.

Another result has been the increased activity shown in creating local political organizations. We seem to have now entered the same stage which your people passed through some sixty years ago, in the days of John Quincy Adams, Jackson, and Van Buren, when the right of the citizens not only to elect their magistrates and representatives, but to select the candidates for these offices, became recognized, and was given effect by the general establishment of a nominating machinery of primaries and conventions. The Liberals have led the way in creating local associations in every constituency on a representative basis, and giving to the delegates of these associations the duty of choosing party candidates. The Tories are following suit, though with less willingness to adopt a purely representative system. The object, of course, is to prevent discord within the party, and the consequent waste of its strength in elections. But the result will also be to make the relations of a member to his constituents more intimate than they have hitherto been. In the county divisions he will have a constituency consisting chiefly of laborers and workingmen instead of farmers and shopkeepers, whose wishes he will have to ascertain. In the cities, he will have divisions much smaller than heretofore, with the residents in which he will be able to have more direct intercourse. Hence he will see more of his constituents, they will know him more closely; he will be more apt to cultivate their favor, they more apt to express their wishes to him and narrowly observe his conduct. This may tend to trench upon his independence and turn him into a mere delegate. I do not think it necessarily will, because there is a great disposition in the poorer classes of England and Scotland to follow a man they have once learned to trust, and to follow him all the more because he belongs to the richer and better educated ranks of society. If it does, it will be rather because candidates may wish to grovel than because electors wish to trample.

The evidently good result of the change is, that the interests of the poor will, at least for some little time to come, occupy more of the attention of Parliament than they have done of late years. Already we hear on all sides of the social reforms which the new House of Commons is to carry out. This great constitutional change happens to have coincided with two other grave facts. The one is a serious depression in trade and agriculture, throwing a good many of the poorest out of work, and making the rest uneasy, while it lessens the ability of the wealthier class to help them. Tried by the test of poor-law returns, the distress is not alarming; that is to say, it does not reach the point of starvation, it has not much increased the number of paupers receiving public relief; still, it is sufficient to set the public mind speculating on our industrial future. The other is an increased sensibility to the sufferings of the poor, and a disposition, very marked among philanthropic persons and particularly in the younger generation, to distrust the orthodox political economy with its doctrines of laissez-faire, supply and demand, and so forth. This disposition does not go far in the direction of protection, which would have no importance as a cry but for the desire of one political party to use it for political purposes and for the benefit of the landowners. As the masses of our city population would never consent to tax food, and as a tax on food is the only kind of protection from which any class can expect help, there is no prospect of its becoming a practical question. But the dissatisfaction with the old economics, and the sentimental anxiety to improve the lot of the poor, leads many to turn to the State for help, and some to look tenderly on Socialistic solutions.

With all these notions and feelings fermenting in the public mind, we have grown accustomed to listen quietly to schemes which would have astonished politicians five or six years ago, before the Irish Land Act had shaken all established ideas. Nevertheless, a sensation has been created by the recent deliverances of Mr. Chamberlain, for it is from Cabinet Ministers that suggestions of sweeping change have usually come. He has emphasized the necessity for legislation on behalf of the workers with particular reference to the land, to taxation, and to education. For some years past he has been the leader of the party which seeks to copy your system of universal gratuitous schools—a party which obtains support from those who look on gratuitous education as a means of extinguishing the denominational schools controlled by the Church of England and the Roman Catholics. He has now indicated his view that land escapes its proper share of taxation, and that taxation altogether ought to be thrown more heavily upon the rich, by means apparently of a graduated income tax—a plan for which there is undoubtedly much to be said, but which alarms the rich. He has expressed sympathy with the proposal to compel the restitution of all common lands improperly appropriated during the last seventy or eighty years (I forget the exact time fixed), which is being embodied in a bill by Mr. Collings, one of the most advanced of his Liberal friends, and adds that he does not see why the three F's of the Irish Land Act—fixity of tenure, free sale, and fair rent—should not be applied to English tenancies. These and other forthshadowings of his speeches have been well received by the Radicals, and caused a proportional alarm in the richer and more conservative class, which had scarcely realized that a new social legislative programme must be expected to follow a shifting of political power. What are the main points in such a programme ? No one has yet worked them fully out, but they will probably be the following :

1. Abolition of the law of primogeniture, and such a restriction of the power of tying up either land or personal property as will practically abolish our present law of entail and settlement.

2. Creation of facilities for the acquisition of land by agricultural holders, possibly by a system of loans to small occupiers, and a large development of allotments to laborers.

3. Increased taxation of land, especially by raising the succession duties.

4. A progressive or graduated income tax or property tax, applied to all forms of property.

5. Extension of the powers of local authorities in towns and in rural districts, so as to enable them to provide better dwellings for the poor.

6. Universal gratuitous undenominational education.

7. Disestablishment and disendowment of the established Churches of England and Scotland.

8. Payment of the official expenses of elections out of local taxes.

9. Abolition of the House of Lords.

10. Payment of members of Parliament.

Of these planks in the Radical platform, some are far from being generally accepted even by Radicals. There are, for instance, many who wish to keep up some sort of Second Chamber. There are still more who doubt the expediency of paying members or of graduated taxation. There is, however, no single plank which has not been advocated by some leading and responsible politician, and none which is not likely to be soon warmly debated. Yet most of them would have been ten years ago deemed impractical and purely speculative propositions. The arguments by which many of them are supported—appeals to the "natural rights" of the people, demands that the public funds and public machinery shall be directly used to promote the well-being of the poor, because that is an object of the highest concern—are almost more noteworthy than the propositions themselves. The fabric of English society is so strong that there is no reason to think that it will give way under any strain likely to be put upon it. But a strain there may possibly be, and some Tories, however disposed to condemn Mr. Gladstone as a Foreign Minister, may be heard wishing that the Conservative force which he

exercises in domestic politics could be continued for ten years more, till the new electoral bodies have gained some experience. It is, however, likely enough that the pinch will not come at first—great changes are seldom fully felt at once—but after a Parliament or two, when the masses have better realized their power. Y.

DUMAS'S "DENISE."

PARIS, January 26, 1885.

AFTER "Théodora," which was a mere pleasure for the eyes, we have had "Denise," which is or pretends to be a pleasure for the mind. By a curious and perhaps not unintentional contrast, the new play of Alexandre Dumas, the son, obeys one of the laws of Aristotle, the law of the unity of place. During the four acts, we have exactly the same scenery—an ordinary drawing-room, comfortable enough, too comfortable for the taste of the old *habitués* of the French Theatre. There is especially a palm-tree (the palm-tree of the "Étrangère"), which is decidedly objectionable. However, it is evident that Alexandre Dumas has made a great effort toward simplicity; he desired us to be quietly at home, and to give our whole attention to the play of passion, to the dialogue, and to the moral lesson which he intended to convey.

A moral lesson! The word would seem almost singular to a person totally unacquainted with the present French stage. Still, there is no mistake—Dumas professes to be a moralist. He has discovered morals, and he seems to enjoy his discovery as much as Christopher Columbus enjoyed the discovery of the New World. We must, in one sense, be grateful to him; we must recognize a certain merit in a person who struggles hard in order to discover the laws of morality, who walks in darkness and without the guide of religion or philosophy, and who, born and bred in sensualism, rises with an almost painful effort toward the heights of idealism, of duty, of sacrifice. The road is long, is narrow, is bordered with precipices, and Dumas sometimes falls over them. Can we forget that in his first great play, the "Dame aux Camélias," he idealized vice even more than the Abbé Prévost had dared to do in his 'Manon Lescaut'? The famous verse,

"Et l'amour lui refait une virginité,"

was put in action. For the first time the person of whom the "Dame aux Camélias" is a type, was placed on the stage, was made interesting, and demanded our applause.

Dumas's second great play was an advance on the "Dame aux Camélias." The "Demi-Monde" will probably remain his masterpiece, and will, with the "Gendre de M. Poirier," be looked upon by future generations as a literary monument of our time and of our social state. Here Dumas is much nearer the truth: he has understood that vice leaves marks which nothing can efface; that a certain sort of venality and corruption leaves no place for real purity, real devotion, real virtue. Some things cannot be undone; it is a sad and terrible truth. The heroine of the "Demi-Monde" tries in vain to fall into the common current of domestic felicity, and is thrown aside. The men who have been her accomplices reject her, denounce her, betray her; she is an outcast and must remain an outcast.

The "Demi-Monde" marks the summit, if the expression is permissible, of the morality of Dumas—a morality which is experimental, which is made of tears, of sufferings, of disappointments. Ever since, he has been discussing all kinds of social questions—the position of the natural son, the divorce question. These problems are his natural element. He is essentially a socialist—I mean, a student of social questions. The French Chambers, at their last session, enacted a law reëstablishing divorce, which had been abolished since the Restoration. We have had already many conversions of the *séparations de corps*, which the old law permitted, into complete divorces, which the new law allows. Dumas had lost one of his favorite questions. The time had come to find something new, something stronger. "Denise" is the expression of this continual and almost morbid effort of Dumas toward another social state of things. *Denise* is what the French law sometimes calls brutally a *fille-mère*: she has had a child, has been a mother without being a wife. Of course, there are extenuating circumstances: she was seduced by a young man who had promised to marry her; she was in love with him, she was ignorant, and her very innocence turned against her and contributed to make her guilty. It is a sad case, and alas! a very common case. Her fault has been concealed from everybody, even from her father; her mother alone knows the terrible secret. The young man, the Don Juan, or, as Dumas would call him, the *vibrio*, has abandoned the girl, and has not fulfilled his promise, but he cannot reveal the fatal secret. He is a *vibrio*, a noxious beast, but he pretends to be a gentleman.

Denise enters as governess the house of a gentleman of thirty, who is unmarried and has a young sister. This young sister has just left the convent and needs a companion and a guide. Fate will have it that *Fernand de Thauzette*, the *vibrio*, a young man who only wants to amuse himself, knows *M. Bardannes*, the gentleman who has taken *Denise* into his house. The mother of *M. de Thauzette* is still young. She is a great coquette, who adores her son and wishes to marry him to *Mlle. Bardannes*, who is an heiress. Fate will have it also that this excellent mother has in past times counted *Bardannes* among her lovers. *Bardannes* has no esteem for the young *vibrio*, and he refuses to give his sister to him. *Mme. de Thauzette* becomes very angry, and finally tells him that he ought not to be so severe—that all over the country it is said that he, *Bardannes*, has a mistress; that this mistress is *Denise*, the companion and governess of his sister. *Bardannes* is very indignant, and the wicked mother tells him, "Bah! you would not be the first." She goes out, after having launched this Parthian dart. Not the first! *Bardannes* meditates upon this word. He has suddenly become conscious of two things: he loves *Denise*, and he is jealous of her. Is she pure? Is she guilty? Have appearances deceived him or not? The poison has entered his veins, and Dumas shows him looking round in every direction for something that may make him perfectly miserable.

The lover begins his inquest. He talks with the father of *Denise*, an honest man, an old officer, who became his intendant at the same time that *Denise* became the companion of his sister. He learns that *Denise* and the *vibrio*, the seducer, were educated together, that there had been some question of a marriage between them, but the marriage did not take place, *Denise* was too poor and the *Thauzettes* were too rich. This is not enough; the lover continues his inquest. He presses *Mme. de Thauzette* with questions; this gay lady swears that nothing had ever been so innocent as the love affair of her son and of *Denise*. Even this is not enough; he cross-examines the young seducer himself, and the young man gives him his word of honor that he has never been the lover of *Denise*. It is commonly said that there is but one circumstance in which a gentleman is allowed to lie: he has no right to confess alone a sin which he has not committed alone. *M. Bardannes*, who seems to have very little knowledge of the world, is completely satisfied with the declaration of the young Don Juan; he at once goes to the parents of *Denise* and asks for her hand. He is so happy that he consents at the time to the marriage of his sister with the seducer. So far everybody has concealed the truth: one has lied in the interest of her son, the other in his own interest. The critical moment comes; the only person who will not lie is *Denise*. She learns of the betrothal of *Fernand*, her seducer, to the girl who has been confided to her, at the very moment when *Bardannes* makes his offer to her. "Will you be my wife?" he asks. "No, I am among the women who love, but who cannot marry." *Bardannes* insists: how unhappy will he not be now that his sister is to leave him; he has consented to her marriage with *M. de Thauzette*. "To *M. de Thauzette!*" she exclaims; "the miserable man!" and she tells the whole story—how she was seduced by him, how she had a child, how the child died.

So far the play runs remarkably well. The exposition is very happy: the jealousy of the lover, his inquiry, the cross-examinations—all this is conducted with much art, and the effect produced by the explosion of the truth is very great. *Denise* destroys in a moment what so many lies had prepared. She loves *Bardannes*, as he loves her; but she will not betray him, and she will not allow his sister to be married to the wicked man who has been the cause of her misfortune. If she cannot be called a virtuous woman, she is a truthful woman, and she will not buy with a lie even the happiness of a whole life. It is a great pity that the effect of this fine scene is spoiled by the melodramatic details into which *Denise* enters after her avowal. One word was enough: a nice woman will not tell the man whom she loves all that *Denise* says. It is repugnant to hear her speak of her secret confinement, of the child given to a nurse, of the death of the child, of the cemetery where the poor victim is buried, of the flowers which adorn the little tomb. This is a great defect in taste. *Denise* makes a great sacrifice when she tells the man who is in love with her that she is not what he thought; but it is not in human nature that she should enter into so many particulars.

The drama comes here to its natural conclusion. It is quite clear that the young *Mademoiselle Marthe*, the sister of *M. de Bardannes*, cannot marry *Fernand*, who has seduced *Denise*. The wicked *Fernand* disappears in a cloud of universal reprobation; and *Marthe*, who has not been well satisfied with her first acquaintance with the world, announces her desire to return to her convent. Why should not *Denise* join her and turn her back upon a wicked world? This would be a natural end, and for a moment we are induced to think that things will take that turn. But what would become of the new theory which Dumas wishes to bring before us? A friend of the unfortunate *Bardannes*, who hitherto has had a mere episodic part, comes forward and explains that chastity and purity are as essential to man as to woman. Nevertheless, women do marry men who have not always been pure and chaste; why should not men marry women who have sinned, if they have repented? *Denise* has repented, *Denise* is good, *Denise* is perfect; *Bardannes* will never be happy with another woman, *Bardannes* can and must marry her; and so he does, and there is an end of the piece.

This end produced a sort of consternation the first evening, but the success of the first three acts had been so great that this feeling was, as it were, lost in the enthusiasm which had been kindled. Ever since, each representation becomes the subject of violent discussions: the *fille-mère* question is the talk of the town. Dumas has succeeded in giving an air of possibility to what was always looked upon as impossible. His new code of morality will, I am afraid, not make men more chaste; it may make women less pure.

Correspondence.

MR. MORSE'S HAMILTON AND ADAMS.

To the Editor of The Nation:

Sir: In your last number Mr. George W. Knight has pointed out sundry inconsistencies between views expressed by me in my 'Life of Hamilton,' published in 1876, and views more lately expressed by me in my 'Life of John Adams.' Perhaps the juxtaposition of selected sentences throws these inconsistencies into a more marked antagonism than would appear to exist if the entire chapters should be compared. But this is merely a question of the measurement of the angle; divergencies unquestionably exist between the two books, and more of them than Mr. Knight has mentioned. I was aware of this, and intended to say a few words about it in a preface to the 'Adams'; with this purpose I endeavored to re-read my earlier book on Hamilton, but I must confess that I found it tedious and gave up the task, so that, were it not for Mr. Knight's spur, I should never have moved in the matter at all.

I would like now, however, to say that the 'Life of Hamilton' was written when I was sufficiently near to the glorious period of youth to retain some tendency to hero-worship and to partisanship. My admiration towards Hamilton and his band was unquestionably a little too heavy a weight in the scales, if perfect justice was to be done. In the eight or nine years which have elapsed since the 'Hamilton' was written I have been steadily at work studying that period; as I have added to my years I have also added to my knowledge, and the result is a modification of my previous views. Certainly it would have been discouraging had it been otherwise. I can neither praise nor condemn so unreservedly as I could eight or nine years ago; and I construe the inconsistencies pointed out by Mr. Knight as indications of what I had hoped was the case—a less degree of partisanship, and a capacity for sounder judgment.—I am yours, etc.,

John T. Morse, Jr.

Boston, Mass.

SLIPSHOD LEGISLATION.

To the Editor of The Nation:

Sir: Your article in the *Nation* of January 29th, on "Slipshod Laws," and in particular what you say of the incompetence of legislative committees, recalls to my mind a bit of my own experience with law-makers, which may be of interest to your readers.

Some years ago I was practising law in Hartford, Conn., and was applied to by the officers of a manufacturing company, organized under the general joint-stock laws of Connecticut, for advice about a difficulty that had arisen in a suit which they were carrying on in another State. The difficulty was owing to a defect in the statute under which they were organized. I gave them such advice as I could, and afterward took occasion to consult with a number of my brother lawyers, several of whom, I found, had met the same difficulty in their practice. The Legislature being then in session in the city, it seemed to me worth while to call their attention to the matter. Accordingly I went to the Chairman of the Committee on Corporations and stated the case to him, and he made an appointment for me to meet his Committee. I appeared before the Committee, explained the present condition of the law, wherein it was defective, and what the injurious effects were, and was going on to state briefly what changes seemed to be needed, when the Chairman interrupted me: "Have you a draft of a bill?" "No," I replied. "To draw exactly such a bill as is needed would take some little time and trouble, which I do not just now feel able to give to a matter that does not especially concern me." "If that is the case," he said, "we can't do anything about it." I ventured to suggest that I had supposed that to prepare needed laws on the subject of corporations was one of the very purposes for which the Committee was constituted; but the Committee refused to entertain the subject, saying that they could not undertake to draw the bill. So nothing wa done at that time to amend the law, nor, so far as I know, until now.

I am not finding any fault with the Committee; probably they were right. But as an illustration of the working of our law-making machinery, look at the absurdity of the thing. There was a Legislature elected and paid for the express purpose of making necessary laws, and there was a committee of that Legislature expressly appointed to take charge of the subject of corporations. A plain defect in that branch of the law, which no one denied to be such, apparent on its face to be due to a mere omission or oversight of some previous Legislature, continually causing trouble and expense to citizens of the State, was pointed out to them, which could be corrected by a short and simple bill requiring no more than a few hours' work of some competent person to prepare; and yet they at once gave up the task as out of their power.

The truth is that, while the people at large, or a Legislature chosen by and representing them, are quite competent to lay out the broad lines of policy upon which the Government is to be carried on, and to say in general what means shall be used to attain their ends (and that they do so, and that such a Legislature have power to pass upon any bill before it becomes law, is essential to free government), the details of measures often require to be worked out by experts; and this is getting to be more and more necessary with the increasing complications of modern life. When old Peter Stuyvesant thrust his watch into the face of a popular orator, and asked him if he could repair it, and, on the man's answering that he could not, as he had not learned the trade of watchmaking, demanded of him how then he presumed to meddle with affairs of administration, which required vastly more knowledge and skill than mending watches, when he had never learned that business—he used an argument which, though if pushed to its extreme it would militate against all free government, has in it a quantum of solid truth.

There ought to be in every State a small council, of which the Governor and chief executive officers of the State should be *ex-officio* members, whose business it should be to prepare drafts of laws and present them to the Legislature, or to whom the Legislature could refer bills for consideration and revision as now to legislative committees. In preparing bills, they should work quietly and at their leisure through the year, and not have to hurry their work through during the few weeks of the actual session. Its members, except the Governor, should have seats in the Legislature with the right to speak but not to vote.

The expense of such a council would be partly, perhaps wholly, saved in the shortening of the sessions of the Legislature; perhaps by the abolition of one of the houses. With such a council, it may be that a second chamber in the Legislature would not be needed.

It may be remarked that the plan of a council and one legislative house would not be the plan which Mr. Bancroft very truly says in his 'History,' has failed wherever tried, of a council to propose and a Legislature to ratify. The failure in such cases comes from the struggle of the Legislature to obtain the power of originating bills. But it is not proposed to take this powe away from the Legislature, but only to confer it upon the council. H. T. Terry.

New York, 20 Nassau St., February 3, 1885.

GENERAL LOGAN AND HIS "MACHINE" IN ILLINOIS.

To the Editor of The Nation:

Sir: Had the *Nation* advised the Republicans of New York that the future of their party depended upon the success of Tom Platt and his Machine, some of its readers could not have been more surprised than they were to find it counselling the Republican members of the Illinois Legislature to stand by General Logan under all circumstances. Both shining ornaments of the same political school, Logan in Illinois, like Platt in New York, had been hoist by his own petard. It is doubtless true, as you suggest, that General Logan did not want to be Vice-President, but preferred to remain a Senator if he could not be President. But it is not plain, and considering the "dicker" in the Convention and before, it is probably not true, that he did not want the nomination for the Vice-Presidency. He preferred the Vice-Presidency to nothing, and he preferred to take his chances for that office rather than tempt the greater hazard of a Senatorial contest; and, finally, neither he nor his friends overlooked the value of a nomination that apparently eliminated him for the time being from State politics, in enabling them to cast an anchor to the windward by covertly working up his campaign for the Senate against a possible national defeat.

The nomination of Blaine, while it made the defeat of the national ticket a foregone conclusion, did not lose the Legislature of Illinois to the Republicans. Nor was it lost to them even when the national ticket was further weighted down by the nomination of the most conspicuous representatives of the spoils system yet remaining in public life. It was finally lost to them because the Logan Machine decreed that those who refused to join in the folly of Logan's boom for the Presidential nomination must be punished. They were punished accordingly, and the loss of the Republican majority in the Legislature is the direct result.

After the election those Republicans who innocently supposed that for one campaign at least the hand of the candidate for the Vice-Presidency would not be seen in State politics, awoke to find that he had all the time been carefully guarding his communications, and that with thrifty foresight his lieutenants had quietly manipulated enough of the districts to give him a majority of the legislative caucus.

It is under such circumstances that General Logan—unless he is belied by the uncontradicted press despatches—tells the Republican legislators that he feels that he ought not to be asked to take the caucus nomination unless with the understanding that he shall not be asked to give place to another. Having by his methods wiped out the Republican majority, so that the Legislature will stand a tie on a joint ballot, he gives notice to a caucus already so "fixed" as to be only a registrar of his decrees, that unless he can be elected no Republican shall be.

If under such circumstances the party cannot abandon him without producing widespread demoralization, what, on the other hand, can be said of the present *morale* or probable future of a party that tamely submits to such dictation from such a source? Joseph Robbins.

Quincy, Ill., January 31.

[We have no knowledge of the composition of General Logan's Machine, but we presume that General Logan has availed himself of all the op-

portunities that the spoils system created. We have some knowledge of Machines in general, and of Mr. Platt's in particular. A Machine exists by virtue of "patronage." When the patronage is withdrawn the Machine falls to pieces. This is what happened to Mr. Platt's Machine when it was put to the test at Albany a short time ago. It collapsed for want of fuel and oil. The rival candidates for the Senatorship, Mr. Morton and Mr. Evarts, had to rely upon their merits and qualifications for the office, and of course in any such contest Mr. Evarts was sure to win. The election of Cleveland has done for Logan's Machine just what it has done for Platt's. The one is as short of fuel and oil as the other. General Logan must win, if he wins at all, on his individual merits. The fact that the Republicans in the Legislature adhere to him after his Machine has been disestablished, is evidence to the people of other States that he is considered the man worthiest of their support, either with or without the aid of Federal patronage.—Ed. Nation.]

THE DOG IN GREEK AND PHŒNICIAN RELIGION.

To the Editor of The Nation:

Sir: The *Revue Critique* of December 15 has a note by M. Clermont-Ganneau relating to the subject rather stirred up than treated by myself in the *Revue Archéologique* of last September (p. 129 and foll.), and which has been very ably discussed by Mr. Merriam in your issue of January 8. Mr. Merriam, and M. Clermont-Ganneau likewise, quote the passage of Ælian ('Nat. Anim.,' XI, 20), concerning the "sacred dogs" attached to the Sanctuary of Adranus. The French scholar writes, in close conformity with your correspondent: "If there really existed a primitive type of Æsculapius as a dog, would it not be convenient to seek the origin of this conception in the figured representations of Egyptian art? It is not impossible that Anubis with his jackal's head—easily confounded with a dog's head, *latrator Anubis*—has something to do with this dog-like Æsculapius." M. Clermont-Ganneau has, moreover, brought forward two interesting passages belonging to Latin literature. The first one is by Festus: "Canes adhibentur ejus (Æsculapii) templo, quod is uberibus canis sit nutritus." The second one is by Tarquitius, quoted by Lactantius ('De falsa religione,' I, 10): "Ait incertis parentibus natum, et a venatoribus inventum, canino lacte nutritum." As M. Clermont-Ganneau observes, these two passages establish a closer connection between the god and the animal than the short legend of Pausanias (II, 26, 4), which I had previously quoted.

Again, Bochart (Opera, I, col. 663) has proposed to derive the name of Asklepios from the Hebrew *ich-kalbi*, "the man-dog." The same etymology had occurred to me, but I dared not mention it on account of the phonetic difficulties it would involve. I have since observed that in a very old Corinthian inscription (Roehl, 'Inscriptiones antiquissimæ,' No. 549), the name of the god is written *Aischlabios*, a form certainly very similar to the Semitic prototype proposed by Bochart.

My learned friend, M. Hartwig Derenbourg has drawn my attention to several other Semitic texts which are certainly of great importance to the question. In a Phœnician inscription from Cyprus ('Corpus inscriptionum semiticarum,' I, No. 49), we find a man named *Kelbelim*, viz., "dog of the gods," or "dog of god." In another inscription from Cyprus ('Corpus,' I, No. 52), a man is named *Kelba*, which is likewise the name of his grandfather. According to M. Renan, the name means "Canis Ejus, id est canis Dei." The Biblical *Kaleb* certainly belongs to the same series. In 1 Samuel, xxv, 3, the Greek version of the Bible has *anthropos kynikos* for the ethnical name *Kalebi*. On the whole, the documentary evidence derived both from Semitic and classical literature goes to uphold the opinion I expressed as to the religious importance of the dog in Greek and Phœnician religion.

I am glad to see that my short note in the *Revue Archéologique*, which was very far from exhausting the question, has induced some able scholars to state their own judgment on the matter, thus introducing a new element in the history of animal worship and in the study of comparative mythology. Salomon Reinach.

Paris, January 20, 1885.

PRIVATE OWNERSHIP OF FORESTS.

To the Editor of The Nation:

Sir: In your article on the "Private Ownership of Forests," in No. 1021 of the *Nation*, you argue that the Adirondack forest will stand a better chance of preservation if placed under State control. In support of this, you allege that there is imminent danger that forest fires will follow lumbering operations as now conducted by private owners; that these fires will spread from the clearings made for farms on the borders; that this danger will be largely increased in the near future by cutting the hard-wood lumber to meet a rapidly increasing demand for that commodity; and that the agricultural settlers are responsible for the desert belt swept clean of vegetation and soil by fires.

No one will deny that these dangers menace forests generally. But it can be shown that these dangers are minimized or made innocuous by the exceptional meteorological conditions of the Adirondack region. It is well established that the lower temperature of mountainous regions arrests, condenses, and precipitates the atmospheric moisture constantly rising from lower, warmer levels, thereby increasing the rainfall in the higher plane. The rainfall of the slightly mountainous lake region of the west of England is nearly double that of the flatter eastern shore. Last autumn, at the very time that men and other animals were dying from the want of water, or from drinking the impure dregs of it from the desiccated springs in the lower parts of West Virginia, I encountered almost daily showers in the magnificent forests that crown the Alleghenies in that State, and roads too muddy for comfortable locomotion. The humidity of the Adirondacks is even greater. During the great drought of last summer and the summer of 1883, when vegetation suffered for the want of rain in other parts of this State, there was but one week in the Adirondacks that it did not fall, and many weeks when shower and sunshine alternated each day.

Instead of their fires spreading into the dank woods, the settlers rarely find their "follows" dry enough to burn well. I have long been a close observer of these matters, and have gathered information from many available sources. I have found no trustworthy evidence that any of the great conflagrations that have swept over the desert belts and marred the beauty of the North Woods can be traced to the causes you adduce. They were caused by forces more potent than a State board of control, and less conservative than the most reckless private owner—viz., the elements, of which the wind is primary. While the lumberman selects and cuts only the mature marketable trees, not exceeding one-tenth of the whole, the hurricane uproots and prostrates all within its vortex, large and small. After a year or two ferns and wild grasses grow up on the southern exposures of these wind slashes, and die down annually, furnishing a tinder-box and vehicle for a spark from a passing thunder cloud or from a smoker's pipe. Fortunately the percussion-cap has minimized the danger from the sportsman's gun. Tornadoes of more or less force are frequent in the North Woods. As I write, I can see from my window the south side of a small mountain that was bereft of its trees by the violent tornado that swept through the wilderness on September 20, 1845, from Lake Ontario to Lake Champlain, more than a hundred miles, leaving a swath half a mile wide, as sharply defined and as cleanly cut as that of a mower. A thrifty new growth of trees cover the northern exposures, while the periodical burning of the ferns and sedge has kept the south side treeless for forty years, and will until the land comes under some kind of cultivation or protection. If the grasses were cut and destroyed before they matured, the land would soon be afforested.

Some of the desert belts are due to another casualty—one less imminent, but more deplorable than the hurricane, and equally independent of conditions, except, I think, it may be said that the very dangers you deprecate serve to mitigate its effects. It is a fire in a standing forest of resinous trees. Once started it leaps from conifer to conifer with electric speed, irresistible and insatiate, until it has consumed all the food within the flight of its winged torches. Nordenskiöld, in his 'Voyage of the *Vega*,' in describing one of the pine forests that he discovered on the Yenisei within the Arctic Circle, says "it is of enormous extent, a primeval forest nearly untouched by the axe, but in many places desolated by forest fires."

I am not writing in the interest of private owners, nor against State control, but rather in defence of the former—a worthy class, who have been most unjustly assailed—not in your columns but through other channels, which have not been accessible to them; and that the facts of the matter may be known and discussed upon their proper basis, one worthy of the cause and the dignity of the State. Let the advocates of the latter admit, as you do in your recent article, that private owners have some rights (and I will add, feelings) that should be respected, and their transfer accomplished, if at all, in an honorable and businesslike manner. Most writers on this prolific subject seem to think there is something to be gained by holding up the men who have the energy and think they have a chance to recoup a small percentage of the money they have paid in taxes, as enemies of the present, and defrauders of future, generations.

The history of land ownership in northern New York is not lighted up with many cheerful rays. It is one of disasters bracketed with broken hopes. Three generations have passed away since Alexander McComb (father of General McComb, U.S.A., obit 1841) purchased about 4,000,000 acres of the State at 8d. per acre, and ruined himself and parceners financially thereby. His patents covered much of the land that has since reverted to the State for taxes, and much of that which the State is now urged to acquire. A tract of it of 250,000 acres was purchased by John Brown, the patron of Brown University, R. I., and a similar tract by the French refugees of 1789 for colonization, the latter hoping to resume the manorial dignity they had lost at home. But fate or the climate was against them, and all was lost. Some of the refugees of the Second Empire essayed likewise with like result. Joseph Bonaparte, ex-King of Spain, bought a large tract and occupied it, mostly for a hunting lodge, I imagine. The last and perhaps the most romantic colonizing scheme was that of the late Gerrit Smith. He offered to give a farm of fifty acres on the bleak hills of Essex County to poor whites

and all the passengers by the Underground Railroad from the sunny South, who would settle upon it. It came to naught, of course. The rough granite boulder placed over the moulder-ing body of old John (Ossawottamie) Brown fittingly marks his grave and that of the colony.

There are good reasons why this territory should become a public domain. What the State does not already possess can be acquired at a comparatively low price. The timber that should be taken out annually to keep it in its best condition would pay the cost of superintendence. There is not another such tract of primeval forest east of the Alleghanies—perhaps not east of the Rockies. It is within a day's journey of a hundred cities. Its hypersthenic basins retain the virgin water of several hundred lakes and lakelets, the fountains of the five principal rivers of the State, which, over and above their commercial utility, if tapped above or before they are polluted by the sewage of manufacturing establishments and the surface drainage and ordure of fertilized land, will furnish a never-failing supply of pure water (free from the infusorial germs that generate disease), that can be carried by gravity to the cities of the valleys and plains, even to the city of New York. The region is unique in almost every respect. Its grandeur is unsurpassed; it is unequalled as a hygienic and ferial resort. It is the most elevated and conspicuous exposition of the oldest rock formation (the Azoic) on the face of our globe. It is the habitat—one might say the asylum—of what is left of our wild animals. ADDISON CHILD.

CHILDWOLD, NEW YORK, February 5, 1885.

MR. CLARK RUSSELL'S SEAMANSHIP.

TO THE EDITOR OF THE NATION:

SIR: There is no need of any poetical license whatever in order to have a whale killed off the Yorkshire coast. The right whale *has* occurred there, and several of the finback and humpback species are found in the German Ocean. If my memory is not treacherous, it was a finback that was killed by Tom Coffin. It was also a smallish whale, and it would be quite possible to kill such an one by a single fortunate stroke of a harpoon. The shoal of sharks *is* poetical license, the species that swarm in the Arctic around the dead whales rarely reaching so far south as Great Britain. Mr. Russell had best look well to his own seamanship.—Very respectfully, L.

WASHINGTON D. C., February 6, 1885.

MISCEGENATION.

TO THE EDITOR OF THE NATION:

SIR: In corroboration of "Bill Arp's" view, referred to in No. 1020 of the *Nation*, that negroes, as a race, do not desire to "mix" with the white race, I may cite a remark recently made by a negro carpenter to a friend of mine. The latter said to him, as a village belle passed them on the street, "Charles, don't you think that's a very handsome young lady?" "I reckon so," he answered, doubtfully, and immediately added, "Fact is, boss, us colored folks don't think white ladies handsome; we like 'em colored the best."

Had it been otherwise there would, doubtless, have been innumerable instances, in the North as well as at the South, of love-longings on the part of negro men toward girls of the dominant race. Yet during all the years I have spent in the Southern States I never knew or heard of any instances of this kind, and their exceptional character in the North must be known to all your readers. The hopelessness of such attachments would, of course, diminish their number, but fancy is always free, and "hopeless attachments" among members of the same race are as common now as when Petrarch sighed for Laura, and Tasso wrote, "The throne of Cupid hath an easy stair," himself having climbed it uninspired by hope. The existence of many persons of mixed blood throughout the country affords no proof that the two races feel toward each other the attraction of love; for the fathers, in these cases, are almost invariably white, and the offspring cannot be called "love-children," but the fruit of mere passion linked with opportunity.

SUE HARRY CLAGETT.

PORTLAND, OREGON.

Notes.

THE Dunlap Society is the name assumed by a number of students of the American stage, in honor of William Dunlap, the first historian of that stage, as well as early dramatist and manager. Its aim is to unite those interested in American dramatic history, to publish books and pamphlets throwing light upon it, and to collect the portraits of American actors, etc., and from time to time to issue engravings of them. The paging of the pamphlets will lend itself to separate or collective binding. The Society will hold an annual meeting in January of each year, at which there will be an exhibition of MSS., books, portraits, autographs, play-bills, and other curiosities. The annual dues will be five dollars; and the publications of the Society, eight of which are already announced, will not be for sale. The Secretary of the Executive Committee is Mr. Brander Matthews, 121 E. 18th Street; the Treasurer, Mr. Thomas J. McKee, 338 Broome Street.

A biography of the late Thomas G. Appleton, by Miss Susan Hale; and 'Selections from the Prose Writings of Jonathan Swift' (in the Parchment Series), are announced by D. Appleton & Co.

Ginn, Heath & Co. will publish on March 1 'An Introduction to the Study of the Compounds of Carbon, or, Organic Chemistry,' by Professor Ira Remsen, of Johns Hopkins University.

E. P. Dutton & Co. publish shortly 'Grandfather,' a story, by E. C. Phillips; 'My Friends,' an autograph album; and 'The Beauty of the King, or Daily Food for the King's Household,' an illuminated book.

'Samuel Gobat, Bishop of Jerusalem, His Life and Work,' is in the press of Thomas Whittaker.

Macmillan & Co. have in press 'Selections from the Poems of Lord Tennyson,' edited, with notes, by Francis Turner Palgrave (in the "Golden Treasury" series); 'Autobiographical Memoirs,' by the late Mark Pattison; a 'History of the University of Oxford from the Earliest Times to the Revival of Learning,' by H. C. Maxwell Lyte; 'Overpressure,' by Dr. Hertel; and 'Twelve English Statesmen,' edited by John Morley. They will also place on the American market a translation of 'Don Quixote,' by John Ormsby, translator of the 'Cid,' and an 'Elementary Text-book of Zoölogy,' by Prof. W. Claus, in two volumes.

Dr. D. G. Brinton, Philadelphia, has in press, as the fifth volume of his "Aboriginal American Literature," 'The Lenâpé and Their Legends, with the Complete Text and Symbols of the Walam Olum, a New Translation, and an Inquiry into its Authenticity,' by Dr. Brinton himself.

The Appletons bring out (as vol. 48 of the International Scientific Series) the 'Origin of Cultivated Plants,' by Alphonse de Candolle, in an English translation. The original French appeared in 1882, and is well known and appreciated in all scientific circles. The English translation, though tardy, is welcome, and will much extend the usefulness of this standard work. It does not appear to have been reëdited, except by the addition of two or three notes, referring to an elaborate review of the volume in the *American Journal of Science*, in which Mr. J. Hammond Trumbull brought out a portion of his full and well-digested store of knowledge respecting aboriginal cultivations in America.

Funk & Wagnalls have reissued the 'Memoirs of the Rev. David Brainerd,' based on Dr. Dwight's improvement on Jonathan Edwards's Life of the missionary to the Indians. We cannot praise the workmanship of this volume.

"No Sect in Heaven," on the other hand, a trifle in verse, by Mrs. E. H. J. Cleveland, has been revived by Geo. H. Buchanan & Co., Philadelphia, and very prettily printed, with an ambitious label, the "Library Edition."

"The manufacture of a beautiful and durable book costs little if anything more, it is believed, than it does to manufacture a clumsy and unsightly one." With this axiom Mr. Henry Stevens, of Vermont, opens a discourse on the causes of deterioration in fine bookmaking in England—the making not of *éditions de luxe*, but of ordinary publications, in which the publisher, the printer, and the binder have observed the highest rules of the typographic art, and sought to produce an object beautiful in itself without respect to its contents. 'Who Spoils Our New English Books?' is Mr. Stevens's question, and the title of the quaint little book (London: Henry Newton Stevens), embodying a paper read some two years ago before the Library Association at Cambridge, England. He enumerates ten guilty parties—"sinners," as he calls them—and examines in detail the shortcomings of each. The volume is itself intended to illustrate what taste and skill may do for a book, and is noticeable for its exemplification of the rules that "the length of a printed page should have relation to its width, and that the top should not exceed half the bottom margin, and that the front should be double the back margin." Also, pagination is entirely dispensed with. The public (or "consumer") cannot learn a great deal from Mr. Stevens's text toward self-improvement, but authors, publishers, and printers may receive a wholesome stimulus from this review of their negligence or ignorance.

The Author is one of Mr. Stevens's ten sinners, and he sins by insisting on having his own way about the typography of his book against the experience of the publisher. This may account for the singular and unprepossessing style of the Harpers' American edition of the new 'Life of George Eliot,' by Mr. J. W. Cross, who certainly dictated the marginal contrivance for distinguishing the letters to different persons strung along one after the other with no other distinction. We are surprised that this margin, which is indeed essential, is wholly dispensed with in the Franklin Square Library edition of the same work.

Mr. Geo. Wm. Harris writes from the Library of Cornell University to the *Library Journal* to expose sad blundering on the part of the publishers of Victor Hugo's complete works—the "édition définitive d'après les manuscrits originaux," in forty-six volumes. The "Légende des Siècles" was begun in vol. vii, which contained the first volume of this poem, and did not reappear till vol. x, which contained the fourth volume. The second and third volumes have yet to be heard from.

One of the most valuable and, in its general text, readable volumes of the Tenth Census series is vol. ix, on the Forest Trees of North America. Prof. C. S. Sargent has here scientifically catalogued and indexed the trees in question; tabulated their worth as fuel and as material for construction, with their behavior under strain, under compression, etc.; and discussed them tho-

roughly in their economic aspects, showing the extent of the lumber industry, consumption for various purposes, destruction caused by fire (estimated at more than $25,000,000 during the Census year). In this last division the entire Union is gone through with, State by State, and our country press could do no better service than by reprinting such portions as relate to their respective localities. Maine is the only State, apparently, which has begun forest conservancy. The number of colored maps is large (38), but in addition a portfolio accompanies the volume containing sixteen beautiful forest maps of the Continent and of the United States.

From Rand, McNally & Co., Chicago, we have the nineteenth annual edition of their 'Bankers' Directory and List of Bank Attorneys,' a well-printed volume, full of information conveniently tabulated and indexed, and well provided with maps.

Under the title of "Contes Choisis" Mr. William R. Jenkins has begun a handy and attractive little series, beginning with Daudet's 'Le Siége de Berlin,' etc., and About's 'La Mère de la Marquise.'

The Harvard University Bulletin for January begins a classified index to the maps contained in the publications of the Royal Geographical Society and in associated serials (viz., *Ocean Highways* and its discontinued sequel, the *Geographical Magazine*), by Richard Bliss, of the Redwood Library, Newport, R. I.

The Harvard Overseers have finally declined to adopt the report of a committee favoring the printing of the Quinquennial Catalogue in English, a reform which it is difficult to resist in seriousness, unless (for the present year) the element of time enters in. Mr. C. F. Adams, jr., was naturally placed on this committee, whose report, perhaps to be ascribed to his colleague, Mr. John O. Sargent, has been printed in pamphlet form. Mr. Wm. H. Tillinghast, by the way, of the Harvard Library, is to undertake the editing of the great Catalogue in place of Mr. Sibley, as we learn from the Bulletin.

The Proceedings of the American Philological Association at its sixteenth annual session at Hanover, N. H., last July, have been printed in their customary modest shape.

The two initial papers of the American Historical Association have also appeared, from the press of G. P. Putnam's Sons. They contain the proceedings of the organization, a list of members, etc., etc.

A list of the historical societies of the United States in the *Magazine of Western History* for February (lacking those in Ohio) will be found useful.

We have received Dr. Asa Gray's memorial tribute to the late veteran botanist, George Bentham, a reprint from the *American Journal of Science;* and a handsomely printed discourse in German on Dr. Francis Lieber, by F. W. Holtz, delivered in December last before the Deutscher Gesellig-Wissenschaftlicher Verein in this city (E. Steiger). The latter is accompanied by the familiar portrait of its subject.

Surgeon George M. Sternberg, U. S. A., comes to the defence of Dr. Koch against Prof. Ray Lankester, in the matter of the much-disputed *comma bacillus* of cholera, in *Science* for February 6. His drawings of the bacillus from a slide furnished by Dr. Koch differ greatly from Prof. Lankester's in *Nature* for December 25, 1884.

Prang & Co. have sent us an assortment of Valentines ranging from an ingenious decorated fan with easel support and perfume sachet—a charming toilette object—down to the slightest work in chromo printing which hard times could drive any lad or lass to be content with. A series of these minor missives, carrying flower groups or single flowers, are very successful in rendering the qualities of water-color work, and some are hardly to be distinguished from the real drawings. Among the more elaborate are some pretty bird subjects, nesting and mating. Of the silk-fringed series two classical designs by W. H. Low are noteworthy.

White, Stokes & Allen publish for the same anniversary one of their well-known booklets, 'Songs of the Roses, a Valentine,' with four full-page chromos of roses and appropriate poetical extracts.

General Faidherbe, whose long service on the west coast of Africa has made his opinion of great weight in all matters relating to that country, enters a vigorous protest against the claim of the English to the sole control of the lower Niger, in the *Revue Scientifique* for January 17. He says that in November, 1884, there were three companies, two French and one English, trading upon the river, having some thirty vessels and sixty stations. In that month the English company bought out its two French rivals, and now remains in undisputed possession of the European traffic. This, however, urges the General, was a purely commercial transaction, and should not be held to confer exclusive rights for the future. Stranger still does he regard the pretensions of the Berlin Conference to regulate the commerce and navigation of the upper Niger. This conflicts with the rights of the three independent and powerful chieftains through whose territory the river flows. The interests of the French also, he considers, are seriously threatened. After repeated efforts, and with a considerable loss of men and at an expense of thirty millions of francs, they have at length obtained a foothold on the upper waters of the river, only to find restrictions placed upon their intercourse with the people.

Five more sheets of the great Atlas of Attica, in process of making under the auspices of the German Archæologic Institute, have just been published by Dietrich Reimer, Berlin. These embrace the square districts designated as Vari (continuing the coast line of the Saronic Gulf), Spata (inland), and Raphina, Perati, and Porto Raphti, in the Eubœan Sea. This series makes nearly complete the belt of the peninsula from sea to sea, lying between 37° 54′ and 38° N. lat., and embracing Athens and its port. The text which should have accompanied it is reserved till the eastern Attic group is further advanced by the mapmakers. It would be superfluous to praise the execution either of the survey or of these topographic, political, and archæological delineations of classic soil.

A very thin veil of pseudonymity covers the authorship of 'Reiseeindrücke und Skizzen aus Russland, von Th. von Bayer*' (*sic*, with an asterisk), a volume of more than 600 pages, just published by Cotta in Stuttgart. The publisher is allowed to advertise it as the work of "an authoress, a member of a German princely house distinguished for its cultivation of art and science"; and Friedrich von Hellwald, in a most eulogistic review of it in the Munich *Allgemeine Zeitung*, believes he commits "no indiscretion in betraying the secret that Th. v. Bayer* is a lady of the house of Wittelsbach"—that is, a Bavarian Princess. After mentioning this "der Autor" becomes "die hohe Verfasserin." This august personage is thus apparently the young aunt of the reigning King of Bavaria, Therese (von Bayern), born in 1850. Her book comprises travels through a large portion of European Russia, and is not only descriptive of impressions and sights, but is ethnographically interesting. The enraptured reviewer tells us that the traveller prepared for her journey by ten years' studies of the Russian language, literature, and history.

The *Revue Critique* protests against the course of the publishers of "La Verdadera Ciencia Española," a series of works of Spanish authors, issued at Barcelona under ecclesiastical patronage, in seizing upon a Spanish relation of the war in the Palatinate in 1620, first published from a manuscript in the Bibliothèque Nationale by H. A. Morel-Fatio, and reissuing it with all his notes and identifications of personal and local names without giving him the least credit, and then impudently putting upon the back of the title-page the notice: "This book is the property of the publishers, who reserve all their legal rights."

It is astonishing that things which lie directly under people's noses can be overlooked so long. Here have innumerable sanitary reformers been preaching for a generation on the evil effects of turning sewage into rivers, and agricultural enthusiasts claiming that it ought to be turned on to the land, and reproaching us with the waste of letting so much good manure go out to sea; and here comes Mr. John Lawes to tell us, in a long letter to the *Times*, that the present plan is the most remunerative, because it largely increases the production of fish, provided it is sufficiently diluted and does not interfere with their health. It supplies in large quantity the chemical ingredients—nitrogen, phosphoric acid, and potash—which are needed by fish, and, by entering into their composition, make their flesh so nourishing to man. In other words, as swill is poured into troughs for pigs, so sewage should be poured into rivers for fish. People who think pork fit for food may like this idea of sewage-fed fish; but it is hard to see why they should despise the Chinese for eating rats and dogs, and why they should object to cats in the sausages.

The English magazines continue to pay a large and increased attention to the stage. In recent reviews Lord Lytton praises Miss Mary Anderson's *Juliet*, and Mr. F. C. Burnand sets forth his views as to the status of the actor. In the February *English Illustrated* Mr. H. A. Jones's lecture on "The Dramatic Outlook" is concluded; it is a sensible and solid plea for serious work on the stage. Unfortunately it is disfigured by a most ludicrous series of theatrical caricatures—that of Signor Salvini as *Othello* being a masterpiece of unconscious burlesque. In the February number of the *Magazine of Art* there is an admirable criticism of the acting of M. Coquelin, the great comedian of the Comédie-Française, who is to visit us next January. It is the work of Mr. W. E. Henley. He calls M. Coquelin the first of living actors—with the exception of Signor Salvini.

—The printing of the Archives of Maryland goes on with as great speed as is compatible with the difficulties of transcribing and scrupulous printing. The second volume has been for some months in our hands, and merits in all respects the praise bestowed upon the first. It embraces the proceedings of the two houses of Assembly from April, 1666, to June, 1676. The quaint style of the record is much enhanced by such entries as, "Then came a Member from the Lower House with two Acts One of them Entituled an Act against Hogstealers & the other an Act Entituled an Act for building a prison at St. Marys." As in the previous quarter of a century, so in this decade, runaways gave the greatest trouble to the legislators, and were the occasion of oft-recurring statutes. The Marylanders wished to part neither with their servants nor with criminals or debtors, so that persons intending to quit the province were required to post their names for three months at the Secretary's office. "An Act for the Encourageing the Importacõn of Negros and Slaues into this Province" (Mar.-Apr., 1671) premises that the importers of these classes "haue to the great displeasure of Almighty God and the prejudice of the Soules of those poore

people Neglected to instruct them in the Christian faith or to Endure or permitt them to Receive the holy Sacrament of Babtisme for the Remission of their Sinns upon a mistake and vngrounded apprehension that by becomeing Christians they and the Issues of their bodies are actually manumited and made free and discharged from their Servitude and bondage." So the statute declares that Christianity is no bar to slavery, and that negroes and their issue must reconcile the two as best they can. This was no new doctrine, as witness the act of March, 1638-39, on behalf of "all the inhabitants of this province being Christians (slaves excepted)." There was trouble also with the Indians, whom it was not easy to distinguish one from another. The killing of wolves had still to be stimulated by rewards, and even the importation of horses into the province ("soe destructive to the inhabitants thereof") had to be interdicted. The glut of tobacco was another evil, which it was sought to remedy by enacting a "cessation for planting" for one year, which led to much discussion. This glut meant an excess and depreciation of currency. John Lawson humbly showed the Lower House, "That your Petitioner was Commanded to imprison Jacob the Negro & to Execute him as likewise to Execute the two Indians with Grave-making. Your Petitioner was out of a good Quantity of Tob[acc]o," and prays to be reimbursed.

—Vulgar abuse of the "lower howse" by one Edward Erbery led to his being punished with thirty-nine lashes and a tobacco fine. The Upper House smelt sedition in the sermon delivered to the other chamber by its chaplain, Charles Nicholett, in 1669, maintaining that the people had "a liberty equal to the people of England, & that if they did not make such Laws as was agreeable to their own Conscience that then this was no Liberty but a seeming Liberty & had better be without it." He pretended to have been set to "stir up the Lower House to do their Duty," and was told he had "medled with Businesses relating merely to the Government," and must beg pardon and pay a fine. A petition of "us who are in Scorne called Quakers," in 1674, praying for the liberty of affirming, was favorably regarded but not immediately granted. Both houses united in asking clemency for John Cowman or Coman, condemned for witchcraft, conjuration, sorcery, or enchantment used upon the person of Elizabeth Goodale. This was granted, but on condition that he should pay a visit to the gallows, with the rope around his neck. The regulation of "ordinaries" led to much law-making, and the mention of lemonade in May, 1666, furnishes a date for the curious.

—'The American Lesson of the Free Trade Struggle in England,' by Gen. M. M. Trumbull (Chicago: Schumm & Simpson), is a rather spirited narrative of the events suggested by the title. The bias of the author is so strong that those who differ with him will hardly be likely to listen to his arguments, and his style, although strong enough, is disfigured by coarse colloquialisms. Nevertheless, his book has a value, for it shows clearly that every argument now in use among American protectionists was used forty years ago in England. The advocates of free trade in modern times have the great advantage over Cobden and his followers, that they can appeal to experience in proof of the fallacy of the arguments of their opponents; and arguments from experience are the only ones that have much weight with most people. The book may be read with interest even by one familiar with the time of which it treats, and is well fitted to stimulate discussion of the subject of tariff reform. Of a more impartial character is a compilation entitled 'Which? Protection or Free Trade' (Hartford: Park Publishing Company), containing the opinions of a large number of persons upon the policy of protection. Many of these opinions are taken from the treatises upon economics, but most of them from the speeches of men in public life. We should not recommend the perusal of this book to those who wish to master the subject; but persons who have not the disposition to study standard works can find much to instruct and interest them in short extracts of the character here presented. Both sides of the question are fairly represented, but the compiler seems to us to have been upon the whole rather more fortunate in his selections from the protectionists. We should hardly have supposed that they could make so respectable a showing in argument. 'The Way Out,' by Charles J. Bellamy (Putnams), is intended as a solution of the great problem of society, the equitable distribution of wealth. In the author's opinion, Government should direct that profits shall not exceed the legal rate of interest, and that any excess shall be paid to labor. The means suggested for the enforcement of this law seem to us to be likely to be extremely efficacious, so far as the reduction of the rate of profits is concerned.

—The observatory in Yale College is now without a Director, Professor Newton having resigned that office last May, and being now the Secretary to the Board of Managers, whose President is Doctor Porter, the President of the College. The points of most importance in the Secretary's report for the year 1884 relate to the photographs of the late transit of Venus taken by Mr. Willson and now in the hands of the Government Commission at Washington—photographs which Professor Harkness reports as "likely to yield valuable results"; to the partial reduction of observations made with the heliometer; and to the appointment in January, 1884, of Doctor Elkin as the astronomer in charge of this instrument for a period of three years. In addition to a thorough general investigation of the new heliometer, Doctor Elkin reports a series of observations of the diameter of the planet Venus, the determination of a large number of positions of the moon, and good progress in his principal work, the triangulation of the group of the Pleiades. Mr. Sherman, assistant in the observatory, has been engaged in magnetic observations, and in determinations of the form, polarization, and position of the Pons-Brooks comet. The details of Doctor Waldo's report on the Horologic and Thermometric Bureaus occupy more than half of the entire pamphlet. He notes a marked increase in the excellence of the watch-movements submitted to the observatory-tests. An international system of watch-trials has been agreed upon, by which the operations at Geneva, Kew, and New Haven will be strictly comparable. The work of the Thermometric Bureau has been much extended over previous years, and there has been a total of more than 6,000 thermometers examined.

—The current number of the *Archiv für Eisenbahnwesen* contains some interesting statistics concerning the recent growth and present extent of the railroads of the world. The total length of railroads in operation at the close of the year 1883 is given at 442,199 kilometres, or about 275,000 miles. Of these, 114,000 were in Europe, 140,000 in America, 11,500 in Asia, 3,500 in Africa, 6,500 in Australia, New Zealand, etc. The increase in the four years, 1880-1883, has been 57,000 miles—an increase of 26 per cent. over the mileage in operation at the close of the year 1879. The most rapid percentage of growth is shown in Mexico, which in 1879 had less than 700 miles in operation, and in 1883 more than 3,000 miles—an addition of 335 per cent. The increase in America as a whole has been 41 per cent.; that of Australia has been 52, that of Asia and Africa each 26, that of Europe only 11. Of the countries of Europe, Germany now has 22,400 miles of railroad — an increase in four years of 8 per cent.; Great Britain and Ireland, 18,700, increase 5 per cent.; France, 18,600, increase 18 per cent.; Russia, 15,700, increase 7½ per cent.; Austria, 12,900, increase 12 per cent. The United States has a mileage of nearly 120,000 (or decidedly more than the whole of Europe), having increased 42 per cent. in four years. In 1879 our mileage was 18,000 less than that of the European railroads, but we drew rapidly near them in 1881, and passed them in the autumn of 1882.

—A comparison of the railroad mileage with the area of the respective countries (similar to the one made by Mr. Atkinson four years ago) shows that for every 100 square miles of territory Belgium has 24½ miles of railroad, or not far from the proportion in Massachusetts, Connecticut, or New Jersey. On the same basis of comparison, Great Britain has 15½ miles; Holland, Switzerland, and Germany each not far from 11; France 9, Denmark 7½; Austria and Italy a little over 5 each; the whole United States 3 1-3. For the part of the United States bounded on the south by the Potomac and the Ohio, and on the west by the Missouri, the proportion would probably be somewhat higher than that of Germany, but less than that of Great Britain, No other country outside of Europe has even half as high a ratio as the United States. When we come to compare railroads with *population*, the order is decidedly reversed. Of all the countries of the world, Queensland stands highest, with 44½ miles of railroad to every 1,000 inhabitants. On the same basis, New Zealand has 30 miles, New South Wales 19, Victoria 17. The United States has 23 miles per 1,000 inhabitants, British America 18. The only European country which makes a respectable appearance in this table is Sweden, with 8¾ miles. Switzerland has 6 miles (half a mile less than the Argentine Republic), Denmark 5 2-3, Great Britain 5 1-3 (about the same as Peru or Chili), Norway a little over 5. Germany, France, and Belgium have each a little less than 5. Holland has not quite 4; Spain about 3 (nearly the same as Mexico or Brazil); Italy and Russia each about 2 miles.

— The "one hundred and forty-eighth thousand" of Thieme's English and German Dictionary has lately been issued by Haendcke & Lehmkuhl, in Hamburg (New York: Westermann), under the new title, 'Thieme-Preusser; a New and Complete Critical Dictionary of the English and German Languages; . . . revised and greatly enlarged by Dr. Ig. Emanuel Wessely.' The late Dr. Emil Preusser's title to joint authorship dates from 1860, when the edition revised by him and Breithaupt first made its appearance. Of this revised Thieme, the publishers tell us, no fewer than 120,000 copies were sold between 1860 and 1884, and, surprising as this success of the work is, examination shows it to be deserved. The fulness, clearness, and excellent mechanical execution of the dictionary are striking. The eight hundred (8vo) pages of the English part—which occupies four-sevenths of the heavy but remarkably unbulky volume—by far surpass in completeness of vocabulary the more than double number of Webster's 4to pages. Thus, we find in only two successive columns a number of rare, provincial, or obsolete words completely ignored in Webster: *yaw-sighted*, *yclad*, *idrad*, (=*dreaded*), *yea'lto* (Scottish for *yea wilt thou*), *yelamber* (=*yellow-hammer*), *yell* (*a.*, Scott., barren), *yellow-gum*, *yellow-jacket* (a species of wasp), *yelt* (young sow), *yence* (=*once*). The profusion of German words, partly synonyms,

used in rendering the English vocables in their various applications is, in fact, excessive. For *heart*, for instance, we have *Herz, Innerste, Kern, Brust, Zuneigung, Liebe, Neigung, Gemüth, Gemüthsverfassung, Gesinnung, Muth, Leben, Seele, Stärke, Kraft, höchste Grad, geheime Zweck, Gewissen, Lust*, and the technical term *grosse Stagblock*. The English renderings of German words are also very numerous: for *Fach*, we find *comparlment, partition, bay, panel, pigeon-hole, box, capade, shelf, row, drawer, cell, loculament, province, department, branch, line of business*. Greater still is the profusion, in both parts, of compounds and phrases. The added list of English names—personal, historical, geographical, etc.—is very rich, and the pronunciation is carefully marked. Thus we find what we consider the preferable pronunciation of *Detroit, Louisville*, and *New Orleans*, and the different pronunciations of *Arkansas* and *Natchitoches*. Of names found wanting we may instance *Balmoral*.

—Dr. Daniel Sanders has finally finished his second great work, the unique 'Ergänzungswörterbuch der deutschen Sprache' (one volume, 4to; Berlin, 1885), intended to complete and enlarge all existing dictionaries of the German language (that of the Grimms included). It was about six years in going through the press and undergoing a wonderfully accurate revision—almost precisely the space of time allotted to the original edition of his main work, the 'Wörterbuch der deutschen Sprache' (three volumes, 4to; Leipzig, 1859-'65). Any one not familiar with this latter grand lexicon will be amazed at the thought of the stupendous amount of study and labor which the compilation of the new volume must have entailed upon so scrupulously painstaking an author. A few lines selected at random from this maze of quotations from all kinds of German authors, "from Luther to our time"—with references to books and journals, volume and page, column and note—will show at once what it means to compose and revise in the same exact way 900 large 4to pages, each containing upward of 250 lines of the smallest print, crammed with abbreviations of every description. (These at once bewildering and blinding abbreviations, probably due to the economical exigencies of the publication, are, in fact, its great blemish.) The following four lines from the last page, illustrative of the "Zsstzgg" (*Zusammensetzungen* compounds) of the verb *Zwitschern*, may serve as a sample of the least condensed matter:

"V. den Liedern der Schwalben *angezwitschert. Holtei* Es. 1, 5 etc.; Der Kanarienvogel zwitschert auch wie im Traum *auf. Corvin.* Sperl. 80; *Schweichel* Bild 3, 1; So agierte, tanzte, zwitscherte ich alle Opern *durch. Nat.-Z.* 32, 585, etc."

And this is another line in the same column:

"u. zizert | das Zeislein. *Gödeke* DD. 1, 348b[8], Vgl. *Wackern.*"

The indefatigable author announces a new book: 'Aus der Werkstatt eines Wörterbuchschreibers,' which cannot fail to be interesting. Nor must it be forgotten that while engaged on his numerous linguistic productions Doctor Sanders has also found leisure and poetic inspiration to indite 'Das Hohe Lied Salomonis,' 'Heitere Kinderwelt,' and 'Aus den besten Lebenstunden: Eignes und Angeeignetes,' etc. Doctor Sanders is now in the sixty-sixth year of his age, the latter half of which he has spent in scholarly retirement in his native town, Altstrelitz, in Mecklenburg.

—The vagaries of German proper names form a diverting chapter in K. G. Andresen's 'Konkurrenzen in der Erklärung der deutschen Geschlechtsnamen' (Heilbronn). The formation of many of these names shows astonishing fancifulness and ingenuity, and the associations suggested by them are often both far-fetched and entertaining. Thus, there is a class of family names which have sprung from appellations of parts of the body, such as arm, bone, lip, crop (*Arm, Knoche, Lippe, Kropf*), and others that denote psychological or moral attributes, such as *Sorgenfrei, Schönheit, Unschuld, Zutrauen, Ohnesorge, Stolzfuss*, reminding one of the Mercys and Patiences of the old-fashioned romances, and the Scriptural designations of the times of the Long Parliament. The imperative mood was fertile in producing such fantastic names as *Reissaus, Kiekhöfer* (=guck über), *Streichan, Spanhut, Drinkhut, Hauschild, Habedank*, and *Lernbecher*. Names of trees gave rise to such names as *Buchner, Hagenbucher, Birkner, Eichner, Fichtner, Lindner*. In the realm of fruits we have *Aepfler* and *Pflaumer;* in that of nuts and grain, *Nussbecher, Weizäcker, Gerstenecker*, and others. Animals and insects abound in such names as *Hirsch, Lamm, Eber, Bienwald;* and colors and flowers run through all the shades of the spectrum and most of the blossoms in the garden. Physical deformities of every sort are embalmed in the brief immortality of popular names, as in the English Bowlegs; geographical localities, like the English East and West, are no less numerous in German; fish and flesh alike survive in *Aff, Einhorn, Frosch, Ochs, Stockfish, Schellhorn*. The birds of the air are not neglected in the numerous *Finks, Fasshahn*, and the like; while homelier associations are found in *Süssmilch, Schweinefleisch, Sauerbrei*, and *Mehlhose*. Imagine the brilliant individuals flashing with the radiance of such jewel-names as Carbuncle, Sapphire, Serpentine, Pearl! Even a Herr *Heaven* and a Frau *Hell*, not to speak of Fräulein *Seven Stars*, exist!

—Mr. Lawrence Barrett's successful revival of "A Blot in the 'Scutcheon" probably furnishes Mr. Browning with his best claim to be practically a "writer of plays"; and the performance derives a special interest from the facts that the version employed at the Star Theatre differs widely from the printed text, and that the changes were made by Mr. Barrett in collaboration with Mr. Browning himself. The play, as found in Mr. Browning's works, begins with the talk of the servants who are watching the approach of *Earl Mertoun*, to ask the hand of the *Lady Mildred;* and the keynote of sorrow is given by the refusal of *Gerard*, the oldest retainer, to join in their merriment. In Mr. Barrett's version all this is omitted, and the curtain rises upon a gallery leading from *Lord Tresham's* dining-hall. *Mertoun's* request is supposed to have been already formally made, and in taking his leave he recurs to it once more—an interpretation which necessitates only very slight changes of text. The next important variation is the omission of *Mertoun's* song in the following scene. This was found to delay unduly the action of the piece, and to be out of harmony with the sorrow and passion which are already making themselves keenly felt. In the second act no change is made beyond cutting down the longer speeches until the end is reached. Then, as *Mildred, Austin*, and *Guendolen* are leaving the scene after *Guendolen's* words, "Remember, sweet, he said there was a clew! I hold it. Come!" *Tresham* enters and stops them, and addresses *Mildred* with the lines from the middle of the same act beginning, "We two will somehow wear this one day out;" continuing, "The dead must heave their hearts under the marble of our chapel-floor," and closing the act impressively with the words, "I'll hide your shame and mine from every eye." A greater change still is made in the last act. In the printed play, after *Tresham's* farewell to his home—which on the stage strikingly recalls the similar farewell in the "Ajax"—the scene changes to *Mildred's* chamber, where she has been waiting anxiously for her lover's last visit. In Mr. Barrett's arrangement, after *Tresham* has left the stage, *Mildred* opens her window and looks out. Then, seeing no one and no signs of *Mertoun*, she comes down to the avenue, crosses unconsciously, but with an involuntary shudder, to the very spot on which her lover has just breathed his last. The unpleasantness of *Tresham's* suicide in his sister's bedchamber is thus avoided, and the final scene gains greatly in solemnity from being played in the shadow of the long yew avenue. Notwithstanding all these changes, however, by an experienced stage-manager, the play still shows how much better its author was acquainted with the passions of the human heart than with the conditions of theatrical presentation. The unimportance of the first act, the climax of the whole play in the middle of the second act, the triple death at the close—these are imperfections which no rearrangement can remove. But the beauty and force of the diction and the intensity of the feelings developed make the play a most impressive one to witness. The second act in particular would be sufficient of itself to establish Browning's position as a dramatist in every sense except the technical one; and Mr. Barrett's rendering of *Tresham's* horror at his discovery of the supposed depths of his sister's infamy, is probably the most powerful piece of acting in which he has yet been seen. "The Blot in the 'Scutcheon" was very appropriately followed by "The King's Pleasure," an adaptation by Mr. Alfred Thompson of De Banville's "Gringoire," a piece admirably suited to remove the painful impressions left by the tragedy. It shows Mr. Barrett in a new and highly successful character, and it is a delightful addition to the English stage.

WILSON'S CONGRESSIONAL GOVERNMENT.

Congressional Government: a Study in American Politics. By Woodrow Wilson, Fellow in History, Johns Hopkins University. Boston: Houghton, Mifflin & Co.

We have no hesitation in saying that this is one of the most important books, dealing with political subjects, which have ever issued from the American press. We have often been asked by students of politics and by foreign visitors for some book which would explain the real working of our Government, and have been obliged to confess that there was none in existence. Of those which explain the origin of the Constitution, the intentions of its framers, and the meaning of its provisions, the name is legion; but of what the Government established by it has actually become after a century of history, if there is any expositor it has escaped our search. Of histories of the United States, again, down to the adoption of the Constitution there is no end, including those which follow the political growth and union of the colonies; but those of the period since are mere catalogues of events. Even the 'Constitutional History' of Von Holst, though it begins with some general observations, soon falls into a bald narration. This want Mr. Wilson has come forward to supply. His book is evidently modeled on Mr. Bagehot's 'English Constitution,' and it will, though the praise is so high as to be almost extravagant, bear comparison with that inestimable work.

The introductory chapter shows how steadily the Federal Government has extended its power over the States, the probability that this tendency will still further increase, and the consequent necessity that the machinery of the Government shall be carefully studied and corrected, so that it

may be fitted for the momentous duties which, with the growth of population and wealth, await it. The procedure of the House of Representatives is then analyzed in a way which is the more effective from the entire absence of denunciation. Nearly all the critics of Congress inveigh against the inefficiency, stupidity, and prevalent corruption of its members, with the result that the world at large has come to believe what is so persistently asserted at home. Mr. Wilson's analysis shows conclusively that these appearances of evil are mainly owing to the helplessness of anarchy. You may take a regiment of the bravest men that ever lived, and if sent into battle without officers and without training in subordination, they will flee in panic at the first attack. Nor will it help the matter to denounce them as cowards. Mr. Wilson says: "I know not how better to describe our form of Government in a single phrase than by calling it a Government by the Chairmen of the Standing Committees of Congress." And this text covers an infinitude of consequences. He shows how Congress has absorbed all the powers of the Government, reducing Executive and Supreme Court to comparative and constantly increasing insignificance. He dwells, we think with hardly sufficient force, on the dangerous and irresponsible power of the Speaker, and very much understates the fearful influence of the lobby in the committee-rooms. The Senate, though he does justice to its valuable qualities, he describes as substantially a second House of Representatives, nearly duplicating the chaos of its forty-eight committees, whereby all consistent and systematic legislation is rendered impossible. His account of the Executive reminds us of the famous one of the snakes in Iceland. He might have pointed his tale by adding that this absorption of all power by the Legislature exists in all the States and nearly all the cities, and constitutes by far the greatest political danger now threatening this country.

In comparison with this, Mr. Wilson gives an account of Cabinet government in England, where all executive power is in the hands of the Ministry, resting upon organized party support, and held in check by an opposition also organized under regular leadership. Mr. Bagehot, in his quiet assumption of superiority, describes ours as Presidential government, having its essential features as above described. We hold this distinction to be entirely fanciful, and unfortunately for it the Presidential government of France since 1870, and since Mr. Bagehot's book was written, has proceeded, if with less perfect development, yet upon exactly the same principles as that of the English Cabinet, which, indeed, is true to a greater or less extent of every government in Europe which has a legislature at all. Debarred from this distinction, Mr. Wilson falls back upon calling ours Congressional government, though we cannot see that the distinction between this and Parliamentary has any better foundation than the other.

It was with extreme surprise that we found on reaching the end of the book that Mr. Wilson was satisfied to draw the distinction and leave the matter there. He has described the danger with perfect clearness, if not in its fullest force, but offers no hint of a remedy. Yet that this is not his last word upon the subject we know from other sources. In an article in the *Overland Monthly* for January, 1884, he said that a gain might be made "by making them [members of Congress] also members of the President's Cabinet, and thus at once the executive chiefs of the Department of State and the leaders of their party on the floor of Congress—in a word, by having done with the standing committees, and constituting the Cabinet advisers both of President and Congress." He closes the same article by saying: "Committee government is too clumsy and too clandestine a system to last. Other methods of government must sooner or later be sought, and a different economy established. First or last, Congress must be organized in conformity with what is now the prevailing legislative practice of the world. English precedent and the world's fashion must be followed in the institution of Cabinet government in the United States." In the book under review he has this forcible summary of our constitutional history:

"In the period of erection there were great architects and master builders; in the period of constitutional interpretation there were, at a distance from the people, great political schoolmen, who pondered and expounded the letter of the law, and, nearer the people, great constitutional advocates, who cast the doctrines of the schoolmen into policy; and in the period of abolitionist agitation there were great masters of feeling and leaders of public purpose. The period of Federal construction is long passed; questions of constitutional interpretation are no longer regarded as of pressing urgency; the war has been fought, even the embers of its issues being now almost extinguished; and we are left to that unexciting but none the less capitally important business of every-day peaceful development and judicious administration, to whose execution every nation in its middle age has to address itself with what sagacity, energy, and prudence it can command. It cannot be said that these new duties have as yet raised up any men eminently fit for their fulfilment."

Feeling thus, how is it possible that he should have passed over without an allusion the only arrangement which, according to his own view, offers us a chance of obtaining the men desired? The answer to this question is not far to seek. He thinks that amendments to the Constitution are an essential prerequisite. In the article already referred to, he speaks of two: first, that in the clause "and no person holding any office under the United States shall be a member of either House during his continuance in office," there should be inserted the words "except a Cabinet office"; and, second, that the terms both of Congress and the President should be lengthened. If such a course is necessary, we do not wonder that he has passed over in silence the reform which it is intended to bring about. It would be hard enough to obtain any action from Congress, but to secure the coöperation of three-fourths of the State legislatures—every one of which is steadily striving to extend its own power and to reduce that of the executive—would be a perfectly hopeless task. It may pretty safely be said that the only constitutional amendments which have any chance in the future, as the Government is now carried on, are of two kinds—those which tend to increase the power of Congress as against the Executive, with which the State legislatures would have an instinctive sympathy; and those in favor of which such a national passion may be aroused as to carry them with a rush. Any move toward placing Congress under executive leadership would meet with solid resistance from local politicians, while the people do not understand it enough to lend effective support.

We maintain, however, that no constitutional amendment is necessary—that the practical result may be arrived at by a much easier process. The secretaries, as Mr. Wilson shows, do now on occasion appear in the committee rooms. There needs only a vote of the House of Representatives authorizing and requiring them to do the same thing on the floor of the House, with the right of taking part in debate, but without a vote. The difference in one respect, indeed, would be immense, for as the committees work in secret, independently, and largely at cross purposes, what the officials say is of no consequence. But if the same officials should lift up their voices before the whole House, advocating a policy or criticising procedure, the attention of the country would be at once aroused, and instead of looking on as now in cold contempt, it would manifest a lively interest. All the rest can be left to time. Whether the Cabinet should introduce and explain bills or be mere witnesses and critics; whether they should resign individually or collectively in case of defeat, or maintain themselves as best they could till a new election; whether the short term of Congress would answer for the dissolution which is the *ultima ratio* of a British ministry; what would be the position of the President; whether the Cabinet should be outside of Congress or members of it—and a constitutional amendment to this effect would then have a very different aspect from what it would have now—these and many other points must be settled in the light of experience. The first step is simple and needs only agitation. It is of not much direct use for scholars to argue about it, and of just as little to advocate it in Congress, as we believe the late President Garfield did as far back as 1864, or as Mr. Pendleton did within a few years in the Senate, because Congress is solidly if silently hostile. It must be carried to the people, and we have a strong conviction that its popularity would be great; that the country is charged with a sentiment in this direction, as a black cloud is with electricity, needing only a point to draw it. If Senator Pendleton could make up his mind to stump the country on behalf of his plan, he would arrive at a very different result. If President Cleveland, in his opening message to Congress, would make the suggestion, with a simple statement of the argument in its favor, it could be carried before his term was over.

We believe, with Mr. Wilson, that the present state of things is too intolerable to last; that the change proposed is the only thing which will give any relief, and that it must come; but, with a natural desire to live to see it, we are looking anxiously for some statesman with mind enough and courage enough to see that in a resolute advocacy of such a proposition lies the broadest and most open road to the Presidency.

A SCOTCH LADY ABROAD.

Letters and Journals of Mrs. Calderwood of Polton, from England, Holland, and the Low Countries in 1756. Edited by Alexander Fergusson, Lieut.-Colonel. Edinburgh: David Douglas; New York: A. D. F. Randolph & Co. 1884.

THE beautiful workmanship displayed in this volume, with its etching of Polton House on the title-page, its pretty tail-pieces here and there, and its admirable printing, has an air of luxury that hardly prepares one for the plain, homely, sensible narrative which the book contains. Mrs. Calderwood has before had the honor of print, but not with such external dignity; her 'Letters and Journals' were among the papers privately issued by the Maitland Club, but are not now easily accessible, and as their piquancy makes them much sought for, they have been republished after a space of forty-two years in a really splendid edition. The lady was the aunt of the two Erskines, Henry and Thomas, and sister of the fourth Sir James Steuart, who spent most of his life in exile on account of his suspected share in the Rebellion of 1745. Her journey was undertaken partly to visit this brother, who was at the time (1756) living at the German Spa, and partly to give her two boys the benefit of some Continental schooling. She passed through England rapidly, made the tour of Holland and the Low Countries in a more leisurely way, and settled at Brussels. The account of what she saw is contained in the MS. "volumes" which she sent to her married daughter for the entertainment of herself and her friends; and as she was one of

those shrewd, outspoken, intelligent ladies of the old school whose extinction Sir Walter Scott laments, and had an eye, moreover, of preternatural sharpness for details, like a modern realist, her circle of acquaintances were edified as well as amused. "The weight of anybody's brain is well known when they are seen out of their own country," is one of her observations, and in her case the test did her honor.

As soon as she got over the border she began to look about and to ask questions, and her first complaint is that the English do not know enough to give intelligence. She is jealous for the reputation of Scotland, and finds the level country, with its villages and spires and quickness of communication not so excellent as the Scotch hills. Here is one glimpse of that attention to nature which marked Scotch poetry so continuously from early days, and was soon in Burns to become a strong literary influence: "I do not think anything could be more beautiful than the straths of some of our large rivers, inclosed on every side, where the grounds hang so that each inclosure might be seen above another, and, after they had advanced so high and steep, then the green hill appearing above, covered with sheep, and the waterfalls coming down now and then betwixt the hills." Mrs. Calderwood, however, was much more interested in cattle and poultry, rents, wages, dairy methods, modes of building and heating, taxes, population, costumes, and the *ensemble* of men and things, than in the beauty of these Scotch prospects which Johnson was to make his famous jest upon. One is sorry that she did not stay longer in England, for she hits off the national temper in her first words, and has that knack of description that puts the object before the mind with all its eccentricities at once. "The English," she is led to think, after a day or two, "are a people one may perhaps esteem or admire, but they do not draw the affection of strangers, neither in their own country nor out of it." She liked those she became acquainted with in London: "They seem to be good-natured and humane; but still there is a sort of ignorance about them with regard to the rest of the world, and that their conversation runs in a very narrow channell. They speak with a great relish of their publick places, and say, with a sort of flutter, that they shall to Vauxhall and Ranelagh, but do not seem to enjoy it when there." Of the ministers (it was the year of Admiral Byng's disgrace) she spoke short and sharp:

"We used to laugh at the English for being so soon afraid when there was any danger in state affairs, but now I do excuse them. For we, at a distance, think the wisdom of our governours will prevent all these things; but those who know and see our ministers every day see there is no wisdom in them, and that they are a parcell of old ignorant senseles bodies, who mind nothing but eating and drinking, and rolling about in Hyde Park, and know no more of the country, or the situation of it, nor of the numbers, strength, and circumstances of it, than they never had been in it; or how should they, when London, and twenty miles round it, is the extent ever they saw of it?"

She soon left England behind, and came to the very novel sights of the canal and sand countries, with their surprises both to the eye and mind. Nearly the whole of the volume is taken up with a minute account of the things and the modes of living which she observed in these foreign parts, with an occasional character-sketch or conversation or anecdote done in the fewest and most effective strokes. She shows on every page the Scotch virtue of economy: she puts down the prices of everything salable, the rents, wages, and incomes—in fact, it is quite just to say that she looks at everything from the side of money-values first, if there is any possible relation to material wealth. She exhibits, too, the instincts of the housekeeper, always noticing the domestic inconveniences and discomforts, and also ready to acknowledge and appropriate the improvements on the Scotch ways where their usefulness was not limited by the peculiarity of the country to that particular climate and condition. In all this portion, the sense, the closeness of observation, the brevity and force of expression, are remarkable; in these respects the 'Journey' will bear comparison with the best writing of the sort, and the whole has so different a complexion from the books of travel we have nowadays from our humorous and picturesque tourists, as to be a telling example of how travel may be made something more than a pleasure excursion. Mrs. Calderwood, it should be remembered, had her husband and children with her.

The 'Journey,' however, is as entertaining as it is instructive. The author's force of character takes the place of literary skill, and the clearness of her sight and statement makes the obscure relations of her nouns and verbs and her patchwork connectives a matter of no consequence. Grammar and spelling are proved to be not essential to lucidity by a practical demonstration. Anything more removed from the bas-relief finish of Mr. James's or Mr. Howells's Italian descriptions, for example, could not be conceived; but with what a vividness, with what a strength and reality this dialect-writing Scotch lady brings out her figures, almost in the round, as it were, or at least in Dresden figures!

"The thing I think the oddest about the Dutch is their appearance; there [are] almost none of them have the look of gentlemen or ladies. The men are tolerable; they have the air of sober men of busness, but, for the ladies, they look like chambermaids, put on them what you please, and they dress very plain. A fine guilt coach will pass, and in it a chambermaid in her Sunday's clothes, or an old worn-out housekeeper; and, when you see them walking from church, drest, they are just like a lady from the country, who has not had on a hoop, nor a fan in her hands, for twenty years, looking very prim, with her elbows into her sides, her two hands streight out before her, holding the fan out likeways, as if she was to red [clear] her way by it, and hagheling, as if she thought all her pitecots were coming off. And this is a description of everybody, for their is no odds in any town, either in the appearance of the people or the place, for, shut your eyes, and you will not know in what town you are, they are so like."

Here is the life-history of Father Daniel, who, when he got leave to visit her, "looked always when he came like a dog wagging his taill for gladness to get out":

"As for my friend Father Daniel, he is a good-natured, innocent, obliging soul, and very ugly and very merry. He is just a Scots pedantick scholer, and was always snuffling, out of curiosity, about every sort of religion, to see what it was, and what this set of folks' tenets were, and upon what they founded their differences from others upon. Had he been bred a divine, he would at this time [have] been a member of the presbitry of Dumferline or perhaps Mr. Jamieson's pastor at Kennoway; but, as he was bred a smuggling merchant, or perhaps a packman, he walked twenty miles to hear Mr. Whitfield, Mrs. Ebenezer Erskine, etc.; and, after satisfying his curiosity about them, he fell to trying what sort of cheese the papaists set their traps with, and, as he was snuffling about that, I suppose he found a life of study and idleness could be had without an estate, or so much as a farthing, none of which the others had offered him."

The good, strong-minded lady despised "the papaists" with an old Covenanter's vigor of spirit and wealth of abuse, some of which unfortunately the editor has excised. It is to be remembered, however, that she was nearer than we can at all realize to the "sufferings" at the Cross of Edinburgh in the significantly-named "killing time" of King James. Her sojourn among the Catholics led her to one generalization that is still a living matter:

"That giving up of the world so much among Roman catholicks, makes them divest themselves of care much easier than we can do; and there is a certain desire of ease, and what I may call a *selfishness*, that the English has, which is unknown to us, that makes so many of them give up their country and freinds with greater ease than we can do, either to wander about amongst strangers, quite alone, or to sit down amongst them, and care for nobody. . . . And if I was Mr. Whitnor I would rather bring up some young family for the world, than clok [of a setting hen] over a parcell of barren nuns."

We have extracted enough to show the reader that in this publication of an old manuscript of travel in a neighboring country, in days when the world is full of newer journeys in all the quarters of the earth, he will find something more than an antiquarian curiosity, something valuable in itself as exact information and shrewd observation, and interesting as an illustration of the mind and life of that generation of Scottish women who reared the men who made Edinburgh an "Athens" in the next age. Mrs. Calderwood herself wrote at least one novel in the manner of Fielding; the editor says that it "out-Westerns the Squire"; and although there is no ale-house incident or language in the present volume, there is the realistic touch, the sense that goes on all-fours, the wit that condenses like a proverb, the quick apprehensiveness of human nature and eye for the points of the animal or the truthful humor of the situation, which were a part of Fielding's endowment. This intercalated matter, what one may call the humanity-sketches, gives vivacity to pages that would otherwise be hardly more than statistics of the past.

SCHIPPER'S DUNBAR.

William Dunbar. Sein Leben und seine Gedichte, etc. Ein Beitrag zur schottisch-englischen Literatur- und Culturgeschichte. Von Dr. J. Schipper, ordentl. Professor der englischen Philologie an der K. K. Universität in Wien. Berlin: Robert Oppenheim. 1884. Pp. 410.

It has been Dunbar's misfortune that in the popular collections of poetry he is represented by extracts which can be regarded neither as his best nor as his most characteristic work, highly as they may have been valued by his own time. Just as that eternal 1328 is still passed along as Chaucer's birthyear, so compiler after compiler continues to accept as best specimens of Dunbar's verse the conventional allegory and "aureate terms" of "The Thrissill and the Rois," or of "The Goldyn Targe." Even Nichol (in Ward's 'English Poets') gives besides these only a part of "The Dance of the Sevin Deidly Synnis," and, of course, "The Lament for the Makaris." Surely there was room for a couple of those delightful smaller poems. For while "The Thrissill and the Rois" has undoubtedly great merits, and presents Dunbar in his most amiable aspect, how little, after all, does it show of his real genius! His drastic humor, his terse and vivid description, his admirable satiric power, are best seen, not in his elaborate verse, but in those occasional poems which sprang from the immediate life about him, and are to-day as fresh as when their author flung into them his joy or his sorrow. "All my poems," said Goethe to Eckermann, "are occasional poems. I have no opinion of poems snatched out of the air." Neither had Dunbar. His work still remains attractive in itself, and rich in hints regarding the life and thought of his generation. It deserves far more notice than has hitherto fallen to its share.

Professor Schipper's work is therefore eminently seasonable. The result of a long preparation, it gives to the German public an excellent study of Dunbar's life and poems. These latter are represented by copious and, for the most part, admirable translations. The work, so its author tells us (p. ix), is meant to put into popular

form the results of scientific study, and to open to yet wider circles the knowledge of a poet so well deserving attention from lovers of literature —a task, thinks Schipper, in no wise unworthy of the new philology, which has heretofore busied itself too exclusively with text-criticism and grammar. We agree thoroughly with this opinion. It is no easy thing to found a popular treatise on exact critical knowledge; but when the attempt is successful, we have such an excellent result as Ten Brink's 'History of English Literature.' We can hardly praise Schipper more than by saying that he constantly reminds us of Ten Brink. There is a wide field in English philology open for work of this kind. The microscope is not the sole instrument of the philologist, nor is his single object the infinitely little.

The book opens with a rapid review of Scottish poetry, based on Nichol's limitation of distinctively Scottish literature to the 150 years from Barbour to Lyndesay and Knox. In this summary, as indeed throughout the whole work, controversy is avoided, and there is little effort to put forth new theories. An attempt, however, is (p. 33) made to explain how James I. came to be regarded as author of "Peblis to the Play" and "Christis Kirk of the Green." Like Skeat (in his recent edition of "The Kingis Quhair") Schipper rejects such an authorship; but thinks the King's name became associated with the poems, as in the Bannatyne MS., through the interest that he took in collecting popular ballads, and his probable attempts at a reforming of music and text. Further, our author regards the "Kingis Quhair" as the chief means by which Chaucer's influence became so weighty and so lasting in Scottish poetry.

After this summary, Schipper turns to his main subject, and gives a careful sketch of Dunbar's life. Laing, the editor of Dunbar's Works, is treated with great respect; though there are many cases where Schipper's chronology is more precise, and some where he has made material change. He puts the poet's birth about 1456 or 1457; Laing, "not later that 1460"; Nichol, 145—. Schipper agrees with Laing as to the death-year of the poet (about 1520), but rejects the elder editor's suggestion that Dunbar *may* have fallen with James at Flodden; for, according to Schipper, our poet undoubtedly wrote "Ane Orisown: Quhen the Governour Past into France" (1517). Laing's date of the famous "Flyting" with Walter Kennedy is changed from "between 1492 and 1497" to December, 1504. From epithets used in the same poem, Schipper has won several additional touches of personal description. Dunbar is there mocked on account of his short stature. Schipper uses this fact to identify the *Droich* in the Interlude (Laing II., 37) with Dunbar himself (p. 207). In the chronology of the poems Schipper differs often from Laing. Some changes are wise; others, based on merely internal evidence, seem to us here and there doubtful. Thus the poem "Of Solistaris at Court" is referred (p. 130) to the author's younger days, because of the final passage, which expresses "a serene and hopeful belief in the King's good will." But at any time in Dunbar's career, a purse of gold from the royal hand was able to call up the mood in which our poem is written. Despite these few deviations, however, Schipper draws liberally from Laing, often (as p. 117; cf. L., p. 281, II.) making a long statement in the very words of Laing's note.

The main work of the book is an elaborate criticism, with copious translations, of Dunbar's poems. These are arranged primarily by their dates: (a) poems before 1503; (b) poems between 1503 and 1513; (c) poems after 1513. They are subdivided according to contents. The success of such work must depend, first, upon the thoroughness of the author's study; secondly, upon his critical ability; and, lastly, on the fidelity and force of his translations. As to the first, there is no question. In the second respect, there is a steady tendency to avoid the infinitely little and to keep the eye on the object, which would delight Mr. Arnold. In fact, as we noticed above, Schipper leans now and then too heavily on mere probabilities. Thus (p. 113) he paints a very black picture of the corruption of justice, the credulity of the King, the reign of adventurers, the loose morals, and the general atmosphere of bribery which must have characterized the court of James IV. All this is inferred merely from the internal evidence of Dunbar's satiric poems, a source of information, thinks Schipper, hitherto unduly neglected. Thus the "Ladyis Solistaris at Court," with its hint of female influence in the law-courts, shows, according to our author, that "the administration of justice, despite the reforms introduced by the King, was by no means so admirable as the historians would have us believe" (p. 114). Schipper forgets here that a satirist like Dunbar will have material anywhere; and, further, that this satire of women was part of a poet's stock in trade. Dunbar resembles Chaucer in this respect, and we know that Chaucer gave more cause of offence to the sex than fifty "Legendes" could have atoned for. As Laing remarks (ii, 273), "The Twa Maryit Wemen and the Wedo" follows closely the vein of the prologue to the "Wife of Bathe's Tale." So, in the poem above noticed, Dunbar is chiming in with a popular note of satire, and needs no definite abuses to inspire him. More attractive, though not convincing, is Schipper's theory (307 ff.) that "The Rewl of Anis Self" and the advice of *Polonius* to *Laertes* in "Hamlet" are probably drawn from the same source. The parallel passages are interesting to the general reader, and we give them all:

D. Behold and heir, and lat thy tung tak rest;
In mekle speich is part of vanitie.
S. Give every man thine ear, but few thy voice;
Take each man's censure, but reserve thy judgment.
D. He rewlis weill that weill him self can gyd.
S. This above all—to thine own self be true, etc.
D. Be war quhome to thy counsale thou discure.
S. Be thou familiar, but by no means vulgar.
D. Put nocht thyne honour in to aventeure.
S. Beware of entrance to a quarrel.
D. In cumpany cheiss honourable feiris,
And fra vyld (=vile) folkis draw the far on syd.
S. The friends thou hast, etc.
But do not dull thy palm with entertainment
Of each new-hatched, unfledged comrade.
D. Be war also to counsal or coreck.
S. Reserve thy judgment.

Thus there are eight lines (out of forty-eight) in Dunbar's poem which correspond in sentiment and expression to the famous lines in Shakspere. Shall we think it necessary to infer certain sources for this poem, sources which may also have been used by Shakspere? Hardly. Good advice for all phases of existence was such a "specialty" of mediæval literature, that commonplace rules of living like the above were as familiar as the Ten Commandments; were proverbial. Strange if in an enumeration of such rules the two passages did not contain similar ideas and even expression. Compare Wright's or Grant White's note to *Julius Cæsar* V, 5, 73, where the striking similarity of the passage to a stanza in Drayton's "Barons' Wars" is referred to the likelihood of identical, or at least similar expression, when two writers put into words a familiar thought. We are even inclined to refer to the same cause such parallels as: ("Twa Maryit Wemen," 316) "For nevir bot in a gentil hert is generit ony ruth," or ("To a Ladye," 41) "Nor out of gentill hart is fundin petie," with Chaucer's ('C. T.' 1763) "For pitee renneth sone in gentil herte." It is the same with certain figures of speech. We find ("Goldyn Targe," 36): "stanneris [=pebbles] clere as sternis in frosty nycht," and at once think of Chaucer's frere, and his eyes that "twinkled in his hed aright, As don the sterres in a frosty night." But Lyndesay has the same figure, even to the twinkling (Works, E. E. T. Soc., p. 559): "Twynklyng lyke sterris in ane frosty night"—used of jewels in a robe. Finally, J. Heywood sings of the Princess Mary: "Her bewté twinkleth like a starre Within the frosty night." This is not copying, which would be an absurd supposition, but rather the common use of a stock figure.

To the German reader, the most important part of this book must be the translations. We hardly dare call attention to a couple of slips, since it is precisely in his rendering of such difficult originals that Schipper has been so admirably successful, both in interpreting the obscure sense and in doing justice to Dunbar's masterly and elaborate metres. In many cases he has smoothed away the grossness of the original, yet without losing the humor and the point. We think, however, that the sense is missed in the refrain of the poem "To the King" (pp. 75, 265): "Excess of thocht dois me mischeif." *Thocht* certainly means 'anxiety,' 'despondency,' 'trouble,' and is the equivalent of "pane and greif" in the third line of the first stanza (cf. notes to "Ant. and Cleop.," iii, 11, "Think and die"; or "Jul. Cæs." ii, 1, "take thought"). Schipper translates, with our modern sense in mind, "Das viele Grübeln schadet mir." While we can excuse, on account of exigencies of rime, a rendering like "Im Prachtgewand von Blumen neugepflückt" (p. 170) for "In brycht atteir of flouris, forgit new," where *forgit* of course refers to *atteir*, there is no reason for the translation:

"Das," sprach Vernunft, "ist deiner würdig ganz,"

for

"Weill worth the, sister, said Considerance."

Worth is surely the well-known verb, found in 'Piers Plowman' (*e. g.*, Prol., 183) and often elsewhere; and *weill worth* is parallel expression to "wo worth" ("woe be to"), found as late as Walter Scott's "Lady of the Lake": "Wo worth the chase, wo worth the day." But, as we said, Schipper's translations are, in the main, excellent.

After a final summary of Dunbar's traits as man and as poet, and a brief discussion of his relations to the drift of thought in his age, the last twenty pages of the book are devoted to an account of Lyndesay and the dependence of his work on that of Dunbar. The latter's excellence, thinks Schipper, lies in originality, satiric power, and mastery of form—"die Uebereinstimmung von Inhalt und metrischer Form": "Klarheit und Anschaulichkeit des Ausdrucks. . . . Gedankenreichthum der Sprache."—Lastly, the undoubted success achieved by our author in this study of Dunbar gives us a more than hopeful interest in his statement (p. 389) that he is soon to publish a work on 'Altenglische Humoristen und Satiriker.' But are Germans always to be first in the field?

Alice, Grand Duchess of Hesse, Princess of Great Britain and Ireland. Biographical Sketch and Letters. G. P. Putnam's Sons.

The Princess Christian (Helena) has written the preface to this memoir, and in it explained that the book is intended not as a complete biography, but merely as a "true picture" of the domestic life and of the loveliness of character of the Princess whose name it bears. The sketch itself was written by a Dr. Sell, resident in Darmstadt, and is interwoven with extracts from letters of the Princess Alice to her mother; or rather a separate summary is given of the events of each year of the Princess's life, after her marriage with Prince Louis of Hesse, and each summary is followed by the letters relating to the period in question. A chapter on "Childhood and Girlhood" precedes this portion of the book, and there is an appendix containing, among other

things, a "Sketch In Memoriam" by Sir Theodore Martin.

The letters are written in a very unaffected and familiar way, as any daughter might naturally write to her mother, and they give a pleasant impression of the Princess's domestic life, which was, indeed, very similar to that of any ordinary wife and mother, not excepting the need of economy and the pressure of many cares. The Princess Alice seems to have been happy in it (though report says that her Louis was not always an ideal husband), but her happiness was overshadowed by the sorrow of her father's death, and by her deep sympathy with the lonely lot of her widowed mother. A most ardent love for that mother pervades these pages; not so much the clinging dependence of a child as a helpful love, seeking always to comfort and strengthen. The allusions to Prince Albert—she calls him "adored papa"—which recur very frequently, are full of a reverent affection which bears witness to the nobility of character of both father and daughter. Singularly enough, the Princess died on the seventeenth anniversary of the death of the father whom she had so mourned. After reading this record of her devoted and loving life we can well appreciate the sorrow of her family and friends—a sorrow so profoundly shared by her German subjects and her English countrymen, to say nothing of the grief of the many poor and unfortunate whom her kindness had assisted.

The ideas of the Princess Alice with regard to the moral education of her daughters are full of liberality and common sense. For example, she writes (p. 250): "I strive to bring them up totally free from pride of position, which is *nothing* save what their personal worth can make it"; and (p. 277) "I bring my children up as simply and with as few wants as I can, and above all to help themselves and others, so as to become independent." But while the greater portion of the letters relate largely to details of domestic and social life, we nevertheless hear a good deal of the Austro-Prussian and Franco-Prussian wars, and something of the Princess's activity in founding hospitals and societies for "aid to sick and wounded," as also of her efforts in various directions in behalf of women. The account, however, of her philanthropic labors is more clearly given by Dr. Sell. She seems not to have shared the more advanced ideas in relation to the political status of women, though in various other ways looking to their advancement. Her friendship with the writer Strauss is scarcely mentioned in the extracts from her correspondence with the Queen, but what Dr. Sell tells us of it is very creditable both to her independence of mind and kindness of heart. She appears to have been faithful to every duty, whether public or private, and the book certainly attains its object, of clearly presenting the traits of a beautiful character. This conceded, we must feel, nevertheless, that to readers more sensitive than curious there will seem something indelicate, something like a breach of trust, something like an outrage upon departed affection, in thus placing these private and tender communications before the public eye. And it must also be confessed that, except to those persons for whom the touch of royalty turns everything to gold, the *thorough* perusal of all these letters would be a pretty tedious business.

History of the Ancient Ryedales and Their Descendants in Normandy, Great Britain, Ireland, and America, from 860 to 1864. Comprising the Genealogy and Biography, for about one thousand years, of the Families of Riddell, Riddle, Ridlon, Ridley, etc. By G. T. Ridlon. Manchester, N. H. 1884. 8vo, pp. 786.

It is very difficult to give a suitable summary of a book like this. It evidences very considerable patience and perseverance on the part of the author, it contains many facts, it possesses some value; but it is nevertheless a monument of misapplied energy. The author seems to be that dangerous kind of an antiquary who has no idea of the relative value of facts, and who is especially incompetent to deal with English antiquities. He does not have the faintest idea of what his citations really mean, and his transpositions thereof into the presumed American equivalents are extremely ludicrous at times.

But the underlying fault of the author is his entire misunderstanding of the object of genealogy. In England it is the desire of the genealogist to trace the success of the main line of a family—that which has absorbed all the wealth, honors, and consideration of the race—and perhaps to enable recent offshoots to show their propinquity. In this country, on the contrary, the family has been considered as a unit, a clan springing from a well-ascertained founder; and the ties of relationship have undoubtedly been drawn closer by the work of the family historian. Even in this respect we have undoubtedly nearly reached the limit, because each succeeding generation dilutes the kinship in degree and vastly extends it in scope.

A book like Mr. Ridlon's is of neither class. He spends much time and space in writing an account of the British families of Riddell and Ridley, both well known and fairly recorded in British works, and he supplements his work with notes on various obscure namesakes, of no especial merit whatever. Two generations of the family of a shepherd in Scotland or Ireland, or of a farmer or mechanic in England, is in no sense a contribution to genealogy; but this is about the extent of Mr. Ridlon's original results abroad. As to his American portion—by far the smaller part of his book—it treats of the Riddells or Riddles and the Ridlons, both families of comparatively late date here, and this part of the work is far below the standard of our local genealogies. The author has his own idea of the best plan of arranging the generations, but in so far as he differs from the approved methods, he errs.

We have said that there is some value to the book, and that lies in the enormous amount of facts collected. Doubtless some student will hereafter find useful material therein, but he will be obliged to delve for it and to rearrange it for service. It would be an easy thing to turn this book into ridicule, so numerous are the misprints, so reckless the mixture of truth and falsehood, and so refreshingly American the comments. But this would be unfair to the evident zeal and good intentions of the author. One example will suffice. Treating (on pp. 402-3) of Sir William Stanley, the hero of Bosworth field, brother to the Lord Stanley who ranked among the highest peers at that date, he thus translates him:

"How came the family of Egerton to have possession of the manor of Ridley? In the absence of specific documentary evidence, I conjecture the connections to be as follows: As the main line of the family of Ridley had ended in Alice, the wife of Robert Dunyel, and the representation consequently devolved upon their son and heir, who became the knight-follower of William *Stand*ley, when this son was put of sight in some mysterious way, his *County Marshal* got possession of his property, being then in great favor with the King." "As Standley was now out of the way, the Egertons, represented in that generation by Sir Ralph, put in their rightful claim to the manor of Ridley, and were successful in its possession, *with all the costly improvements on the estates* made by William Standley."

This may be a graphic description of the attainder of Sir William Stanley and the confiscation of his vast estate, but we prefer the style of Dugdale, Collins, or even Sir Bernard Burke.

The Plant-Lore and the Garden-Craft of Shakespeare. By Rev. Henry N. Ellacombe, M.A., of Oriel College, Oxford; Vicar of Bitton, Gloucestershire, and Hon. Canon of Bristol. Second edition. London: Simpkins, Marshall & Co. 1884. 12mo, pp. 438.

A book well worthy, this, of a second edition, and to stand on the shelf along with Doctor Prior's 'Popular Names of British Plants'—books to be read with interest and to be consulted with satisfaction. It is much to have a collection of all Shakspere's references to plants and flowers, and Canon Ellacombe gives no stinted measure. Even cork comes in, although "it is most probable that Shakspere had no further acquaintance with the cork tree than his use of corks"; and barnacles, because the barnacle tree in those days was firmly believed in. Moreover, he misses no appropriate occasion of drawing upon his full stores of herbalistic and of ballad lore. Besides, the Canon knows much more of plants than their names and literary history. An enthusiastic cultivator and a fair botanist (as a country clergyman ought to be, and in England often is), he gives good advice about the cultivation of flowers and the management of trees and shrubs, even of some which have only in our own days come to be known. The appositeness of these cultural remarks is more obvious when we learn that the materials of this volume first appeared as articles in a horticultural periodical. The author decided to retain them in his book "on finding that they interested some readers, by whom the literary and Shaksperian notices were less valued." The converse is more imaginable.

About People. By Kate Gannett Wells. Boston: James R. Osgood & Co.

This little book will be valued not so much for the novelty of the views presented in it as for their justice and wisdom. Each of the essays touches closely subjects upon which there have been many misleading discussions, many disappointing arguments, simply for want of that wide experience which Mrs. Wells has here contributed. However general may be the titles, the essential thought and purpose of all the essays are most specific—a woman's view of the present position of woman in the home, in a profession, or in day labor. The difficulties are stated without exaggeration and without bitterness, and the hopes held out are not delusive but rational. The curious facts gathered in the article on "Caste," as to social distinctions among working people, must give the book a position of authority upon questions as to their improvement. Whoever means to help them has to reckon early and late with this feeling of class-separation. A more lucid style would have been more forcible, and a keener sense of the figurative meaning of words would have added point to the argument and eloquence to the appeal to feeling. The paragraphs on manners, pages 190–197, are among the best in the book. We had almost said it would much profit young people to commit them to memory.

BOOKS OF THE WEEK.

Harper's Young People for 1884. Harper & Brothers.
James, H. The Author of Beltraffio. Pandora. Georgina's Reasons. The Path of Duty. Four Meetings. Boston: J. R. Osgood & Co.
Shepherd, W. Prairie Experiences in Handling Cattle and Sheep. Illustrated. O. Judd Co. $1.
Sherwood, J. M. Memoirs of Rev. David Brainerd, Missionary to the Indians of North America. Funk & Wagnalls. $1.50.
Songs of the Roses. A Valentine. White, Stokes & Allen. $1.50.
Southworth, Mrs. Emma D. E. N. The Changed Brides. Philadelphia: T. B. Peterson & Brothers. 75 cents.
Stories by American Authors. IX. Charles Scribner's Sons.
The Money-Makers: a Social Parable. D. Appleton & Co.
The White Witch. A Novel. Harper's Franklin Square Library. 20 cents.
Turner, E. A. Primer and First Reader. Boston: Ginn, Heath & Co. 24 cents.
Vasari, G. Lives of the Most Eminent Painters, Sculptors, and Architects. Vol. VI. London: George Bell & Sons.
Youngs, E. S. A Heart's Life, Sarpedon, and Other Poems. London: Kegan Paul, Trench & Co.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 19, 1885.

The Week.

THERE is probably no odder or funnier incident in the advent of a new Administration than the arrival of delegations from various parts of the country to "present names" for "Cabinet positions" to the incoming President. It begins about a month after the election, when the quarrels of the canvass have been closed, and the relative deserts of the various persons who have contributed to the triumph have been settled, or finally left unsettled. The members of the victorious party in every town and city in States which have been carried, or came near being carried, then begin to look around to see whether they have not some local notable, a judge, or a general, or even colonel, whom it would be well to "present" to the new President for a seat in the Cabinet. To their imaginations the Cabinet is not a set of advisers, standing in an intimate relation to the President, and chosen to suit himself, but a strictly representative body, the seats in which are the rewards of party devotion. In nine cases out of ten, however, there is no expectation whatever that the presentation will be successful in obtaining a position. It is simply a compliment, and consequently the delegation, instead of trying to get the President-elect into a private place and giving him secret advice, harangue him about the Judge's merits in the most public way possible. This is intended to let him know that if a portfolio is not to be had for our distinguished fellow-citizen, it is to be borne in mind that he is the local boss of the party, and the man to be consulted about the local offices in case the State is not properly represented in the Senate. The mixture of simplicity and humbug in the whole performance is delightful and in many ways unequalled. Any one who has assisted at a presentation will, if a humorist, carry away delightful memories of it.

The followers of Mr. Bland have fallen into a spasm on the discovery that the President-elect favors and desires a discontinuance of the silver coinage. To this must be attributed their extraordinary petition, or whatever it may be called, addressed to Governor Cleveland, urging him to suspend his judgment on the silver question until "the sentiment of the party" can be ascertained. If it is the sentiment of the party that eighty-five cents are equal to a dollar, they want Governor Cleveland to adopt that view. The only proper guides for Governor Cleveland in the premises are the rules of arithmetic and the last Democratic national platform. The platform declares that the party "believes in honest money, the gold and silver of the Constitution, and a circulating medium convertible into such money without loss." The inevitable consequence of the forced coinage of silver will be to expel gold altogether from the money of the country, and to substitute silver in its place. This is the real purpose of the Bland faction. They want a cheap dollar, an 85-cent dollar, any kind of a dollar except an honest dollar. The honest money of the Constitution which the Democratic platform calls for is not the sort that they are looking for. Governor Cleveland will perhaps ask to be excused from turning away from the latest official declaration of his party to learn the true Democratic faith from Mr. Bland's petition.

Senator Bowen, of Colorado, disclosed the true significance of the Silver Bill when he rested its defence upon the rights of the silver producers, as a part of the army of American industry, to protection. He said that they had as good a claim upon the public taxes as anybody else, and that they intended to assert it. Very good, Mr. Senator, but why should the American taxpayer be required to support the silver market for the benefit of Mexico and Peru as well as that of Colorado and Nevada? Would it not be a saving all around to pay a bounty to American silver, instead of holding up the market price for everybody to sell on, by purchasing $2,000,000 per month at the London price of the article? If the present price is one dollar per ounce, and it falls to ninety-eight cents in consequence of our stopping the coinage, let Congress pay 2 cents per ounce for all the silver hereafter mined in the United States and duly authenticated as such at the public mint. In this way we should confine our benefactions to our own people instead of distributing them in a random way to Mexico, Germany, India, and every country which has any silver for sale.

The determination of Senators Sherman and Ingalls to "haul Senator Edmunds over the coals" for his declaration in regard to the electoral count, has wisely been abandoned. Mr. Edmunds will not be removed from the Presidency of the Senate, neither will any effort be made to show that he is not a sound interpreter of constitutional law. It ought not to have taken Senator Sherman twenty-four hours to reach so sensible a decision as this. He joined Senator Morton in 1877 in the plan to have Mr. Hayes counted in by the President of the Senate, and was defeated through the opposition of Mr. Edmunds. Both houses of Congress decided then, by large majorities, that the Edmunds view was the sound one. There is in Washington, as well as in the Republican newspaper offices, some natural irritation because Mr. Edmunds has "rubbed in" his view with such publicity at this time, and we observe with much interest that the chronic dislike of the partisans of the party for the Vermont Senator's way of doing things has been greatly aggravated thereby. We venture to remark that we think it is a good way, and that it would be a vast gain to our politics if more of our public men followed it.

A variety of cross purposes have combined to defeat, for the time being, the bill to place General Grant on the retired list of the army. We say for the time being, because the bill will come up again and again, and will, we are sure, be finally passed, in obedience to an undoubted popular sentiment in its favor. If it fails altogether in the present Congress, we trust that President Cleveland will commend it to the attention of the next Congress. This he will be amply warranted in doing since it has received the nearly unanimous support of his party in the Senate, and has only failed of passage in the House by reason of the passions excited by President Arthur's veto of the Fitz-John Porter Bill. This veto is the parent of all the opposition that the Grant Retirement Bill has encountered, except the personal opposition of General Rosecrans, who will not be in the next House to fight the ex-commander of the Union armies. We have expressed the opinion that the Democrats in the House were acting unwisely in forcing an issue upon the President by compelling him to sign a bill at the expense of his consistency, or to veto it at the expense of his feelings and wishes. We remain of the opinion that games of this kind are bad politics. If anything could be gained by putting the President in a dilemma (which is doubtful), much more would be gained by a straightforward and manly course. Yet the blame should be distributed equitably, and it is impossible to deny that President Arthur paved the way for the mishap which the Grant Retirement Bill met in Monday's vote. He vetoed the Fitz-John Porter Bill in order to make himself a more acceptable candidate for the Republican party than he would have been if he had signed it. The constitutional objection which he raised against it was a "fetch." This is clearly proved by the fact that he had signed other bills of a similar character which were open to the same constitutional objection, and by the further fact that the Fitz-John Porter Bill did not direct the President to restore Porter to the army retired list, but merely authorized him to do so. The option to restore Porter or not was still in his discretion.

Mr. Holman and Mr. Randall rendered the public an important service on Friday by defeating the steamship subsidy, which had been proposed as an amendment to the Post-office Appropriation Bill. The vote by which it was rejected was close—105 to 97—but it was sufficient. This subsidy scheme is the same which has been haunting the lobbies of Congress during the past eight years. Sometimes it takes one form and sometimes another, but its substance is always the same. It is an endeavor to repair the injury which protection inflicts upon our ocean carrying trade by appropriations from the public treasury. Mr. Don Cameron was bold enough to make the avowal, in his remarks on a resolution recently introduced by himself favoring donations to American ships. He said that it was intended to carry the principle of protection to its logical consequences. Nobody who believes in protection ought to find fault with Mr. Cameron's resolution. Ships on the high seas cannot be protected by Custom-house duties. The ocean carrying trade must get its bonus, if at all, by direct payments from the Treasury. The refusal of the House to sanction such payments is an indication that the country has come to a halt, and

that the vicious practice of robbing Peter to pay Paul is not to be pushed any further, whether logical consistency requires it or not. The vote by which the subsidy was defeated will disperse the birds of prey for a season, but they will be back in Washington as soon as the new Congress assembles. Before that time comes we shall have a new Administration, in which schemes for taxing the many for the benefit of the few, and the poor for the benefit of the rich, we may hope, will find no favor.

Mr. Evarts had a reception at the Union League Club on Friday night, and made a speech which was listened to with much interest as an exposition of what his course was to be in the Senate, and what his views were on great public questions. He said that the Republican party had been defeated here in New York "at the centre of the array," but that it still held the Senate; that one President of the United States had thought it no descent to go into the Senate; that Mr. Morton, our Minister to France, was willing to go into the Senate, as were Mr. Hiscock and Mr. Russell, and he (Mr. Evarts) was willing to go too, when properly called upon; that when he is there he will no longer speak as a private citizen, but as a representative of the State of New York; that the two great parties are "the same in heart, in substance, in principle, and in purpose" as in 1860; that it is the duty of our representatives in Washington to see during the next four years that "as little detriment as possible" shall be done to the Republic; that he had much reason to believe that the Republican party would come back to power in 1888; that there must be no "discord" between now and then; that "secret and sinister methods by artificial combinations" will work "defeat, disorder, and disgrace," and that the late Senatorial contest had been "free, honest, and good-tempered."

A new woman-suffrage bill has been introduced in the New York Legislature, and one of the old-fashioned conventions has been sitting in this city during the past week. Woman-suffrage in this State inherited much of the reformatory zeal which lost its occupation by the emancipation of the slaves and the close of the war, and was urged upon the Constitutional Convention of 1866 by so respectable an advocate as George William Curtis, and, if we remember rightly, had Henry Ward Beecher as President of the Association in this city. But it received a severe blow from the figure cut by many of its leading supporters in the Tilton-Beecher scandal, and by the adhesion of Victoria Woodhull and some other women of her kind. From this it can hardly be said ever to have recovered. Reformers who were at all squeamish about the company they kept began to fight shy of it, and it came to have in the eyes of the general public the air of being the first stage on the road to something in the nature of "free love." In fact, if it were not for the greater respectability of the associations in Massachusetts, and the adoption of woman-suffrage in some of the extreme Western States and Territories, the movement would have kept itself alive here with great difficulty. The agitators here have of late addressed themselves almost exclusively to the Legislature, the members of which they threaten or cajole with considerable effect. Nearly all legislators live in terror about reëlection, and will grasp at almost anything which promises aid without involving any violation of party allegiance. Woman-suffrage happens to be an open question with both parties, and its friends may damage any legislator in his district to some extent, if they set about it in good earnest. Every man, too, who is not clad in triple brass, shrinks from feminine hostility publicly expressed. Even if it does not injure him, it is sure to make him more or less ridiculous. There are few men, also, who are insensible to feminine praise, and the cockles of whose hearts are not more or less warmed by finding that a certain number of members of the opposite sex consider him "a champion" of some form of right. In addition to these things, the woman-suffragists in this State have been and are making legislative converts by the fact that it is all but certain that an act bestowing the suffrage on women would be unconstitutional, and that consequently the passage of one would at worst be nothing more than a frolic. The woman-suffragists are now everywhere adopting the plan of attacking the legislatures of States where there is no constitutional restriction on the legislative admission of women to the franchise, and especially the legislatures of the new States of the far West, where population is sparse, women few, and where government is as yet of so little importance that few care how many experiments in it are made. They hope by their success with these to familiarize the older States sufficiently with women's voting to improve their chances of securing amendments to the Constitution wherever they are necessary.

In this State at present their chance of obtaining constitutional recognition would, we think, be very small. The movement has not among its professional advocates a single person, male or female, to whose opinions on any political change the New York public attaches any importance; a serious fact when taken in connection with the usually conservative temper of the New York voters. Moreover, it must be said that the samples which the suffragists have given, both here and in Massachusetts since 1870, of the kind of contributions they would make as voters to the political thought or action of the day, have not helped their cause. Their speeches and articles are still as shrill, incoherent, shallow, and irrelevant, their range of political knowledge as narrow, and their love of and reliance on personalities as great, as ever. What is worse, too, for them, is, that the activity and efficiency in a great many professions and callings of women who either care nothing for the suffrage, or are greatly opposed to it, have all the while been increasing rapidly. Besides this, there is a deep and growing conviction among a large body of the people of the State, that the problem which to-day most puzzles thoughtful men—the government of the large cities—would be rendered much more difficult, in some cases perhaps insoluble, by the enormous reinforcement which the ignorant and corrupt male vote would receive from woman suffrage. Strong therefore as the argument is which woman-suffragists may draw from the ignorance and unscrupulousness of large numbers of the men who hold the franchise in the great cities, the main body of people of a reforming turn, while acknowledging the discomforts of the frying-pan, cling desperately to it, as in all respects preferable to the fire.

The *Evening Post* publishes a letter from Bangor giving some official statistics of the liquor business and its effects in Maine. As the State has a stringent prohibitory law, these figures make curious reading. There is not a county in the State which has not places where liquor is sold openly, and many more where it is sold on the sly. One of the prison inspectors, who has travelled all over the State repeatedly, says he does not believe there is a village or town where liquor cannot be obtained by any one familiar with the ways of finding it. Intemperance is said to be the cause of three-fourths of the sentences to jail, and the principal directions in which crime is on the increase are violations of the liquor-law and drunkenness. Along the State line the traffic in liquor is especially brisk. One store in Aroostook County runs over the border into New Brunswick, and in this New Brunswick portion a large and inviting assortment of liquors is kept on hand, which any thirsty visitor may "sample" without molestation from Maine laws simply by walking the length of the store. The statistics show that the prohibitory law, instead of suppressing the liquor traffic, forces it to be conducted quietly. Undoubtedly it acts as a strong check upon it, but an equally strong check would be exercised by a high-license law, by which the State would gather a revenue.

We trust there is no truth in the reports that the prosecution of Short is in some way in the discretion of Phelan, and that the latter can, if he dislikes it or finds waiting here in the city too expensive, drop it and go off to Kansas or any place he pleases. Short's crime was a crime not against Phelan, but against the State, and his prosecution is, therefore, in the hands of the District Attorney, whose duty it is to see that Phelan is forthcoming on the trial, and made to testify whether he pleases or not. Things have not yet reached such a pass that dynamiters and conspirators can knife or pistol each other in this city on the sidewalk or on open stairways in broad daylight, and then treat it all as a private affair with which the public has no concern. If Phelan cannot afford to live here, the Sheriff can well supply him with board as long as may be necessary.

The inconvenience, not to say absurdity, of the American participation in the Congo Conference receives a fresh illustration nearly every day. The resolutions of the Conference would, of course, only amount to so much jabber if they were not embodied in a treaty signed by all the conferring Powers. When the time came for this, however, Mr. Kasson refused to sign in behalf of the United States, the State Department probably having found out by this time that it was on the verge of an "entangling alliance." There is now, therefore, another delay, as the Powers think the action of the Conference would have no moral weight if it were not unanimous. What makes

the matter worse is, that they have been listening for many weeks to a prodigous stream of talk, both from Mr. Kasson and Mr. Sanford, in the belief that it meant business—that is, that these gentlemen were talking with power to act.

The doings of Mr. Winans in Scotland, in appropriating 300 square miles of territory, extending from sea to sea, to a deer forest, seems likely to give a serious stimulus to the crofter agitation against the landlords now going on in the Highlands. It is hardly possible, indeed, that the new Parliament will fail to take up the question of land tenures in Scotland in much the same spirit in which the Irish land tenures have been dealt with. Many people believe Winans has made his deer forest with the view of performing a *reductio ad absurdum* on the pleas by which the eviction of families to make way for deer have been hitherto defended by both Scotch landlords and sportsmen. In other words, he shows the monstrous things which may be done under the law as it stands. He makes short work of the most sacred traditions of sport, by giving up deer-stalking wholly, as too fatiguing and tedious. He has the deer driven to some convenient trap, where he slaughters them at his leisure at short range, and leaves the carcasses which he does not want on the ground, and allows the wounded to perish miserably. He has evicted a great many families to make room for this sort of fun, and has prosecuted one man for letting a pet lamb trespass on his preserves. Moreover, he sets local opinion at defiance, and laughs at the local gentry when they send him to Coventry for his unsportsmanlike conduct. In fact, he has many of the marks of an American humorist, and has that specially American quality which Matthew Arnold extols in the last number of the *Nineteenth Century*, of "seeing straight and clear." John Morley has now almost promised his constituents that Winans will not be allowed his amusement much longer.

Lord Rosebery has at last got into the English Cabinet as Lord Privy Seal and First Commissioner of Public Works. Everybody who knows him will be glad to hear this, for he is one of the ablest of the younger generation of English politicians, as well as one of the most charming of talkers and orators. He has long been conspicuous as one of Mr. Gladstone's most devoted supporters, but has been too young to have much done for him in the way of political advancement, without the endorsement of a great constituency, and this, as he was in the House of Lords, he could not get. Mr. Fawcett's successor in the Post-office, Mr. Shaw Lefevre, has also been admitted to the Cabinet, which Mr. Fawcett was not. But the Cabinet needs strengthening, owing to the serious breakdown of Lord Granville and Lord Derby, both of whom are under a cloud for shortcomings in their respective offices, Foreign and Colonial.

The steps in the Sudan tragedy which the world is now witnessing are as follows: 1. Revolt of the Sudanese against the Egyptian Government, which had, since the conquest in 1868, been little better than organized robbery. 2. Ineffectual efforts of the Egyptian Government to suppress it, ending in the destruction of Hicks Pasha's army. 3. Refusal of England, which had in the meantime taken charge of Egypt, to allow these efforts to be repeated, in view of the condition of the Egyptian army and treasury. 4. Refusal of the Mahdi to allow the Egyptian garrisons in the Sudan to be withdrawn peaceably, followed by loud Jingo cries in England that it was a shame to leave these brave men to be massacred. 5. Slow acknowledgment of the British Ministry that something ought to be done for them if possible. 6. Appearance of General Gordon on the scene, offering to settle the whole matter single-handed by going himself to Khartum. 7. Acceptance of his offer by the Ministry, with emphatic warning that an armed expedition was not contemplated, and that if he failed he was to come back. 8. Further concession of the Ministry to the Jingoes by sending troops to Suakim, just to secure the port against Osman Digna. 9. Complete failure of Gordon to make any impression on the Sudanese as a deliverer, and his conversion into the commander of the Egyptian garrison in Khartum. 10. Announcement of Gordon that he would not come back, but would stay and "smash the Mahdi," if he could get some Indian or Turkish troops, or if European and American capitalists would lend him about a million dollars. 11. Growing impudence of Osman Digna at Suakim, leading to a sortie of the garrison, and two fights in which about 5,000 men were killed or disabled, just to teach him manners. 12. Gradual blockade of Gordon at Khartum, accompanied by loud Jingo cries that it was a shame to leave such a splendid fellow to be overwhelmed. 13. Gradual breaking down of the Ministerial determination not to meddle in the Sudan trouble, partly through fear of the Jingoes, and partly through fear of the effect which any sign of timidity might have on Germany and France and the Indian Mussulmans. 14. Determination to send 7,000 men and spend $50,000,000 in rescuing Gordon, as a splendid specimen of the British officer. 15. Death of Gordon before the arrival of the expedition. 16. Determination, since there was no Gordon to rescue, to prosecute the war, and "smash the Mahdi" anyhow, no matter at what cost in blood or treasure, but without any intention of keeping the Sudan.

This most lamentable affair has now entered on a new stage. About 500 English, Irish, and Scotchmen have already been killed or disabled. Some 5,000 Arabs, whose bravery and devotion everybody admires, have been mercilessly slaughtered or driven home as cripples, and their villages burned. The campaign which is now opening will probably bring Wolseley's force up to 25,000 men, and, as far as we can see, he is going to undertake a siege of Khartum in the middle of an equatorial summer, and in a deadly climate. If he determines to make a long job of it, his own men will die of disease like cockroaches; if a short one, as is more probable, he will have to deliver desperate assaults against an enemy who excels in hand-to-hand fighting. The result in any case will be the loss of hundreds at least of British lives, and an addition of say, $200,000,000 to the public debt, besides two or three pence in the pound to the income tax. This is the prospect at present. Wolseley's proverbial good luck may get him out of the scrape at less cost, but the chances are against it. The Suakim route to Berber is to be opened under General Graham, who commanded in the fight with Osman Digna. There are to be one hundred and thirty miles of railroad and an intrenched camp constructed, from which there will be a march of one hundred miles over a very bad desert. There is a powerful passage in De Maistre, apropos of war, describing the loathing and disgust which would be excited in the human breast by the spectacle of tens of thousands of cats meeting in a great plain, and scratching and biting each other till half their number were dead and mangled. To beings superior to man, conflicts like this in the Sudan must have much the same look of grotesque horror.

Wolseley's objections to the Suakim route to Berber as a quick means of communication with Khartum have now been fully justified since the Sudan enterprise has assumed larger proportions, by the order to make a railroad over at least part of it. No better acknowledgment of its difficulty for the march of an army in the presence of a watchful and hardy foe could be made. The water supply at any of the wells is only sufficient for small bodies of men, and much of the country is mountainous and rough. The railroad will take long to make, will cost heavily, and will absorb a considerable force in guards. Every yard of it will have to be patrolled night and day, and water-carrying will be one of its chief functions. Osman Digna is now reported as having a very large force along the route, and he evidently will not be as ready to attack squares as he has been. He can employ his forces far better in mere annoyance.

One of the latest London stories about Gordon, and one probably true, is that Lord Wolseley received a long despatch from him strongly denunciatory of the Government, which the Ministry refuses to publish, and the Jingo newspapers evidently look on this as a most disgraceful act. There is nothing odder in English history than the position which party spirit has led the Tories to give Gordon. He was either in the service of the Government, or he was not. If he was, his conduct in remaining at Khartum, and sending home lectures to his superiors, was grossly insubordinate, and such as Tories are ordinarily the first to condemn. If he was not, and remained at Khartum simply as a private adventurer, he remained at his own risk, and the fitting out of an expedition to rescue him is a scandalous waste of blood and treasure. There is also another story, that he sent Colonel Stewart away in order to save his life, as he despaired of relief. But this is contradicted by his latest despatches, which showed he had no doubt of his ability to hold the place. Moreover, it was not characteristic of the man to despair of anything. He probably never despaired in the whole course of his adventurous life. Nor is there the slightest reason for believing that he was not from the first secure in Khartum against everything but treachery, and this he clearly did not expect.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, February 11, to TUESDAY, February 17, 1885, inclusive.]

DOMESTIC.

BOTH branches of Congress met in the hall of the House of Representatives on Wednesday, at noon, in pursuance of the Constitution and the laws, to count the electoral vote for President and Vice President. Senator Edmunds, as President of the Senate, presided over the joint convention, opened the certificates from the States, and handed them to the tellers, who declared the result in each. When all had been announced, Senator Edmunds declared that the tellers reported 219 votes for Cleveland and Hendricks, and 182 votes for Blaine and Logan, and that the former had a majority and appeared to be elected President and Vice-President of the United States for four years from March 4, 1885. He added: "And the President of the Senate makes this declaration only as a public statement, in the presence of the two houses of Congress, of the contents of the papers opened and read on this occasion, and not as possessing any authority in law to declare any legal conclusion whatever." Here the immense audience broke into applause and cheers, which the presiding officer attempted to suppress, but with little success.

The peculiar form of Senator Edmunds's declaration of the result attracted immediate attention as being without precedent. The announcement was designed to call attention to the fact that there is no law which gives to the joint convention the authority to declare who is elected President; that the only office the joint convention has is to count the vote and declare the result. The Republican Senators were angered by the form of Mr. Edmunds's declaration of the result. The dissatisfaction was expressed immediately upon the reassembling of the Senate. Messrs. Conger, Ingalls, Wilson, and others, wished to have recorded their formal protest against such an announcement of the vote. They maintained that Mr. Edmunds had surrendered the Republican position as to the powers of the Vice-President in counting the vote. A resolution setting forth their views was submitted by Mr. Ingalls and referred to a committee. Mr. Edmunds asserts that his declaration respects only his individual views of the Constitution.

In the House on Wednesday, Mr. Keifer moved a resolution declaring that no further declaration of the result of the electoral-vote count was necessary, but on Mr. Springer's motion the resolution was laid on the table. During a short debate, Mr. Springer asserted that Mr. Edmunds's course was contrary to all precedent, and Mr. Blackburn remarked that the Senator had made exactly the proper declaration. A motion was passed to appoint a joint committee to inform Messrs. Cleveland and Hendricks of their election.

In the Senate on Friday, Mr. Ingalls said he had seen it stated in the Opposition quarters that the Republicans were trying to compel an extra session, and he would be glad to have a statement of the condition of the appropriation bills. Mr. Allison, Chairman of the Senate Committee on Appropriations, replied that the Military Academy Bill was the only one which had become a law. The District of Columbia, Pensions, and Consular and Diplomatic Bills are in conference. The Army Bill passed the Senate on Thursday. The Indian Bill was reported on Friday, leaving only the Agricultural Bill in the hands of the Committee. The Post-office, the Legislative, Executive, and Judicial, the Naval, the Fortifications, the General Deficiency, and the Sundry Civil Bills—six of the most important—had not been received from the House. Mr. Beck said that, after a number of years' experience on Appropriation Committees of both houses, he could not recall any last session of Congress when at this period the appropriation work was better advanced. Mr. Allison said that he felt sure that if the House got along reasonably well with the bills they would all be passed without any trouble.

Mr. Randall insists that an extra session of Congress will not be necessary. He is charged with having kept back the appropriation bills to the last minute, so that there would not be an opportunity for any other legislation, and he has succeeded.

The House on Thursday considered the Postal Appropriation Bill. Liberal additions were made to the items for Star-route transportation, railway postal clerks, etc., and $266,764 was inserted for the fast-mail service. The paragraph fixing the rate for first-class matter at two cents per ounce or fraction thereof (instead of half an ounce as now) was adopted, to take effect July 1, and it was provided that publications of the second class (newspapers and periodicals to subscribers) may be sent to bona-fide subscribers for one cent per pound, half the present rate. On Friday the House in committee struck out the Pacific Mail subsidy provision by a vote of 105 to 97, and in the House proper, on Saturday, it was rejected, 129 to 113.

The Senate River and Harbor Bill was introduced on Wednesday. It is the same as the bill reported by Representative Willis from the River and Harbor Committee of the House, except that the projected improvements of Sandy Bay, Mass., and Galveston Harbor, Texas, the proposed construction of the Hennepin Canal, and the provision making Eads the advisory engineer of the Mississippi River Commission, are not included in the bill.

The Senate passed on Monday the Indian Appropriation Bill practically as reported by the Senate Committee. The Committee on Post-offices and Post-roads reported favorably what is known as the "subsidy clause," proposed by Mr. Frye, to the Post-office Appropriation Bill.

In the House on Monday the Grant Retirement Bill (the first passed by the Senate) was taken up. Thirty minutes' debate was allowed. General Rosecrans made an attack on General Grant. The motion to suspend the rules and pass the bill was lost—yeas 158, nays 103—not the requisite two-thirds in the affirmative.

Mr. Dorsheimer (Dem., N. Y.) introduced a bill in the House on Tuesday to regulate the coinage and promote the circulation of gold and silver equally.

The Army Appropriation Bill, as reported to the Senate by the Committee on Appropriations, appropriates $23,949,052, being $2,161,437 less than the estimates, $505,397 less than the appropriations made for the current year, and $470,000 less than the amount of the House bill.

The House Committee on Foreign Affairs on Thursday decided to report, relative to the dynamite resolutions, that it was unbecoming the dignity of the House of Representatives to assume that American citizens had been in any way connected with these crimes when no charges had been made, and that the Committee was unwilling to request an officer of the Government to search for proof of guilt when there was NO charge.

The bill to prevent the illegal fencing in of public lands in the West has gone to the President.

The second annual report of the Civil-Service Commission, covering a period from January 16, 1884, to January 16, 1885, was sent to Congress by the President on Wednesday. It says the Civil-Service Law has been found practicable and effective for the accomplishment of its purpose. During the year persons have been examined from every State and Territory except Idaho. One hundred and sixty-two examinations have been held, and 6,347 persons have been examined, of whom 5,525 were males and 822 were females. Of those examined 4,141 passed at a grade showing them competent for the public service, and 2,306 failed. The report states in detail the education of 5,556 of those examined, and of these the education was as follows: 3,920 only in common schools, 1,960 in part in high schools or academies, 91 in part in business colleges, 459 in part in colleges. More than 70 per cent. of them therefore had only a common-school education. The fact that but 449 out of 5,556 had been in college seems to show that the great body of the public servants are being drawn from the class who are educated in the public schools.

Ex-Assistant District-Attorney O'Byrne and Assemblyman Oliver were the only persons who appeared before the Assembly Judiciary Committee at Albany on Thursday to favor the bills which do away with some features of the Civil-Service Reform Law. Mr. George Walton Green, on behalf of the New York Civil-Service Association, especially opposed the bill seeking to exempt from the operations of the law honorably discharged Union soldiers and sailors and volunteer exempt firemen, and the bill proposing to remove the Police and Fire Departments from the operations of the law.

The Republican members of both houses of the Illinois Legislature refused on Wednesday to vote for United States Senator. The Democrats cast 74 for Morrison and 1 for Haines, but there was no quorum. No ballot has since been taken.

A brilliant reception was given at the Union League Club-house in this city on Friday evening to Mr. William M. Evarts, President of the Club, in honor of his election as United States Senator from New York. Mr. Evarts made an address extolling the record of the Republican party, predicting its success in the next contest for the control of the Government, and referring in kindly terms to his competitors in the Senatorial election.

A remarkable assemblage of men distinguished in the professions gathered on Friday evening at the house of Cyrus W. Field, in Gramercy Park, to congratulate David Dudley Field on having reached his eightieth birthday.

At a special meeting held recently the Faculty of Harvard College voted to put themselves on record as being in favor of making attendance on morning prayers voluntary to all undergraduates. Concurrent action by the overseers is necessary before the change can be made.

By a fire in the insane department of the Philadelphia Almshouse, on Thursday night, 19 lunatics were burned to death.

Dr. Leopold Damrosch, musical and general director of the German opera at the Metropolitan Opera-house, died of pneumonia on Sunday afternoon at his home in this city, after a brief illness. He was fifty-three years of age. In 1871 he came to this city from Germany, where he had acquired high reputation as leader of the Breslau orchestra and as a violinist. In this city he organized the Oratorio and Symphony societies, and the May festival of 1882. Having been chosen to direct the fortunes of the Metropolitan Opera-house, he sailed for Germany last summer, and in five weeks organized the company whose stay in this city now draws near to a close. His career as a conductor of German opera was successful in every respect.

Francis A. Drexel, the senior partner in the well-known Drexel banking houses of Philadelphia, New York, and Paris, died suddenly on Sunday in Philadelphia, at the age of sixty-one.

B. B. Hotchkiss, the famous gun inventor, died in Paris on Saturday at the age of fifty-five. He was born in Connecticut and began life as a machinist.

FOREIGN.

The British forces in Egypt have met with another great loss. Major-General William Earle, who was leading the British column of 2,500 troops from Korti to Berber by way of Abu-Hamed, along the Nile, was killed on February 10, during a charge on a fortified Arab position near Binti at El Kerbekan. General Brackenbury, who took command of the forces when General Earle fell, sent on Thurs-

day from Dulka Island, about seventy miles above Meraweh, an account of the engagement to General Wolseley, in which he said: "The attack was well planned and gallantly executed. Our expectation is that the effect will be to open the way to Berber without further fighting. The rebels held a high ridge of razor-backed hills, with some advanced 'koppies' in front, close to the river. Six companies of the Black Watch regiment and six companies of the South Staffordshire regiment marched around the high ridge of hills, entirely turning the enemy's position, which was attacked from the rear. The number of the enemy was not great, but their position was extremely strong, and they fought with the most determined bravery. The Black Watch advanced over rocks and broken ground upon the koppies. They answered the fire of the enemy in the coolest manner possible, and, after they had thereby driven off the enemy's charge, they stormed the position under heavy fire. General Earle was among the foremost in this attack, and, to the deep sorrow of every officer and man in the force, he was killed just as the summit of the first koppie was reached. At the same time the six companies of the Staffordshire regiment went to the attack of a high ridge, the way to which lay over the most difficult ground possible. In this attack their gallant commanding officer, Lieutenant-Colonel Eyre, was killed. Meanwhile the Nineteenth Hussars had captured the enemy's camp and our success was complete." The enemy's losses were great, estimated at 600 killed. The British lost 3 officers and 9 men killed, and 4 officers and 42 wounded. Other accounts show that the charge was a very gallant one. General Earle, who fell at the head of his men, was a brave soldier, between fifty and sixty years of age, who as a young officer saw considerable service in the Crimean war, and who distinguished himself at Tell el-Kebir in 1882.

General Brackenbury telegraphed from Kerbekan, on February 11, a translation of an Arabic document found near the camp deserted by the rebels the day before. It is from the Governor of Berber to his faithful followers, and says: "To-day, after midday prayer, I received a letter from the Faithful Khalifa Abdullah Eden Mohammed, in which he says that Khartum was taken on Monday, ninth Rabi, 1302, on the side of Elhaui, in the following manner: El Mahdi prayed and blessed the troops, who then advanced against the fortifications. They entered Khartum in a quarter of an hour, killed the traitor Gordon, and captured his steamers and boats. God has made him glorious. Be grateful, and thank and praise God for his unspeakable mercy. I announce it to you." "Ninth Rabi" corresponds to January 26.

Lord Wolseley telegraphed from Korti on Thursday to the Government that no trustworthy particulars about Gordon's fate had yet been received; that all published accounts were based on rumors.

Despatches from Korti on Saturday were published in London, asserting that messengers had arrived there who left Khartum six days after Sir Charles Wilson appeared before the city in boats. They professed ignorance of the fall of Khartum or Gordon's reported death. The Government authorities announced that they discredited the reports.

A cavass of Ibrahim Bey Ruchdi, who left Khartum a fortnight ago, arrived at Korti on Sunday. He states that Farag admitted the rebels to Khartum. The cavass, with his master, went to the Government-house and met Gordon coming out armed, with Mahommed Bey Mustapha and twenty cavasses. While proceeding to the Austrian Consulate they met a party of rebels, who fired a volley. Gordon and Mahommed Mustapha fell dead.

The diary kept by General Gordon in Khartum, with entries up to December 10, 1884, is reported to be at present in possession of the British Government. The Conservative papers charge the Government with suppressing the diary and letters, in which Gordon stated that he sent Colonel Stewart away from Khartum in order to save his (Stewart's) life, intending himself to meet death at Khartum, as he knew no help could reach there in time to rescue him. When Parliament assembles, the production of all despatches of the Government in regard to the Sudan campaign will be demanded.

The British Cabinet on Wednesday approved General Wolseley's plan for an early advance from Suakim to Berber. A narrow-gauge railway will be laid to Ariab, 130 miles west of Suakim, where an intrenched camp will be formed, with a central depot for stores. English firms offer to build the road in a fortnight. Leaving Ariab, the troops will proceed by forced marches to Berber. Other despatches assert that the railroad will be laid the whole way to Berber.

The expectation of the British war officials is that the forces will reach Berber by April 25. Hassan Bey, brother of the Khedive, has, at the request of General Wolseley, assumed the command of the Egyptian forces in the Sudan. This is to indicate that England has no desire to conquer Egypt for herself. Radical members of Parliament are organizing opposition to the Government on the Sudan question.

The contingent from India to take part in the Suakim-Berber expedition has been raised to 3,000 men. General Hudson will be in command of the contingent, which is expected to arrive at Suakim several days before the Guards reach there. The entire force for the expedition is due at Suakim within three weeks. General Graham has been appointed to the command of the Suakim-Berber expedition. General Freemantle will command the Guards, and General Greaves act as chief of staff..

General Wolseley was compelled to remain at Korti until Monday, owing to the importance of the communications constantly passing between him and the Government. He started for Gubat on Monday.

Despatches from Massowah state that the situation there has improved steadily since the Italian occupation.

It is estimated that Osman Digna has 12,000 hostile Arabs at Tamai.

A spy returned to Suakim on Friday from Hesheim, the place where the reconnoitring party of Hussars and Egyptians were attacked on February 3. The Hussars got as far as Handub without opposition, but, having on their way out burned a native village without reason, they were attacked on their return at Hesheim. The attacking party lay in ambush, and the Arab fire was so terrible that the Hussars could not face it, and saved themselves from annihilation by retreating at full gallop to Suakim. Eight Hussars and three Egyptians were lost. Spies were at once sent out to ascertain the fate of the missing troopers. The spy who has returned could learn nothing of them, but he found in the desert, near the scene of the fight, several articles of clothing which had evidently belonged to the missing men. They were all pierced, as if by spears.

The recent dynamite explosion in the House of Commons having demonstrated the fact that, under the existing rules governing the admission of strangers to the galleries and lobbies, it would be an easy matter for dynamiters to convey explosives into the buildings during a session of Parliament, the Government has decided to adopt more stringent rules regulating the admission of visitors. Members of Parliament in future will not be allowed to introduce strangers into the galleries and lobbies. The Speaker of the House of Commons will alone have the right of granting tickets, and he will only issue tickets to members for their friends after having received a week's notice, so that in the meantime the antecedents of the proposed visitor can be inquired into.

The police and other witnesses for the Crown in the case of James G. Cunningham, the alleged dynamiter, charged with high treason-felony, have received letters threatening them with death if they persist in giving damaging testimony against the prisoner.

Further testimony was presented on Monday at the Bow Street Police Court, London, against Cunningham and Burton, inculpating them in the Gower Street Station explosion of January 2 last. They were remanded for one week.

It was announced in London on Wednesday afternoon that the police had made an important seizure of dynamite on the Harrow Road. It was found in a bookstore occupied by two supposed Americans. Later reports proved the affair to be of little account.

Cardinal McCabe died in Dublin early on Wednesday morning, after a brief illness, at the age of sixty-nine. He took a prominent part in Irish politics, and on several occasions warned the people against the principles of the Land League. He was made Cardinal on March 30, 1882. A pastoral letter, written just before the Cardinal's death, was read in Dublin churches on Sunday, solemnly warning the people against the dynamiters.

There was a demonstration of 3,000 unemployed workmen in London on Monday. They invaded Downing Street, and were dispersed by the police.

It was officially announced on Wednesday in London that Lord Rosebery had been appointed Lord Privy Seal and also First Commissioner of Public Works. Both Lord Rosebery and Mr. Shaw-Lefevre, Postmaster-General, will occupy seats in the Cabinet.

It was announced on Thursday that the Government of Portugal and the International African Association had been enabled, through the mediation of England, France, and Germany, to reach an understanding in regard to the rights claimed by each along the Congo River.

The final adjournment of the West African Conference at Berlin is delayed by the action of the delegate from the United States. Minister Kasson opposes the proposal to make the acts of the Conference equivalent to a treaty between the Powers represented, and refuses to sign the memorandum which has been drafted. The other Ambassadors are impatient over the delay.

Germany has annexed the island of Samoa despite the protests of the English and American consuls.

The German Reichstag on Monday agreed to raise the duties on rye and wheat to three marks. During the debate, when Bismarck was speaking, a great tumult arose among the Socialists. They were severely rebuked by Bismarck.

A despatch from Tonquin on Thursday stated that the French column which was advancing toward Langson under the command of General Brière Delisle had had three days' hard fighting in the defiles of the mountains. The French losses were heavy, but the troops were making steady progress despite the obstinate resistance of the Chinese.

General Brière Delisle telegraphed on Sunday that the French occupied Langson on February 13. A battle was fought between the French and Chinese not far from the town. The fighting was severe.

The French loss at the taking of Langson was 30 killed and 222 wounded.

A terrific explosion occurred in a powder magazine at Gibraltar on Monday, killing seventeen men and doing considerable damage otherwise.

Advices from Durban, South Africa, state that the bellicose section of the Boers declare that if a single shot is fired in Bechuanaland, they will absorb the colony of Natal. The inhabitants of the latter country are firmly resolved to resist the aggression of the Boers.

SENATOR EDMUNDS AND THE ELECTORAL COUNT.

THERE is something very amusing about the commotion which Senator Edmunds has created in both houses of Congress by his brief declaration that, as President of the Senate, he had no "authority in law to declare any legal conclusion whatever" concerning the electoral count over which he presided on Wednesday. He made the declaration that Cleveland and Hendricks were elected, "only as a public statement in the presence of the two houses of Congress." This is precisely in accordance with the position which Mr. Edmunds held in the bitter controversy of 1877, and he doubtless took genuine pleasure on Wednesday week in having his decision officially entered upon the record as a precedent. If the Senators and Congressmen who are disposed to question the sound constitutionality of his decision will turn to the debates in Congress in January and February, 1877, they will find much instructive matter for contemplation.

At the outset of the Tilden-Hayes controversy, all the extreme Republican partisans, led by Senator Morton and "Zach" Chandler, took the ground that the President of the Senate had absolute power to count the vote in case the two houses were unable to agree. Their position was substantially this: "Granted that the two houses of Congress have the right to count the votes, if they please. The exercise of it, however, requires joint action expressed by some prior resolution, or rule, or statute. If they adopt no such joint method, they cannot count. If they cannot, the President of the Senate, from the necessity of the case, must do so, and, as presiding officer of the joint convention, he is under the control of neither, and, having no joint instructions, must count as he thinks fit." Any one can see at a glance that this was an iron-clad, fire-proof plan for the purpose designed, namely, to secure the Presidency for Mr. Hayes in spite of all obstacles. The President of the Senate was a Republican, and could be depended upon to decide every disputed Southern State's vote in favor of Hayes. The plan was supported with great unanimity by the Republican press, and any criticism of its fairness was denounced as "heresy" of the most unpardonable kind. Yet Mr. Edmunds did not fear to raise his voice against it. He refused to support it at all, and sustained instead the Electoral Commission Bill, which was constructed on the assumption that the President of the Senate had no power whatever over the count. His strongest ally was Senator Conkling, and it was through the combined efforts of the two that the Morton-Chandler plan was defeated and the Commission adopted in its stead. On the final vote in the Senate the Commission Bill was opposed by sixteen Republicans, who followed Morton's and Chandler's lead, of whom about half were Southern carpet-baggers. Twenty-one Republican Senators supported it, and it was adopted by a vote of 47 to 17. The result was a grievous disappointment to the advocates of the other plan, but when the Commission decided in favor of Hayes their faith in the perpetuity of Republican institutions was restored. Anything more monstrous than their assumption that the Vice-President had power to decide absolutely all disputed questions concerning the electoral count, it would be difficult to conceive.

The vote of 1877 ought to have been considered final in the matter, and probably would have been, had not Vice-President Wheeler departed from all precedent when, after the counting had been completed in 1881, he declared:

"Wherefore I do declare that James A. Garfield, of the State of Ohio, having received a majority of the votes of the whole number of electors appointed, is duly elected President of the United States for four years, commencing on the 4th day of March, 1881; and I do further declare that Chester A. Arthur, of the State of New York, having received a majority of the votes of the whole number of electors appointed, is duly elected Vice-President of the United States for four years, commencing on the 4th day of March, 1881."

It is probable that Mr. Edmunds had this declaration in mind when he made his statement. He has done the country a service in setting the record right, and a further service in calling fresh attention to the need of legislation providing some means for disposing of disputed returns. There was no need of such a law this year, and the formalities were carried through easily enough under the old joint rule, which was adopted again for the occasion; but if there had been a disputed return we should have been confronted with a situation full of perils. The extraordinary bitterness of the last campaign, combined with the now almost universal belief that a gross fraud was perpetrated in 1877, would have made an electoral controversy a grave danger to our institutions.

The present session is so nearly ended that there is no hope for any action on the question by either house. There are two bills providing methods for counting the vote pending in Congress at this time. One is the Edmunds bill, which has passed the Senate twice, and is an admirable measure, and the other is the Eaton bill, drawn by Congressman Eaton, of Connecticut. Mr. Edmunds's plan provides that each State may establish tribunals for the trial of electoral contests, and that their decision shall be final; that if there be any dispute as to the lawfulness of the State tribunal, or if there be double returns from a State which has not provided such a tribunal, only that return shall be counted which the two houses, acting separately, shall concur in receiving, and that any single return shall be counted unless rejected by both. The Eaton bill, which is proposed as a substitute, provides that the two houses of Congress shall meet in joint convention, and gives the majority of both houses the right to accept or reject votes in the same manner as the majority in the houses of State legislatures in joint convention elect United States Senators. This would give the final decision in almost every case to the Lower House, for its greater numerical strength would outweigh the Senate in all disputed questions. The Edmunds bill provides a means for getting the disputed returns out of Congress entirely, by having them settled in the State in which they originate. There can be no valid objection to this, and every argument for public peace and safety is in its favor.

THE MONEY MATTERS OF THE BONAPARTES.

ONE of the first things done by the French Government after the war was over in 1871, was to appoint a commission to collect, classify, and publish the private papers and correspondence of the Imperial family found in the Tuileries after their flight. The Commission was appointed in September, 1870, and early in October it had issued two volumes, one of 480, and the other of 288 pages, which were extensively distributed, but, strange to say, almost immediately disappeared, and have ever since been all but impossible to find. A writer in the January number of the *Edinburgh Review* seems to have got hold of a copy, and makes a synopsis which certainly contains some facts that no Frenchman ought to be able to read without a blush. The papers show that the French nation in 1851, seventy years after the great Revolution, allowed a vulgar adventurer to take almost as complete and as irresponsible control of its Treasury as Louis XIV., who had all the traditions of the old monarchy behind him, and who governed in an age when no Continental nation had ever voted its taxes or seen a budget.

The private correspondence of the Emperor and the memorandum books of his Secretaries prove that the Bonaparte family—that is, the Emperor's relations, far and near—received from him, between 1853 and 1870, in the way of gifts or allowances, and without any service rendered therefor to the State, over $14,000,000. Besides this the Emperor distributed in "allocations, subventions, pensions, gifts, succors, indemnities, and encouragements to art, science, and literature," over $10,000,000. To this must be added various allocations on "the privy purse," a special fund reserved by the Emperor for his personal use. Under this head about $200,000 were distributed annually by M. Thélin, "the keeper of the privy purse." Then there were other distributions of a similar character by Persigny, one of the conspirators of the *Coup d'État*, when he was Minister of the Interior, making altogether, the Commission estimate, about $14,000,000 more. All this $38,000,000 comes under the head of "munificence." It has nothing to do with the regular civil list or salary paid to the Emperor, or rather appropriated by him, as "Chief of the State."

The number of smaller pensioners and beneficiaries was very great. Napoleon's mistress before his marriage, a Miss Howard, received, between 1853 and 1855, $1,089,000. Letters were found from her later, in 1855, asking for $500,000 more. There are memoranda showing that in one year, not mentioned, but doubtless soon after his marriage, there was sent to his mother-in-law in Spain, the Countess de Montijo, no less than $1,358,160. The Empress had a regular allowance of $20,000 a month. The Emperor was, in fact, very generous to various women. A certain Mlle. Marguerite Bellanger acknowledges gratefully the receipt of considerable amounts, but there is no trace of the exact sums. A Countess Émilie Campana had endorsed a note for him, when he was President, for $6,600. By 1870 she had received nearly $80,000. Miss Mary Gwynne, another mistress, apparently received, between 1846 and 1868, $26,000 by

way of pension; then she got $5,000 by way of "dot" on her marriage in 1852, and then $2,500 by way of "succor" in 1868. A lady named "T." got in 1857 alone the enormous sum of $40,000. Another, Mlle. Alexandrine Vergeot, got numerous sums, finishing up with $5,000 in 1852. The christening of the Prince Imperial cost $180,000. Besides all this, it appears that the Emperor had in 1866, on deposit with the Barings in London, nearly $5,000,000 in money and securities, as a provision for a rainy day.

The corruption of the rest of the gang, of course, kept pace, according to their opportunities, with that of their chief. Morny got 30 per cent. on the Jecker bonds for his influence in forcing a recognition of them from Mexico, and grew, as is well known, enormously rich in similar ways. Magnan, another confidant of the *Coup d'État*, was made a marshal, with good pay, allowances, and chances, but nevertheless died $167,000 in debt, which was discharged by the Emperor. Fialin, alias Persigny, pocketed, undoubtedly, large amounts also, but they were mainly through salaries and allowances for the high offices he held. He was undoubtedly, too, Louis Napoleon's go-between in many dirty transactions. There is one memorandum showing that an offer of $20,000 was made through him for "the authorization by the Prince of the docks for the Rouen railway," which was doubtless accepted. In fact, between 1848 and the *Coup d'État* in 1851, the Prince and his friends were very "short." They came over from London wretchedly poor and heavily in debt, and when he was elected President it was at a comparatively small salary, and without access to the Treasury. There is abundant evidence that during this period he was "on the make," and borrowing heavily on the strength of his criminal designs against the Republic.

The publication of these papers by the Thiers Government was a mistake committed in the first moments of anti-Bonapartist rage and mortification, and without thinking of the humiliating light in which they would present France to the world. This was probably soon recognized, and the suppression was doubtless due to the exertions of the Government itself. That a nation as great as France, which had experienced both Louis XIV. and Louis XV., which remembered the building of Versailles and the orgies of the Parc aux Cerfs, should, in our own time, after thirty-five years' experience of parliamentary government and of a free press, give its Army and Treasury over for twenty years to the absolute control of a crapulous adventurer and a small party of his broken-down companions, and never call him to account until he had failed in a great war, is surely the most striking phenomenon of recent history. When we reflect, too, that during all this time the Empress was very pious, and that no sceptic or rationalist was allowed to get any of "the boodle," and that the maintenance of the temporal power of the Pope was one of the most sacred portions of the Imperial mission, the picture becomes complete to the point of absurdity.

It is needless to add that the first Napoleon managed the National Exchequer in precisely the same manner. He levied what he chose, disposed of the taxes as he chose, and rendered no accounts. M. Léon Say brings to light, in a recent discussion of the national finances, the remarkable fact that there is no trace whatever in the French archives of the receipt of the $15,000,000 paid by the United States for the purchase of Louisiana. The First Consul, doubtless, pocketed it and spent it as he thought proper.

A FRENCH EXHIBITION IN LONDON.

LONDON, February 1, 1885.

THE "Salon Parisien" in Bond Street is composed chiefly of the works of a Belgian artist, Jan Van Beers, who holds a high position in Paris as a very skilful painter of a class of subjects tolerated only by people whose taste has been thoroughly demoralized by luxury and vice. Mr. Van Beers has chosen the scenes he depicts from the demi-monde and the corps de ballet surrounded by the evidences of ill-gotten wealth. It is a relief to turn for a few moments to inspect the crape-draped case containing the last unfinished work of Bastien-Lepage in this same exhibition. How true and serious and how pathetic is the little Chimney Sweep in his patched black and gray garment. His face is solidly modelled, and so firmly painted that he seems to live; the face and hands are grimy with soot, especially the latter, yet one can see the flesh, warm and palpitating, through the smears of black, and the relief is perfect throughout. The child sits on a low chair before the dying embers of a little iron basket of charcoal; he holds in his hand a large slice of bread upon which lies a small piece of ham. He has just thrown a tiny scrap of fat to a playful gray kitten at his feet, and he is watching her seize the dainty morsel, while a white cat opposite the child is gravely looking at him, patiently waiting her turn for his bounty. The scant furniture of the room is extremely battered. This portion of the picture (the background) is unfinished, as is also the white cat in the foreground, which is merely blocked in; but nothing could be more masterly than the painting of the kitten, and yet, when one looks into the work, it seems to be done in a few touches, which give form, detail, color and texture of fur, as perfectly as one could desire. The child's shirt, too, shows almost the threads of the coarse dark linen stuff of which it is made, and yet all is done with ease and with no elaboration, and the face is kept the principal point, with its kind, pathetic, childish look of interest in the kitten.

As we return to examine Mr. Van Beers's pictures the attendant hands us a magnifying glass, that we may note the wonderful finish with which he treats every inch of his work—for the most part ballet girls in very eccentric costumes, flinging themselves in many graceless attitudes on complicated sofas upholstered in the very latest fashion as to variety of stuffs and complications of passementeries and tassels, in plush-lined boudoirs strewn with lion and tiger skins. Of these smaller pictures there are more than a dozen, all very cleverly executed as to painting of stuffs and indication of textures, but very characterless in flesh-painting and conventional as to the type of head. "Mélancolie," No. 4, is a good example of the small pictures. A girl in a pale-yellow short silk dress is lying at full length on a gray-blue couch ornamented by variegated tassels and stuffs. She is stretching out her feet, covered with tawny gold-colored silk stockings, of which one can see the meshes. The painting of the closely-pleated flouncing of yellow, enclosing a crisply-starched, flounced white petticoat, is marvellous. The brilliant black of the hair gives the dark note to this harmony, while the floor is covered by the skin of a lion, and the background here and there shows suspicions of strawberry pink in the hangings. This is one of the prettiest and most refined of this class of subjects, and we must acknowledge that the smaller size suits this painter's capacities best. In "Peace with Honor"—a life-size soldier in scarlet, flirting with a nursemaid on a bench in a spinach-green park—we see a very poor sample of impressionist painting: everything is heavy and gray and flat, and the color throughout is monotonous.

The place of honor in the Exhibition is held by a more attractive subject, "Embarqués," and we recognize at once a work which would exactly satisfy the artistic limitations of the public, and which has already become popular and fetched a very high price. The canvas (a square one) is covered with transparent gray-green sea, through which an outrigger is cutting. The lady facing us is steering; she fills the greater part of the picture with a harmony of blues. Her costume is luminously rendered and cool in tint. She is so attentively steering that she is heedless of soiling her long pearl-gray gloves, and does not perceive that a large lion-skin which has been thrown across the narrow seat on which she is sitting, is dipping into the water. Her dress is of the palest tint of blue, almost white; her silken petticoat a tone deeper; her stockings bluer still, and her parasol pale blue, while a bunch of blue cornflowers in her black bonnet give the brightest note, and the black boots repeat the black of the bonnet. The young man rowing has his back to us and occupies the foreground. His arms are bare, and their untanned look and his generally refined appearance and fashionable yachting jersey show that he belongs to the "jeunesse dorée," and that he is embarked in a perilous adventure, led by the handsome lady who steers. The flesh is smoothly painted and well modelled, though the treatment in this case, as in all other examples here, shows that flesh is not Van Beers's strong point, and we should suppose that he felt this himself, as he has not treated the nude in his many vagaries on the walls around. But the "Embarqués," agreeable in line and color, and with fine atmospheric effect, is quite the most artistic example, though of well-painted lace, plush, and velvet and silk hose there is no lack.

There are a number of female heads, large-eyed, small-mouthed, of the conventionally pretty type, all very poor in painting; and a very clever mad life-size head, floating in its cap and bells on a vermilion background, spotted with black or blue. Nothing could be more ghastly than this sight, for the head is realistically painted, the eyes are sunk and mad-looking, the flesh seems nearly livid against the scarlet background, and the grimacing pale-blue red mouth is open and hideous. Why should art be put to such a purpose? There are other examples of this kind here—a Pierrot (a sculpture) modelled up in white, the color dabbed on, looking and grinning from its plush stand in the middle of the room, with a tambourine behind the head on which are painted dancing ballet girls.

Among the 300 landscapes, mostly about three inches by six, or thereabouts, there are very beautiful effects very cleverly rendered—some with surprising dash and rapidity, others with more elaboration. Here we see that our artist has great gifts for landscape, which we could not suspect from the larger examples in the backgrounds to figures about the room.

Besides Van Beers's works there is a room of Belgian artists composed of no very striking examples of well-known names. There are also two colored pieces of sculpture by Ringel, the "Rakoczy," No. 86, a life-size musician, evidently a portrait, in a long coat, playing on a two-stringed instrument taller than himself. He is bending over it in a fury of inspiration: his hair is tumbling over his face, his eyes are gleaming through

half-closed lids; every line of his figure expresses absorption in his art. The whole, stained to a very dark flesh tint, with brown coat, and long matted black locks, has a weird look almost too real to be decorative; and still less so are St. John the Baptist's head, with gore and a scimitar, on a charger, treated in the same manner—though both works denote power and knowledge.

Correspondence.

COLLEGE-BRED MEN IN CONGRESS.

To the Editor of The Nation:

Sir: The statement made in the *Nation*, No. 1023, that the University of Virginia "has to-day more of its alumni in the Senate of the United States than has any other college in the Union," is not borne out by Poore's 'Congressional Directory' for 1884. According to this volume, there are three colleges or universities in the United States that have two alumni each in the Senate of the Forty-eighth Congress, viz., Western Reserve College, lately removed from Hudson, O., to Cleveland; Miami University, at Oxford, O., temporarily discontinued some ten years ago, and Brown University, Providence, R. I. There are twenty-three college graduates in the Senate, but no college except those named has furnished more than a single alumnus.

Taking Congress entire, the colleges which are most largely represented are Harvard, Dickinson, and Miami. These have furnished eight, seven, and five graduates respectively to that body. Perhaps it is to the credit of our large colleges that they have sent out so few practical politicians, but in this respect they have done much less than many of the little-known literary institutions. Three others besides those just named sent four graduates each to Congress, several three, and quite a large number two each. C. W. S.

Athens, O., February, 1885.

[The statement to which our correspondent refers was based, as it was thought, upon an article which appeared in the *National Republican* of January 20, 1885, taken from the *Collegian*. A careful review of that article proves that the statement in question is erroneous. "The University of Virginia," according to the *Collegian*, "has graduated more men in this *Congress* than any other institution of learning. Harvard comes next to it in point of numbers." If "Congress" be substituted for "Senate" in the *Nation's* statement, it will be borne out, we think, by Poore's 'Congressional Directory,' which credits the University of Virginia with one Senator and fifteen Representatives. It is not meant to be said that all of these are graduates of the academical department of that institution, or that they have even taken a degree of any kind. One cannot by mere length of attendance, or even by high attainments, secure a degree from the University of Virginia, but only by "standing" all of the examinations for which a *formal application* is made. Comparatively few students make this formal application. Still, those who attend the lectures but who do not apply, and those who apply but do not pass the examinations, are, as well as those who secure degrees, styled *alumni* of the University of Virginia.—Ed. Nation.]

BOHN'S TRANSLATIONS.

To the Editor of The Nation:

Sir: The inaccuracy of Bohn's translations (upon which your correspondent animadverts in the *Nation* for February 5) has impressed me afresh in a recent reading of Schiller's "Maid of Orleans." Perhaps one or two examples will be of interest as contributions to the "proof upon proof" which your correspondent invites.

In Raoul's speech (act i, sc. 9), the words

"ein Glanz
Vom Himmel schien *die Hohe* zu umleuchten"

are translated:

"A heavenly radiance shone around *the height*."

"Die Hohe" means, of course, Johanna, whose lofty stature, with its saint-like aureole, is thus referred to as a fitting climax to the description in the preceding lines, where she is compared to a "war-goddess," "fair yet dread to look upon." Even if the translator had an edition with the reading "*die Höhe*" (which I doubt), the context should have shown it to be a *Druckfehler*, for they were not on any "height" at all, and Raoul expressly says "als wir *in das Thal* . . . herunter stiegen," the apparition of the maid appeared "aus *der Tiefe* des Gehölzes."

Many similar evidences of careless or incompetent work appear in this translation. Especially frequent are the substitutions of the singular for the plural, causing not merely arbitrary alterations in the style of expression (some of which might, of course, be defended), but often real confusion or obscuration of the sense. For instance, in the Prologue, scene 3, the line—

"Umsonst erschallt *der Fürsten* Aufgebot"

is rendered:

"In vain the summons of *the king* resounds."

The king, as the context shows, had made no "summons," but *his princes* or nobles were unable to bring up their forces, owing to the panic which had seized the common people. Only one knight had collected sixteen companies, and was marching to join the king.

One more instance:

"In deiner Freunde, deines Königs Armen,"

from act v, scene 14, is rendered

"Supported by *thy friend* and by thy king,"

which is not what Charles says or means. Did space allow, many similar inaccuracies could be noted.—Yours most respectfully, E. H. H.

Worcester, Mass., February 12, 1885.

PRIMITIVE COLOR-PREFERENCES.

To the Editor of The Nation:

Sir: Mr. W. O. Sproull, writing from Cincinnati, January 24, to the *Nation*, undertakes to account for what he calls the ancients' and savages' preference for the colors red and yellow. His explanation is, that men who lead an outdoor life become sated with the colors of the vegetation (green) and of the sky (blue), and consequently feel a grateful sense of relief when beholding the complements of these colors.

There may be a shade of truth in this theory, but it is very doubtful. This liking is not confined to the two colors named, nor is it peculiar to savages or the ancients. All bright, decided, flashy colors awaken in all men (and in many other animals) more pleasurable feelings than the dull, neutral tints. The child raised in the city, where its opportunities for seeing green and blue are rarer than those of the savage, begins to manifest at a very early age its preference for bright colors, and I see no explanation for this, except that the greater luminosity of such colors creates more vivid and pleasurable sensations. Every child, if allowed to select its own garments, would, I believe, invariably dress in the "loudest" colors. When he grows up he is told that it is vulgar and in bad taste to adorn one's self in a flashy way, and hence he submits to the dictates of fashion; but this is no proof that pleasure in such colors no longer exists. On the contrary, many people, either through ignorance or a disregard for public opinion, freely indulge their liking for gaudy attire, and in this they but follow native instincts, which are common to all men and would be universally followed but for fashion's sake. This is evident from the fact that the refined, as well as the vulgar, man experiences great pleasure in looking at the showy, gaudy costumes seen on the stage.

What is true of colors is true of many other things. Whatever we most clearly and distinctly perceive will impress us most, and the pleasure or pain attendant upon our sensations will be proportionate to their distinctness of perception.

Samuel Garner.

Bloomington, Ind., February 7, 1885.

Notes.

The Rev. William Cushing's 'Initials and Pseudonyms: A Dictionary of Literary Disguises,' will be published by Thomas Y. Crowell & Co. The material amassed by Mr. Albert R. Frey, of the Astor Library, will be incorporated with Mr. Cushing's collection.

The 'Life and Letters of John Brown,' prepared by Mr. Frank B. Sanborn, will be published early in the spring by Roberts Bros.

The author of 'The English Governess at the Siamese Court' and 'The Romance of the Harem,' Mrs. A. H. Leonowens, is about to come before the public with another work, entitled 'Life and Travel in India,' of which Porter & Coates will be the publishers. They announce also a luxurious edition of the 'Ingoldsby Legends, limited to 450 copies.

We learn that Mr. Walter H. Page, editor of the Raleigh (N. C.) *Chronicle*, is preparing a work on 'The Negro Problem.' Mr. Page's previous contributions to the discussion of Southern questions warrant us in expecting from him a fair and faithful treatment of this, the largest of them all.

It is understood that the author has written a special preface for the American edition of 'Obiter Dicta,' which is to be published immediately by Charles Scribner's Sons.

William S. Gottsberger has ready a translation of Georg Ebers's romance, 'Serapis,' by Clara Bell. The German edition reached us some weeks ago from B. Westermann & Co.

Ginn, Heath & Co., who have already brought out an abridged translation of Rousseau's 'Émile,' have in press Pestalozzi's 'Leonard and Gertrude,' translated and abridged by Eva Channing. Prof. G. Stanley Hall furnishes an introduction.

'Arthur Penrhyn Stanley: His Life, Work, and Teachings,' by Mrs. Grace Oliver; 'An Actor's Tour,' by Daniel Bandmann; and a popular edition of Mrs. Frances Brooks's translation of Johanna Spyri's 'Heidi,' are promised by Cupples, Upham & Co.

E. & J. B. Young & Co. have nearly ready the Bampton Lectures for 1883, of which the author is the Rev. W. H. Mauth, Canon of Canterbury, and the title, 'The World as the Subject of Redemption.'

'Man's Birthright; or, The Higher Law of Property,' by E. H. Clark, a sort of antidote to Henry George, will be published by G. P. Putnam's Sons.

Cassell & Co. will shortly issue a 'Dictionary of English History,' by Sidney J. Low and F. S. Pulling; volume ii. of Edward Walford's 'Greater London'; John Webb Probyn's 'Italy,' from the fall of Napoleon I. to the death of Victor Emmanuel; and a 'Memoir of Dr. Humphrey Sandwith,' compiled from autobiographical notes, by Thos. Humphrey Ward.

'John Knox,' by the Rev. Wm. M. Taylor,

with a steel portrait, is in the press of A. C. Armstrong & Son.

We receive from G. Bell & Sons, London, the appendix to Vasari's 'Lives,' edited by J. P. Richter, forming vol. vi of the edition, the entire volume being occupied by notes and emendations giving all the newer information collected or discovered since the former edition of the 'Lives.' Vasari is known to have been most inexact and credulous in all that relates to the painters before him; but he is still, as to his contemporaries, the great source of information, to be checked and corrected, however, by students more critical and scientific than he was. Richter's commentary is studious and in the true historical temper. He has already distinguished himself as of classical authority, especially in his 'Da Vinci' noticed last year.

No one, unless the publishers themselves, can object to a popular edition of 'Alice in Wonderland' and 'Through the Looking-Glass' such as Macmillan & Co. have just brought out in one volume, both in paper and in cloth. These old favorites will now enter upon a useful competition with base literature.

This competition might extend even to the schoolroom. In a late circular of information of the Bureau of Education (No. 4, 1884), containing the proceedings of the Department of Superintendence of the National Educational Association at Washington a year ago, we have found nothing better than some remarks of Superintendent Geo. J. Luckey, of Pittsburgh, on the subject of reading—of "readers," particularly. "It is painful to reflect," he says, "that the vast majority of our children, after spending seven or eight years of the best period of their lives in the school-room, have never read a book"—only the disconnected and half-intelligible scraps of the primary, first, second, etc., even to sixth, readers. His remedy is a school circulating library, but experience is against it. The great obstacle to improvement is the uncultivated literary taste of the teacher.

No. 19 of the *Journal of Social Science* (Putnams) contains the transactions of the American Association at Saratoga last September. Noticeable is the paper on the "Conflict of State Laws" by Mr. Eugene Smith. It is rather a plea against centralization, concurrent State action being recommended as the remedy.

One is filled with fresh hopefulness as to the future of the South who reads the newly published proceedings of the Trustees of the John F. Slater Fund (Baltimore: John Murphy & Co.). The Agent accounts in detail for the distribution of upwards of $30,000 among twenty-three institutions, almost all of which have been founded by Northern philanthropy since 1865, while every one combines industrial with scholastic training. The reports of the several beneficiaries carry conviction as to the immense utility of this noble charity, and we recommend them to the attention of the benevolent who can profit by the hints they afford. President Gilman has appended an interesting biographical sketch of the late Mr. Slater. His father's business relations with Moses Brown, of Providence, and his own education and residence in Windham County, Conn., in a burning period of the anti-slavery agitation, seem to furnish some explanation of his concern for the welfare of the colored race.

The last annual report of the Connecticut Agricultural Experiment Station possesses its usual interest for all who are scientifically minded as well as for cultivators of the soil. The Station saved last year about $1,000 out of the annual appropriation of $8,000. One's ideas of physical geography are jostled on finding the elephant a domestic contributor to Connecticut's fertilizers—thanks to the wintering of Barnum's menagerie at Bridgeport.

The latest Boston notion is broached in *Science* for February 13, which advocates a new building (a "Bowditch Hall") to serve at once as the depository of the libraries of several local scholarly and scientific bodies, and as a convenient rendezvous for their respective members. It will, we suppose, be found difficult to reconcile all the interests involved. The Massachusetts Historical Society is one of those contemplated in the scheme.

The third series (for 1885) of the Johns Hopkins "Studies in Historical and Political Science" opens with a republication of Dr. H. B. Adams's valuable paper read before the Maryland Historical Society in 1877, entitled "Maryland's Influence in Founding a National Commonwealth." The title is now changed to "Maryland's Influence upon Land Cessions to the United States." We are not sure that the change is an improvement, as the emphasis placed by the former title upon the relation of the public domain to the national sovereignty has always seemed to us an important feature of the paper. We do not see that the paper is changed in the republication; three short appendices are omitted, and Appendix No. 2, "Washington's public spirit in opening a channel of trade between East and West," is divided into three, treating respectively of Washington's interest in the Potomac Company, his plan for a National University, and the origin of the Baltimore and Ohio Railroad.

The address of Mr. John Jay, delivered before the New York Historical Society on its seventy-ninth anniversary (November 27, 1883), has just been published by the Society in an octavo pamphlet of 230 pages. Being a review of the peace negotiations of 1782, in the light of recent evidence, it is a valuable supplement to the late revision of Bancroft's history of this period, and contains in full the grounds for the changes made by Mr. Bancroft in this edition. The historian does not always agree with the author of the address. Mr. Jay, as is natural, defends his grandfather for refusing to proceed with the negotiations with Great Britain until the independence of the United States was acknowledged. Mr. Bancroft, on the other hand, still maintains that Vergennes and Franklin were right in holding that the terms of Oswald's first commission "would do," and that Jay's obstinacy in the matter imperilled the success of the negotiations. He appears also to give more credit to the sincere friendliness of Count Vergennes than is done by Mr. Jay. The most interesting point in both writers, however, brought to light by publications since the appearance of the original edition of Bancroft's tenth volume, is the readiness of the French Count to sacrifice the interests of the United States in the matter of the boundaries and the fisheries. The family compact between France and Spain, and the obligations entered into by France towards Spain, made her relatively indifferent to the interests of this country. A map at page 121, taken from the life of Lord Shelburne, shows the narrow territories which the French were ready to leave to us. The rest of the pamphlet is occupied with documents and illustrative extracts, all making the points in question very clear.

The *Commercial Advertiser* has been having a little contention with some one about the date of the introduction of the practice of interviewing into American journalism. The *Herald*, intervening, rightly says that it began in 1866, after the war. But it was rare, and attracted little or no attention, until 1868, when it was used to draw talk from General Butler about his greenback crusade, and from Charles Sumner about the *Alabama* question. This led to an article on "interviewing" in the *Nation* of January 28, 1869, which was the first formal notice of the practice under that name, and caused the adoption of the term both in this country and in England, where it was hailed as an amusing American novelty.

As a means of preparing the French to be better colonists by making them more disposed to travel, M. Ernest Michel recommends, in *La Réforme Sociale* for January 15, world-tours on Cook's system. He enters into some details in this number, and promises more hereafter.

It may interest those who have read the recent analysis of M. Dumas's new play by our Paris correspondent to know that "Denise" has been promptly published (Paris: Calmann Lévy; New York: F. W. Christern). M. Dumas refused an offer of 25,000 francs for the American stage-right on condition of not publishing in France.

Parts 131-135 of the new 'Brockhaus' Conversations-Lexikon' (New York: L. W. Schmidt) carry us to the telegraphic cable in the letter K. The weightiest articles are on Ireland, Italy (with its several subdivisions of wars, art, language, literature, music, philosophy), Japan, Jesuits, and Jews. Several beautiful maps accompany the article on Italy. That on Ireland concludes with the comforting assurance that peace is making headway in spite of dynamitic attempts, instigated by O'Donovan Rossa from this country, to intimidate the British Government. A few American notabilities—Andrew Jackson, Andrew Johnson, Jefferson, and Stonewall Jackson—are included in the present instalment.

The publisher, F. A. Brockhaus, Leipzig, announces the immediate appearance of his 'Kleines Conversations-Lexikon,' in its fourth edition, completely revised. It will be sixty weeks in reaching completion in as many weekly parts, the price of each being twenty-five pfennigs. This smaller work will be welcomed even beside the larger one just described and still unfinished.

It is difficult to avoid repeating the fatigued quotation, "Who reads an American book?" when one glances through the advertising columns of the leading English literary weeklies, and as one notices the steady and yet rapid increase in the number of American books reprinted or, at least, republished in England. Perhaps the *Spectator* is the most abundant and the most kindly in its criticism of American books, but the *Saturday Review* lags not far behind. In the number of this journal dated January 31st there are twelve long book-reviews, of which five are devoted to American publications—four wholly and one almost entirely; and no one of these articles is unfriendly in tone.

No surprise will be expressed that the Council of the Royal Astronomical Society should this year have found no more worthy person for the award of the Society's gold medal than Dr. William Huggins, of Upper Tulse Hill, London. Eight years ago, in conjunction with Dr. Frankland, Dr. Huggins received the Society's medal for marked successes in spectroscopy, and now the award is made for his spectrum determinations of the motion of stars in the line of sight, and for his photographic spectra of stars. Dr. Huggins received the medal at the Society's meeting on February 13, the presentation address being delivered by Mr. Edwin Dunkin, F.R.S., the President of the Society.

A late number of the *Observatory* states that Dr. David Gill, Her Majesty's astronomer at Capetown, South Africa, has obtained a grant from the Government fund for scientific research sufficient to enable him to set on foot a photographic survey of the Southern heavens, and that Mr. Woods, who was sent out by the Royal Society to Caroline Island to photograph the solar eclipse in 1883, has already gone to the Cape to begin the work. He will also continue, if possible, the work of photographing the sun's corona on which he

was lately engaged in Switzerland, under the direction of Dr. Huggins.

An entirely novel plan of obtaining money for scientific uses is suggested by the announcement of Dr. J. Palisa, of Vienna, that he will sell the right of naming the latest discovered small planet (No. 244) for £5, as he desires to raise funds for his projected expedition to observe the total solar eclipse of August, 1886. Had he been successful in disposing of this right at the same figure for all these bodies of which his industrious search has led to the discovery, he would already have accumulated a fund of some $10,000.

—The Astor Library has begun the printing of its new catalogue, which will include books of no later date than 1880, and, as a rule, no accessions to the Library received after that year. It will thus embrace the acquisitions of the fifteen years since the printing of the Supplement in 1865, which will also be incorporated with it. The titles will probably require four volumes, as did the original catalogue prepared by Dr. Cogswell, and will be likely to be somewhat bulkier. The new work will introduce a number of improvements upon the old. Titles, contents, and authors' names, for instance, will be printed in three different types, so that the page will be more varied and legible. Books will be entered analytically under subjects or authors not mentioned on the title-page, or with reference from editors and translators, only in exceptional cases, although biographies and town histories will be catalogued under both authors and subjects; otherwise the catalogue will be simply one of authors. The material is now nearly all ready for the printing, which will be done by the Riverside Press, and the work will go on without interruption. There were added during the last year 6,209 volumes, exclusive of pamphlets; 5,030 of these were bought. Some of the volumes, manuscripts, missals, and early editions, whose accession was chronicled some time ago, are very rare and fine copies, of great pecuniary value, and a very choice addition to the Library's treasures. These were the gifts of Mr. and Mrs. J. J. Astor. The number of books belonging to the Library, December 31, was 214,638, excluding pamphlets. The amount of the endowment at the same date was $1,888,607 03—all, of course, the gift to New York of the Astor family for this invaluable reference library. As nearly a million of this sum has been expended for building, site, books, and equipment, there remains a productive capital of $435,812 69, yielding an income of about $24,000. This sum would not carry on the Library work as at present administered, and keep the Library supplied with the latest books and the best, if it were not for Mr. J. J. Astor's special gifts, which amounted to $15,000 last year for the regular purchase of books alone, aside from the $20,000 or $30,000 which, with great liberality, he expended for the rare treasures before mentioned.

—The first number of volume vii. of the *American Journal of Mathematics* has been for some time upon our table. We take the first opportunity, although somewhat late, to call attention to it. With the new volume Prof. Simon Newcomb assumes the duties of chief editor, Prof. Sylvester, the former editor, having been elected Savilian Professor of Geometry in the University of Oxford. All the papers in the present number are of the highest order, no less than four being contributed by Prof. Cayley of Cambridge, England. This is something of which *Crelle's Journal*, which for more than half a century has been known to mathematicians all over the world, might well be proud. It is curious and noteworthy that the opening paper by Prof. Cayley takes up and develops "A very remarkable discovery . . . recently made by Captain MacMahon"; while the second paper, by Captain P. A. MacMahon, R. A., "carries on" an investigation of Prof. Cayley, "from the point where it was left" by him. This is but one among many indications of the friendly feeling which, as a general rule, seems to prevail among the scientific men of both Great Britain and America, and is in marked contrast with the custom of a large part of the scientific men of Germany, who seem to regard personal detraction as the necessary seasoning of any reference to the labors of their contemporaries. The number also contains several mathematical tables by Prof. Cayley, the labor of preparing which must have been extreme, which are of great value to those engaged in studying the most abstruse branches of mathematics, and which can nowhere else be found. To those whose tastes incline them, or whose professional duties require them, to keep pace with mathematical progress, and to be familiar with mathematical studies of the highest order, the commencement of a new volume, under the direction of a new editor of such high scientific reputation, and so remarkable for his skill in exposition, as Prof. Newcomb, offers an opportunity which they should not let pass of becoming subscribers. The first volume of the *Journal* is already numbered among the books "out of print." Other volumes will gradually fall into the same category, and perhaps before the close of the present century the volume which is now beginning will only be procurable at long intervals in the second-hand book-store or the auction-room, and then only at a premium.

—The latest number of the *Anglia*, VII., *Heft* 3, contains a long article by Prof. James A. Harrison (Washington and Lee University) on "Negro English." The article will interest not only the professed philologist, but even the general reader. It is a very full collection (made from the author's own observations and from the writings of "Uncle Remus" and others) of negro peculiarities of every kind, whether of pronunciation, of grammar, of idiom, or of style. We recognize here a great many old friends of our childhood. It is a pleasure to see them thus made *hof-fähig*, as it were, by a touch of the grammarian's wand. The collection is a valuable one, and if we take the liberty of criticising here and there, it is not because we are ungrateful. We have one general ground of complaint, namely, that the author does not draw a stricter line of demarcation between what is properly negro and what is merely Anglo-American. For instance, why cite "sparrer-grass" for "asparagus"? One need only visit Philadelphia to hear the vegetable called "sparrow-grass," or, concisely, "grass." We did not wait for the negro to invent "up" as a verb. Lowell's "Courtin'" might have reminded the author of Yankee capacity in that line. Besides, "up" as a verb is as old as the language, being found in King Alfred's translation of the 'Pastoral.' Is "chock-full" negro? The list of general Anglo-American archaisms and provincialisms (pp. 259-260) proves, it is true, that the author has been somewhat on his guard, but hardly with sufficient persistency. Every one will admit that "dish-yer" for "this here," "bret" for "breath," are pure negro. But can we thus get rid of responsibility for "let her rip"? "Her" for "it" is Anglican vulgarism, beyond a doubt; as for the "rip," we are less confident, but assuredly it is not negro. The analysis of negro pronunciation is good. Better still is the synopsis of conjugation and irregular verbs. This section might afford material for a study in psychology, by showing us the African mind wrestling with the puzzles of Indo-European logomachy. Few will read Professor Harrison's paper without gaining a higher respect for the fervor of negro imagination and the heartiness of negro character. The speech thus delineated is a child-dialect, but it is not contemptible. We hope that the grammarian will continue his labors.

—The last few months have brought us several German text-books, which will attract the attention of college teachers. Professor Brandt's 'Grammar of the German Language' (G. P. Putnam's Sons) will rank among the very best works of its kind. It combines with a clear and precise statement of the general rules of the language a very thorough and detailed treatment of phonology, word-formation, and history of words, and will thus prove of equal value to the beginner and the advanced student. It is based upon the highest philological authorities in Germany, and may be said to reflect the present state of scientific investigation. In this country it has not its equal. We cannot speak so favorably of Mr. W. H. Rosenstengel's 'Reader of German Literature' (G. P. Putnam's Sons). The author has endeavored to give in his book an idea of the whole development of German literature from Ulfilas to the present time. But instead of selecting the very highest productions of the different periods, and giving these as complete as possible, he offers an almost bewildering quantity of little scraps chosen without any discrimination—thus, for instance, ranking Von Giesebrecht and Ranke with obscure writers like K. Faulmann and C. Beyer. On the whole, this book is neither a reader nor a compendium of German literature, but a mass of indigested and mutilated fragments. Mr. William Deutsch, of St. Louis, shows better taste. His 'Colloquial Exercises and German Reader for Schools and Colleges' (Boston: Ginn, Heath & Co.) can be warmly recommended to teachers of elementary German. The first part of the book contains one hundred short stories, easy enough to be committed to memory. The second part comprises fairy tales, extracts from history, some standard poems, and a collection of phrases and idiomatic expressions. Copious English notes and an alphabetical vocabulary add to the value of the book. In a second edition it is to be hoped that the vocabulary will be somewhat more complete. Professor Heness, in his 'Neuer Leitfaden beim Unterricht in der deutschen Sprache' (Henry Holt & Co.), embodies the results of his long and successful experience in applying the so-called Natural Method to the study of foreign languages. For all those who believe in this principle—and we are glad to say that the number of them is increasing steadily—Mr. Heness's work will be of great importance. Under the somewhat pretentious title, 'Comparative Study of German,' Mr. William W. Valentine, of Richmond, Va., publishes specimen-pages of a more comprehensive work on the same subject, now in preparation. The author does not lack learning, and we anticipate from his large work a good deal of instruction, provided he heeds the golden rule, *nonum prematur in annum*. In its present form, his work is marred by many traces of inconsistency and immaturity. Thus, for instance, we read on page 22: "Noun-substantives may have one form and one grammatical gender for both sexes—*Gast*, *Liebling*, etc." But on the following page we find: "Substantives with a double gender do not occur in German. Such are in English *friend*, *neighbor*, in Latin *civis*, *artifex*, etc." This is a want of consistency which ought not to be exposed in print. That the understanding of a language may be greatly advanced by comparison with kindred languages, is beyond question. But it seems a waste of learning to explain the German *Hirschbock*, *Hirschkuh*, by referring to the Thibetan *ra-pho*, he-goat; *ra-ma*, she-goat. Finally, we notice an excellent little pamphlet by Professor Vietor, of Marburg, on 'German Pro-

nunciation' (Westermann & Co.). It will be very serviceable to those who wish to acquire a standard pronunciation of German, which is described as "High German word-forms pronounced with Low German speech-sounds." It will help, also, to destroy the undeserved prestige generally given in this country to the Hanoverian dialect.

—Few occurrences in recent years have so taken the musical and social world by surprise as the death on Sunday of Dr. Leopold Damrosch. The first symptoms of his illness showed themselves at a meeting of the Oratorio Society, with which he rehearsed Verdi's Requiem, unconscious of the fact that it was his own requiem which he was preparing for performance; and it is impossible in this connection not to think of poor Mozart and his Requiem. There can be no doubt, however, that what undermined Dr. Damrosch's health was the herculean labors he undertook in connection with the season of German opera. From early morning till midnight he busied himself there, with an enthusiasm that proved contagious to his associates, and accounts for much of the remarkable success of his operatic venture. It was a victory such as few operatic conductors have achieved, and it revealed a power on his part of dealing with the most complicated forms of music, that astonished even his friends and former admirers. The excellence of the ensemble which he imported from Europe did indeed facilitate his labors and lessen his responsibilities; yet, taking into account the shortness of the time at his disposal, and the fact that he produced some of the most difficult of operatic works, it must be regarded as little short of a wonder that, in a season including fifty performances, there has not been a single serious mishap. What the fate of the German opera, and of Dr. Damrosch's vocal and instrumental societies may be, it is too early to conjecture. Dr. Damrosch came to America in 1871, in response to an invitation of the Arion Vocal Society, who were in want of a conductor. When he arrived, the rough, pioneer work of educating audiences to an appreciation of classical music had already been done by Mr. Theodore Thomas. But the numerous concerts given by the Oratorio and Symphony Societies under Dr. Damrosch have also had an influence which must not be underrated. Dr. Damrosch was a personal friend and follower of Liszt, and the works of this composer, in particular, always received an interpretation which rendered clear their complicated structure and revealed their great beauty. Of Wagner also he was a personal friend, and by the excellent productions of "Tannhäuser," "Lohengrin," and "Die Walküre," given under his bâton this season, he won thousands of new admirers for the great master, and destroyed a legion of misconceptions regarding the modern music-drama. This last achievement of Dr. Damrosch will always rank as his greatest; and his friends congratulate themselves that, after years of hard work, with scarcely any material reward, he lived to see the realization of his ideals, and to establish on a firm basis the music of the German operatic composers, whom he so greatly admired that, in his last moments, their scores divided his attention with thoughts of his family.

—The rehanging of the Watts collection at the Metropolitan Museum finally accorded will allow the public to see to advantage some of the pictures which before were scarcely visible, and all to better advantage. The impression made on the public taste by this exhibition has been greater by far than Mr. Watts's most enthusiastic admirers had expected, and we have received numerous indications of its influence in quarters where we had hardly expected to find any. As we said in a former article concerning it, the art of Mr. Watts will always remain caviare to the general, and the artists and critics who are educated in the school of surfaces will always be at loss to judge it intelligently, as they would be to judge that of one of the old masters, if his work were for the first time introduced to their acquaintance. Mr. Watts, by his intellectual tendencies and the nature of his art, must be classed with the great Venetians. If his achievement in their way is less, the reasons are easily found in his surroundings, the isolation in which he found himself, and the utterly unartistic atmosphere of England. Critical opinion in New York has, of course, spoken in very varied tones, but on the whole the reception accorded the collection is flattering to our public, because to understand the true position of art of this type implies a catholic and healthy taste. To admire and really sympathize with Mr. Watts's work is even more the proof of high cultivation than to accord it intelligently its relative rank; because, besides being of a severe and exalted walk in art, it is strongly individual in its character, so that even where the intellectual appreciation is not lacking, the personal sympathy may be, No doubt, some who are ready to accord the artist his true rank among the great painters of all time, are less disposed to sympathize with the temperament of the painter, and its tendency to the more melancholy phase of feeling and the more tragic motives of composition. Little critics will, of course, always carp and rail at any new great art until overpowered by authority; and the general public, which only knows of art as the looking-glass of external nature, will find little to its taste in the Watts Exhibition. But to many among us it has been the beginning of a higher art education, and one which will not be effectless. We owe to the committee which organized and carried out the exhibition, to Miss Mead and Mr. Millet, who undertook the most of the labor, a debt of gratitude, but especially to Mr. H. G. Marquand, to whose liberality the good intentions of others in the matter owe their fruition.

WOODBERRY'S LIFE OF POE.

Edgar Allan Poe. By George E. Woodberry. [American Men of Letters Series.] Boston: Houghton, Mifflin & Co.

THE career of Edgar Poe has long been a mine for eager biographers, and affords, indeed, just the materials for their work—genius, unhappiness, and a prolonged series of very small conundrums. So many disappointments, debts, disappearances, love affairs, and miscellaneous escapades are rarely crowded into a single career; and what with his own ingenuity in doubling these by exaggeration, and what with the accumulated contradictions and blunders of others, the task of his biographers has come to resemble those labyrinths in English pleasure-grounds where a dozen people are trying to find each other, and, although always within speaking distance, can never meet. Thus, among Poe's chroniclers, Stoddard follows Griswold, and Ingram pursues Stoddard, and Gill goes upon the trail of Ingram, and now Woodberry winds up the chase, after all the rest, and each is sure that he and he alone has the clue to the labyrinth; and, after all, the whole area of the puzzle is but a hundred feet square, and the question arises at the end whether it is worth so much trouble. To be sure, a human character is involved; but here occurs another curious thing, that, while each is engaged in vindicating Poe's reputation against somebody else, they all have to admit very much the same damaging facts. Neither Mr. Griswold, the prosecuting officer, nor Mr. Ingram, of counsel for the defence, nor Mr. Woodberry, who sums up in a judicial fashion, really presents anything which modifies the reputation as to truth or morality acquired by Poe during his life-time; and a very poor reputation that was.

In a detailed notice some years since (see the *Nation* for Nov. 18, 1880), of some of the more recent Poe literature, we expressed the opinion that Poe's true biographer was "yet to come." It is a satisfaction to be able to say that, if we take biography in a strict sense, Mr. Woodberry has fulfilled this hopeful prediction. It is not merely that he writes later than the rest: the later a man writes, the worse for him, if the theme grows more and more perplexed and he has not the brains to disentangle it; but the advantage is, in the case of the present author, that he is the kind of man who ought to come last. He has been helped, not hindered, by the work of his predecessors; he has cleared away their cobwebs and added none of his own. Henceforth the record of Poe's life may be regarded as being, for the first time, established. There is no more correspondence to be unearthed that can essentially vary the result; no more files of obsolete newspapers; no more War Department correspondence; no more reminiscences of simultaneous and equally impassioned love-affairs. There may yet be brought to bear, on some of these points, even more acute and ingenious analysis of character than is here exhibited; but so far as facts are concerned, the case may be said to be closed. We may, therefore, turn to what is, for the purpose of the series of which this book forms a part, the more important matter, viz., the consideration of Poe's place in the literary history of the time. On this point, we regret to say, our praise of Mr. Woodberry's work must be far more limited and our criticism more marked.

It becomes more and more obvious, as the two parallel series of "American Men of Letters" and "American Statesmen" develop, that the characteristics of the two are to be very different. In the "Statesmen" there is far more of a monotone, both in treatment and in theme, than in the other series—a more level excellence and a less exciting variety of treatment. This arises in part from a greater uniformity of subject, since the statesmanlike character is more simple and less diverse than the literary character; but it also comes in part from the mode of handling. Each of the "Men of Letters" series is by a different author, whereas five of the memoirs of "Statesmen" are by Messrs. Morse and Lodge, whose point of view is somewhat similar, and who have long been accustomed to work together. But above all, there is the difference, that in the "Men of Letters" series there is generally much pains taken to exhibit the whole life and environment of the subject; whereas, in dealing with the statesmen, the treatment has kept close to what may be called the professional career, and it has sometimes been rather difficult to make sure even that the man described had a wife and children. Be that as it may, it is certain that the present collection of lives of authors exhibits a marked variety of method. Comparing only the last two, we shall be compelled to acknowledge that Mr. Woodberry's work is strong where Doctor Holmes's is weakest, in the record of personal history, and that it becomes less satisfactory where Doctor Holmes is strong, in the department of literary criticism.

We should say, for instance, that Mr. Woodberry errs at the very outset in laying such stress on Poe's own career as a critic, except as the secret of the perpetual hot water in which he lived. To say, for instance, that Poe's independence as a reviewer was regarded in his lifetime as his great distinction (p. 270), shows the writer to be misled by dwelling on the little world of the New York press of that day. The readers of the country at

large hardly ever saw or heard of these criticisms. They bought, on the other hand, several thousand copies of the 'Gold Bug': every college student racked his brains over the ingenious plot of 'Murders of the Rue Morgue'; and almost every newspaper in the land reprinted "The Raven." Again, Mr. Woodberry goes too far in saying of his hero that he was "the first to take criticism from mere advertising, puffery, and friendship, and submit it to the laws of literary art" (p. 270). So far as the first part of this statement is concerned, Margaret Fuller went to New York in the same year with Poe (1844); she wrote in a journal of four times the circulation and influence of any he attempted—the *Tribune;* and Poe himself pronounced her reviews "frank, candid, and independent" (Works [Armstrong], 5:506), at least when she agreed with him. In the next place, if Poe got rid of these objectionable methods at all, it was not to substitute in any degree the laws of literary art—for, as Mr. Stoddard has well said, he established no criterion—and he set up something as objectionable as anything he displaced. What that substitute was is stated by Mr. Woodberry himself, in his quotation from the man who of all men in New York had best opportunity to know Poe thoroughly, Mr. C. F. Briggs, his associate in the *Broadway Journal*. Poe's criticisms were declared by Briggs to be "purely selfish" (p. 234). "I have never met a person," he says in another letter, "so utterly destitute of high motive. He cannot conceive of anybody's doing anything except for his personal advantage" (p. 237). For want of recognizing this, and by a rather arbitrary selection from Poe's helter-skelter criticism of what makes for his own argument, Mr. Woodberry presents a case which seems to us quite overstated.

After admitting Poe to be a reckless, erratic, and unscholarly judge (p. 270), he tries to build up for him a claim of final justice in his judgment on individuals. The means by which this is done is very obvious. Let a man scatter praise or blame broadcast to win favor or to gratify ill-temper; let him do this without the slightest attempt at consistency, and then, whether the persons about whom he writes turn out great or small, a judicious biographer can quote a prediction corresponding to the verdict. To Poe, Tennyson was at one time "the greatest of poets"; at another time Elizabeth Barrett Browning was worth a dozen of him (p. 219). Which, now, shall we regard as Poe's judgment of Tennyson? At one time he pronounced Hawthorne "original at all points" (p. 158), and at another time "not original, but only peculiar" (p. 280). Is it not a misuse of language to claim that these authors, so waywardly treated, were "foreknown by him when their names were still in doubt" (p. 269)? As to Lowell, the case is still worse, for here the waywardness was enhanced by selfishness. When Lowell was projecting a magazine, and was supposed to have influence with Boston lecture-courses, no praise was too great for his melodramatic early poem of "Rosaline" (p. 177); but as soon as Lowell touched Poe in his "Fable for Critics," Poe announced that "no failure was ever more complete or pitiable" (Works, 6:243). It is easy to honor a prophet by only recording his successful guesses; and a shrewd sibyl can secure many such triumphs by judicious "hedging"—by betting, as it were, for and against every horse in the field. It would be just as easy to make out an overwhelming case against Poe by dwelling on the fact that he declared Horne's forgotten poem of "Orion" to be "never equalled" "in all that regards the loftiest and holiest attributes of true poetry" (Works, 6:489), and that his whole verdict on Carlyle was that he was "an ass" (Works, 6:167).

But it is when we come to Mr. Woodberry's criticisms on Poe's poetry that we feel compelled to mingle with general praise some very hearty dissent. To our thinking, he strikes a false note, at the outset, when he calls "The Raven" a great poem. We should say that the general consensus of good criticism now regards "The Raven" as a sensational and meretricious poem, of which, as Mr. Stedman has well said, "the artificial qualities are those which catch the fancy of the general reader." To produce or even enhance an effect by such mere jingle as "the pallid bust of Pallas" is in no sense good art. The popularity of the poem was very much like the popularity among collegians of those turgid and inflated verses beginning "I am dying, Egypt, dying"; or that of the pompous "Spartacus the Gladiator" among schoolboys. Poe himself carried this turgid quality to the verge of disgust, or beyond it, in his "Ulalume." But his fame as a poet really rests upon far higher ground than this—on the exquisite early verses "To Helen," on the really great poem of "The Haunted Palace," and on the wonderful melody of "Lenore" in its earlier form. Here, again, we come upon a point where we must wholly dissent from Mr. Woodberry. The whole value of his criticism is impaired when he makes the general statement that, in Poe's frequent changes of his poems, "in every instance the alteration is judicious, the step is a step forward" (p. 253). We should say precisely the contrary—that, as Poe grew older and, if that were possible, more self-conscious, the artificial habit so grew upon him that his ear demanded more and more jingle; and he took some of his best verses and bound them hand and foot with that tiresome "repetend" which became his bane. This was a habit of closing every verse with two lines varying by a word or two only, sometimes attaining such a height of the ludicrous as in:

> "Of cypress, I roamed with my Soul,
> Of cypress, with Psyche, my Soul,"

or, yet worse,

> "Till the fair and gentle Eulalie became my blushing bride;
> Till the yellow-haired young Eulalie became my smiling bride."

It is strange, in looking back, to see that even Lowell was at one time so infected by this trick as to write in his "Moods," of the pine-tree,

> "Meeting with graceful resistance,
> With a graceful though sturdy persistence."

But this was soon dropped by Lowell, and these very verses were so altered as to remove the mannerism, while Poe tended that way more and more. "Lenore," as it appeared in the *Pioneer*, had a lyric motion that recalled Coleridge, but it stands now as Poe made it after he had caught the fountain at its source, and compelled it to turn the weary mill of a "repetend." Instead of

> "And let the burial rite be read,
> The funeral song be sung,
> A dirge for the most lovely dead
> That ever died so young,"

we have the cramped lines

> "Come! let the burial rite be read, the funeral song be sung,
> An anthem for the queenliest dead that ever died so young,
> A dirge for her the doubly dead in that she died so young."

And so it goes on through the poem.

But the point, after all, where Mr. Woodberry seems to have most distinctly erred—to the extent, we should say, of directly reversing Poe's own announcement of his position—is in a passage on Longfellow's versification. It is the more remarkable, because the biographer himself endorses precisely the opinion which Poe would have repudiated. We read (p. 231) that Poe made it an objection to Longfellow that he was a writer of hexameters. "In this there is so much truth as is involved in the milder statement that . . . his ear was too little refined to be offended by the spondaic flatness of an English hexameter"; the words omitted referring to a wholly different charge. Spondaic flatness! But Poe's whole complaint against Longfellow and the English language itself was that the latter did not afford spondees enough to fit out a hexameter handsomely. He charged it upon "Evangeline" especially, not that it was too spondaic, but that it had the opposite fault and was too dactylic; had plenty of short syllables, but two few long ones. "We maintain," he wrote in his paper on Longfellow's Ballads, "that the hexameter never can be introduced into our language, from the nature of that language itself. This rhythm demands, for English ears, a preponderance of natural spondees. *Our tongue has few.*" (The italics are our own.) "In glancing over the poem ["The Children of the Lord's Supper"] we do not observe a single verse which can be read, to English ears, as a Greek hexameter. There are many, however, which can be well read as mere English dactylic verses; such, for example, as the well-known lines of Byron, commencing 'Know ye the | land where the | cypress and | myrtle.' . . . Now, a great many of Professor Longfellow's hexameters are merely these dactylic lines, continued for two feet" (Works, 6:387). What now becomes of the "spondaic flatness" of Mr. Woodberry?

We are firm in the opinion that it is better, in writing the life of an author, to have a final summing up of his literary character in one place, instead of distributing the criticism in fragments amid biographical details. This said, and waiving a few merely verbal criticisms on Mr. Woodberry's usually excellent style, we pronounce his book, as a whole, a very valuable addition to an important series of works. So far as the biography is concerned, he has perhaps given us the final word; so far as criticism goes, there is nothing in the book so admirable as Mr. Stedman's remark that Poe's place is, after all, rather with Doré than with the masters of art.

RECENT NOVELS.

The Mystery of the Locks. By E. W. Howe. Boston: J. R. Osgood & Co.

Within the Clasp. A Story of the Yorkshire Jet-hunters. By J. Berwick Harwood. Harper's Franklin Square Library.

Farnell's Folly. By J. T. Trowbridge. Boston: Lee & Shepard.

The Widow Wyse. Boston: Cupples, Upham & Co.

Tompkins and Other Folks. Stories of the Hudson and the Adirondacks. By P. Deming. Boston: Houghton, Mifflin & Co.

A Modern Midas. By Maurice Jokai. Translated from the German by Mrs. L. C. Bullard and Miss Emma Herzog. R. Worthington.

Christmas at Narragansett. By Edward Everett Hale. Funk & Wagnalls.

Stories by American Authors. VIII. Charles Scribner's Sons.

The Talk of the Town. By James Payn. Harper's Franklin Square Library.

Face to Face. By R. E. Francillon. Harper's Franklin Square Library.

By Mead and Stream. By Charles Gibbon. Harper's Franklin Square Library.

From Post to Finish. By Hawley Smart. Harper's Franklin Square Library.

'The Story of a Country Town' was in several ways so peculiar that 'The Mystery of the Locks' cannot help creating curiosity; but it will hardly sustain the interest which was awakened by Mr. Howe's first novel. He has seen fit this time to forego the pleasure of a preface; so one element

that gave much of its individuality to the more pretentious novel is lacking. Just what else is lacking is hard to determine. It is plain, however, that Mr. Howe has forsaken realism, and one is apt to imagine that whatever of realism was in 'The Story of a Country Town' was due to his having written from experience. He has an eye for the queer and incongruous things of the world, and is far more concerned with delineating striking and unusual characters than he is with giving an accurate impression of the life in which his scene is laid. It is this penchant for oddity, combined with a certain independence of literary tradition, which makes 'The Mystery of the Locks' a striking novel, for Allan Dorris is not an unusual personage, nor his history a particularly uncommon one. The circumstances of his unfortunate marriage are left almost entirely to supposition; that he should be divorced and seek oblivion in an obscure town on the Missouri River is natural enough. His happy marriage with Annie Benton follows, not exactly as a matter of course, but still with a certain inevitableness, while his violent death by the hand of his first wife's brother seems more like a forced tragedy than a necessary growth out of the circumstances. Nor is Annie Benton so very remarkable, especially after Jane Eyre; and Tug Whittle's chief peculiarities are his big eye, which is always staring, and his little one, which is always cocking. Perhaps the way in which his scalp is always creeping over his forehead to look at his smile, and the devotion with which he sets out first to protect and then to avenge Allan Dorris, with the merest thread of a motive, are quite as peculiar as his eyes. And throughout, the characters, for all their commonplaceness, are rather bundles of conceits and peculiarities than living beings. For the power that is really in the book one must not go to Mr. Howe's realism, after all; it lies in another direction. The mind does not dwell upon the queer people that recall Dickens's caricatures, but upon the eddying, turbulent river hurrying away from Davy's Bend, its dark nights and muddy streets and discontent—upon the weird mystery of the Locks, and the ghostly Hedgepath graveyard. Mr. Howe's imagination is content to sacrifice reality for the sake of effect—of inducing a mood that shall be consonant with the matter. He has, in 'The Mystery of the Locks,' striven after art instead of realism.

In spite of the claim on the title-page, 'Within the Clasp' is not a story of the jet-hunters; it is the stale story of the long-lost son, with the conventional smooth villain and the conventional heavy villain in wicked partnership to win the lovely heiress from him. With the real life and interests of the picturesque jet-hunters the novel is not concerned. They and their dangers on the treacherous Yorkshire coast serve only to give occasion for a few melodramatic scenes, while their true purpose is to harbor the lost child until the proper time come for restoring him to his noble father. Who the noble father is, appears plainly enough as soon as the melancholy Wyvern, Earl Wyvern, the eminent statesman and diplomat, is introduced. And one is tolerably certain, too, that, in spite of his life among ignorant people, young Lord Wyvern will prove a "son of whom any father would be proud" in the eyes of his aristocratic father. When they are made known to each other this turns out to be the case. Nor is the son less satisfied, but, after three minutes' conversation with the noble Earl, decides that had the choice been given him he would "have gratefully chosen as fate had willed it." In fact, there is from the start very little of which the reader does not feel certain. When the lovely heiress is put on a vicious horse he knows very well what will happen, and who will rescue her; it is the same when she is attacked by a savage stag; and when the smooth villain in the person of an indigent baronet pays court to her, he reads on in comforting confidence that some of the baronet's dark deeds will be discovered in time to save her. Of course the heavy villain meets his just doom, and falls from a high cliff on the very rocks which he had intended should be the last resting-place of young Lord Wyvern.

The facility with which Mr. Trowbridge always writes is as apparent as ever in his latest novel. The 400 and more pages which are required to tell the story of 'Farnell's Folly' were, we may be sure, not written painfully, nor yet carelessly; but there is a rapidity about the style that makes the movement of the story seem tedious by contrast. As now and then happens with facile writers, the points are often so much insisted on that the characters, while not seeming exaggerated, still fail to seem natural. Then, a reader objects even to the apparent assumption that he has no discernment whatever. The story is essentially American in its qualities. The people of Waybrook, their environment and traditions, are all in keeping with a village of western New York. Ward Farnell, whose magnificent house was to have been his pride and became his folly, is a type of the successful American, led on to financial ruin by love of display; and some of the minor characters are excellent from the way in which the limitations of their birth and nurture are portrayed, while their real worth and honesty are not sunk out of sight. Though the story is American, it is not new; both the incidents and the characters have an exasperating way of seeming to have been already encountered somewhere. This is ordinarily a mark of commonplaceness; yet it may not be disagreeable to many who have grown tired of the strained effort for novelty in much of the current fiction—the painful search for queer types and unused material—to read a novel in which their imaginations are not asked to leave the earth, nor even to dwell in strange places.

The author of 'The Widow Wyse' very judiciously chooses to remain unknown. We risk nothing in guessing that she is a woman. Not much is to be expected of a book that opens: "A tumble, a roll, a bump, and a prolonged howl broke upon Miss Ethel Townsend's ear," and is made up of a young girl's letters from boarding-school, and the very simple machinations of a pretty widow who deceives no one. But even the insight given by the first chapter does not fully prepare one for the absolutely colorless descriptions, the perfunctory delineations of character, and the total lack of structure and interest which await him in the succeeding pages. The story can hardly be said to have a plot. Miss Townsend is merely hurried from Mobile to boarding-school, and through a series of visits in Boston, Newport, and in the country, to a picture gallery in Europe. Here she is found by Major Apthorpe—whose chief merit seemed to be that he always travelled with a dress-suit in his trunk, and at a moment's notice could make himself perfect in evening costume—and her tone in welcoming him with the "one word 'Gerald'" betrays the secret which he had come to discover. The Widow Wyse plays but a small share in the little episode, and why the book should be called after her is as difficult to imagine as why it was written at all.

It would be a relief to turn from such unsatisfactory work to a volume of fresh and taking tales like Mr. Deming's, even if they were less entertaining than is really the case. Readers of the magazines have already, perhaps, met with 'Tompkins and Other Folks'; at any rate six of the seven stories which make up the volume have been printed either in *Harper's*, or the *Atlantic*, or in *Lippincott's*. However, they lose nothing by being grouped, and any one who enjoys encountering an old acquaintance in good company will take up this "Little Classic" volume with pleasure. The chief charm of the stories is their quietness; after that, perhaps, their suggestiveness, though they owe not a little to their tone of kindly humor and mildness. Mr. Deming avoids the disagreeable things in life; his stories show a disposition to be lively—not from animal spirits, but from that genial attitude of mind induced by looking on the bright side. That Tompkins should lose his illusions, and turn from the enthusiastic hopes of his college days to auctioneering in Chicago, might be made to seem a genuine tragedy. Yet most young men are enthusiastic, their hopes have some such ending as Tompkins's; and Mr. Deming prefers to dwell, in his pleasant, half-pathetic way, on the auctioneer's unromantic love affair and his warm-hearted remembrances of early days. One or two of the stories are hardly more than sketches. "The Court in Schoharie" is nothing but the description of court week in a slumberous, old-fashioned village among the Catskills; but it is done with such a touch of sympathy—the influence of the simple people and their humble, picturesque surroundings on the old Judge's remaining bit of sentiment is so delicately suggested—that the piece is better than a story would have been. This sketch and "Mr. Toby's Wedding Journey" make the best of the book; but throughout there is an evenness both in matter and in style that makes a choice almost entirely a matter of taste.

Maurice Jokai reveals the complex and highly romantic fortunes of 'A Modern Midas' most skilfully. The selection of fields comparatively fresh to the English reader, and of characters nearer to nature than the ultra-civilized ladies and gentlemen whom most of our novelists struggle to mould into heroic form, gives him a great advantage for dramatic purposes. Very probably the fact that few of us are on terms of familiar intercourse with the dwellers by the lower Danube may add much to the charm of the story, for we are not called upon to determine what passions or emotions are natural or possible to a multitude of Greeks, Turks, and Hungarians. From the moment that Timar and Timea appear in the grain-laden vessel on the Danube, the reader must mentally let himself go. Timar is the supercargo, and Timea the daughter of Ali Tschorbadschi, flying, with great treasure, it is whispered, from the wrath of the Sultan. Tschorbadschi dies on the voyage, and Timar gets possession of his priceless jewels in a way which, not to put too fine a point on it, is far from honest. He thus lays the foundation of the fortune of Midas and of the great unhappiness of Timar. His practical restitution by marriage with Timea is vain, and vain, too, are his enormous public charities. The man is afflicted with a moral nature which, to quote the author, "longed for honesty, human respect, philanthropy, and self-sacrifice; but by a strange and sad destiny he had, through temptations too great for him to withstand, become a man whom others esteemed and honored, but who must despise himself as the veriest hypocrite." Only on "No Man's Land," cut off from the world by the waters of the Danube, can Timar find any peace for his soul. And even here there is always the sting that Naomi, the loving Eve of his Paradise, knows nothing of his true position, and nothing of his cold, faithful, wronged wife, Timea. The methods which the author adopts to free Timar from his burdens, insuring long life and happiness, are not at all in harmony with the Anglo-Saxon standard of morals, nor has he been trammelled by any prejudice in favor of the final reward of good and punishment of evil. He has, however, followed the prompting of a thoroughly artistic nature, and brought his story to a logical and natural if unrighteous conclusion.

"His wallet of stories," says a recent eulogist of Edward Everett Hale, "seems as inexhaustible as Fortunatus's purse." The essayist is so dazzled by Mr. Hale's honest gold that he is incapable of detecting counterfeit, much of which has found its way into the 'Christmas in Narragansett.' The volume is largely a reprint of short stories told by people who have already appeared in the author's works. In almost every story one comes across something original, shrewd, amusing, aptly expressed; but the keynote is assumption of indifference to literary conventions and affectation of extreme familiarity. "Pilchards" and "Cromwell's Statue" are worth telling and well told, while "The Return Message," "Law and Gospel," and half-a-dozen anecdotes are inconceivably weak and pointless. Many seem to be written in conformity with the dictum of one of the narrators, that an extraordinary, improbable event should be chosen for a short story. This is very well as far as it goes, but if the extraordinary impress the reader only as absurdity, then the story is a failure. Colonel Ingham's interview with his antipodal counterpart at the North Pole is an illustration of such failure. But to stamp that kind of fantasy even momentarily with reality requires an imagination of the finest fibre, combined with the subtlest literary touch. The talk of those who tell the stories and link them together is painfully strained, and necessarily offensive to people of any intellectual repose—which is not by any means a euphemism for stupidity.

Miss Phelps's "Zerviah Hope" is, beyond comparison, the best thing in the eighth volume of "Stories by American Authors." It has the simplicity, fervor, and strength which give the author high rank among living writers of fiction; it has none of the obscurity and pedantic affectation which mar all of her novels and many of her sketches. The story of atonement for a crime committed in the heat of passion, by devotion to a fever-striken city, is admirably fitted to display Miss Phelps's perception of the spiritual possibilities in very common humanity. The management of the story, too, is remarkable; for, though a profound impression of horror and desolation is made, all ghastly and loathsome details are avoided.

In the 'Talk of the Town' Mr. Payn has attempted to make the Ireland forgeries of Shakspere in the last century a groundwork of fiction. The central figure, William Henry *Erin*, is an unmistakably cool young scamp. The audacity of his forgeries is equalled only by the completeness of his success, but it is improbable that a young gentleman with his *aplomb* should not defy a mere bully like Reginald Talbot. In spite of Mr. Samuel Erin's disagreeable personality, his implicit belief in the authenticity of the MSS. lavishly supplied by his son attracts sympathy, and we grudge that "inveterate scoundrel," Malone, his triumph over the sturdy stickler for the "text." Many scenes in the Erin household are very clever, but the story drags, as if the author were treading not perfectly familiar ground, and had not fairly entered into the spirit of the age and theme.

Mr. Francillon has dipped into history for the material of his 'Fact in Seven Fables; Face to Face.' On the eve of his marriage, an honest Englishman, seized by mistake as a deserter from the ranks, is carried off to fight through a campaign of the Peninsular War. His adventures abroad are woven with his betrothed's troubles at home into a graceful, quaint, and interesting tale. The misfortunes of the lovers are just grave enough to stimulate compassion, while the author leads smoothly up to a happy end and a new moral—"If you would be good, be happy."

There are pleasant sketches of English landscape and farm life in 'By Mead and Stream,' but it is not on the whole either idyllic or pastoral. The complications of the plot arise from bitter enmities, gloomy jealousy, and intricate financial operations. Though the indefinable quality which excites interest is lacking, the careful elaboration of characters not met with every day will gratify readers of a patient and inquiring mind.

'From Post to Finish' is full of instruction about the horse. It is, moreover, exciting to a limited range of feeling. The racer, Dancing Master, is the real hero, and, with all his faults, a fine fellow, filling his exalted rôle admirably. The moral of the tale would seem to be that impoverished gentlemen need no longer stand idle in the market-places. The career of a jockey lies open, with riches and honors accruing, and liberty to marry a trainer's daughter by gracious permission of her relations.

MORE LAW BOOKS.

Some Leading Principles of Anglo-American Law, expounded with a view to its arrangement and codification. By Henry T. Terry. Philadelphia: T. and J. W. Johnson & Co. 1884.

The Nature of Positive Law. By John M. Lightwood, M.A. Macmillan & Co.

The Law of Extradition, International and Inter-State. With an appendix, containing the extradition treaties and laws of the United States, the extradition laws of the States, several sections of the English Extradition Act of 1870, and the opinion of Governor Cullom. By Samuel T. Spear. 2d ed. Albany: Weed, Parsons & Co. 1884.

A Digest of Statutes. Admiralty Rules and Decisions upon the jurisdiction, pleadings, and practice of the District Courts of the United States. By Erastus Thatcher. Boston: Little, Brown & Co. 1884.

The Board of Trade and the Produce Exchange. Their history, methods, and law. By Lewis H. Bisbee and John C. Simonds. Chicago: Callaghan & Co.

Leading Cases Simplified. A collection of the leading cases in criminal law. By John D. Lawson. St. Louis: F. H. Thomas & Co. 1884.

The Jewish Law of Marriage and Divorce in Ancient and Modern Times, and its Relation to the Law of the State. By Rev. Dr. M. Mielziner, Professor of Talmud at the Hebrew Union College. Cincinnati: The Bloch Printing and Publishing Co. 1884.

MR. TERRY has been a Professor of Law in the University of Tokio, and he begs the indulgence of his readers on the ground that his book was written in Japan, where he had access to a very small library, and was often compelled to cite authorities at second-hand. We doubt if the reader will think the explanation necessary, for we have seldom read a work more suggestive of wide research. Like Judge Holmes's book on the common law, it is a credit to American scholarship, and is a significant bit of evidence of the constantly increasing interest, in the Anglo-Saxon world, in the scientific study of jurisprudence. Mr. Terry differs from a good many of his fellow-students in the same field in refusing to abandon Austin, and in insisting that his general principles of analysis are correct. He differs from Austin, however, in putting forward a different classification of rights, which he divides into correspondent, permissive, protected, and facultative. His discussion of the matter will be found very interesting, and embodies the part of his work for which Mr. Terry claims originality. We can do no more than refer to it here. A more practical topic in this part of the world at the present time is codification, as to which Mr. Terry has a good deal to say. He has a poor opinion of the draft of a code pending in this State, and the lawyers who are engaged in trying to prevent its passage by the Legislature could not do better than publish and circulate his criticism:

> "Many most essential definitions have been omitted, and of many important rights and duties only very brief and meagre statements have been given, less full and complete than would reasonably be expected in one of the every-man-his-own-lawyer manuals that are occasionally issued for the ensnarement of the lay public. The points on which any question is likely to arise which a lawyer of ordinary learning could not answer off-hand, and for which he would need the help of a code—at least such as belong to the now unwritten law—are usually passed over without notice."

He quotes what the draft Code has to say about the subject of fraud, and merely adds: "Comment on this is unnecessary." With regard to "obligations" Mr. Terry makes the cruel suggestion that the codifiers apparently had some idea of adopting the civil-law theory of obligation *ex delicto*, but that either they did not grasp the true nature of the theory, or else they saw fit to give the word obligation a new meaning, alike inconsistent with its use in the civil law and in our own. Mr. Terry thinks on the whole that the Code had better "remain unenacted, since in that condition it would be just as serviceable, and would be free from the inconveniences of an authoritative code, whose *ipsissima verba* could be made the ground of innumerable quibbles." It must not be supposed, however, that he is opposed to codification. He admits that a final and complete code is impossible, owing to the continual accretions of new judge-made law; but he would have the whole subject put in the hands of a commission consisting of a dozen or twenty of the best lawyers in the country, and paid by the national Government; and he adds the quaint suggestion that "if the enterprise were undertaken jointly with Great Britain, an equal number of codifiers would, of course, be appointed from that country." He also thinks the commission ought to comprise a few civilians, who "would probably be able now and then to make very useful suggestions which lawyers trained exclusively in our law might overlook." Suggestions of this sort do not so much show the proper method of codification as throw a strong light upon the difficulties which surround all modern undertakings in this field.

The discussion which has been carried on in England during the last few years over Austin's view of law and legal conceptions is full of interest. Sir Henry Maine was the first critic of Austin who showed that that great analyzer's system must now be studied in the light shed by modern historical research upon the growth of jurisprudence, and that there are periods of social development in which Austin's fundamental conceptions of sovereignty, command, sanction, and even law itself are faint or non-existent—periods when custom is not indeed a source of law, but supplies its place. In a Russian *mir*, in an Indian village community, Austin's analysis would not merely be forced, it would be meaningless. We, are, therefore, confronted with the question, which Mr. Lightwood, among others, has attempted to solve, whether the Austinian view must be given up. No solution can be said as yet to have been agreed upon, but it is of the utmost importance that some should be reached, if only in the interest of systematic legal education. If the view taken by Austin be overthrown, we must have something in its place. What can be substituted?

Mr. Lightwood offers a view of the subject which seems, as far as we understand it, to make

jurisprudence dependent upon, instead of distinct from, ethics:

"Law," he says, "is a collection of rules regulating either human actions or human relations, which spring from and explain the current rules of morality, and which, therefore, depend for their support upon the general assent of the people. Owing, however, to the fact that individual wills are sometimes in opposition to the general will, the law must occasionally be enforced by the physical power of the community, and, owing to the complication of human affairs, it must sometimes be directed by courts of law. Further, these rules are made by a sovereign who is acquainted with the wishes of the people, either directly in accordance with such wishes when they can be ascertained, or, where this is not possible, by reference to the principle of utility, or else upon the advice of jurists who are skilled in legal matters."

The difficulty with this and other similar views is, that they tend to confound the province of law with that of morality, and to be so very general as to be useless. And possibly it may turn out in the end that such speculations are directed to an unattainable object. To discover the principles which underlie all systems of jurisprudence is one thing; but to discover the principles which underlie systems of jurisprudence and (if we may so express it) not-jurisprudence, seems a hopeless task. But is not this what Mr. Lightwood hoped to be able to do? In early social systems the right of private revenge is exercised, but as long as this right is exercised among men much as it is in the animal world, the conception of law can hardly be applied to it. The avenger slays his enemy, and there is the end of it. Subsequently a religious sanction is attached to the notion of revenge, just as a custom grows up about common proprietorship. All this, however, is anterior to law as we know it, just as much as it is anterior to territorial sovereignty. How any conception, therefore, of law that is of any value can be made to cover all the diverse and antagonistic systems out of which law has grown, it is hard to see; and, curiously enough, we find the author in his preface hinting that

"perhaps hardly any idea of law is likely to be accepted by all students; it is sufficient if each aspect is from time to time brought prominently forward, and so made to influence actual conduct. In the complication of human affairs it is enough for us to give every view proper expression and representation; the blending of them is effected, and the final result worked into the history of the race, by forces which are beyond human control."

We have had such frequent occasion, in the course of the discussions over the extradition treaty with Great Britain, to refer to the first edition of Mr. Spear's work on extradition, and have found it so full and careful a work, that we take great pleasure in commending this revision to the attention of the public. Mr. Spear is doubly qualified for his task, as he is the author of a very good book on the Federal judiciary, a subject with which any one writing on extradition ought to be familiar. Every one interested in extradition will open the book to see what he has to say about the cases of Eno and Tully. Here we find that the author holds much the same views expressed in these columns at the time that the cases were disposed of—that there was no room for criticism of the position taken by the judiciary. The general principle of these decisions, as also of the Windsor case in England, was that a treaty crime cannot be stretched beyond what was intended to be covered by the language of the treaty at the time of its ratification by the contracting parties. It would certainly be very convenient if, having a treaty with England authorizing the extradition of persons charged with the crime of "forgery," we could then, by simply enlarging the meaning of that term in our statutes, make falsification of accounts and embezzlement treaty crimes, notwithstanding the fact that the treaty is entirely silent about them. There seems hardly any limit to the use we might make of our legislative prerogative: if we could make false accounts forgery, in the third or fourth degree, could we not make any misrepresentation of a fact on paper forgery in some degree a little more remote, and thus transport ourselves by easy stages into the realm of perjury, or any other offence of which falsehood is an essential part? Indeed, on the theory contended for by those interested in Eno's extradition, could we not, by simply declaring in a statute that any crime or misdemeanor should hereafter be known as forgery in such and such a degree, enlarge and change the treaty to any extent we pleased?

Besides the cases relating to this point, Mr. Spear has added to his authorities on the old question of the right to extradite for one crime and try the prisoner for another. In the case of Vanderpool and Jones, the Supreme Court of Ohio had it before them very recently. The defendants were indicted for forgery committed in 1880. On being arraigned, they pleaded that prior to the finding of the indictment they had been extradited from Canada to Ohio for another offence under the treaty of 1842; that they had been tried, convicted, and sentenced, and were now serving out their sentence in the penitentiary. The Court held that the prisoners could not be put on trial for a crime for which they were not extradited. In Ker's case, the matter came up in a different way before Judge Drummond, in the Circuit Court for the Northern District of Illinois. Ker was kidnapped in Peru, brought to the United States, and duly indicted for crimes within the jurisdiction of the court. He applied for a writ of habeas corpus, and the court thought the case not so clear as to authorize the issuance of the writ, and used language implying that, while a prisoner might be entitled to the writ when he was extradited for one crime and tried for another, if he were simply kidnapped, the question of the right to hold him under the treaty could not be raised. But the Judge also pointed out that his decision was not final, as the prisoner could set up the defence in other ways, and said that on this account he was the less inclined to grant the writ. Mr. Spear makes the further suggestion that "he might very properly have considered a preliminary question, and that is whether, upon the showing of the facts, he had any jurisdiction over the case."

Thatcher's 'Digest,' originally confined to the Supreme Court, has grown into a work of three volumes, embracing the District and Circuit Courts as well; *i. e.*, the whole field of Federal practice. It is a valuable book of reference, probably the best of its kind. We cannot compare it with Judge B. R. Curtis's invaluable little handbook on the jurisdiction of the Federal Courts, for that consists of elementary lectures delivered at the Harvard Law School, while this is simply what it is called by the author, a digest—that is, a collection of decisions, rules, and statutes for use in actual practice. The practice of the tribunals of the United States is getting every year to be more important, the field of jurisdiction is growing wider and wider, the number of cases annually reported is always increasing, and the interests involved in litigation continually rising in amount and value.

It is a curious fact, as pointed out by Judge Curtis in his lectures, that a large part of this Federal business should have got into these courts through a fiction of law, introduced in the middle of the nineteenth century by the judges of the Supreme Court, by a process analogous to, if not identical with, that which grafted so many fictions upon primitive Roman and English law. This fiction is that of the citizenship of corporations in the State of their creation, which is simply a fiction growing out of the imaginary presumption that the corporators are citizens of that State—a presumption which the judges of the Supreme Court held, in the Ohio and Mississippi Railroad Company vs. Wheeler, 1 Black, 286, could not be contradicted or disproved. The Federal courts might to a very great extent be shorn of their jurisdiction over corporations by the simple enactment of a statute repealing this rule, for it would in nine cases out of ten be impossible to prove the jurisdictional fact which is now conclusively presumed. We mention this here because one of the plans for the relief of the Supreme Court is the withdrawal altogether of the jurisdiction of the Circuit Courts so far as it is founded upon citizenship in different States.

In Mr. Thatcher's present volume there are citations from 246 volumes of reports. These are classified under various heads, to which there is an alphabetical index. So far as we have been able to test this, it seems full and accurate. The author gives in all cases the date of the decision, the importance of which so many digesters overlook.

The Produce Exchange, like the Stock and other commercial exchanges, is already producing every year a crop of decisions by which the peculiar customs and obligations of its members in their relations with each other and with the public are being gradually classified and regulated under general principles of law. The process is an interesting one in any department of human activity, and the mere mention of the great body of new law on the subject of warehouse receipts, and of the legal nature of membership in exchanges, will serve to remind the reader of what he will find in a volume like that of Messrs. Bisbee and Simonds. Their collection of cases is valuable, and their statement of the conflicting views of courts on such topics as we have mentioned seems fair. In a second edition they will perhaps be able to give a more careful exposition of their own views on the subject of the law governing warehouse receipts. Their treatment of it shows marks of haste, which perhaps does no very substantial harm, as it is made up for by great fulness of treatment; but as a specimen of legal style the book might be greatly improved. It contains, besides its discussion of the law, much valuable information as to the history and organization of the institutions to which it relates.

Mr. Lawson's last volume completes his series of 'Leading Cases Simplified.' He has now treated in a "brief and semi-humorous form" the leading cases of the common law, of equity, and constitutional law, and of criminal jurisprudence. In the present volume he includes an "assize sermon" of his own to the judges of appeal, which shows that Mr. Lawson takes the view of delay in capital cases always maintained in these columns—that the procedure needs to be much more rapid, and the result much more certain.

In less than 150 octavo pages, all told, Doctor Mielziner gives all that the lay reader, especially the Gentile, cares to know about the Jewish law of marriage and divorce. The main subjects treated are "monogamy and polygamy," which has only an historical interest; prohibited marriages; forms of the marriage ceremony; effects of marriage; dissolution by death or divorce. The author, though free from the exuberant show of erudition which John Selden made in his 'Uxor Hebraica,' gives in his foot-notes illustrations from the laws and customs of different countries, nations, and churches, from which the Jewish custom may, in some instances, be derived, while in others there is only the resemblance due to a common origin. Curiously enough, he never quotes Selden. He gives first, by way of introduction, the ethical drift, as distinguished from the legal provisions, in Bible and

Talmud. Though both allow polygamy and divorce at the husband's will, both of them deprecate these relics of barbarism, and teach man to honor and cherish woman as his companion and equal. Coming to prohibited marriages, we are told that the Jewish interpreters, unlike the Catholic and Anglican Church, have never extended the Levitical degrees by construction; hence an uncle may, and often does, marry his niece, though a nephew cannot wed his aunt. All Jewish authorities agree, under the plain provisions of Leviticus, xviii. 18, that a man may marry the sister of his deceased wife. The "secondary" degrees which are prohibited by the rabbis, are unimportant, and, with the exception of the "maternal aunt by marriage," almost out of the question; and as to these degrees, it is plainly admitted that the prohibition is not Scriptural, but only *propter bonos mores*, and a marriage within them is but voidable—that is, the parties to it are bidden to dissolve it by divorce.

As to the *forms* of solemnizing marriage, it is shown that the use of the ring as the "money's worth" for the purpose of "acquiring" the wife is very recent among the Jews; the Talmud nowhere mentions it, neither does Maimonides, writing in Spain in the twelfth century. The presence of a rabbi or minister of any kind is also a comparatively modern usage. Formerly a rabbi was never called in, except to give his opinion as to legal obstacles to a proposed union; the groom himself, or one of his friends, would recite the benedictions, both at the betrothal and at the nuptials. Doctor Mielziner makes it very clear that neither of these ceremonies is a "sacrament."

HUMAN INTERCOURSE.

Human Intercourse. By Philip Gilbert Hamerton. Boston: Roberts Brothers. 1884.

Mr. Hamerton has chosen what at first sight seems a singular title for his latest volume; yet on examination it proves not to be a bad one. It is dedicated to the memory of Emerson, on account of the "great and persistent influence" that author had on Mr. Hamerton's course of thought and work; and human intercourse is certainly a subject to which much of Emerson's writing relates. Mr. Hamerton, however, shows the influence of Emerson much more in his subject than in his treatment. He is no mystic, nor poet; simply an essayist gifted with more than ordinary curiosity, intelligence, and power of analysis and exposition. The ground covered by him is that which has been gone over by poets, essayists, dramatists, novelists, psychologists, since the world began. The difference is that few of his predecessors, so far as we can remember, have avowed by the title of their works the ambitious extent of their researches.

Mr. Hamerton's book we should distinctly call, like everything else he has written, "readable." We can give the best idea of it, perhaps, by analyzing one of the chapters—that on "Differences of Rank and Wealth." He opens this by saying that the most remarkable peculiarity about the desire to establish distinctions of rank is, that public opinion should establish distinctions among people who are not people of title at all. As an illustration of this, he says that he once dined at a country house in Scotland where the host asked one of the guests, "Are you a land-owner?" in order to determine his precedence. He adds these reflections: "It struck me that the distinction between a man who had a moderate sum invested in land, and one who had twice as much in other investments, was not clearly in favor of the first." Again, Mr. Hamerton professes himself unable to understand, except "in the most confused manner," the distinction between "those who are in trade and those who are not." He declares that he can understand trade being objected to socially because it is followed solely for profit. But if this were the ground of the objection, "every profession followed for profit has in it what is objectionable in trade," and the professions themselves are not noble unless they are followed "in a disinterested spirit."

"I should say, then, that any attempt to fix the degree of nobleness of persons by the supposed nobleness of their occupations must be founded upon an unreal distinction. A venal clergyman who does not believe the dogmas that he defends for his endowment; a venal barrister, ready to prostitute his talents and his tongue for a large income, seem to me to have in them far more of what is objectionable in trade than a country bookseller who keeps a little shop and sells note-paper and sealing-wax over the counter; yet it is assumed that their occupations are noble occupations," etc., etc.

Again, why is the wine trade considered (all this applies to England chiefly) a specially gentlemanly occupation? Are not bread, cheese, beef, and mutton, Mr. Hamerton asks in surprise, more useful to the community than alcoholic drinks? Another "wonderful unreality" which he points out is, that people, "in order to fill their pockets and preserve their rank at the same time," "engage in business anonymously, either as members of some firm in which their names do not appear, or else as shareholders in great trading enterprises." Another inconsistency is, that a man may be excluded from "good society" because he is in trade, while his grandson may be admitted because his grandfather was in trade, that is, "through a fortune of commercial origin."

Mr. Hamerton next advances to the indisputable proposition that "there is a great deal of unreal distinction in the matter of ancestry," many persons of old family being in humble social positions, simply from want of money, "whilst others usurp their coats-of-arms and claim a descent that they cannot really prove." In conclusion, what should the wise man think of all these things? Should he not think of rank and wealth at all and simply take human nature as it comes? If he does, he had better go and live in a tub or in a cave, for nowhere else will he escape both these evils; and Mr. Hamerton, having first shown how unreal are distinctions of rank, has many a good and true word to say, per contra, for wealth, and what it does for "human intercourse," making it easy and refined, bringing within our reach so many varied kinds of interest. Not that Mr. Hamerton is a worshipper of the golden calf, but he is a just man, and likes to look at a subject on all its sides, and say neatly and well all that it occurs to him to say with regard to it.

Sometimes Mr. Hamerton suggests a new view of some old topic, as witness the following:

"The general opinion in our own country condemns falsehood by exaggeration, but it does not blame falsehood by diminution. Overstatement is regarded as a vice, and understatement as a sort of modest virtue, whilst in fact they are both untruthful, exactly in their degree of departure from perfect accuracy. . . . By a strange result of conventionalism, a man is admired for using language of the utmost clearness and force in literature, whilst if he talked as vigorously as he wrote (except, perhaps, in extreme privacy and even secrecy with one or two confidential companions) he would be looked upon as scarcely civilized. This may be one of the reasons why English literature, including the periodical, is so abundant in quantity and so full of energy. It is a mental outlet, a *dérivatif*."

Mr. Hamerton's horizon is by no means confined to England. He is familiar, as readers of his other books know, with French life, and what is most valuable in this volume comes from his knowledge of European life. His "human intercourse" is generally the social intercourse of Englishmen with one another as observed by one who knows how the same things seem in France. If he wishes to extend his range of observation, he could not do a better thing than to study "human intercourse" in the United States; for he would find here a country in which most of what is regarded as adventitious and factitious in English human intercourse has been dropped, where there are no ranks, no rules of precedence, hardly any social distinctions founded on occupation; where falsehood by diminution is looked upon with as much disfavor as falsehood by exaggeration or inflation—if, indeed, in some circles the latter is not looked upon with positive approval; and yet where "good society" is hollow and frivolous and pretentious and unreal and still satirized as being devoted to mere wealth.

There is one point which Mr. Hamerton and all philosophers like him who undertake to discuss society as it is and society as it might be, overlook, thus introducing great confusion into their best work—and that is, the object for which "good society" is carried on. This is not self-improvement or edification: it is simply and solely amusement and relaxation. Whether it amuses itself in a refined way or in a vulgar way, in an intelligent way or in a stupid, boorish way, in a moral or in an immoral way, will depend on the general fund of education and refinement and morality upon which it draws. But the idea that it will ever change its object, or keep itself going for the sake of making the world more moral or more refined or more educated, is a great mistake. Good society is what a community puts forward as one of its flowers; if the growth be rank and poisonous, there is no use in addressing homilies to the flower. There is clearly something wrong in the soil, in the community, or, perhaps, in the race of which the community is a part.

Syntax des Französischen und Englischen in vergleichender Darstellung. Von Dr. Friedrich Brinkmann, Oberlehrer. Braunschweig: Vieweg & Sohn; New York: B. Westermann & Co. 2 vols.

Dr. Brinkmann holds that "there is no greater difference between the syntax of the French and that of the English than between the French and the Spanish or the Italian syntax." It is true that he does not think this fancied similarity so very great in modern French as it is apparent in the French of the sixteenth century, "the uniting link between modern French and modern English." It is to "that form which it [the French language] had gradually assumed by natural development before the last alteration was made in it, in the seventeenth century," that he calls attention, as also to "the language of the great prose-writers, Calvin, Rabelais, Montaigne, Amyot, and the poets, Marot and Ronsard and his school," as presenting examples of that great freedom which is found in English, and which distinguishes it and the French of the sixteenth century from modern French.

The learned author finds good reasons for this in the fact that the two languages lived side by side for centuries, in England, the French predominating; and he quotes Macaulay to show that William the Conqueror's companions and their descendants, to the fourth generation, spoke French; that this language was spoken in the court, in the castles of the barons and knights, and, by degrees, made its way into the courts of justice and the Parliament. It was not till the middle of the fourteenth century, says Doctor Brinkmann, that the supremacy of the French language and literature began to wane in England. About that time English was substituted for French (as a study) in the Latin schools, and somewhat later in the courts of justice, while the use of French in Parliamentary business was kept up until the following century, and still later as the language of the laws. Yet French main-

tained its influence in literature, even at that time. For these various reasons, Doctor Brinkmann concludes that the syntax of the English language is, "for the greater part, an imitation of the French and Latin."

He overlooks, however, the fact that while the nobles and the officers of the Government accepted, perforce, the language of their rulers, the people stoutly resisted its introduction, and the conquerors had to learn the idiom of the conquered—the Anglo-Saxon. This language, which had absorbed the Celtic, had received but slight modifications from the invasions of the Danes and Norwegians, and these modifications only tended to strengthen the German element. When Alfred, disguised as a minstrel, penetrated into the Danish camp, the Danes understood his Saxon songs and stories. After the Norman invasion, another blending process followed, by which Norman-French words were grafted upon the native stock. The language of William and his followers can scarcely be called "French," for at the time of the invasion the *langue d'oïl*, spoken in northern France, was divided into four principal dialects—namely, those of Normandy, Picardy, Burgundy, and the Isle of France—which last, the fountain-head of modern French, finally absorbed the others in the fourteenth century. Roger Bacon, who visited France in 1240, noticed the existence of these various dialects, and mentions them in his 'Opus Majus.' William the Conqueror and his followers, therefore, spoke *Norman*, and the gradual transformation of this dialect into French must have been slower and less complete in England than on the Continent. That the antagonism between the two languages continued while "they lived side by side" is demonstrated by the very fact that, during the glorious reign of Edward III., English was recognized as the legal language and French banished from the courts of justice. This could not have been a sudden measure. It was the culmination of the latent but protracted struggle of the national language with that of the foreigner. It was a public confession that, after three centuries of possession, French had failed to root out or to absorb the Anglo-Saxon—the language from which modern English derives its structure, idiom, and inflections, the language to which it owes its terseness and simplicity, while its irregularities are due to the many sources from which it has drawn its wealth and variety of expressions.

French, once banished, must have fallen rapidly into disuse, even within the precincts of the court. Shakspere in his "Richard II." makes the *Duchess of York* exclaim, as she pleads for her son to *Bolingbroke*:

> "Speak pardon, as 'tis current in our land;
> The chopping French we do not understand."

And in the charming wooing scene in "King Henry V." the enamored king tells fair *Katharine* of France: "It is as easy for me, Kate, to conquer the kingdom as to speak so much more French. I shall never move thee in French, unless it be to laugh at me." And, further on, "Now, fie upon my *false* French! By mine honor, in *true English*, I love thee, Kate."

This "true English" was the old Anglo-Saxon, softened by the smooth French sounds that had been added to it and enriched with many new terms, but losing nothing of its originality. Chaucer, while preserving the Saxon characteristics in his verse, used many French words which have since disappeared from the language. Especially in Spenser's time was the Anglo-Saxon rid of these superfluous additions; and here, two facts may be noted: first, that the English words of French extraction have benefited poetry more than prose; and secondly, that the major part of the words retained are but synonyms, giving new names to existing things and ideas.

What was the condition of the French language, *in France*, during that period of three hundred years? M. A. Brachet, in his 'Grammaire historique de la langue française,' tells us that old French, with its two cases (borrowed from the original six cases of the Latin declension) and its several dialects, prevailed until the close of the thirteenth century; the work of transformation then began, to continue through a whole century. The fifteenth century saw the birth of modern French; the sixteenth, its growth. Says M. Brachet:

> "The French language, such as it appears to us as early as 1535 in Calvin's celebrated manifesto ('The Institutes of the Christian Religion'), is already completely mature; it is an excellent instrument for every shade of expression; our idiom seems to have fixed forms. And if the French language had remained in that condition, it is clear that the seventeenth century and Malherbe would have had nothing to reform; but it was spoiled and compromised by an extravagant invasion of foreign words, borrowed from the Italian, the Greek, and the Latin."

Now, the English language of the fifteenth century—save in its uncertain orthography—bears as much resemblance to modern English as the French of the same period does to modern French. Modern English, according to most grammarians, arose during that brilliant epoch of our literature, the reign of Elizabeth; but its foundation may be found in the grammatical revolution which occurred in the latter part of the fifteenth century, and it owes its development to the Reformation and its polemic writers. "The progress of the human mind has been," says a French writer, "from poetry toward science; and all modern languages, at a certain period of their history, have shown a tendency to leave the synthetical construction for the analytical, thereby gaining in precision and clearness what they lost in poetical force and harmony." At no time was this tendency more marked than during the sixteenth century. The English language assumed certain fixed forms about the same period that French attained its highest point of perfection and that modern German was modelled by Luther, who reformed the language as well as the religion of Germany.

The points of syntactic analogy between French and English—and Doctor Brinkmann has certainly made the most of them—are not sufficiently striking or numerous to support his theory. Where analogy is found between English and Latin grammar, it is precisely in those rules which French—a Latin language—had rejected long before the sixteenth century: for instance, the declension of nouns, inflection, and the neuter gender. Nor does the invariable definite article of the English in any way resemble the article which the French made out of a Latin pronoun; it is Saxon, and was in use in England before the *lingua rustica* gave way to the Romance language in France. The use of the abstract nouns without this article—more common in French in the sixteenth century than nowadays—was just as common in old English. Nor can we detect any analogy in the auxiliary verbs or in the syntactic rules that govern the adjectives and participles in the two languages. The difficulty in finding this analogy becomes greater when we consider the names of the "great prose writers" mentioned in this connection by Doctor Brinkmann. Did he discover it in those clear, forcible writings of Calvin which any French scholar can read with as much facility as he can Thiers's or Guizot's works? Was it in Rabelais's works, so rich in quaint words and novel expressions, but which can be understood only with the help of a glossary? Or did the English model their syntax upon the masterpieces of "Ronsard and his school," after these worthies had attempted to reconstruct the French language upon Greek and Latin bases, thereby destroying its beautiful simplicity and clearness?

Doctor Brinkmann's work is a monument of vast learning and patient research, and the German student will find it of invaluable help in mastering both French and English. It might be less voluminous without losing anything of its effectiveness. Where two or three examples would be deemed amply sufficient by an English or French writer, our author gives twenty. Yet, as this disposition to amplify is essentially a German characteristic, his German readers will not complain. His subject could not have been treated in a more thorough and exhaustive manner. He is evidently as familiar with the literature as with the syntax of the two languages he proposes to teach. The French authors, from Amyot to George Sand, and the English, from Shakspere to Carlyle, furnish him many an apt quotation. He is not, however, always happy in his rendering of idioms—of which there are several long lists in his book. The idea conveyed by the expression "faire fureur," which is 'to be in vogue,' 'to be much sought or run after,' is hardly grasped when rendered by 'to create sensation.' "Faire abnégation de" is not 'to deny,' but to make a sacrifice which implies self-denial; nor does "faire abstraction de" mean 'to abstract.' A plunderer may "faire main basse" on everything he can lay his hands on, or, figuratively, a hungry fellow on all the eatables; neither can be said to 'put to the sword' the plunder or the viands. "Avoir bon nez," 'to have a fine nose'—in German, 'Eine feine Nase haben'—Doctor Brinkmann quotes from Molière's "George Dandin," and his misconception is the more remarkable since Molière used it in the figurative sense of 'to be sagacious, far-sighted.' The German who, wishing to "pay his address to a [French] lady," should make known his intention to "lui conter fleurettes," would be guilty of a grievous mistake. 'To watch or sit up in the night' is simply "veiller," not "être sur pied." 'To walk like a wolf,' for "marcher à pas de loup" (that is, stealthily), is rather too literal. 'Blind by birth,' for 'born blind' or 'blind from one's birth,' is scarcely English. The "delicates," instead of the delicacies (of the table), although used by Dryden and Shakspere, is no longer modern, we believe, and Doctor Brinkmann is somewhat at sea as to the meaning when he renders 'to be at sea' by "aller par mer," instead of "être en mer," or "sur mer."

But such idiomatic blunders, and even the more serious one of misquoting a passage from Mme. de Staël (*que* for *qui*), and thereby making that writer guilty of a mistake in French syntax, may be due to the careless handling of the dictionary and copying of extracts by an amanuensis charged with the drudgery of the work. They detract nothing from the scientific part. Besides, one may have a perfect knowledge of syntax and yet be bothered by an idiomatic expression.

Ueber Nervosität. Vortrag von Prof. Dr. von Krafft-Ebing. Zweite Auflage. Graz: Leuschner & Lubensky.

Dr. von Krafft-Ebing is not only one of the leading alienists of the day, but a remarkably clear and incisive writer. In the brief space of sixty pages this brochure contains so many valuable suggestions on nervousness, its causes, symptoms, and treatment, that a translation of it would doubtless find numerous readers and do much good. We are accustomed to regard nervousness as a special American prerogative; but Krafft-Ebing, speaking particularly of Austria and Germany, declares that the two great failings of our time are anæmia and nervousness, as

a glance at a numerous class of advertisements alone would show. Formerly nervousness was confined to the upper classes, but now it is common to all, to men and women, to teacher and pupil, to brain and muscle workers. He believes, however, that it is merely a transient phenomenon of civilization, due to the unprecedented activity in every sphere of life, which makes the struggle for existence more severe than ever, while those who feel they are succumbing hasten their ruin by indulging in the stimulants and narcotics which modern science and commerce have placed within the reach of all. The decrease of the rural population and the consequent overcrowding of cities are also referred to as leading causes of nervousness, the correctness of this diagnosis being evinced by the fact that a short visit to the country usually at once dispels the symptoms of the disease. The difficulty of establishing a comfortable home induces an increasing proportion of men to marry late or not at all, and this throws on the world a large number of women who have to earn their own living. Among this class of women—bookkeepers, telegraphers, postal clerks, governesses, etc.—the Professor finds a peculiarly large number of victims; and he explains this as due not to any natural incompetence of the female brain to engage in regular work, but to the fact that centuries of purely domestic life have left the female mind without that special elasticity and strength which inherited capacity and habit alone can impart.

Over-pressure in schools appears to be responsible for much nervous weakness and suffering. From 60 to 80 per cent. of school-children in Germany are shortsighted. The higher class of the Gymnasia and Realschulen have thirty-six hours a week of school work, with an additional two or four hours a day of home work. Gymnastic exercise is everywhere prescribed to mitigate the evils of over-pressure; but Professor Nussbaum declares that experience shows that "injuries to the brain are not repaired by strengthening the muscles. Limitation of the school hours is the only remedy." Professor Krafft-Ebing's remarks on the treatment of nervous children are of especial value; and he also points out the dangers of hereditary transmission, as the nervous constitution is specially apt to be inherited. Among the general prophylactic measures recommended are the inculcation of temperance principles; non-taxation of the most necessary articles of food; hygiene of the home, schools, and factories; state regulation of the hours and wages of operatives; lowering of school hours and raising the age of admission.

Comments are made on our foolish habit of reserving for parlor and reception rooms our largest and sunniest apartments, and sleeping in small, badly-ventilated rooms. Weather-strips are useful in saving fuel and preventing colds, but the alternatives are anæmia, nervousness, and consumption. The writer regrets that whereas there are plenty of asylums for the insane, there is but little provision for nervous patients, who need, above all, removal from their every-day surroundings and petty annoyances. He speaks favorably of the growing habit of rusticating in summer, but suggests that brain workers should be allowed four weeks of vacation, atonement being made by the improved quality of work and postponement of the time for pensioning. The Professor has an ingenious way of explaining why nervous patients are so apt to fall into the hands of charlatans. The body is greatly influenced by the mind, as is shown, *e. g.*, by the facts that fear of the dentist very frequently drives away toothache; that the presence of a trusted physician dispels other evils; and that the mere presence of a favorite narcotic on the night table may overcome sleeplessness. The quack acts on this principle, gives his patient some harmless dose or pill, and trusts to the faith cure for the rest. The patient believes in the remedy, recovers cheerfulness, which alone was needed to tone up his nerves; and the quack succeeds because he is a better psychologist than the physician, who made light of the patient's complaints on the insufficient ground that some of them were purely imaginary.

The Chief Works of Benedict de Spinoza. Translated from the Latin with an introduction, by R. H. M. Elwes. 2 vols., pp. 387, 420. [Bohn's Philosophical Library.] London: George Bell & Sons. New York: Scribner & Welford.

Benedik Baruch von Spinoza's Stellung zum Judenthum und Christenthum. Von Dr. Alfr. Chr. Kalischer. [Deutsche Zeit- und Streit-Fragen.] Berlin: Carl Habel. 8vo, pp. 88.

THE two volumes of Spinoza by Mr. Elwes, giving a translation of the works of the great Jewish thinker in the convenient Bohn edition, are a valuable and much-needed addition to a philosophical library. Taken with the recent essays of Pollock and Martineau, and the Continental ones collected by Knight, and Auerbach's biographical novel, they give us a pretty full knowledge of a philosophy about which the English materials were before so scanty. A complete English edition is still wanting. Notwithstanding his abstruse style, with its quasi-mathematical demonstrations, it is only necessary to mention Lessing, Goethe, Heine, Coleridge, Shelley, and George Eliot to see what an attraction Spinoza has had for poetic minds of a transcendental cast. The loftiness and eternal calm of his teachings were full of zest to them; and Mr. Elwes notes in this preface the kinship with Stoicism to which his doctrine of the all-embracing nature of the divine substance led Spinoza in his moral code, though his view of moral emotions and exaltation of personal pleasure was far more Epicurean in its type.

Not a few modern thinkers sympathize with his conclusions, although the force of his logic is weakened by his pantheistic assumption that mind and matter are essentially identical (being different modes of the same substance), and hence that an idea, if it was distinct and adequate, must necessarily be true. This strange way of taking the conceivability of a notion as the test of its truth, permeates his whole system so thoroughly that it is impossible to eliminate it, or throw his work into a sound logical form; and the hedonism, pantheism, and disbelief in personal immortality which he taught are obstacles to many thinkers. On the other hand, Mr. Elwes ought to have noticed the valuable nature of his work in disproving the theory of a multiplicity of substances, urged by Leibnitz and others, and giving us instead his lofty view of the unity of the divine substance. This fundamental opposition was doubtless the cause of the slighting way in which Leibnitz spoke of him.

It seems idle now, in our better understanding of Spinoza's views, to look for any foundation for the belief in personal immortality, or the atheism, which his contemporaries were so ready to assign to him.

"Strange," says Dr. Hedge, "that the stigma of atheism should have been affixed to a system whose very starting point is Deity, and whose great characteristic is the ignoration of everything but Deity, insomuch that the pure and devout Novalis pronounced the author a God-drunken man, and Spinozism a surfeit of Deity. Naturally, enough, the charge of atheism comes from the unbelieving Bayle, whose omnivorous mind, like the anaconda, assisted its enormous deglutition with a poisonous saliva of its own, and whose negative temper makes the 'Dictionnaire Historique' more morgue than Valhalla."

Of the pamphlet of Dr. Kalischer it is not necessary to say much, for it is not very able, and is written from a somewhat Jewish standpoint. His main points are, that Spinoza did not recognize sufficiently the religious endowment of the Jewish nation or the spiritual character of prophecy (as, for instance, in putting Solomon among the prophets); and that he thought too much of keeping the Jews a distinct people, and too little of the Christian ceremonies. Dr. Kalischer defends him, however, against the criticisms which George Eliot puts into the mouth of Mordecai, which he calls sickly sentimentality, and gives a good many appreciative quotations from Schopenhauer, Novalis, and Goethe.

Personal Traits of British Authors. I.—Wordsworth, Coleridge, Lamb, Hazlitt, Leigh Hunt, Procter. II.—Byron, Shelley, Moore, Keats, Southey, Landor. Edited by Edward T. Mason. With portraits. Charles Scribner's Sons. 1885.

THE object of these two volumes, together with the two others which will supplement them, is to give the literary gossip, already set down in books, regarding twenty-seven of the authors whose works have made the literature of this century memorable in English speech. The treatment of the twelve authors named in the titles above may be fairly taken as that of the whole series, and of its kind it is entirely satisfactory. The papers in each case are made up of paragraphs from the various volumes of biography or reminiscence in which first-hand knowledge of the author in question is to be obtained. The only original matter is the semi-bibliographical note prefixed to each bundle of extracts, and the chronological tables of each life. All that can be asked of an editor who adopts such a method of compilation is a thorough acquaintance with the field, and good sense and good taste in his selection; and these capacities Mr. Mason exhibits.

The result is that, although the personal traits are fairly recorded, without any marked prejudice for or against any of the authors, nevertheless no consistent personal impression is given. It is necessarily so, because the extracts are from the whole range of friendly or hostile comment and observation. Here is what a cold or dull man perceived, and next to it what an enthusiast saw in his hero. The lack of any attempt to harmonize, or even to sift out and in some way arrange, the different and frequently conflicting impressions of several persons regarding Byron, for example, leaves the reader at the end of his perusal with a very mixed notion of what Byron was after all, what traits he really and normally had, and how they entered into his composite character. One has much the same feeling as after reading the summaries of character in the 'Variorum Hamlet'—the heart of the mystery, he feels, is still to be plucked out. The material for private judgment, however, is given, and one is told where to find more if he desires further evidence in the case. In fine, the series is not critical, but encyclopædic, and thus, while it does not relieve one of the task of weighing evidence, it affords a literary brief, and makes many books (often not easily to be obtained) unnecessary to the student of literary character. Primarily its interest is that of anecdote. The portraits are poor things.

The Foundation of Death: a Study of the Drink Question. By Axel Gustafson. Boston: Ginn, Heath & Co.

THE temperance, or more strictly the alcohol, question as a social problem is constantly extending its scope, or at least its volume, and is yearly, in one direction or another, making stronger appeals to reason and to emotion. The argument, however, is by no means one-sided; for while the

literature is essentially aggressive, an occasional formal defence is made, as when the Brewers' Association publishes a discussion of the 'Real and Imaginary Effects of Intemperance,' and a perfectly honest respect for personal liberty occasionally finds vent on the platform. The natural reaction against control, and the feeling that every man should be his own governor, influence much private conversation, and excuse, if they do not explain, a good deal of the moderate and social drinking. A silent, but the most strenuous, antagonist of all is the appetite that, spontaneous or kindled by emulation of the elders, daily recruits its supporters from the adolescent, and in the truest sense grows by what it feeds upon.

On the attacking side, the latest weapon, or, better, arsenal of weapons, is the volume above named. Its pages teem with argument, statistics, and entreaty, looking to total abstinence as the only safe rule for one's self and one's neighbor. The author began with the impression that moderate drinking might be advisable, or at least permissible. He speedily reached the conclusion that drink is an accursed thing, with which no one may tamper. The work is essentially a compilation, but it is in the main well done, and the exaggerations that seem almost inevitable in dealing with this question are neither gross nor numerous. On a few points more might be said, and, in our judgment, a little be left unsaid; but it is a valuable mine to the reformer, and we commend its careful reading to those who think it harmless to look upon the wine when it is red.

The Development Theory. A brief statement for general readers. By Joseph Y. Bergen, Jr., and Fanny D. Bergen. Boston: Lee & Shepard. 1884. 12mo, pp. 240. Illustrated.

THIS work contains a fair and very readable presentation of the theory and evidences of organic evolution. "In the preparation of this elementary book on a great subject, the authors have tried to meet what seems to them a real need." Their aim has been to present a more concise view of the present standing of the theory, and at the same time one which, seen by the majority, will be less obscured by technicalities than any that has yet appeared. The book is well adapted to its purpose in plan and execution. It deserves a favorable reception. Whether the title will in all cases convey the idea intended is doubtful. On taking up the volume the question naturally suggested to many will be, "Which of the numerous theories?" It is explained in the first pages to mean the theory of Organic Evolution or that of Descent, which will hardly meet the approval of advocates of various development theories. Linnæus is not generally called the father of Natural History, as by the authors; Aristotle has a better and an older right to the designation. The description of the metamorphosis of the Axolotl is included in these words: "Some of these animals cast their skins after crawling out of the water, and begin a new existence in the shape of a common salamander (Amblystoma)," which is worse than no information on the subject. Several of the illustrations are very poor: fig. 25, Adult Male Orang, for instance, adds nothing to the attractiveness of the theory of descent.

The Ancient Empires of the East. By A. H. Sayce, Deputy Professor of Comparative Philology, Oxford. Charles Scribner's Sons. 1884. 12mo, pp. 301.

PROFESSOR SAYCE'S object, in his new Oriental history, can be best described in his own words. He says that, owing to the rapid progress of research and the numerous discoveries in this field, the works of Rawlinson, Lenormant, and Maspero have already become antiquated in some regards, and it was time "that stock should once more be taken of our present knowledge, and the ever-increasing mass of facts—many of them hidden away in obscure periodicals—be reduced to order and consistency." His book is in reality the second volume of an edition of the first three books of Herodotus. In a very interesting preface, Professor Sayce discusses the trustworthiness of the "father of history" in relation to Oriental history, with the conclusion that he is not at all to be relied upon. He calls attention to "the profound difference between the history of the East as told by the great writers of classical antiquity and by the native monuments themselves"; and then, after examining the nature of Herodotus's evidence in some detail, declares that "modern research obliges us to endorse the judgment passed upon Herodotus almost as soon as his History was published: it is not only untrustworthy but unveracious. We cannot accept a statement made by the author, even where he seems to be describing his own personal experiences, unless it is verified by other and better testimony."

Having thus cleared away the rubbish, as we may say, Professor Sayce proceeds to inform his readers what the monuments, and they only, tell us of the ancient history of the East. In this volume his object has not been to present a complete account of his subject, but rather an account of what is new in it. He passes very cursorily over familiar ground, but dwells with considerable detail upon the facts that have been recently discovered. An outline is given of the whole history, so that it may serve as a manual for the subject; but the special use of the book will be as a supplement to older and more elaborate works, as, for example, that of Lenormant and Chevallier. A very valuable feature of it is the careful statement and appreciation of the sources of information, whether literary or monumental. In this respect the book will prove a useful guide to the student who wishes to enter more deeply into the study.

Perhaps the most striking piece of recent information is in regard to "the important part once played by the Hittite race"—a fact, says Professor Sayce, not recognized even in so recent a book as that of Maspero. The history of the Hittites is brought into Chapter iv, "Lydia," in which it occupies several pages. We are told (p. 212) that, "as late as the seventh century B. C., a non-Aryan population still held the country" east of the Halys. Of this "Proto-Armenian" race the Hittites were the most important branch, having "founded an Empire which contended on equal terms with Egypt, and once extended its sway as far as the Ægean. Its two capitals were Kadesh, on an island in the Orontes, and Carchemish, . . . on the Euphrates. . . . A Hittite tribe even succeeded in settling in the south of Palestine, in the neighborhood of Hebron. . . . But the Semites gradually managed to push the Hittites to the north, whence they had come." The final victory of the Semitic race was marked by the conquest of Carchemish, B. C. 717, by Tiglath-Pileser II. The Herakleid dynasty of Lydia, ending with the half-mythical Candaules, appears to have been of Hittite origin, and the Georgians may be regarded as the modern representatives of this Proto-Armenian race.

Besides the sketch of Hittite history, there are several matters of detail which will interest the historical student. We find (p. 242) the interesting fact, previously brought out by Professor Sayce in contributions to periodicals, that it was not Cyrus but Darius who was the representative of the pure Persian race and the Zoroastrian religion. The exodus of the Israelites is placed (p. 46) in B. C. 1320. The identification of the Elamite King Cudur-Lagamar with the Chedorlaomer of Genesis is maintained (p. 111). The religions of the Oriental world are well described, and this will be found a very valuable part of the work. There is no index, but an appendix contains elaborate lists of kings, both from the ancient writers and from the monuments. Twelve pages are given to those of Egypt alone—an invaluable aid to study.

An Historical Atlas: a chronological series of one hundred and twelve maps at successive periods, from the dawn of history to the present day. Seventh and enlarged edition. New York: Townsend MacCoun. 1884.

MR. LABBERTON'S historical atlas, which was first published in 1871, appears with a change of publishers, and with a very valuable addition—eight full-page maps and one supplementary one (of Alaska), illustrating the historical geography of the United States. In these American maps we cannot agree with the editor in regarding Oregon as a part of the Louisiana purchase; apart from this, they are accurate and very useful. There have also been added since the first edition maps to illustrate the Eastern Question, the annexation of Cyprus, and the growth of the British empire in India.

When the atlas was first published, we pointed out some errors and misprints (see *Nation*, October 19, 1871), which we are surprised still to find in this (professedly) revised edition. A few other points have attracted our attention, which we submit for consideration in any future revision. In map 7 Parthia should be considerably further north; it would be desirable, also, to give the Caspian Sea. In No. 8 we find *Zazynthus* for *Zacynthus*. No. 9, "Sixth progressive map, Hellenic ascendency," is the only one of the "progressive maps" which gives a date (as all ought to do). Unfortunately, the date is incorrect—B. C. 300. At this period, just after the battle of Ipsus, the kingdom of Thrace, under Lysimachus, embraced as well Thrace as all the western half of Asia Minor. The map here given, omitting the kingdom in question, is correct for 281, after the death of Lysimachus. In No. 12 (containing four small maps) we think the editor is mistaken in changing the coloring of the Balearic Isles, which in the first edition were represented as Carthaginian possessions before the first Punic war. He is certainly wrong in giving Sardinia the Carthaginian color after this war: it was occupied by Rome earlier than Corsica. No. 17 is an excellent one, giving correctly the divisions of the empire in the fifth century; it would add very much to its value to insert also the position of the half-dozen principal Germanic nations at this date (400). This would be desirable as a preparation for their changed positions in 500, in No. 18. Here, however, the Longobards ought to be further south—partly, at least, south of the Danube; and the Ostrogothic empire should stretch to the Rhone. In No. 19 the empire of Clovis in 507 should include the Alemanni. In No. 20 the Italian dominions of the Byzantine empire are not extensive enough. Sicily, Sardinia, Corsica, and the Balearic Isles all have the Saracen color in No. 20 (eighth century), but have lost it in No. 21 (ninth century); the reconquest was not until long after this date. The inclusion of Denmark within the empire of Charlemagne, in the same map, may have some formal basis, but has certainly no basis in fact. Bulgaria should also be south of the Danube—probably both north and south. In No. 28 the blue-red line (incorrectly called green-yellow, by a careless alteration from the old edition) should run east, instead of south, of Flanders, which was a French fief. In No. 28 the coloring gives the erroneous impression that Hungary and Bohemia were united in 1400, which was not the case until 1419.

In No. 33, Cleve should have the Prussian color, as well as Mark and Ravensberg.

An atlas as good as this is should be made faultless. For class purposes there is nothing to compare with it in the lucid and accurate presentation of territorial changes; especially in modern history the student will find it most serviceable. It does not aim to give the amount of detail that is required in reading our standard historians; but towns and rivers do not change their places, and can be found on modern maps. What the reader of Prescott and Motley wants is the larger relations and the shifting boundaries; and these he will find given admirably in this atlas.

Comparative Anatomy of the Vegetative Organs of the Phanerogams and Ferns. By Dr. A. DeBary, Professor in the University of Strassburg. Translated and Annotated by F. O. Bower and D. H. Scott. Oxford: Clarendon Press. 1884. Royal 8vo, pp. 659, with 241 woodcuts.

THIS book has been long in coming. Intended as an integral part of the 'Handbook of Physiological Botany' commenced by Hofmeister in 1865, it appeared originally in the spring of 1877, and has only now donned its English dress—a becoming one, although in places rather stiff and awkward with German idioms and punctuation. Great thanks are due to the English translators and to the Delegates of the Clarendon Press. It does not so much matter that circumstances did not permit the work to be brought up to the latest date, either by the author or the translators; for "supplementary patching" is never quite satisfactory, and the fruits of many recent researches are still unripe. The occasional references to the more important subsequent memoirs given in foot-notes will serve for the present.

BOOKS OF THE WEEK.

THIEME-PREUSSER'S

New and Complete Critical Dictionary of the English and German Languages, revised and enlarged by J. G. Wessely. 1884.

$4.75 BY MAIL.

"Surprising as this success of the work is, examination shows it to be deserved."—*The Nation, Feb.* 12, 1885.

SCHOOL BOOKS IN FOREIGN LANguages. Miscellaneous Books in Foreign Languages. Catalogues on application. Foreign Periodicals.
CARL SCHOENHOF, Importer, 144 Tremont St., Boston.

One of the most Important Religious Works of the Age is

EVOLUTION
AND
CHRISTIANITY;

Or, an Answer to the Development Infidelity of Modern Times. By Benjamin F. Tefft, D.D., LL.D., formerly President of Genesee College, New York. With an Introductory Letter by Bishop Simpson. 484 pages, bound in cloth, price, $1.50.

Says Bishop Simpson: "I think such a work ought to have a very large circulation. Very many minds have been affected by the superficial statements of evolutionists, and they have had neither time nor opportunity to conduct the requisite investigations for the removal of wrong impressions. Allow me to say, then, that I wish you great success in your labor, and a very wide circulation for your book."

Sold by all booksellers; or mailed, postpaid, on receipt of price.

LEE & SHEPARD,

The Nation.

NEW YORK, THURSDAY, FEBRUARY 26, 1885.

The Week.

THERE appears to be little doubt that Senator Bayard is to be Secretary of State in the Cleveland Administration. If the general belief proves to be well founded, the country will feel reasonably secure against any sudden outbursts of "foreign policy" like those which overtook Mr. Blaine at the beginning of Mr. Garfield's Administration, and those which overcame Mr. Frelinghuysen at the close of Mr. Arthur's. Mr. Bayard represents in an eminent degree the conservative and common-sense policy embodied in Washington's farewell address, which has been the text-book of the common people from the earliest period. It will be a great satisfaction to know that there is a man at the head of the State Department whose leanings are favorable to peace, and opposed to every form of foreign embroilment and adventure. People will sleep more soundly under such an assurance, and business will rest upon a surer foundation. The dynamite Irish will, of course, be estranged by Mr. Bayard's appointment. Every faction which esteems American citizenship valuable chiefly for the opportunities it gives for pestering foreign governments, and seeks to make this country a fulcrum for disturbances abroad, will be aggrieved at the selection of Mr. Bayard. All the speculators in Central American lands, all the brokers of canal privileges, all the would-be builders of a great navy, and "all the unsettled humors of the land," will be disappointed and shocked. Fortunately these constitute a very insignificant part of the American people, and if they go over to the Republican party, or, being there already, decide to remain there, the Administration will be the gainer by such a disposition of the restless elements of the body politic.

It has been a part of the current Washington gossip that Mr. Bayard was reluctant to accept the position of Secretary of State on account of the expense which society imposes upon the head of that department. It is said that he is unable to maintain the scale of private expenditure which has been kept up by nearly all of the later chiefs of the Department. If this be true, he will have the rare opportunity of introducing a new and simpler mode of life, which is much to be desired. The social distinction which comes from giving the most elegant balls and the most expensive dinners, can be achieved by any fool who happens to have money, and has become so common that it has ceased to be a distinction. It is time for somebody in the higher ranks of public life to set an example of "plain living and high thinking." Here is a chance for real distinction, and Mr. Bayard is just the sort of man to lead the way. If he has the courage to let society know in the beginning that he does not intend to alter his style of living one iota, or to add a dollar to his private expenditures on account of his political promotion, he may not, indeed, shame the extravagances of the rich, but he will keep in countenance those who are not rich, and will set an example which will be generously applauded by his countrymen.

Judging from the talk at the meeting of the Bay State Club, in Boston, on Monday, some of the Democrats in that region are indulging in what Mr. O'Brien, the Mayor, calls "pleasing dreams" about the civil service. They think they are going to get rid of competitive examinations and all that sort of flummery, and treat the country to another old-fashioned hoggish scramble for the national offices. We believe, however, that if they fancy Mr. Cleveland is going to treat them to anything of the kind they have mistaken their man. Moreover, if he attempted to gratify them, four years would see the end of their revel. The Democrats have now to decide whether they will enjoy prolonged power with decency, or have a short bout of hoggish indulgence, and then be driven from the trough for another quarter of a century. The wise men among them know this very well, and no one knows it better than Mr. Cleveland.

We believe, however, that the new President, in the legitimate and proper exercise of his authority, will have to make plenty of vacancies. There is not a doubt that two or three of the departments at Washington are honeycombed with corruption, and will have to be overhauled and cleaned out with an unsparing hand. For this the Republicans are not so much to blame as human nature. Human nature cannot bear twenty-five years of irresponsible power, with plenty of money, and this the Republicans have had. When you tell any body of men that they are so good, compared to everybody else, that it would be a sort of sin to prevent their doing what they please or to ask them for a pecuniary accounting, they take to corruption and abuse as a duck takes to water. But then, no matter how many vacancies President Cleveland may have to make in the subordinate places, he will fill them under the law with the best men who offer themselves. He will not put in another set of thieves or incapables simply because they are short of money, and have never been able to persuade honest business men to give them work. This sort of thing is over, and anybody who expects to revive it must prepare himself for defeat and humiliation.

The Senate has made itself a party to a very discreditable job in confirming the nomination for a second lieutenantship of Mr. Wright, who failed in his studies at West Point, and resigned in order to avoid being dropped. He would, had he remained in the Academy, have graduated in 1886. Having failed, he appears to have gone to work to secure "influence" enough to get a commission without graduating. The nomination he got; but a long-standing regulation of the Academy, based on common justice as well as sound policy, prescribes that no one who has failed to graduate shall obtain a commission until both his own class and the classes above him have graduated and been commissioned. In other words, if he enters the army at all, he has to enter it below his former classmates and seniors at the school. This regulation in Wright's case was set aside. His commission gives him rank above the class of this and next year. In other words, a positive rule, approved by many Presidents and Secretaries of War, has been violated, not only to save him from the consequences of failure, but to put him in a better position than he would have held had he not failed. That the President should have made himself a party to such a performance is, we must honestly say, not surprising, as he has made himself a party to things still worse. But that the Senate should have been ready to sanction it is surprising. It is also surprising that Mr. Wright and his father should have been willing to accept a favor of this kind, which starts a young man in a profession that everywhere makes honor an object of special cultivation, through a somewhat tricky job. A worse beginning for a soldier's career it would be hard to think of. To make the thing complete, Mr. Wright is not ordered out to the dreary plains of the West, but has been assigned to duty here at the East, where he can make himself comfortable.

The action of the Senate in putting the Pacific Mail subsidy, which was rejected by the House, back into the Post-office Appropriation Bill, is striking evidence that the Republicans of that body do not yet realize that the country has really entered upon a new epoch, in which subsidies are to find very small favor. It was a curious blunder in politics to take this step now. There is, we are glad to believe, not the slightest danger that the House will recede from its position. The subsidy will be cut out by the Conference Committee, and all that Senator Frye and his subsidy allies will be able to accomplish, will be to show that they are loyal to the old subsidy policy to the last. The pretence that the donation of $400,000 in this way is designed to accomplish in some inscrutable manner a "revival of American shipping," is so worn and thin that it deceives nobody any longer. If the project were put in its true light, as a present from the United States Government to the Pacific Mail Steamship Company, there would at least be no humbug about it.

The Anti-Foreign Contract Labor Bill, which has passed the Senate, is one of those mysterious fruits of modern statesmanship which nobody is capable of fully explaining. As it passed the House originally, the bill made it unlawful for any person or company to bring any alien or aliens into this country under contract to perform any kind of service whatever. Every person bringing in an alien under contract was to pay a fine of $1,000. Italian street-sweepers, Hungarian miners, and railway workers were not only barred out by these penalties, but opera-singers, actors, lecturers, French nurses and servants as well.

The free and unfettered American, and the alien already on our shores, were to be "protected" against the talent and the labor of the whole outside world. The Senate has interfered with this fine scheme, and has so amended the bill as to omit singers, actors, lecturers, private secretaries, nurses and domestics. The Hungarian and Italian laborer is, however, still to be forbidden to come in under any contract whatever, under penalty of $1,000 fine, the fine to be paid by the person bringing him in.

An amendment was offered, but does not appear to have been adopted, fining the laborer who came in under contract $1,000. This would have been a noble scheme for enriching the country. How the fine was to be collected we do not know, but probably the Italian or Hungarian would be nabbed by the Custom-house officers when he landed, and required to give his note for $1,000 before he was permitted to begin work. The idea was as sound as anything else in the bill, and its rejection is inexplicable. One provision which remains is in direct conflict with the general tone of the measure. By it a person or corporation engaging in a "new industry not at present established in the United States," can engage under contract skilled labor for the purpose, provided such labor cannot be otherwise obtained. This permits British capitalists to take a lot of "pauper laborers of Europe," bring them in here free of duty, and establish a hated foreign industry on such a low wage basis that American competition will from the outset be impossible. If contract-labor is wrong in principle when applied to an old industry, how can it be right when applied to a new industry? And what is to prevent laborers who are brought here under contract to work for an alleged new industry from being employed in some other industry after they are once admitted?

The Spanish treaty has been so deeply buried under the débris of the Nicaraguan treaty that a fresh reminder of its existence, coming by way of Madrid, seems to be needed to refresh our recollection. It is said that the Spanish Government has directed its Minister at Washington to withdraw certain "concessions on sugar" if the treaty is not ratified before the end of the present session of Congress. We had been of the opinion that all the concessions on sugar were of our making and not of Spanish origin at all, seeing that whatever is allowed in the way of discrimination in favor of Cuban sugar is in the nature of a bounty and a gratuity. The withdrawal of all concessions of every sort on both sides will be the most satisfactory disposition of the matter, and this is the most probable outcome of the adventure. It is manifestly impossible for both houses of Congress to act upon the treaty during the half-dozen working days which still remain to the present Congress. When the new Administration comes in, it will be a question whether the treaty shall be withdrawn from the Senate or not. Probably its withdrawal by the Executive would not be permissible under the comity of nations. An agreement having been made to submit it to the legislative branch of the Government, good faith will require that the formalities which the Constitution provides for in our dealings with foreign countries be fully observed.

The *Rochester Democrat* says that Mr. Evarts, in his late speech at the Union League Club, "outlined the cardinal principles of Republicanism." We have read the speech with care for the purpose of discovering them, but in vain. This may, however, be due to mental obtuseness on our part, and we shall be grateful to any Republican contemporary who will quote the passage which contains the "outline." There is great curiosity all over the country about "the cardinal principles of the Republican party," and it increases, and anybody who knows where they are and will reveal them, can, we think, now achieve some fame, besides making a little money. A rumor is afloat that they are among the private papers of the late Hugh Hastings which his family refuse to produce. Our own belief is that Mr. Evarts has not seen them. One gentleman has tried to persuade us that there is only one "cardinal principle" of the party, namely, that it ought to have the offices in perpetuity; but he is a Democratic wag.

Mr. Roswell Smith, the proprietor of the *Century* magazine, and President, though a layman, of the Congregational Club of ministers, expressed himself very forcibly at a meeting of the Club on the 17th with regard to Mr. Evarts's extraordinary statement, in his Union League Club speech, that the South "remained in heart, substance, and purpose" what it was in 1860. Mr. Smith declared, amid the cheers and laughter of his auditors, that

> "a man who has the audacity to stand up in the Union League Club and assert at this time that there has been no change in the sentiment of the South in the past twenty-five years, lies under a mistake, to say the least of it."

He further added that he himself was so disgusted with this utterance of Mr. Evarts that he rose and left the room on hearing it. We think he was too severe on Mr. Evarts, however. There was not sense or substance enough in the assertion to furnish materials for a mistake. Mr. Evarts was producing sound, not making propositions, and was satisfied if it kept people listening.

The Senatorial contests in Illinois and Oregon have passed through several new phases during the past few days. In Oregon, after sixty-eight fruitless ballots, the Legislature has adjourned *sine die*. By remaining in session a few days longer an election might have been effected, but the forty-day limit for a legislative session, after which the members receive no pay, had been reached, and that precipitated an adjournment. There is said to be some conflict of opinion about the right of the Governor, under the State Constitution, to fill the vacancy by appointment, but in reality it is the Federal and not the State Constitution which is his guide, and the language of that instrument is plain enough for anybody to understand. It expressly provides that "if vacancies happen, by resignation *or otherwise*, during the recess of the Legislature of any State, the Executive thereof may make temporary appointments until the next meeting of the Legislature, which shall then fill such vacancies." The vacancy in the Oregon Senatorship will not be created till March 4, when the term of the present Senator will expire. The Governor can then appoint a successor who can hold office until the next meeting of the Legislature, which, as there are only biennial sessions in Oregon, will not occur until the fall of 1886, unless an extra session is convened.

In Illinois the case is somewhat different. The Legislature is still in session, and is likely to be for some time to come. A plan is said to be under consideration for throwing the appointment into the hands of the Governor, which is clearly unconstitutional. It is proposed, in case the present deadlock continues till March 4, to have a resolution introduced in the Legislature declaring a vacancy and requesting the Governor to fill it by appointment. Under the Constitution this clearly cannot be done. The power to fill the office is vested in the Legislature alone, and the only way in which it can be transferred to the Governor is by adjournment *sine die*. There is some talk of transferring it by having the Legislature take a recess, but this also is plainly in violation of the Constitutional provision. The Governors of Oregon and Illinois are both Republicans, so that the various plans in both States to have them fill the vacancies by appointment cannot be said truthfully to be designs for helping the wicked old Confederacy into the saddle again.

The votes taken at Springfield indicate pretty clearly that there will be no election of a Senator by the Illinois Legislature at its present session, and that there will be a vacancy in the Senate after the 4th of March. In any legislative body which is equally divided politically there will always be found one, or two, or three obstinate and possibly corrupt members who, in order to gratify some spite or crotchet, or to make some money, will refuse to agree to anything, and will change their own ground as often as there is any prospect of coming to an agreement. Of course reasons can be found in abundance to excuse or justify such persons. Four Democrats have refused to support Mr. Morrison on account of his tariff record. One Republican has refused to vote for General Logan for the singular reason that the caucus did not fix upon some candidate as their second choice. Failure to agree upon a second choice before a trial had been made of the first choice is construed by this severe casuist to mean "Logan or nobody." So he says that he is not voting against Logan, but against the principle of exclusiveness in caucuses. Here is a field for political reform which has been much neglected. The name of its cultivator is Sittig.

The Democratic bolters, with one exception, cast their votes for Haines, the Speaker of the House. One member has attached his fortunes to a rich cattle-dealer named Hoxie—this by way of protecting the iron interests of the country. The principal difficulty lies in the fact that if all the members on both sides should vote for their respective caucus nominees, the result would be a tie. This shows the impor-

tance of making the total number of members of the Legislature an odd number, so that a tie vote shall be impossible. Probably this contingency would have been looked after and provided against in the Illinois Constitution, had not the principle of minority representation been introduced. The plan adopted for putting it in force resulted in making a Senate of 51 members, a House of 153, and a joint session of 204. There has been a good deal of complaint against minority representation among the politicians of Illinois, because it upsets the calculations of both parties, but there is nothing to show that it does not fairly represent the popular will. Provision, however, ought to be made to avoid tie votes in the joint sessions.

They had an old-fashioned debate in the Massachusetts Legislature last week, over a bill abolishing the rule which makes the testimony of persons who do not believe in the existence of a God inadmissible in courts of justice. The facts of daily life, as observed by everybody, show that there is no perceptible difference in the matter of truth-telling between people who say they do not believe in the existence of a God and those who say they do. A declaration of this belief is in fact so easy, and does a man so much good with his neighbors, that nearly all liars make it as a matter of course. A man needs to be very honest and truthful to deny the existence of God, and as a general rule the testimony of such men is apt to be as reliable as that of professed believers. The principle that religious belief has nothing to do, and ought to have nothing to do, with a man's credibility as a witness is now acknowledged in the jurisprudence of most civilized countries, including twenty-eight States of this Union. But the Massachusetts Senate rejected it sternly by 24 to 10, after a luminous debate. One Senator held that a man who "denied under the genial sunlight his belief in the Author of that radiance," ought to be punished for it in some way. Another Senator opposed putting the man who denied the existence of a God "on an equality with the man who devoutly acknowledged it." The object of a court of law in examining witnesses is to find out the truth about a particular transaction, and not to discourage infidelity. No man conducts his business or his social life on the assumption that atheists are untruthful or dishonest; and to administer justice so as to deprive him of important testimony in his favor, on such a theory, is monstrous as well as barbarous.

The proposed change in the curriculum at Harvard is less of a defeat for the Grecians than would appear. They have only consented to make Greek or Latin optional for admission in cases in which the candidate agrees to take, in place of the omitted language, in addition to all other requisitions, two courses of college study, one in mathematics and the other in either mathematics or physics, as part of his preparation. These extra courses are to be courses actually given in the College, to Freshmen especially, and occupying each three hours a week in recitations through one year. Consequently, nobody can escape Greek or Latin without giving serious pledges to science. This arrangement was the result of a compromise in the committee, and probably the only one which the Faculty would have adopted, and is not wholly satisfactory to the scientific and modern-language men.

The condition of Ireland is telling just now seriously on English foreign policy, as it did once before at the close of the American war. There are about 30,000 good troops in Ireland who are sorely needed on the Nile, but General Steele, who is in command, says he cannot spare a man of them. There is something melancholy, under these circumstances, in the talk of a visit of the Prince of Wales to Ireland as a sort of sedative. Forty years ago, when the young Queen was making her plans of life, the transfer of the court during a portion of the year to Ireland, a little fostering of Irish sentimental nationalism such as has been bestowed so lavishly on that of Scotland, would doubtless have had a good deal of political effect. After half a century of neglect, however, on the part of royalty — neglect that may almost be called studied—and the infusion into the Irish mind from this side of the Atlantic of Republicanism in its least reverential form, coupled with savage social discontents, the Irish are hardly likely to receive the Prince in a very cordial way. In fact, the visit seems like an opportunity for insult and outrage, of which some wretch may avail himself, and which the rest of the population will take with a calm that will make Englishmen furious.

There are still but few indications of the probable result of the debate in the British House of Commons on Sir Stafford Northcote's vote of censure. Mr. Gladstone seems to be defending himself rather feebly, as if his heart were not in the work, and we presume there can be no doubt that he is really unable to make a creditable explanation of the Sudan affair. His policy in Egypt has reflected the varying moods of the British taxpayer; but when the taxpayer sees it traced in black and white he does not like it, and thinks some one has been blundering and must be punished. Lord Salisbury is said to have declared that he was ready for office, but this is enough to frighten a good many wavering Liberals. Much is evidently going to depend on the Irish vote, for which both sides are bidding. The Liberals can have it, if they will promise not to renew the Coercion Act, but they have apparently not made up their minds to do so. The Conservatives, like all parties out of power, are much readier with their promises. Mr. Gladstone's age and weariness are doubtless counting for a good deal in the conflict.

Mr. Gladstone's faults in Egyptian affairs, and notably the fault of hanging back, and doing no more than the occasion imperatively called for, are chargeable on the English public alone. They have all along wanted some interference, but as little as possible; and some fighting, but not one shot more than was necessary. They have forgotten, however, that one shot always leads to another, and that a nation big enough to have what is called "prestige" cannot carry on a little war. There was a universal chorus of approval of Wolseley and the Government from the moment he developed his plan at Korti until Wilson brought back the news of the fall of Khartum. The plan was based on the "general idea," as the strategists call it, that Gordon could hold out for a reasonable time, and that when the British got within sticking distance, he would be able with his garrison to reach out into communication with them, and either evacuate Khartum with their help, or drive the Mahdi away from it. The garrison of Khartum, headed by Gordon, was in fact an important element in Wolseley's calculations, and these proved wonderfully correct. He reached Korti by the river most successfully, with his men in excellent condition, and then made that brilliant push for the river across the desert which would have relieved Khartum and rescued Gordon had the latter held his own. The expedition was three days too late, but not in consequence of anything which a military commander can be expected to foresee or allow for. Treachery plays no part in the game of war, any more than thunder or earthquakes. If Gordon had fallen through an assault of the Mahdi's forces, or through the exhaustion of his supplies, after warning his superior of his weakness, the Ministry would be undoubtedly responsible for his death. But he had never expressed any doubt of his ability to hold the place. What he chafed under and complained of was his inability to go out and "smash the Mahdi," and the policy of "smashing the Mahdi" was one to which the Government never gave one word of support.

Nor can they fairly be held responsible for delay in going to Gordon's rescue. They did not begin to prepare the expedition until August, it is true, but they never thought of sending an expedition until Gordon's obstinacy and disobedience had led to his being shut up in Khartum, and his audacity had led the British public to make a hero of him. If August was late, it was because not until then did the Government feel really sure that the English public demanded that thousands of lives should be put in peril in order that one fanatical adventurer should be saved from the consequences of his own folly and insubordination. The military problem has now wholly changed its character. Wolseley is no longer marching to effect an entrance into an impregnable stronghold held by a friendly garrison. The Mahdi is no longer blockading Khartum with a few thousand spearmen, without artillery or ammunition. He has secured a fortress in which he can stand a siege, and the capture of which not only liberates the force with which he has been attacking it, but brings him thousands of new recruits from the surrounding region. He has, moreover, secured a good deal of artillery and ammunition, and is descending the river in such force that he could probably crush any of Wolseley's detachments by mere weight of numbers. Under these circumstances there is nothing for Wolseley to do but draw in his detachments, and wait until his expedition is enlarged sufficiently to undertake the new and immense task of conquering the Sudan.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, February 18, to TUESDAY, February 24, 1885, inclusive.]

DOMESTIC.

IN the House debate on the River and Harbor Bill on Wednesday, an amendment was adopted appropriating $500,000 for the improvement of Galveston Harbor, and directing the Harbor Board to proceed at once to examine the plans, specifications, and estimates for the improvement, and report to the Secretary of War for his approval.

The House Committee on Coinage, Weights, and Measures held a meeting on Wednesday to consider the bill introduced by Mr. Dorsheimer "to regulate the coinage and to promote the circulation of gold and silver equally." They gave a hearing to J. Edwards Pierrepont, of New York, in advocacy of that measure. He contended that the free coinage of domestic silver in dollars of 480 grains troy would increase the volume of the currency, which was now far too small, and would restore confidence to the business of the country.

The House debated the Naval Bill on Thursday. On a motion to strike out the paragraph appropriating $400,000 for the completion of the *New York*, Mr. Hewitt said that it was as preposterous as ridiculous for the country to undertake to build or finish the building of wooden ships. The motion to strike out was lost.

In Committee of the Whole on Friday, the Chairman of the House ruled out of order the clause in the River and Harbor Bill relative to the Hennepin Canal, on the ground that that Committee had not original jurisdiction of the subject, and that it should properly have been considered by the Committee on Railways and Canals. A motion to strike out the entire Mississippi River clause was carried.

The House passed the Naval Appropriation Bill on Monday, but without including Mr. Randall's proposition for rebuilding the navy, and with an amendment authorizing the building of a steel cruiser of from 5,000 to 6,000 tons displacement, at a cost of $1,780,000. The House also passed with the Senate amendments the bill forfeiting the Texas-Pacific land grant. On Tuesday the House voted down the other appropriation bills and took up the River and Harbor Bill by a vote of 139 to 122. This is not a hopeful indication for the progress of business.

The Post-office Appropriation Bill was reported in the Senate on Thursday. It appropriates $53,819,990, an increase of $300,000 over the bill as passed by the House, and $3,279,179 less than the estimates. The aggregate appropriated is $2,547,169 in excess of the estimated revenue for the fiscal year 1886. An increase of $490,000 is made in the appropriation for transportation on railroad routes.

Despite an earnest protest by Mr. Edmunds the Senate on Friday voted, by a large majority, to retain in the Post-office Appropriation Bill the clause fixing the rate of postage on first-class mail matter at two cents per ounce instead of two cents per half-ounce. On Monday it passed the bill with Mr. Frye's Pacific Mail subsidy amendment by a vote of 30 to 18.

The Senate on Thursday, with but two dissenting votes (Blair and Bowen), passed the bill forfeiting the Texas-Pacific land grant. It goes back to the House because of unimportant amendments.

The General Deficiency Bill reported to the House of Representatives on Wednesday provides for an appropriation of $3,561,916, of which amount $75,000 is made in compliance with the recommendation of the Postmaster-General for clerk hire in various post-offices.

The House Sundry Civil Bill gives the Federal Civil-Service Commission only $19,140. They will ask the Senate so to amend the bill as to give them one new clerk at $1,400 a year and a laborer at $660. Their clerical force is now so small that they are required to work regularly an hour longer each day than clerks in the executive departments.

In the investigation of the Pension Bureau on Wednesday, Mr. Sawyer, who has charge of the statistics of the Bureau, testified that when Mr. Dudley became Commissioner in 1881 the running expenses of the office were about $500,000 a year, and that for the last year they were $2,900,000, the special examiners' division alone costing about $1,000,000. He said that the increase in the amount of work now performed in the Bureau over that done before Mr. Dudley became Commissioner was very slight.

Recently the Treasury gold fund increased more than $1,500,000. This and other indications have convinced Secretary McCulloch that the action of the Department, the efforts to secure the stoppage of the silver coinage, and the probabilities of that result, have averted the threatened withdrawal of gold from circulation.

The findings of the Court-martial in the case of Judge-Advocate-General Swaim of the United States army, and the sentence of the court as approved by President Arthur, were made public on Tuesday. He was found "guilty of conduct to the prejudice of good order and military discipline, in violation of the 62d Article of War," and sentenced to be suspended from rank and duty for twelve years and to forfeit one-half his monthly pay for the same period.

The dedication ceremonies of the Washington Monument were successfully carried out on Saturday. In the morning at 11 o'clock there were open-air exercises at the monument, where speeches were made by Senator Sherman, Colonel Thomas L. Casey, President Arthur, and W. W. Corcoran (read by Dr. J. C. Welling). The great procession then moved to the Capitol, where, in the hall of the House of Representatives, Robert C. Winthrop's oration was read by ex-Governor Long, of Massachusetts. An oration was also delivered by John W. Daniels, of Virginia.

The Michigan House on Thursday, by exactly the necessary two-thirds vote, adopted a prohibitory constitutional amendment for submission to the people. All the Republicans but two, and twenty-three Democrats, voted yea. Its fate in the Senate is doubtful.

In the Assembly at Albany on Friday a Prison Labor Bill was reported favorably from committee which provides that "no contract shall hereafter be made by which the time or labor of any prisoner or prisoners in any State prison, reformatory, or penitentiary in this State shall be let, hired, or sold to any contractor. The system of labor in the State prisons, reformatories, and penitentiaries of this State shall be on State account, or by the piece-price plan, or partly by the one system and partly by the other, as the Superintendent of State Prisons, or the managers of penitentiaries and reformatories, may deem best for the interests of their respective institutions and the convicts employed therein." A motion to recommit the bill was carried by 72 to 35, no Democrats voting in the negative.

The Judiciary Committee reported to the Assembly against appointing a special committee to investigate the action of Judges Truax, Andrews, and Beach in the scandals attending the closing hours of Mayor Edson's administration in this city. After a warm debate the report was sustained, 59 to 37.

The American Iron and Steel Association has received returns of the Bessemer steel production in the United States last year. The total quantity of ingots converted was 1,538,355 net tons. As compared with the production in 1883 there was a falling off of 116,272 tons, or only 7 per cent. The maximum production of Bessemer steel ingots was reached in 1882, when 1,696,450 tons were converted.

The Harvard Overseers on Wednesday referred to committees the propositions to make morning prayers no longer compulsory and to print the quinquennial catalogue in English.

The Yale Alumni Association of this city gave a reception at the University Club Theatre on Friday evening to Senator-elect William M. Evarts, who was a member of the class of 1837.

Judge Houston, of New Orleans, has rejected both of Mrs. Myra Clark Gaines's wills. That in favor of Mrs. Evans is pronounced a forgery. The nuncupative will was in favor of her children. The succession will have to be administered according to Louisiana law. An appeal to the Supreme Court will be taken.

The funeral ceremonies of Dr. Leopold Damrosch took place on Wednesday afternoon at the Metropolitan Opera-house in this city. The musical services, in which the Oratorio Society and Symphony orchestra took part, were very impressive. Addresses were made by Felix Adler and the Rev. Henry Ward Beecher. A letter from Assistant Bishop H. C. Potter was read.

Dr. Louis Elsberg, eminent as a specialist in the treatment of the throat and larynx, and an author of books on those subjects, died on Thursday in this city. He was forty-eight years old, and was a native of Westphalia. He was the first physician to introduce the laryngoscope into general practice in this country.

William C. Kingsley, ex-President of the Brooklyn Bridge trustees, died in Brooklyn on Saturday at the age of fifty-two. After the death of the chief engineer of the work, the late John A. Roebling, in 1869, Mr. Kingsley was made Superintendent. He had charge of the work until the towers were three feet above high tide, and then resigned.

Jonathan J. Wright, Associate Justice of the Supreme Court of South Carolina from 1870 to 1877, and the only colored man who ever held the office in that State, died on Thursday, aged forty-four years.

FOREIGN.

The British Parliament opened on Thursday at 4 P.M. In the House of Lords the Government was at once assailed with Conservative questions. Earl Granville, Minister for Foreign Affairs, replied. He frankly stated that the Government had left it entirely to General Lord Wolseley to decide whether the British forces should proceed to attack Khartum at once or delay the attack until later, say some time next autumn. Earl Granville admitted that the Government believed that General Wolesley would decide upon a postponement of the aggressive operations. He said: "The finances of Egypt and the relief of Gordon, that heroic soldier whose loss has excited the greatest sympathy and unanimous regret, are the prominent questions before the country.

In the House of Commons, Mr. Gladstone said that the present situation did not allow the Government to make overtures to El Mahdi, because such overtures might defeat their own object. He added that he had done all he could for General Gordon, and was not to be held responsible for his death. "Our policy in the Sudan," continued the Premier, "is still for evacuation. The recent events there prevented the immediate application of this policy. The fall of Khartum altered, in a military sense, the whole situation in the Sudan. Lord Wolseley is authorized to take what measures he sees fit to overthrow the Mahdi at Khartum. No further communications will be made to the Mahdi, but any received from him will be considered."

Sir Stafford Northcote gave notice that he would move on the earliest day possible that an humble address be presented to her Majesty the Queen, representing that the course pursued by her present Liberal Government in regard to Egypt and the Sudan had involved a great sacrifice of valuable lives and heavy expenses, without any beneficial results [cheers], rendering it imperatively necessary to the interests of the British Empire and the Egyptian people that the Government should distinctly recognize and take decided measures to fulfil the responsibility, now incumbent upon them

to insure good stable government in Egypt and in those portions of the Sudan necessary for Egypt's security.

Monday was fixed for debate on the motion, when Sir Stafford Northcote, in the course of his address, said: "We are getting daily into deeper water, and whatever the consequences may be I feel compelled to summon the House to pronounce a verdict in our case the same as it has done on previous occasions, with the additional experience of the value of the Ministry's promise and the success of the Ministry's action." In his reply, Mr. Gladstone paid a tribute to the devotion of Gordon, saying that his one object in life was to do good to all, irrespective of race, color, or creed. He denied that the Government had any reason to suppose last year that Gordon was in imminent danger. General Gordon's own despatches, said Mr. Gladstone, had led the Government to believe that he would retreat with the garrison southward if possible. The Government had not swerved a hair's breadth from the covenant to send General Gordon assistance when necessary and when possible to do so. He referred to the statements of General Gordon's colonels that under no circumstances could relief have been timely, as Farag had long ago agreed to betray Khartum as soon as the British arrived. If the House thought the Government had failed in its duty, the latter would cheerfully accept the verdict, but if they believed it had acted with good intentions and without palpable errors of judgment, he hoped they would give expression to their confidence, and thus strengthen the hands of the whole country in the face of the world. The debate was continued on Tuesday without noticeable incident, except the suspension of William O'Brien, editor of *United Ireland*, who created an uproar, and a significant speech by Mr. Goschen, foreshadowing his adhesion to the vote of censure.

In the House of Commons on Friday the Marquis of Hartington, Secretary of State for War, stated that Prince Hassan had been appointed Governor-General of the Sudan at the suggestion of General Lord Wolseley. Prince Hassan would be under the authority of Lord Wolseley. The Marquis also stated that the Government presume that Lord Wolseley has received one volume of General Gordon's diary. The remaining volumes, believed to be five in number, were on the way from Gubat to Korti. After he had seen these volumes, the Marquis continued, he would be better able to state whether or not their contents would be published.

Sir William Vernon Harcourt, Home Secretary, addressing a deputation of unemployed London workingmen on Wednesday, said: The question as to the best method of relief was an extremely difficult one. Experience had shown that attempts to relieve distress by inaugurating public improvements were unwise. The failure of the efforts made by France to relieve distress thirty-five years ago by starting and carrying on vast public works was pointed to as an illustration. The Government, however, the Home Secretary promised, would look into the matter closely, and would consider the advisability of stimulating the efforts of the local philanthropic bodies with a view to affording larger temporary relief.

It is announced that the Prince and Princess of Wales will make a tour of Ireland in April.

Doctor Walsh, the well-known President of Maynooth College, and leader of the Nationalist clergy, will be appointed Cardinal McCabe's successor. The new Cardinal "will be a figure in Irish affairs second only to Mr. Parnell."

It was made known in London on Wednesday that General Sir Redvers Buller on February 14, after rendering Gordon's two steamers useless, withdrew his whole force from Gubat to Abu-Klea, arriving at the latter place on the following day without firing a shot. The reason for the abandonment of Gubat was the advance made by El Mahdi from Umderman toward Gubat, and the retreat was ordered when the main body of the Arabs was twenty miles off; but an advance guard of 3,000 men, with five cannon, was within seven miles of the British lines. The total force at Abu-Klea, including the Egyptians and Sudanese, now amounts to 1,900 men, with 1,500 camels. The water supply is not sufficient for the men and camels.

General Sir Redvers Buller telegraphed on Wednesday that a convoy of wounded in charge of General Talbot, while on the way from Gubat to Abu-Klea, met a force of 5,000 rebels at a point nine miles from Gubat, and a slight skirmish ensued, in which one British soldier was killed and five wounded. The rebels then proceeded toward Metemneh. The convoy reached Abu-Klea in safety.

On Thursday the announcement was made that in view of the fact that the fall of Khartum and the death of General Gordon had rendered the main object of General Lord Wolseley's expedition impossible, the Government deemed it expedient to change the whole plan of the campaign in the Sudan. General Brackenbury, who succeeded the late General Earle, was ordered to abandon his advance on Berber, and to concentrate his troops at Korti. Gen. Sir Redvers Buller was also ordered to fall back on Korti. All the available troops in General Wolseley's command will be concentrated at that place and at Debbeh and Korosko, the main body being at Korti. It is probable that General Lord Wolseley may finally evacuate Korti and retire to Debbeh, where desert routes from Umderman, El Obeid, and Darfur converge on the Nile. General Lord Wolseley will there await help from England. At Korti he could be surrounded.

The alarm in England caused by this retreat was intensified on Friday by a despatch from Korti saying that General Buller had been compelled to halt at Abu-Klea Wells and intrench his troops in a position there, in order safely to defend himself against El Mahdi's men, who were gathering in large numbers on his line of retreat, and were continually menacing the British forces. Special despatches indicated that General Lord Wolseley would have to send strong reinforcements to General Buller if the latter is to be rescued from his perilous position.

It was also announced in London that the Government had called out the militia and suspended transfers of officers from the regular army to the reserves. This action created a profound sensation, and a general feeling of alarm respecting the safety not only of the forces under General Buller, but also of those under Generals Wolseley and Brackenbury.

The Queen's message does not, as at first reported, call out the reserves, but orders the soldiers at present serving, who would otherwise be entitled to retire as reserves, to remain in active service until further notice. Two batteries of artillery and six regiments of infantry of the militia, one being an Irish regiment, will be embodied. It is believed that a portion of the militia will be used to garrison Ireland.

The Coldstream Guards left England for Egypt on Thursday, and the Grenadier Guards on Friday. They were given a royal farewell. Queen Victoria sent them Godspeed. The Prince of Wales made a personal address. The Scots Grays departed on Saturday.

An Egyptian Blue-book, issued in London on Monday, contained a number of notable letters from Gordon. On November 4 he wrote to Wolseley: "I can hold out forty days longer with ease. After that it will be difficult. Your expedition, as I understand, is for the relief of the garrison of Khartum, which I failed to accomplish. I decline to admit that it is for the rescue of me personally." In a letter dated September 4 he said: "How many times have we written asking for reinforcements and calling your serious attention to the Sudan, and no answer came! Men's hearts become weary of delay. While you are eating and drinking and resting in good beds, we and those with us, soldiers and servants, are watching night and day, trying to quell the movements of the Mahdi. Of course, you take no interest to suppress this rebellion, the serious consequences of which are the reverse of victorious for you. Neglect thereof won't do." It appears from a letter dated December 14 that General Gordon never said, "I can hold out for years," as has been published, but, on the contrary, had declared that food was scarce and that relief should be sent him at once.

An Arabian paper reports that the Mahdi promised Farag 140,000 thalers to betray Khartum, but gave him only 60,000, and when Farag complained the Mahdi hanged him. It is said that the Mahdi captured 15,000 Remington rifles at Khartum.

General Gordon's trusted messenger, George, arrived at Abu-Klea on Wednesday. He says that almost all the native accounts agree that General Gordon, on finding himself betrayed, made a rush for the magazine near the Catholic Mission buildings. Finding the rebels already in possession, he returned to the Government House and was killed while trying to reënter it. The rebels were admitted to Khartum at 10 o'clock on the night of the 26th of January. It is reported that General Gordon's last message to General Wolseley, "I can hold on at Khartum for years," was preceded by the question, "What are you coming for? I have not asked for you."

A despatch from Korti on Friday brought the sad intelligence of the death of General Sir Herbert Stewart, who was wounded at the zareba fight of January 19. The death occurred February 16 at Gakdul Wells, where the wounded were brought from Gubat. This death cast a profound gloom over the whole army in Egypt. General Stewart was only forty-two, and had distinguished himself in the Zulu, Alexandria, and Suakim campaigns. His recent brave march across the desert from Korti to Gubat is fresh in public memory, as are the two victories of January 17 and 19.

A report was sent from Korti on Friday of a night attack by Arabs on General Buller, which occurred on February 16. The latter sent the following message: "About thirty of the enemy's cavalry scouted around us all day Monday. They were reinforced about an hour before sunset by 400 infantry armed with rifles. The infantry crossed the hills to the northeast of us, and have kept up a well-aimed, desultory, long-range fire. This fire has thus far caused sixteen casualties." Two of the British were killed. General Buller has erected three new forts, and is preparing for a siege. He despatched a messenger to General Wolseley describing his situation to be critical, and stating that El Mahdi was advancing with an immense force. General Wood, who is at Gakdul, immediately sent transport camels to General Buller.

The text of the treaty under which Germany has gained a protectorate over the Samoan Islands has been published. The treaty provides for the creation of a Council of State, to consist of the German Consul, two Samoans, and two Germans. This Council is empowered to establish laws in the interest of the Samoans and of the Germans resident upon the islands. A German officer will act as the adviser of the King, and will serve as judge in all penal matters in which Germans are concerned. Germany is allowed to withdraw from this agreement by giving six months' previous notice.

Admiral Courbet telegraphed on Wednesday that the French fleet had had an engagement with five Chinese men-of-war. Two of the latter were sunk by the French torpedo boats. The three others escaped in a fog to Chinghai.

The German Reichstag on Wednesday rejected a proposal to defer the adoption of the increased duties on rye until the expiration of the existing commercial treaty between Germany and Spain. The Reichstag also decided to retain the existing duties on oats and pulse, which the Government wanted to raise 50 per cent., but agreed to increase the duties on buckwheat and barley by 50 pfennigs.

THE SILVER CAMPAIGN.

LATE reports from Washington indicate that the extreme silver men are so exasperated against Governor Cleveland for what they call his interference with their prerogatives, that they will resort to filibustering against any bill which proposes to suspend the silver coinage, and that they will defeat the Sundry Civil Appropriation Bill altogether rather than allow it to pass with such a clause. Filibustering is the last resort of a desperate minority. If it should be resorted to in this case, it would be evidence that the silver coinage is doomed, and that its advocates have no expectation of keeping it up by fair means. Filibusters in legislative bodies always get the worst of it in the long run. They might succeed in the few remaining days of the present Congress, but their proceedings would serve to make a political issue for the country. Nothing would be more acceptable to the advocates of honest money. They ask nothing better than a "square stand-up fight." Governor Cleveland could desire nothing better than an issue at the beginning of his Administration which should designate him as the champion and defender of an honest dollar.

The friends of honest money have no fears of the result of such a contest. They have fought similar battles in the past against greater odds. They remember the greenback craze of 1868, when even Senator Sherman, of Ohio, lent his influence and prestige to the faction which proposed to pay the bonds in greenbacks. They recall the "Inflation Bill" of 1874, when Senator Morton, of Indiana, became the champion of a bad currency. They have not forgotten the fight against specie resumption in 1877-78. They are as ready to try conclusions with the silver maniacs as they were with the greenbackers in those memorable contests. It would be in many respects a good thing to have such a battle at the hustings. The hollowness of the silver delusion would be exposed, and its dupes would be so thoroughly beaten that we might look for peace and common decency in matters of national finance for a generation to come. The actual presence of $200,000,000 of silver coin among us, largely unused, has deprived the silver advocates of the chief argument which served them when they passed their bill in 1878. The "dollar of the fathers" is now to be had in any desired quantity. Sentimental considerations no longer demand the sacrifice of $2,000,000 per month of the hard earnings of the people, to be stored in costly vaults already full to overflowing. If the devotees of the 85-cent dollar fancy that their opponents desire to shirk the issue or to put a stop to the coinage by trick or indirection, they are much mistaken. What they want is a stop put to a wasteful expenditure of the public treasure, and to a ruinous debasement and depreciation of the money in every man's pocket. If the Republicans in Congress are as far-seeing as they were when the Inflation Bill and the Anti-Resumption Bill were the great questions of the day, they will not allow Governor Cleveland to have the advantage of an issue which will surely draw to his side a great reinforcement from their ranks. Nothing would so rapidly disintegrate their party through all the marts of commerce, East and West, as an issue which should put them in the attitude of hostility or indifference toward the principles of sound finance, or which should enable the incoming Administration to take the headship of these principles away from them.

The principal strength of the silver faction, we regret to observe, is in the South. Why it should be so is an unsolved mystery; yet of the 121 members of the House who are counted upon to oppose any suspension of the coinage, 74 are from the Southern States. These States are not producers of silver. They are perhaps the most prosperous section of the Union today. The business depression of the past three years has affected them less than the North. The percentage of unemployed laborers is smaller with them than anywhere else in the country. Their great staple, cotton, would be the first to feel the evil consequences of a depreciated currency. Being managed by Northern brokers and Northern capital, good care would be taken that the losses consequent upon a slowly declining standard of value should fall upon the producers. Capital would take care of itself as it always does in such cases. The loss would fall chiefly on the cultivator and the laborer, and in the last extremity we should have two standards of value—one for the commercial classes, and the other for common people. The standard of the civilized world will be maintained by its own intrinsic force in spite of legislation, and all values will have to be computed in it, as was the case during the paper régime which preceded the restoration of specie payments.

The *Tribune* asserts, without a blush, that Republican members of Congress ought to consider themselves affronted by any attempt to curtail the coinage of silver, which confers upon the President of the United States the power to suspend such coinage, even for a single year. If they find themselves affronted by the proposed plan for relieving the business interests of the country, the suggestion is plain that they ought to vote against Mr. Randall's measure. The Chicago *Tribune*, on the other hand, which was perhaps the most ardent advocate of the Silver Bill in the whole country at the time when it was enacted, says that "If Cleveland can prevail upon his party majority in the House to order the coinage of silver to cease for the present, he will be entitled to the gratitude of the country, and *it will be an excellent start for his Administration.*"

The Democrats ought to learn a lesson from their adversaries in this matter. If the temporary suspension of the silver coinage will be "an excellent start for the Administration," and if the apprehensions of such a result lead the principal Blaine organ to change its policy and stultify itself in the grossest manner, the policy of Mr. Cleveland's friends ought to be clear to the dullest comprehension. Especially ought Southern members of Congress to see wherein the path of safety lies. The "pivotal States" which gave Mr. Cleveland the votes necessary to elect him, are very nearly of one mind regarding the silver coinage. Nearly all persons who think for themselves—that is, all who make the body of public opinion and give shape to parties and policies—in New England, New York, and New Jersey are earnestly opposed to silver. Their opposition rests upon a profound conviction that further coinage of that metal means disaster to business. They believe that it signifies not merely a change in the standard of value, but the introduction of two standards, of varying values, with all the confusion and uncertainty and loss which such an anomalous condition of monetary affairs must bring in its train.

"POLITICS" IN THE PENSION BUREAU.

WE are in a fair way to find out what it has cost the country to have the Pension Bureau in the hands of a political "worker" for nearly three years. The statistician of the Bureau, Mr. Sawyer, testified last week before an investigating committee, that when Commissioner Dudley took charge of the office in 1881 its running expenses were about $500,000 a year; that now they are $2,900,000; that the examiners' division alone costs $1,000,000 a year, though the increase in work there is very slight; that during the last six months, with 390 examiners at work, the number of cases decided was seven per cent. less than the number for the same period last year with only 240 examiners. The expense-account clerk testified that the reports of the special examiner showed that no work at all was done during the last two weeks of September—the period, it will be remembered, when the Ohio campaign was at its height, and the Commissioner was on the ground leading it in person. It was also shown to the Committee that the Medical Reviewer of the Bureau, Mr. Ross, went to Indiana six weeks before election, and devoted only five days during that period to his official duties, yet drew his salary all the time, together with nearly $200 for expenses.

Mr. Dudley, the late Commissioner, it will be remembered, was appointed under peculiarly discreditable circumstances, and his conduct in the last campaign was thoroughly disgraceful. When Garfield became President in1881, the Commissioner of Pensions was Mr. Bentley. He was a public servant of great ability and faithfulness, having administered the office with striking success during a period of great perplexity. The passage of the Arrears of Pensions Act had enormously increased the work of the Bureau, and at the same time, by holding out larger prizes, had greatly stimulated the greed of those who live by cheating the Government on the one hand, and the pensioners on the other. Mr. Bentley brought the service of the Bureau up to the point necessary for meeting adequately the increased demands, and by his vigilance and sagacity was able to thwart the designs of the thieves who sought to profit by the new situation. There were no complaints about him except those which came from the baffled swindlers, and from the politicians who wanted the place as a reward for political service. Colonel Dudley had been of great service in helping Dorsey to carry Indiana for Garfield. There was some doubt whether, as the organizer of the "soldier vote," he had not accomplished as much as Dorsey had with his "soap." Gar-

field resisted for a while, but finally succumbed, and, having removed Mr. Bentley for no cause, put Colonel Dudley in his place.

In September last, when the Blaine campaign was dragging heavily in the West, Mr. Dudley handed in his resignation, to take effect not immediately but on November 10, and started for Ohio. For two months he devoted all his time to organizing the "soldier vote" in Ohio and Indiana for Blaine, drawing pay from the Government at the same time at the rate of $5,000 a year. His operations in both States were unblushingly disgraceful, being nothing less than the use of the Pension Bureau, with all its power and influence, as a bribe for votes. It was openly announced that pensioners who voted for Blaine would be given precedence in having their claims heard at Washington, and with this announcement there was spread the naturally following intimation that a pensioner who voted against the Republican candidate would have to wait a long time for a hearing on his claim.

In fact, Garfield took the Pension Bureau out of civil-service reform control and put it into "politics." The immediate result is an increase in its cost to the people from a half million to nearly three millions a year, within less than three years. It is very evident from these figures that Dudley "used it for all it was worth," and it is easy to understand now why he was considered so useful a man. We have no idea that the full extent of his usefulness has yet been revealed. There is more to come in this as well as in other departments of the service.

The Pension Bureau was really a victim of the modern Republican plan of electing a President by "carrying Indiana." To this plan we owe some of the worst of our political scandals. The first sacrifice was the Post-office Department, which was given over to Tyner and Brady, primarily to "carry Indiana" for Grant. After they had used it for that successfully they began to use it for other purposes, and the gradual growth of the Star-route Ring was easy and natural. When Indiana had been carried for Garfield, another claim was established for the Pension Bureau, and was recognized. The October election in Indiana having been abolished, as well as the Star-route Ring, the "carrying" machinery, with Dudley at its head, was shifted to Ohio last year, and the result was a triumph even as it had been in Indiana. If the October triumph had been followed by a similar one in the nation in November, who can number the claims for service rendered which would have been filed, or tell how many other departments would have been given over to "politics" to pay them? Dudley is out of office now, and he as well as all other claimants has no hope of recognition. Before another Presidential election comes, the date of the Ohio election ought to be changed to November, and then the carrying business will be at an end forever.

"FREEDOM OF WORSHIP."

THE contention of the Catholics in the matter of the Freedom of Worship Bill now before the New York Legislature, that permission to them to give religious instruction to the inmates of the House of Refuge is of no value as long as they are not allowed to celebrate mass, is very plausible on its face. They say, and we believe truly from the theological point of view, that there is no Catholic "worship" but the sacrifice of the mass, and they maintain now that if young criminals are cut off from this, they are cut off from the one great means of religious edification.

But this argument must be taken with much allowance. It would be far more effective with Protestants but for the policy pursued for ages by the Catholic Church, of claiming everything, but in case of necessity taking what she can get. Nothing has been more clearly laid down by Catholic theologians than that it is the duty of the civil power to suppress heresy; and whenever the civil power has been won over to this view, they have insisted on its either extirpating heretics wholly, or obliging them to live without public worship, or obliging them to conduct their worship under considerable restrictions as to publicity and locality. In fact, the policy of the Church in every country has been to get from the Government all the intolerance of other creeds which she could, but to accept the inevitable diminutions in the amount of this intolerance. The equality of all creeds before the law she only accepts in countries in which there is no chance of anything else, but this toleration was denounced so late as 1864 by Pius IX. in the Syllabus as a damnable error. In Rome public Protestant worship was never permitted within the walls until the downfall of the temporal Power, and was never permitted anywhere in the Papal States without many restrictions. Within the past year Leo XIII. has complained bitterly of the freedom of worship now enjoyed within the city, as an insult to the Papacy and a hindrance to him in the discharge of his high functions. In the Mortara case Pius IX., so late as 1858, used the physical force at his command to deprive Jewish parents of the control of a child of tender years, and to bring him up in the Catholic faith against their will, simply because some zealous Catholic had baptized him on the sly, if we may use the expression.

We mention these things now, not by way of passing any judgment on them, but by way of showing that the rules of equality for all creeds before the law do not really bring the Catholic clergy face to face with what is called a "non possumus." They adapt themselves to any situation as soon as it is shown to be inevitable. In England and the United States they accept the régime of equality with absolute resignation. In France and Italy they accept it with much murmuring and indignation; in Belgium and Spain they kick against it almost with violence. This, we admit, furnishes no excuse to Protestants for withholding from them anything short of equality, but it does furnish a strong defence for examining their complaints about equality in a very critical spirit. It has been shown by abundant experience in the modern world that the Church knows how to adapt her discipline and services to the peculiarities of countries in which Protestants are in a great majority. It is not true, as a matter of fact, that she considers no religious worship or instruction of any value without the celebration of the mass. There is provision in the Church discipline for the vast body of Catholics, who are every year, all over the world, by land and sea, cut off for months together from the services of a priest. Catholic soldiers, sailors, travellers, criminals, in regions where there are no Catholic priests, or which priests visit only rarely, are enabled by processes which it is not our province to describe, to keep their religious faith and expectations undamaged by prolonged deprivation of the most solemn services of their denomination.

Public processions of Catholic clergy through the streets carrying the Host, and compelling the outward adoration of all the spectators of whatever creed, were considered necessary in our own time in many States of Italy, and are to-day in Spain. They were considered necessary in every country in Continental Europe as long as the Government would permit them. They have been given up everywhere solely under legal prohibition, and the legal prohibition has been based on the sound doctrine of modern politics, that no religious sect shall be allowed, on any common ground, or in any public place, to conduct its worship in such a way as to offend the prejudices or inflame the passions of persons belonging to other sects.

The management of criminals, and especially youthful criminals, is common ground. In a Protestant country Protestant prejudices do furnish a reasonable and fair limit to Catholic pretensions. This has been conspicuously acknowledged in our public-school system. It is not intolerance to prohibit sectarian instruction within the schools, or to forbid either the sacrifice of the mass or any other religious service within school walls. Adult criminals have chosen their faith, and it is but right to provide the means within prison walls of their public worship. Criminal children have not chosen it, and the faith of the parents of such children is rarely ascertainable. The children are in fact in the condition of heathen, deprived of their liberty, and ready, if their custodians will permit it, to be scrambled for by a large body of rival missionaries. It would be unseemly to the point of scandal for their custodians to permit such a scramble, or to expose them to the competition of rival forms of worship. But it would be worse than unseemly to prevent their being instructed in the doctrines of any recognized Christian denomination to which their parents belong, or for which they themselves profess an intelligent preference. The compromise between the claims of order and the claims of religion, between what Protestants consider expedient and fair, and Catholics consider their due, which the managers of the House of Refuge have hit upon, is the best within reach. The sole objection to it which is worth considering is the Catholic contention that the Church accepts no compromises, and can make no provision for the acceptance in civil society of anything less than her rights. But this, as we have said, has no support from experience. No church has compromised so much, or put up with such immense deprivations of authority.

THE SUDAN NEWS.

GORDON'S letters from Khartum have now been published in a Blue Book, and show that

he did not, as was reported, express confidence in his own ability to hold out indefinitely. On the 4th of November he wrote to Wolseley that he could hold out "with ease" for forty days, or till, say, the end of the year, but that after that it would be "difficult." As a matter of fact, he held out nearly twice as long, and did not after all succumb to famine. There appears every reason to believe that Farag Pasha had long been under agreement to betray him whenever the English got near the place. The tone of the letters, if we may judge from the extracts which have reached us, is querulous, and, considering that he was in the military service of the Government, highly insubordinate. He declines to consider the expedition as sent for his own rescue, but for that of the garrison, and this rescue he pronounces unhesitatingly the duty of the Government. Neglect of it he considers disgraceful, but nevertheless charges the Ministry with it.

His military counsels are not less singular than his political ones. He advises the relief expedition to follow the right bank of the Nile round the immense curve from Wady Halfa to Berber, a march of 700 or 800 miles, "in the hope of surprising Berber." Another piece of warning is still more curious: "Don't let rumors of your approach spread," as if the advance had not been watched by hundreds of eyes for weeks and weeks, and doubtless reported every day to the Mahdi. In fact, the letters only confirm the impression which has been entertained for months by every Englishman who knew Gordon, that the first and great mistake of the Ministry, and indeed the only one, was sending him out single-handed, as a knight-errant, without even a shadow of authority. They ought not to have incurred even the appearance of responsibility for him. He had, ever since he took service with the Chinese in 1862, acted solely under his own inspirations. Both in China, and afterward in the Sudan, he was practically his own master, and defined his own policy, and was, strictly speaking, accountable to nobody. He had consequently long lost the habit of obedience and subordination. He was doubtless a good man to send on any military or semi-military mission in which he had to trust to his own resources, for his resources were wonderful; but to send him anywhere with power to draw on the British treasury and army would have been an immense blunder.

This blunder, it is but justice to the Ministry to say, they did not commit. They warned Gordon emphatically that they were not to be considered responsible for him if his mission as a sort of counter-prophet did not succeed. But the English public knew nothing of this. They saw that the Government had taken charge of the Egyptian army and finances, and had put a veto on any further Egyptian efforts to reconquer the Sudan, and they therefore not unnaturally assumed that Gordon had been sent out as the forerunner of some independent British attempt in the same direction. This impression was allowed to spread and grow deeper all through the spring. Gordon was not, as he ought to have been, publicly and peremptorily ordered to quit Khartum while the way was still open. He was, on the contrary, for all the public could see, allowed to remain there as the agent of the Government, to get along without help if possible, but to receive help if it became necessary. In the meantime his heroship was growing steadily in the popular imagination until he at last came to represent English honor and prestige in the middle of the desert, against a horde of savages. The result was, that when the expedition was sent, it had all the effect of a confirmation of the popular delusion, and of a condonation of Gordon's folly and disobedience. To crown all, Gordon's heroic death has now put it out of the power of the Ministry to tell the truth about him without seeming harsh and unfeeling.

Severer punishment for what seemed a slight blunder probably no government has ever received. In the first place, there is evidently going to be some difficulty in extricating the advanced detachments under Buller and Brackenbury. Buller, who is at the Abu-Klea Wells, only a few miles on his return march to Korti, probably owes his safety thus far to that curious feature of desert warfare which makes it impossible to besiege a force that has possession of the wells, inasmuch as the besiegers, too, must drink. But the supply of water at Abu-Klea is scanty and nearly exhausted, and the camels are dying rapidly. Buller cannot move without a fresh supply of animals, and it is in moving that his danger will begin; for the Mahdi may attack him in great force on his way to Gakdul, which is the next stage. Still, the Mahdi will, of course, find it as difficult to keep a large force afoot in the desert as the British. Food can be carried by men as abstemious as the Arabs in small compass, but water cannot, and no large force of men of any race can in those regions do much more than hurry from well to well. In fact, this is what the best provided caravan or single traveller has to do.

In the present—what we must consider—half-crazed condition of the English mind, it is impossible, of course, to say how far the Sudan folly may be carried. But at this writing it really seems likely, although the Government sticks to its resolve not to try to obtain or retain possession of the Sudan, that a railroad will be built, at a cost of $15,000,000, from Suakim to Berber simply to enable the British troops to "smash the Mahdi" next fall. The cost of a complete and effective "smash," in fact, can hardly be put down at less than $200,000,000, and this at a moment when vast bodies of unemployed poor in all parts of the kingdom are either eating up the savings of former years or throwing themselves on public charity. We cannot help feeling, however, that the prolonged pause which the climate of the Upper Nile makes necessary, will do something to restore sanity to the British people, and that the view of the Radicals, to which Mr. John Morley gave utterance in the House of Commons on Monday night, that the proper course to pursue with regard to the Sudan is to evacuate it, will in the meantime gain ground. The fear that the effect of such a step would be injurious to British prestige in India is probably the most absurd of the Jingo bugbears. If the Indian Mussulmans have not learned for themselves from the events of the last hundred years in India, the potency of British arms, and the unconquerableness of British hate and courage when once fairly roused, it makes little difference, as far as they are concerned, what happens to British troops in other parts of the world.

LABORERS' INSURANCE IN GERMANY.

THE text of the German law of July 6, 1884, for the insurance of workmen against accidents lies before us; a law of so remarkable a character that one wonders at the little attention which it has received outside of Germany. Like its predecessor, the act of 1883 for the insurance of workmen against sickness, it is a result of the "Socialistic" policy which Prince Bismarck has adopted, and which has the support of the largest and most influential body of German economists. We have heard much of the principle of state interference, and of its adoption in Germany; but the details of its application have received little attention in this country. It is worth while to point them out in these insurance acts, which must strike every one who has been accustomed to the Anglo-Saxon method of handling social problems as most extraordinary pieces of legislation.

The act for insurance against accidents provides that all workmen employed in factories, mines, quarries, and the building trades, whose pay does not exceed $500 a year, are to be insured. The clauses describing the insured persons are sweeping, and the only great classes excepted from the operation of the act are ordinary day laborers and agricultural laborers, the latter being an exception which doubtless has a connection with Bismarck's reliance on the landed proprietors of the country districts for political support. Every one of the workmen reached by the act is declared to be entitled, in case of accident, to the costs of his cure and restoration to health. In case of complete disablement, he is to have a pension of two-thirds of the wages earned by him during the year preceding the accident. In case of death, his widow, and children, and dependent parents are to have a pension not to exceed 60 per cent. of his previous wages, so that the act includes a life-insurance provision. It is immaterial how great may have been the carelessness or recklessness of the insured; the only case in which he or his representatives have no claim to compensation is when he has intentionally brought about the accident.

The person who is to pay for this liberal compensation to the injured workman is not the workman himself, not the State that enacts the law, not the local Government, but the employer. All employers whose workmen come within the scope of the act are required to form unions or associations; if they do not do it for themselves, a Government Bureau comes in and organizes the unions over their heads. All establishments from the same or allied branches of trade in a given district are to be united in this way. They are to settle the amount of the premiums to be paid by each employer, in proportion to the number of persons he employs and the danger of his establishment; and they are empowered to enforce

precautions against accidents. Every employer is made *ipso facto* a member of the union for his trade and district. The associations elect their own officers. With them are joined elected delegates from the workmen for the arbitration of disputes. A Government insurance bureau is established (this hardly requires to be said in Germany) which supervises and enforces the whole arrangement.

A very similar measure, but of not quite so drastic a character, was the act of 1883 for insurance against sickness. By this, also, insurance is made compulsory; that is, irrespective of any volition or action of the insured. The sick workman is given free medicine and medical treatment, and, so long as he is too sick to work, one-half the wages of ordinary laborers. If the sickness is the result of drunkenness or immorality, or is intentionally brought on, aid may be refused. The payment comes ordinarily from the local Government bodies, the communes. There are permitted certain methods of establishing it through associations of a voluntary character; but normally the local bodies pay the insurance. They levy for this purpose a tax of not more than 2 per cent. on the wages of the insured; if the proceeds of the 2 per cent. do not suffice to yield what the act gives to the workmen, then the excess must be borne by the town out of its general revenue. The tax is collected from the employers, who are authorized to deduct two-thirds of it from the wages of the workmen; the remaining third they must pay out of their own pockets. This Sick Insurance Act and the Accident Insurance Act of 1884 are made to work together, by providing that if a workman becomes injured by an accident, he is to receive his insurance money in the first instance from the sick-insurance fund (*i. e.*, from the town), and this fund is then repaid by the accident-insurance fund (*i. e.*, by the employers' union).

This sort of legislation may suit Germany; it may be possible to carry out its provisions with German habits of Government superintendence and police, and no one would deny that its object is most praiseworthy, so far, at least, as appears on the surface of the act. But it is completely alien to our manner of approaching social problems. It is evidently not insurance at all. It is not making voluntarily a prudent provision for possible misfortune in the future. It is a vast extension of the poor-law principle—of the principle that those who are not able to take care of themselves are to be taken care of by the public at large. Moreover, it is the poor-law principle applied without those precautions against abuse and demoralization of which the necessity has been dinned into our ears during the last half-century. Apart from the proviso that intentional injury and illness resulting from drunkenness or immorality are to be excluded from the insured contingencies, there is no precaution against recklessness, ignorance, shamming, and cheating, and no stimulus to independence and self-help. When one considers the moral and intellectual state of the average manual workman, it is clear that the assurance of half-pay during any disability will make disability far from a great calamity. Being sick and idle on half-pay is not a bad piece of luck. One may venture to doubt whether even German administration and German police will be able to set aside with a stern hand the cases of pretended sickness and intentional injury. On the other hand, the most powerful incentives to prudence, and temperance, and saving habits are evidently taken away by making prudence and saving unnecessary. For those who believe, as most English-speaking people do, that the only deep-reaching method of bettering the condition of the laboring classes is the raising of the standard of prudence, of morality, of independence, and of intelligence among the laborers themselves, the German method must seem radically false. Insurance against sickness and accident is undoubtedly a most desirable thing, and the community should do all that it wisely can do for its encouragement. But the encouragement should come rather in the way of legalizing and regulating that voluntary form of relief which trades-unions in England and benefit associations in this country have applied on so large a scale, than in imposing on one class in the community the burden of looking after another.

It is characteristic of the policy by which Bismarck is trying to win the Social-Democrats to his side, that the money for insuring the laborers is raised in both these acts from their employers. In the Accident-Insurance Act they are to pay the whole fund out of their own pockets; in the Sick-Insurance Act they are to do the same, but may deduct two-thirds of the payment from the wages of their laborers. Of course, whether the law says so or not, the money will, as a general thing, come out of the wages of the laborers anyhow. The tendency will be for employers to deduct the insurance payments out of the current wages of their employees. So far as this is done, the process amounts to taking part of his earnings from the workman at one time for the purpose of providing for him at another; a process to which there can be no particular objection, when once the principle of self-help is abandoned. But a tendency of this kind, like every attempt to throw off an indirect tax from the first payer and to charge it to somebody else, is one which is not at all certain to be carried into universal effect. The force of habit, the resistance to innovation, those influences which economists sometimes call economic friction, will stand in the way. It is pretty certain that in some cases the insurance tax will really come out of the pockets of the employers themselves; in others it will be added to the price of the goods they make—that is, will be paid by the consumers. In such cases there will be the result of one set of people being provided against illness and misfortune, not by the community at large, but by another set of people—a result hardly consistent with those principles of economic "justice" which are supposed to underlie the schemes of Socialistic legislation.

THE TROUBLES OF ENGLAND.

LONDON, February 9.

SEVERAL times during the last few years one has heard people in England wishing that so many events did not happen. Generally speaking, men relish excitement in this hot and hurried world of modern Europe. It is not only the newspapers that live by and upon news, but no small part of our city populations, who find it hard to realize what existence was like two centuries ago, or is even now in quiet country nooks with one delivery of letters in the day and no telegraph office. Yet latterly those who watch public affairs seem to feel that they have too much excitement, that events come too thick, and tread too fast upon the heels of those that have gone before; they begin to appreciate the saying that happy is the nation which has no history. They wish for more time to think about things; to comprehend and see how to face the new problems which are perpetually appearing and passing swiftly from one phase to another.

England has been in perpetual unrest, throbbing and quivering with effort and passion, ever since 1876, when the revival of the Eastern question not only dragged us back into the whirlpool of general European politics, but, by the bitterness which it added to party feeling, made our domestic contests hotter and perhaps even less scrupulous than they had been before. No part of this period, not even the Irish crisis of 1880-81, has been so exciting and troubled as the last six months. The constitutional crisis between the House of Lords and the House of Commons occupied the autumn, and revealed the hatred which had been silently accumulated against the Peers; and when the deadlock had been disposed of by the compromise between the Liberal and Tory leaders, men's eyes were opened to see that a revolution had been accomplished which definitely stamps Britain as a democratic country. There was some satisfaction felt at the peaceful way and conciliatory spirit in which this revolution had been effected. But this was soon dashed by the foreign and colonial difficulties thickening round us. The Egyptian problem seemed more insoluble than ever, and the Ministry more puzzled than ever how to deal with it. The unfriendly, not to call it hostile, attitude of Germany could no longer be denied when Bismarck was seen trying to pick quarrels with us all over the world. The jealous desire of France to embarrass us in Egypt became more evident, and suspicions were roused as to her designs on Siam and Burmah. We found Russia making trouble over the question of the boundaries of Afghanistan. And in the middle of these vexations came first the dynamite explosions of January 31, and now on February 4 the news of the fall of Khartum, the death or captivity of Gordon, the peril of our little army scattered here and there over the deserts of the Upper Nile. Seldom has a modern state found itself pressed and distracted at the same moment by more anxieties. We have realized more clearly perhaps than ever before how unique is the position of England and her empire, whose nerves, so to speak, so stretch themselves over the whole globe, that they can feel pain and danger and the need for action in so many points at once that the central brain is scarcely able to meet by thought and will all the demands that crowd upon it.

My task is not to describe these anxieties, but only to attempt to tell you how our people take them, what are the first emotions and views which they evoke.

Although we had got pretty well accustomed to dynamite, the sensation caused by these latest attempts to destroy life and property was deeper than on any previous occasion. The mischief wrought was greater. It was wrought simultaneously in three spots. There was more audacity shown in striking at the Tower and the House of Commons than in the stupid and cowardly device of leaving infernal machines in the cloak-rooms of railway stations, or dropping them out of the windows of cars on the underground railway. It looked as if the conspirators were gain-

ing experience and confidence, while becoming even more reckless as to the consequences upon human life. Hence the thing has been taken more seriously than on previous occasions. Then the dominant impression was one of surprise, and though there was indignation, it was mixed with amusement. The idea of frightening England by letting off gigantic squibs seemed so ludicrous that we should have been ashamed to be frightened. Now, although there has been no panic, and even less excitement than you might fancy from the newspapers, in whose thermometer the mercury stands always some degrees higher than it does in the nation generally, there is little amusement, but rather a deep, quiet anger which might easily break out into lynchings of persons suspected, or even into demonstrations against the Irish. London is such a huge, inorganic place, where no man knows his neighbor, and the Irish are not distinguishable from the rest of the people, that such demonstrations are unlikely in it. But in Lancashire there has always been some ill-feeling between Irish and English working people, and had the explosions taken place there, the results might have been serious for the former. As it is, we hear of Irish workmen being here and there dismissed, here and there refused employment—regrettable incidents, but such as must be expected when in Irish meetings voices are raised in approval of the dynamite party. Of results on the ordinary intercourse of Englishmen and Irishmen, one sees nothing in the middle and upper classes, because the Irishmen who belong to those classes are usually Protestants, and more hostile to the Nationalist party than any Englishman. But in the humbler classes there must be a good deal of friction.

An Irish acquaintance of mine had been in the habit of talking occasionally with the police constable of his district, who was an Irish Protestant from Ulster. A few days after the explosions, as he bade the constable good morning in passing down the street, the latter asked him whether things were not made disagreeable for him as an Irishman. Somewhat surprised, my acquaintance inquired what the constable meant. "Well, sir," was the answer, "perhaps it is different in your rank of life, where persons are more polite, but they make it very annoying for me; they are always worrying at me because I am an Irishman; and then, sir, they are so ignorant. They don't know the difference between an Irish Papist and an Orangeman." In those ranks of life where persons are not polite, and where events like the dynamite attempts engross the thoughts and tongues of the people, Irishmen must have had much to put up with, and the relations of the two races will become more strained than ever. Great vigilance is now observed all over London. Not merely are the public buildings guarded, but one seems to see a far larger number of police everywhere, and these police constantly on the alert, observing everybody who loiters, and particularly those carrying handbags or paper parcels. We rub our eyes and ask ourselves whether we are in London and in the nineteenth century; yet of course opinion approves all possible vigilance, and everybody is willing to coöperate. There has never been anything that can be called alarm in the public at large—London is far too big for that; but there has certainly been a more serious view of the position than there was before, and a painful sense that what the Irish revolutionaries attempt now may hereafter be attempted by revolutionaries of other kinds, and may encourage the Anarchists of the Continent to play the same game in Germany or France.

As regards the political problem of Irish disaffection, these outrages will hardly affect its solution one way or the other. Although Mr. Parnell has been much censured for his silence on the subject, all sensible men know that he and his immediate allies are hindered and embarrassed by such conduct, and have all along found in the extreme faction one of their chief difficulties and dangers. There are persons in England who feel more inclined after each fresh proof of Irish implacability to wish that we had done with Ireland altogether. There are other persons who draw the conclusion that more repression is needed—martial law and the suppression of Parliamentary representation—and who charge the dynamite outrages on Mr. Gladstone's policy of conciliation. But the great majority feel that it would be unworthy of England to let her policy be deflected either way by the acts of a knot of conspirators, and unjust to charge their ferocity on the bulk of the Irish nation. The question of renewing the Crimes Act, and of extending either local self-government or any form of Home Rule, will apparently be dealt with just as if these explosions had not taken place.

Much satisfaction was felt, even more than was publicly expressed, at the sentiment evoked in America by the news of the explosions. Anything which legislation can do there to prevent the advocacy of these crimes or the collection of subscriptions for them will be deemed helpful, but it is believed that the acts themselves are frequently planned from Paris, which affords a nearer and easier base of operations.

The excitement caused by the dynamite affair would probably have been greater had not two other things happened at the same time to divert attention from it. The one was the series of speeches, sketching out a bold programme of social change, by which Mr. Chamberlain has startled the more moderate section of the Liberal party. The other was the march of General Stewart across the Bayuda desert with the battles of Abu-Klea and Gubat. Now upon these there has come the tidings of the fall of Khartum, which of course throws all else into the shade, because it involves the safety of the detachments of Lord Wolseley's army, and the question of further military operations which may last for many months and involve a vast expenditure of money.

The first impression of the news was of regret at the fate (for it was and is still generally supposed that he has perished) of Gordon. His striking character and the long defence of Khartum, which he has held by the mere force of his presence, have profoundly affected the people, always more attracted by persons than by causes or policies. Even those who thought him wild and odd, and who blamed the Ministry for sending him, could not refuse their admiration to his chivalrous daring and unselfishness. The next feeling was of anxiety for the army, and especially for the small bodies under Stewart and Wilson. This would have been greater but for the belief, deeply rooted in the English mind, that the most insignificant body of English troops can defend itself against any odds of uncivilized enemies. Many as have been the perils which our forces have had to encounter during this century, there have been only three instances within the memory of living men in which a detachment has been overpowered—the catastrophe of the first Afghan war in 1842, the fight at Isandlana against the Zulus, and the slaughter at Cawnpore in 1857. In the first instance there was treachery, in the two others surprise, so that the belief is sustained that where the danger is foreseen our troops can always resist it. The way in which so many tremendous perils were escaped from or surmounted during the Indian mutiny has confirmed our faith in English invincibility, and may, perhaps, some day involve us in worse troubles. We are always despising our enemies, and running risks which the judgment of Continental soldiers condemns.

Next after these two feelings came that of perplexity as to what should be done—whether we should stand still, on the defensive, or move forward on Khartum, or retire on Upper Egypt. Such perplexity is the greater because our people have never liked the expedition nor quite understood its object. To rescue Gordon was the obvious aim; but, supposing him rescued, nobody knew what else ought to be done, nor what arrangements should be made for the future of the country. There has seldom been an instance in recent times in which public opinion has been so utterly at sea as through the whole of these Egyptian and Sudan troubles, everybody admitting that he had no light to give, and vainly hoping that it would be revealed from some other quarter. In such cases, the usual course is to trust the Executive, assuming that as it has more knowledge, it is fitter to judge than the people can be. But unhappily public confidence in the Executive has upon foreign questions been seriously shaken. They sent Gordon out a year ago with no definite idea as to what he was to do, or as to what they would do if he failed to pacify the country. They fought battles at Suakim for which they have never been able to assign a sufficient motive, and which have had no useful result. They decided late in July last on an expedition to rescue Gordon, which ought, as events have shown, to have been undertaken at least two months earlier. Hence that faith which the Liberals have given so largely to their leaders, and which moderate men of all parties are disposed to give to the Ministers of the Crown, is now confined to domestic questions, and the unspoken anxiety of the more thoughtful part of the community is greater than the present state of matters warrants. It extends to the whole international position of England, and it is all the more serious because few persons, even in the Tory ranks, believe that such Tory leaders as Lord Salisbury, Sir S. Northcote, and Lord Randolph Churchill are likely to steer the ship more prudently or skilfully than their antagonists have done. I do not say that this harsh judgment is justified, but merely note the fact.

Whether the Government will survive the shock which these misfortunes have given to its authority, whether the bulk of its party will approve the resolution it is said to have taken, to continue the war and recapture Khartum, are questions which it is useless to discuss at this stage, before the opinion of the nation has had time to crystallize. The position of the Cabinet is insecure, but there are obvious objections to a change of Ministry at a moment when vigor and despatch are needed, and the Tory party may be unwilling to take office so shortly before a general election. They have a great opportunity of assuming a dignified and patriotic attitude, but they have seldom known of late years how to use their opportunities. It will not be surprising if, when the first desire to display the strength of England has passed, many voices are raised against continuing a struggle in the Sudan which the Government themselves condemned, and from which they do not expect any substantial profit. Those who know India best make light of the idea that a reverse on this side the Red Sea will shake our military hold on that country; and those who have visited the Sudan represent it as anything but a desirable acquisition. Y.

HOLLINGBURY COPSE AND ITS SHAKSPERIANA.

BRIGHTON, February.

"Come hither, come hither, come hither;
Here shall you see no enemy
But winter and rough weather!"

THESE lines from a song in "As You Like It" (Act. IV., scene 5) are written in black-letter on the cornice of the house of Halliwell-Phillipps, at

Hollingbury Copse. They stretch from end to end of its front, and so seem a more cordial greeting. Some eight years ago this famous Shaksperian, coming down to Brighton for a brief rustication, concluded to make it his country home. For this purpose, purchasing thirteen acres northwest of the city, on a hill so high and steep that it was scarcely inhabited at all, he built a shanty that would serve him for keeping a bachelor's or rather widower's hall. He soon added other rooms—some of them cased with iron and equipped with fire-proof vaults for the storage and safe-keeping of his idols, as Shaksperian curios may be fitly styled. Marrying a Brighton lady, he expanded his establishment in every direction, but built it nowhere more than one story in height. No room has a ceiling. Above every one you see the rafters running up to the ridge. The roof and wainscot are varnished but not painted. The whole pile is an excellent specimen of a building that has grown, as Paley says of the British Constitution, rather than been made to order.

The grounds are shut in by a wall of masonry ten feet high, or, where the view would be thus obstructed, by a fence of open iron work no less difficult to scale. The gates are two, an outer and an inner. At the outer there is a notice, "No dog admitted," and the porter's orders are not to unbar the inner gate till all dogs have been barred outside of the outer. The copse which gives name to the place is on the highest ground, and consists in a sort of jungle of underwood, largely evergreen, threaded with labyrinthine paths. Here and there from a bower one can command an outlook over Brighton, the Channel, as well as chalk cliffs east and west, for the altitude is 460 feet above the sea-level. On this south shore, the Italian Riviera of England, the fields, where not freshly ploughed, are green with grass and grain at the end of November. At this season, too, the tilth, or ploughed ground, is white with the stone harvests. The stones, worth $2 a load, are an unfailing crop, and, in the judgment of those who to-day gather them, *grow*, though an outsider would trace them to frost or subsoil ploughs. Next to the copse, the most conspicuous object in the grounds is a spacious and stone-curbed fish-pond.

Within the walls of the house, which Mr. Phillipps, aware of its oddity, calls sometimes a bungalow and sometimes a wigwam, there are corridors leading, or rather misleading, strangers from one quarter to another. On their walls you read their names, such as *Wolsey's Walk*, *Dogberry's Lane*, *Romeo's Ramble*, but you do not thus learn their nature or purpose. Over the dining-room fireplace hangs a picture of *Portia* disguised as a judge, and just disclosing to *Shylock* the "true inwardness" of his bond. But the supreme interest of this English interior centres in the Study, or treasury of Shaksperiana, which is separated from the rest of the mansion by doors of iron. Along one side of its antechamber stretches what Mr. Phillipps has named the "book bin." Every afternoon his habit is to look over a score of books, cut out of each the fractions he can use, and throw the rest as refuse into his mammoth waste-basket. The legend over the study door is the words of the witch when Macbeth sought entrance to her cave (Act IV., scene 1), "Open, locks, whoever knocks!" Classical quotation, said Dr. Johnson, is the parole of scholars the world over. Shaksperian quotation is now becoming preëminently that sort of parole, and nowhere more than at Hollingbury Copse. American Shaksperians are there sure of a double welcome, partly as pilgrims from a far country, but chiefly because, in the opinion of Mr. Phillipps, his labors were appreciated in the United States sooner than in his own country.

His Shaksperian working library is mainly at his house in the London suburb of Brompton, while the rarities, or, as a German would say, the *Sehenswürdigkeiten*, glorify Hollingbury Copse. But things "worth seeing" just because they are to be seen rather than heard of, are hardest, or rather impossible, to describe. Mr. Phillipps has printed, but not published, a hand-list of ten hundred and ninety-three drawings and engravings illustrative of the life of Shakspere, which he has accumulated. In obtaining a portion of them he was himself busy, aided by an accomplished draughtsman, for six years. On showing these delectables to the writer he unwearyingly turned over portfolios all a long morning, and guided him to the salient points of interest in the representations of every morsel that could be found in England contemporary with Shakspere, on the routes where he travelled and in the places where he lived—notably, the arches of triumph in London under which there is "authentic record evidence that Shakspere passed in the procession of March 15, 1604"; the earliest engraved view known to exist of the church where Shakspere is interred; the earliest plan of Windsor Park in which Herne's oak is noticed; a view of Stratford College as it appeared when Shakspere was a scholar there; and the Avon Bridge as his childish eyes first looked upon its arches.

But the gem of the collection, in the eyes of its owner, and, I think, in the mind of every visitor, is the portrait of Shakspere by Droeshout, dating from 1623, in its original proof, before it was altered into the vitiated form in which it has been so long familiar to the public. "Here," said he, "we have the most reliable likeness in existence of the dramatist, the only one that has not been tampered with, while the evidences of its genuineness and its antiquity are incontestable. It is of such extreme rarity that it is the only copy which has as yet been discovered." Mr. Phillipps demonstrated the superiority of this likeness, holding up beside it one of the best of more modern copies. In the shading of the collar, the arch under one eye, the hair, moustache, and muscles of the mouth, the difference, when once pointed out, was palpable.

Among printed rarities, the first folio of 1623, in excellent preservation, was about the largest to my eye. But a special pet with Mr. Phillipps is "Love's Labor Lost," the thin quarto pamphlet of 1598—so far as known, the *editio princeps*, not only of that play, but of any Shaksperian play. He was so fortunate as to secure this relic for £60, but would not part with it for ten times as much. It is, in truth, a long time since Mr. Phillipps has lost his grip on anything Shaksperian that has fallen in his way. "It is his plan to lose no part of that immortal man." Of two things in his career Mr. Phillipps said that he repented every day. One was, that while poor he had sold certain Shaksperian jewels. The other was, that he had not travelled while he was young. About 1854 he had visited Lucerne and reached the crest of the St. Gothard pass; but during the last generation he has scarcely been out of England. As his age is now only sixty-five, he would not seem at present too old to view abroad the wonders of the world. But to his mind travel is travail and exile. His reluctance to leave home may be intensified unawares by his zeal in Shaksperian research, which never flags. His discoveries in 1883 were great, in 1884 far less, yet sufficient to encourage labors for more. His investigations just now are in that long-explored, but still exhaustless, mine, the New Record Office in Fetter Lane.

Possessing an ample fortune, thanks to marriage with the daughter of Sir Thomas Phillipps, whose name he adds to his own patronymic Halliwell, he is able to pay a fabulous price for any trifle which will supply a missing link in his chain of Shaksperian mirabilia. He complains, however, that he hears sometimes of such a nonesuch and bids high for it by telegram, only to find that his order has arrived too late. His copy of Lilly's Latin grammar, in an edition which Shakspere must have studied, led me to remark that one might, perhaps, espy in that work where the dramatist "of small Latin" got some of his quotations; and that such a search would be easy with the help of the list of "Sentences taken from foreign languages" at the end of Schmidt's 'Lexicon.' Mr. Phillipps was pleased with the suggestion, but said he did not know of the list, and was even utterly unacquainted with the work of Schmidt, which in America, at least, has become the vade-mecum of every student. He said he would buy the 'Lexicon' at once—for the quotation-list; evidently sharing Mr. Grant White's notion that no foreigner can light up for us the vocabulary of our dramatic bard.

Mr. Phillipps takes frequent walks to Brighton and back—three miles each way. He begins study at half-past five even in winter mornings, but never studies after his lunch, which he takes before two o'clock. Although he has written more about Shakspere than any living man, he declares himself unable to repeat from memory ten consecutive lines of any play. When asked how he would dispose of the illustrative matter on Shakspere which he had been gleaning and hiving through so many studious and active years, he answered that he had long thought on that subject, and that the longer he thought the more he felt at a loss what to do. Some patriotic impulse prompted me to urge him that he bequeath his jewels to America—that utmost corner of the West where the majority of those who speak the tongue of Shakspere are already resident, where that majority daily grows, and where all helps to the appreciation of that prince of dramatists will accordingly do the most good. The proposition struck him as equally new and startling, but he promised he would take it into consideration. As Smithson's half million could nowhere in the Old World have been such a power for good as it has proved in the New, so, I believe, would be the good fortune of the Shaksperian treasure-trove of Phillipps. We'd set it in a shower of gold and rain rich pearls upon it.

Correspondence.

A MUSEUM OF CASTS.

To the Editor of The Nation:

Sir: Among the very able articles published in the *Studio* of January 3, I have been particularly struck by one relating to the contemplated formation of a museum of casts and photographs. Allow me to suggest to you my view of the question.

The idea of endowing a city like New York with a collection of original sculptures and paintings by old masters is to be completely put aside. Such a collection, even if millions were spent for it, would never rank equal to the museum of a provincial town in Germany or in France. The masterpieces of the past all now belong, with very few exceptions, to museums, or to very rich families, which will never give them up at any price. There exists in Rome, it is true, a private collection of 400 *so-called* ancient statues, which the possessor, Torlonia, has the childish hope of selling some day for *thirty millions* to Russia or to America; but that collection, which you certainly know, is filled with outrageous forgeries. Lady Burdett-Coutts and the Duc d'Aumale are the only persons possessing *original* pictures by Raphael, and they certainly will never sell them. America is a young country; it was never gov-

erned by kings ready to lavish the people's money for the sake of getting up splendid collections; not having known the drawbacks of monarchism, it must be content not to know its advantages either. But assuredly a great nation has the right and the duty to secure collections capable of educating the people, and giving to those who cannot travel in Europe an adequate idea of the marvels of ancient art.

It is obvious that a collection of casts is the best *succédané* of a gallery of ancient sculptors. We possess in Paris two collections of that kind. The first and oldest one is in the École des Beaux-Arts. It numbers about 3,000 casts, large and small, reproducing all the masterpieces of Greek and Roman art, including the sculptures of Olympia and Pergamos. The second one, recently founded, is in the Palace of the Trocadéro, built in 1878. There you find not only casts of ancient, mediæval, and modern sculptures, but of architectural fragments, such as the Gothic doorways of Chartres, Étampes, and other cathedrals, of mediæval tombs, bass-reliefs, altars, etc. The collection is set up in historical order, and, when completed, will afford a splendid illustration for the study of art from the days of Assos to those of Canova.

But casts can only reproduce the works of sculpture, architecture, and what the Germans call *Kleinkünste*. What of the paintings? Here, I will enter into some detail, because the article in the *Studio* proves to me that the exact state of things in France is not known in America. You know that since Louis XIV. we have had in Rome an Art Institute, the Villa Medici. Every year, a painter, having gained the *Prix de Rome*, which exempts him from military duty, is sent to Rome, where he remains three years. He is obliged, by the rule of the School, to send every year a painting to the French Government; the first year he must send a copy after some masterpiece of Italian art. By means of this clause, the French Government possesses a vast number of excellent copies after all the best paintings of old Italian masters.

Thiers, as you know, was a great art-fancier. During fifty years, he had copies painted, in water-color and on a reduced scale, after the best pictures in Rome, Florence, Dresden, etc. He thus contrived to collect about eighty copies, some of which (for instance, those of Raphael's Stanze) are real masterpieces. This collection has just been given by his sister-in-law, Mademoiselle Dosne, to the Louvre, where it forms a most welcome supplement to the collections of original paintings.

When Thiers, in 1871, became President of the Republic, he intrusted Charles Blanc with the direction of the Beaux-Arts, and ordered a *Musée de Copies* to be established in the Palais de l'Industrie. This collection immediately numbered about 200 paintings, belonging to the State and sent in former times by the young painters in Rome. Thiers, in his impatience to see the collection completed, sent a number of young painters to Holland, Italy, and Germany, in order to get copies of the principal pictures owned in those countries. Unfortunately, the painters, being over-hurried and not sufficiently controlled, did their work in a very indifferent manner; and when their pictures came to Paris, there was a general uproar against them. Other painters, who had begged to be sent to Italy or Holland, and who had not been chosen, naturally joined with the enemies of the new museum; and when Thiers was upset on May 24, 1873, a decree followed suppressing the Musée de Copies, and assigning its contents partly to the École des Beaux-Arts (which still possesses the best copies of Italian and Spanish paintings), partly to the provincial museums. Every one now regrets it bitterly, but it would be impossible to resume Thiers's plan, the paintings given to the provincial museums being now their definitive property. The gift of Thiers's personal collection of copies to the Louvre, in 1884, is a slight compensation for the loss of our Musée de Copies.

Now, observe that a good copy of an ancient painting is a comparatively common thing, since we have the means of insuring, by means of photography, the perfect accuracy of the outline. For a good copy for the provincial museums, after a large picture like Raphael's "Holy Family" (about two metres high and one broad), the Government pays 1,500 francs; and with 300,000 francs you could easily get 200 very good copies of the best pictures in the Louvre gallery. But all the museums in Europe together do not possess more than 300 masterpieces of great size, and a museum of copies containing 300 large pictures and 1,500 small ones would be the equivalent of the most splendid gallery in the world. The total cost would certainly not exceed 1,200,000 francs; that is, the price paid by the Museum of Berlin for a single picture of Albert Dürer's, purchased last year from Dürer's family in Nuremberg. Surely America is rich enough to spend 1,200,000 francs for a gallery of paintings, and 200,000 for a large collection of casts.

Such a scheme would certainly be supported by all the real amateurs and by all the young American painters, who would be glad to be sent to Europe in order to procure copies from the most celebrated paintings. The danger would be that they might work too quick and send bad copies; but this could be avoided by appointing in the different towns committees intrusted with the care of examining the copies before they should be sent off. Moreover, there are in Paris and in Italy hundreds of poor painters, especially ladies, who do nothing else but paint copies for the State and for churches; the Louvre is crowded with them. It would be very easy to get excellent copies from them, and they would give particular attention to their work, knowing that one good copy might induce America to order many others from them. This is my idea of the matter; photographs from pictures are a very dull thing, and nothing can give an adequate idea of a Murillo or of a Rubens except a good copy in natural size, or—as in the case of Thiers's collection—a copy in water-color reduced to a smaller scale.

Yours truly,

SALOMON REINACH.

PARIS, January 17, 1885.

[Mr. Reinach, in common with cultivated Europeans generally, is puzzled by the status of the fine arts in this country. We hear continually expressions of wonder why "the United States" does not undertake or purchase this, that, or the other thing, it being a rich and lavish country. It seems like kicking at an open door to say that "a great nation has the right and duty to secure collections capable of educating the people," etc., but the truth is that the United States, though in the ordinary sense of the term a great nation, is merely an immense corporation, whose business is managed by delegates who have no *right* or *duty* other than to administer certain of the affairs of the country as the people direct, and, if it were possible, honestly and economically; and the education of the people is a matter with which the national Government has nothing to do, all questions of that nature devolving on the State governments. And of the State governments, that of Massachusetts has been the only one sufficiently appreciative of the value of art education to make a State matter of it, though its attempt at education resulted in establishing the worst system of art instruction ever known (that of South Kensington) as a State system. This was far from encouraging; but, in fact, with our system of complete decentralization, we have even no central State authority capable of regulating and intelligently directing a primary art education. The most we could hope from the Federal Government would be to put the expenditures for the District of Columbia under intelligent control, while exactly the contrary takes place, and when Congress dabbles in the fine arts it is a veritable bull in a china-shop. It cannot even secure us a coinage which is, from the artistic side, respectable, so that the product of our mint is the worst in that respect in the civilized world. Even the Spanish-American States do better. As for the higher branches, a public body capable of encouraging art like that of Clark Mills, Vinnie Ream, etc., should be interdicted by constitutional provision from spending money for works of art.

The State governments are in one respect still more impotent. They have no common locality like Washington under their absolute control, or even charge, to which they can appropriate funds for educational or decorative purposes. They might unquestionably endow State art schools, which must be located somewhere; but the civic jealousies put this practically out of the question, and we are finally thrown back on the city governments. But to any city the expense of a great art institution, in addition to what the city finances already bear (between stealing and legitimate expenditure), is formidable, and in practice where anything has been done it has been by private contributions slightly aided by the municipal authorities. In this way the Boston Art Museum, a most admirable and useful institution, and by far the most complete in the United States, and the Metropolitan Museum of New York, have been organized. But the latter is not, properly speaking, an art but an archæological museum—its finances have been absorbed in the purchase of collections which have no art-educational value whatever. It has spent $276,000 for its collection of Dutch pictures and its Cypriote collections, which, whatever their archæological value, are utterly valueless as art. These acquisitions have strained the present benefaction of that part of the New York public which adheres to the present management, and have absorbed a sum about equal to that which Mr. Reinach mentions as the cost of the entire museum he recommends.

To secure for New York such a museum would be, no doubt, a most desirable thing, and in fact a plan to form one has been under discussion for some time by wealthy citizens, who are willing to contribute to its acquisition if it can be organized in entire independence of the present management of the Metropolitan Museum. We see by a résumé of the report of its Board of Trustees in the *Tribune*, that they contemplate providing their own building and making themselves independent of municipal restrictions. If this should be the case, the carrying out of the new plan becomes easily practicable, if, as would probably be the case, the corporation were willing to transfer the

present buildings to the Museum of Copies.—Ed. Nation.]

THE TRUE CAUSE OF THE HARD TIMES.

To the Editor of The Nation:

Sir: It is generally assumed that there is no limit to the extent to which income-producing wealth may be accumulated. This is indeed practically true so far as the accumulation of such wealth by an individual is concerned: but when the possible amount of accumulation of income-producing wealth by the whole world is considered, we find that the problem involves a new element, and that a limit to that amount really exists. The chief kind of income-producing wealth known to modern civilization consists of the machinery or instruments of production and transportation. In other words, the principal way in which men at the present day can so use capital that it will bring them annual returns is by employing it in the creation of such machinery and instruments—by building factories, railroads, steamboats, etc.

These things, however, are not valuable in themselves, but only as they produce or transport articles which are of value because there is a demand for them. If mankind should cease to care for the products of our factories, or for the goods transported by our railroads and steamboats, we could not expect to derive profits from these factories, railroads, or steamboats. If the whole world were like those parts of it where a tropical climate renders shelter and clothing almost superfluous, where food can be obtained without effort, and where the people, having the few necessaries of life almost given into their hands, feel little or no desire for anything more, what would be the possibility of income-producing wealth; what the opportunity for the profitable investment of money? If the people of such a world were desirous of acquiring income-producing wealth, of making profitable investments, they would certainly find it to be substantially impossible to do so. If, however, we imagine such a world to advance in civilization, if we imagine the wants of its inhabitants to increase and extend, we can see that opportunities for the profitable investment of capital would continually arise, and would be enlarged in proportion as the people increased their demand for and consumption of the products of labor. But it can never, in any condition of the world, be profitable to produce or to transport more than the people are at the time both able and willing to consume; and if it should ever happen that the rich people in the world, being mainly desirous of growing richer, were not *willing* to consume largely, and that the poor people, having but small wages, were not *able* to consume largely, there might arise a condition of affairs in which the aggregate investment of capital in the machinery and instruments of production and transportation would, temporarily at least, have grown out of and beyond its due proportion to the production and transportation that were at the time required or called for.

If, then, it is theoretically possible that there should be a condition of affairs in which the investment of capital with a view to the return of annual income to its owners should be overdone, the question arises whether such a condition has ever been actually experienced. To answer this question properly, it will be well to consider what would be the phenomena by which such a condition of affairs would naturally be accompanied, and then to inquire whether those phenomena have ever been observed as actually existing. We believe that, as the result of this inquiry, we shall learn that the phenomena which we should theoretically expect to find, correspond exactly to those which we have in fact observed in recent years.

In the first place, this period of over-investment might be expected to arise after a time of great prosperity, during which people had made large gains which they had not spent in meeting their daily wants, but had been able and willing to invest. As a matter of fact, we have had in recent years a world overflowing with products, in the enjoyment of which the poor could not largely join by reason of the smallness of their wages, while most of those who had any surplus of income beyond the amount needed to supply them with the mere necessaries of life, have been desirous of adding some portion, and many of them a large portion, of that income to their income-producing wealth. Consequently immense sums have in recent years been seeking for new fields of investment. The richer classes, in their desire to gain still greater wealth, have saved many millions out of their income to add to their investments, while, among the poorer classes, the well-to-do mechanics, shopkeepers, and others, in their desire to "lay up something against a rainy day," have diverted other millions from their every-day expenses to the field of investment. We may, therefore, safely conclude that the present time is one when, if ever, we might expect to find that the world had overdone the attempt to make profitable investments, and had created more of the instruments of production and distribution than there was any demand for.

Assuming, then, that recent years have been favorable to an over-investment of capital with a view to annual returns, let us next consider how such an over-investment, if actually existing, would manifest itself. It would seem that we might expect it to appear gradually that some of the favorite fields of investment had been overcrowded, that too many railroads had been built, that so many factories had been set in motion that more products were created than there was any demand for. Then, as the products accumulated in the warehouses, we might next expect to see the factories, in their competition to sell their products, reducing their selling prices till at last they would be ready to sell at or below the cost of production. Then there would naturally come a reduction of the wages of the workpeople, as the result of an attempt to reduce the cost of the products below the price at which they could be sold, or the factories might stop work altogether till their accumulated products could be disposed of. Then, as the wages of the workpeople were cut down or ceased altogether, there would arise distress among the laboring classes, and as the natural consequence of such distress, strikes and labor riots. At the same time that the poor were losing their wages, the rich would necessarily be losing their dividends from their factories, railroads, and other investments, and these causes would force all classes to economize, and thereby the consumption of the products of the factories and the work of the railroads, in the transportation of both passengers and freight, would be largely diminished, the business of the trader and mechanic would fall away, hotels, theatres, and places of amusement would languish. There would be an appearance of plenty in the markets, which would be filled with an abundance of the products of the field and of the factory; everybody would have something, either goods or labor, that he wished to sell, but comparatively few persons would be both able and willing to purchase. There would be a world full of factories lying idle, of railroads not paying their running expenses, of stores and warehouses standing empty, of banks overflowing with funds for which no investment could be found, and finally, and worst of all, there would be a world full of men and women, able and anxious to engage in useful labor, but forced to sit idle and starving in the midst of the abundance by which they were surrounded. Is not all this exactly what we have seen in recent years and are seeing to-day?

In conclusion, do not the observed facts all agree with the theory that the hard times have been caused by an excessive desire to acquire income-producing wealth, by overdoing the creation of the machinery and instruments of production and transportation? And does not this theory afford, what other theories have failed to do, a full and simple explanation of the causes of the distress from which the whole business world is suffering to-day? U. H. C.

Boston, February 16, 1885.

THE PHILADELPHIA PANACEA.

To the Editor of The Nation:

Sir: I enclose the following cutting from the Philadelphia *Press:*

SURE CURE FOR DULL TIMES.

To the Editor of The Press:

Sir: I often see articles in your paper with regard to the improvement in trade which will occur when trade starts up. Now, it seems to me that the only thing to start trade is increased demand; the only way to increase demand is by increased consumption; the only way to increase consumption is by increasing the wages, and the only way to increase the wages is by increasing the tariff. Add 20 per cent. to the present tariff, and before six months idle men will be hard to find. In our past history the depressions of 1837, 1847, and 1857 were all cured by increasing the tariff. If it cured then, why won't it now?

Yours truly, A Workman.

Norristown, Pa., February 16.

The *Press* is a tariff organ that rejoices in the attempts of Mr. R. P. Porter to instruct its readers in protective fallacies.

The above note would be pitiable and not to be regarded, did it not very fairly express the dominant idea of that great class whose vote exercises so powerful a control in our economic system.

I am yours truly, C. B. Newbold.

Philadelphia, February 19.

DEFECTIVE TRANSLATIONS.

To the Editor of The Nation:

Sir: It is with dismay that many a student now sees the character and trustworthiness of faithful friends assaulted. The charges thus far made, however, can hardly be repelled, nor do I attempt the defence of the "Bohn translations"; but is not the phrase a little too general? The "Bohn translations" were made by between fifty and a hundred different men, and the presence in the list of such names as William Hazlitt, George Long, and Charles Rann Kennedy, not to mention other well-known scholars, ought at least to save the series from wholesale condemnation, whatever faults may be found in many of the versions. The defects of the "Bohn translations" are not so much defects of that series as weaknesses common to that kind of literary work. Allow me to present a few examples which far surpass in ludicrousness any that have been culled from "Bohn."

Some time ago a French writer, in treating upon the religious condition of this country, made some observations upon "Bob" Ingersoll. Among other things it was remarked that he was *spirituel.* The Springfield *Republican* quoted the criticism, and gravely and ingenuously informed its readers that Bob Ingersoll was spiritual.

The translator of Amicis's work on Holland went to work with great boldness, which, unhappily, was not seconded by any acquaintance with Holland or by adequate knowledge of Italian. Amicis naturally has many references to the *cataratti* (sluicegates) that are so common. Now it would be a curious speculation to

imagine the impressions of the various readers of the English as they meet with constant remarks about the "cataracts" in Holland, until the climax is reached with the vast "cataracts" at the mouths of the Rhine.

In Daudet's 'Les Rois en Exil,' at the close of a meeting of the French Academy, many of the audience who have been led into day-dreaming by the speech of the "Noble Fitz-Roy" find, instead of imaginary carriages with footmen awaiting them, merely the rain pouring down amid "le fracas des omnibus et le carnavalesque bouquin des tramways." In the translation of this novel, published in Boston, the last phrase is rendered, "the carnival din of steam-cars." The general term "din" completely misses the realistic touch in "bouquin." "Steam-cars" is obviously an oversight, and not a misconception. In the same book "orgues de Barbarie" is translated "organs from Barbary." In 'Numa Roumestan,' at a resort of Southern Frenchmen, one of the southerners asks in his broad accent for some "lemonade," saying, "Garçon, dé gazeuse"; this the same translator ingeniously renders, "Waiter, a thimbleful of *gazeuse*." Earlier in 'Numa' occurs this passage: "Rochemaure, . . . élevé chez les Pères de l'Assomption, . . . et gardant de son éducation, des candeurs, des timidités de lévite en contraste avec sa royale Louis XIII., l'air à la fois d'un raffiné et d'un jocrisse." In this passage the Boston translator speaks of "a royal Louis XIII. air," while the translator of the Seaside Library edition paraphrases the lines thus: "Possesses a natural candor and timid levity which contrasted strangely with his Louis XIII. air."

But the following from the Boston translator is by far the most astonishing of my examples: Daudet refers to the Prince of Axel in 'Les Rois en Exil' as "cet esprit engourdi et lourd que les vins de France . . . n'étaient pas plus parvenues à mettre en branle que la fermentation de la vendange ne gonfle et n'enlève en aérostat un foudre pesant cerclé de fer." This is done into English as follows: "That heavy, torpid mind which the wines of France . . . succeeded in stirring no better than the fermentation of the vintage can swell and raise a heavy thunderbolt into a balloon!" The mistake here is at once so simple and so tremendous that it seems almost inexplicable. But I should mislead if I left the impression that these Boston translations of Daudet are poor; on the contrary, the work is done with vivacity, taste, and general accuracy, so far as I can judge. The general character of the work is so good that these slips are exceedingly surprising.

So much translation is done to earn a scanty living, and so much as a labor of love for no return, that we should be thankful for what we get, though we have to keep our eyes open; and we should not be too severe in our criticism, remembering that the most masterly translation in the language contains a number of curious errors, which have been pointed out by men probably far inferior to the translators in capacity.

E. G. Bourne.

New Haven, February 20.

PRIMITIVE COLOR PREFERENCES.

To the Editor of The Nation:

Sir: Mr. Garner, in his attempt to account for color preferences, or rather to controvert Mr. Sproull's theory, allows himself to be drawn into misstatement of one of the most important in the whole range of facts connected with this subject. Children and savages, whose æsthetic sensations are crude and uncultivated, like best brilliant colors, especially red, as do people whose tastes never go beyond the childish or barbaric state; but it is missing the point and pith of all cultivation to suppose that the preference for quieter and more harmonious colors depends in the least on "the dictates of fashion," and equally far from true that "whatever we most clearly and distinctly perceive will impress us most, and the pleasure or pain attendant upon our sensations will be proportionate to their distinctness of perception." If Mr. Garner knew anything of the higher forms of art, he would not have arrived at such a conclusion, for the work of every great colorist disproves it. Artists are, as a general thing, of all men least governed by fashion, and the higher the art of a painter, the more offensive to him are "loud" colors. Uncultivated, and therefore insensitive, taste enjoys the impression of decided and positive colors; but cultivation, while it weakens the hold of "fashion" and brings individuality of taste, makes the mind more susceptible to the impression of subdued and broken colors in harmony. If this were not so, all art would be impossible so far as color is concerned, and the analogy will hold good in all the elements of art. It is not fashion, but cultivation (*i. e.*, development of the powers of perception), which rejects the crude, and, going further, finds more beauty in the subtler and more refined qualities of color. In this respect fashion is antagonistic to taste, firstly, because the people who have the most taste are the least subject to the "dictates of fashion," and secondly, because true taste is conservative and does not like extreme changes, while fashion is dependent on them. Taste is individual, fashion gregarious, so that while people of taste form their own fashions, fashion forms people of no taste.

A leading French author—I think About—tried a most interesting experiment with one of his workmen, wishing to ascertain how far taste was a matter of habit. He had engaged to give him his dinner, and after some days, during which he had supplied him with the customary bottle of ordinary wine, he pretended to have run out of it and gave him a fine Bordeaux. At first the workman protested—he preferred the rough taste of the ordinary article; but when, after a few days of the Bordeaux, About went back to the original drink, the workman put it aside as undrinkable. Whether this be the case as a law in the preference of the palate, it is certainly true in the cultivation of the artistic perceptions and sensations.

No investigation of one branch of æsthetic impressions can be safely investigated separately—there must be one law for all; and the statement of this law must be the basis of more specialized investigations.—Yours truly,

W. J. Stillman.

New York, February 18.

Notes.

An edition of Bryant's poem, 'The Unknown Way,' illustrated; 'The Celestial Country'; and a little book of selections, called 'Friend to Friend,' are among the Easter announcements of E. P. Dutton & Co.

Mr. Edward Roth, Philadelphia, has issued the sixth part of his 'Complete Index to Littell's *Living Age*,' reaching the name of Henry Noad in the biographical division.

The second edition of 'Methods of Teaching and Studying History,' edited by Prof. G. Stanley Hall (Boston: Ginn, Heath & Co.), is in large measure a new work. Dr. Diesterweg's "Instruction in History" has been omitted, as having meantime been published separately; and the list of contributors now contains no foreign name except that of Professor Seeley. Among the fresh writers are Prof. Ephraim Emerton, on "The Practical Method in Higher Historical Instruction"; Dr. Richard T. Ely, on "Methods of Teaching Political Economy"; Mr. W. E. Foster, of the Providence Public Library, on "The Use of a Public Library in the Study of History"; and Mr. Joseph Thacher Clarke, with his "Plea for Archæological Instruction." As a book of reference, the value of this work still lies largely in the second portion, which contains not only Prof. W.F. Allen's bibliographical guide, but a bibliography of Church History, by the Rev. John Alonzo Fisher. We judge from the preface that the editor's expectation of making this the first volume of a "Pedagogical Library" is not likely to be realized. Attention should be called to an error in the last line on page viii, where "1844" stands for 1884.

A third volume has been added to Mr. Edward T. Mason's 'Personal Traits of British Authors' (Scribners). It includes Scott, Hogg, Campbell, Chalmers, Wilson, De Quincy, and Jeffrey. We have already sufficiently characterized this series.

The proposed changes in the requirements for admission to Harvard give a certain timeliness to Circular No. 7 of the Bureau of Education upon the teaching of physics in primary and secondary schools. Professor Charles K. Wead, of the University of Michigan, has here collated the replies of seventy-three instructors in answer to a circular letter of inquiry sent out by the Bureau, and has added a chapter upon the position which physics holds in primary and secondary education in France, Germany, and England. There is evidently a demand for uniformity in the college requirements in this matter.

The paper read some time since by Dr. Chas. W. Dabney, jr., before the Watauga Club of Raleigh, N. C., upon the necessity of establishing industrial schools in order to lead to the utilization of the State's remarkable timber resources, has attracted much attention, and greatly strengthened the memorial of this club, addressed to the State Legislature now in session, for the establishment of such a school. Dr. Dabney claims for North Carolina 120 of the 338 kinds of timber found in the United States, and declares that these include the best and finest of ornamental woods. Notwithstanding this, North Carolina is entirely wanting in any manufactories of wood of more than local importance.

The notable article in *Outing* for March is that descriptive of the new house of the Massachusetts Bicycle Club in Boston. A gymnasium is one of the features of this well-appointed establishment.

In a note on Dr. Rây's 'Cholera and its Treatment' (*Nation*, No. 1001) we remarked: "Chlorinated lime is distinctly not fit to disinfect choleraic discharges, as recommended. Such disinfection requires an acid, not an alkaline agent." We had in mind that such discharges retain their virulence longest in alkaline media. It is proper now to say that very recent experiments by Dr. Sternberg appear to demonstrate that, by virtue of the hypochlorite of lime contained in good commercial "chloride of lime," the latter becomes an effective germicide when applied in solution. If the cause of cholera is a bacillus, this old agent thus applied may destroy it. It remains true, however, that lime, although useful as an oxidizer, is presumably a not powerful disinfectant *per se*, that the chlorine emitted has no influence upon the cholera-cause, and that to scatter chloride of lime with the view of "purifying the air" is futile. Corrosive sublimate in solution is probably the cheapest and best disinfectant available.

The bringing over of emigrants in sailing vessels is so much a thing of the past that it is ten years since the last instance was recorded by the Deutsche Gesellschaft of this city. So we read in the 101st annual report of this useful society. It is also remarked that while the arrivals at the port of New York fell off about 20 per cent. in

1884, the proportion of Bohemians, Hungarians, and Russians increased some 40 per cent., forming about one-ninth of the total. A larger number than usual betook themselves to California, Dakota, Indiana, Kansas, and Texas. The new comers were so far from being paupers that they exchanged at Castle Garden alone $1,253,057 (a smaller sum than the year before); and the railroads annually sell at the same place from $3,000,000 to $4,000,000 worth of tickets.

A paper of a class which cannot be very numerous—the *Record*, organ (shall we say?) of the First Presbyterian Church, Morristown, N. J.—begins in its current monthly issue Part II. of a history of that Church, in instalments. The feature of this is a register of communicants, their wives, husbands, and children from 1742 to 1885—a considerable genealogical undertaking.

"School and Fireside" is the title of a little series of selections of modern French plays and novelettes just begun to be edited by M. Jules Lévy, whose monthly periodical *Le Français* we have so often had occasion to praise. Henry Meilhac's one-act comedy, "La Duchesse Martin," is chosen to lead off. M. Lévy's notes are calculated for almost any class of students. The publisher is Carl Schoenhof, Boston.

Two plays of Alfred de Musset's, "On ne badine pas avec l'amour" and "Fantasio," have been bound together in the Clarendon Press Series (Oxford). Mr. Walter Herries Pollock furnishes a sketch of Musset's life (which is defective in giving no account of the poet's father), introductions to both plays, and notes to the second. Mr. George Saintsbury contributes an essay on the progress of French comedy, which is much the best of the English matter.

One of the last labors of the late Paul Lacroix was to set in order the scattered articles and parts of articles by the late Édouard Fournier, relating to Molière, his life, works, and theatrical interpreters. This doubly posthumous collection, 'Études sur la vie et les œuvres de Molière,' has just been published, with a brief preface by M. Auguste Vitu, the dramatic critic of the *Figaro*. M. Vitu is as fervent a Molièrist as were MM. Fournier and Lacroix, but he is saner and more strict in his application of scientific methods. It is pleasant to see that he agrees with Mr. Andrew Lang in rejecting the noisome theory that Molière's wife was the daughter of Madeleine Béjart.

The *Revue Historique* for January prints, for the first time, the full text of the "Petition of the Protestants of France to Louis XIV." This famous document, hitherto only known from the analysis given in Benoît's 'History of the Edict of Nantes,' was from the pen of Claude, the leading Huguenot pastor. Written at a time when the persecution of the Reformed Church had become well-nigh intolerable and there were great fears that the revocation of the edict was imminent, it is, nevertheless, a calm, dignified, and respectful appeal to the King, setting forth the condition of his Protestant subjects in a simple but pathetic statement of facts. No reference is made to the principle of the irrevocability of the edict, though many of the leading Protestants were strenuous that this should be done. Claude maintained, however, that it was unwise to remind Louis that there were limits to his sovereign power. The petition was presented in January, 1685, and, it is hardly necessary to add, received no attention, even if it actually reached the King. As a faithful picture of the condition of the Huguenots at that time, the document has great value. It is printed from a copy preserved in the Archives Nationales, and is edited with numerous notes by M. F. Puaux.

H. Gaidoz, noticing, in *Polybiblion*, Mohr's bibliography of typographical centenaries ('Die Jubelfeste der Buchdruckerkunst und ihre Literatur,' Vienna, Jasper, 117 pp. 8vo), points out that among the twenty celebrations not one was held in France. Germany, Holland, Belgium, England, Switzerland, Italy, Austria, Sweden, Russia, have all had their festivals; France has done nothing. In fact, in the matter of early printing she has not very much to boast of. She has early-printed books—that is, as early as 1470—but the art was introduced by foreigners, and, what is peculiarly distasteful just now, the first Parisian printers, Gering, Franz, and Friburger, were Germans, and so were most of their early successors.

The *Athenæum* for February 7 prints an invitation to an international competition in automatic engraving, by a committee headed by Mr. W. Blades. Subjects in pen-and-ink, line-engraving, drawing in wash, and photography (of sculpture, landscape, and portrait), have been selected for treatment by all the "processes" alike, and can be obtained on application to J. S. Hodson, Hon. Secretary, at Gray's Inn Chambers, 20 High Holborn, W. C. The time seems rather limited, as the jury will award its prizes upon a private view in April next, when the inevitable public exhibition at South Kensington will follow.

Mr. John M. Cook, well known to most travellers in Egypt, has been employed by the Government in organizing the transportation service of the Nile expedition. In an address before the Royal Geographical Society, immediately after his return to England, he stated that on completing his special work he ascended the river as far as Dongola, and that "although he had been travelling on the Nile for sixteen years, he had not the most remote idea of the enormous difficulties to be encountered, or he should have hesitated running some of the risks he had to run if he had been able to foresee them." The Government survey, in anticipation of the expedition, though by competent naval officers, was made at high water, and consequently when the troops passed up there were four or five dangerous cataracts, between the second and third cataracts, which were not laid down on the maps. His boat, the only one besides the whalers which succeeded in getting from the lower Nile to Dongola, was but 24 feet long, 6 feet 6 inches beam, and drawing 20 inches of water, and yet "at five different points [in 74 miles] it required 170 men in addition to his own crew to pull it through the cataracts, and at one point 75 Dongolese had to be employed in addition." This was the principal reason of the delay in the concentration of the troops at Dongola.

The latest additions to the Tauchnitz collection are Mark Twain's 'Adventures of Huckleberry Finn' and Mr. F. Marion Crawford's 'An American Politician.'

Among the most recent numbers of the collection of foreign novelists published in Paris by Hachette & Cie., is 'La Passagère de l'Aroostook,' translated by Mme. Marie Dronsart from the English of Mr. W. D. Howells.

"Hugh Conway's" 'Dark Days' has now reached a circulation in England of nearly two hundred thousand copies—surpassing that of 'Called Back.' Mr. Lang's clever parody, 'Much Darker Days,' is nearing its twenty-fifth thousand.

Mr. Christern sends us the prospectus of an Atlas of China, with orographical and geologic maps on a scale of 1 : 750,000, to accompany Baron Richthofen's classic work (1877-1882) on that country (Berlin: Dietrich Reimer). The first part will deal with Northern China, the subject of Richthofen's second volume. The price will be twenty-four marks for twelve maps, constituting the first half of Part I. Fourteen will follow. The Atlas will finally include a general map of China on a scale of 1 : 3,000,000.

The news of Mrs. James Russell Lowell's death will be received with deep sympathy by all Mr. Lowell's friends in both hemispheres. The state of her health has, in fact, clouded nearly the whole period of his residence abroad. She had a desperate illness, lasting many months, while he was in Spain, and her recovery was never sufficiently complete to enable her to share the brilliant social activity which has marked his life in London. She was only able to be presented to the Queen at a private reception specially arranged for her. She was a woman of many gifts and much cultivation, and was probably the critic whom during the last twenty-five years he has in his literary work most heeded.

The late John Norton Pomeroy, LL.D., editor of the *Pacific Coast Law Reporter*, and the head of the Faculty of the Hastings Law School of San Francisco, in 1865 published 'An Introduction to Municipal Law,' and in 1868 followed this with another, 'An Introduction to Constitutional Law.' Both these books passed through several editions, and were adopted as text-books in a number of leading universities. In 1876 he published a treatise on 'Remedies and Remedial Rights,' under the reformed practice, which is regarded as of high authority. His greatest work, however, is 'Equity Jurisprudence,' in three large octavo volumes, published in San Francisco in 1881. Dr. Pomeroy contributed numerous articles to 'Johnson's Universal Cyclopædia,' and was for many years a valued contributor to the *Nation*.

Mr. John Fiske begins at Chickering Hall on March 3 a series of thirteen lectures on "The Story of the American Revolution." Few American lecturers are so well equipped as Mr. Fiske; fewer still, perhaps, have a greater natural gift for interesting an audience.

—We are able to recall no month whose magazines were so exclusively American in their themes as are those for March. From the article of Mr. John Fiske, in *Harper's*, which shows that it is only a question of time—and a short time, too—when the English race shall have crowded out of individual existence all other peoples of the earth, with the possible exception of the Russians and the Chinese, to the description, in the same magazine, of an obscure Virginian town, this national, or at least racial, pæan is almost uninterrupted. Besides the articles we have mentioned, *Harper's* has an interesting account of Jefferson's habits, founded on his financial diary, a slight but agreeable description of some new Washington houses, which are termed throughout the text, as well as in the title, "homes"—as though "home" connoted no other idea than that of the roof which shelters us—and, in "The Cape Ann Quarries," an example of the deadly-lively, hop-and-skip kind of article which, we supposed, was long since extinct, or else appeared only in "Lady's Books." Mr. John Bigelow, who wrote the *Harper* article on Jefferson, appears in the *Century* with recollections of Charles O'Conor, while the national glory is further propitiated by reminiscences of Webster. Those who are willing occasionally to exercise their thinking faculties in magazine-reading may find the best American article of the month to be that in the *Atlantic* on the historical position of the Supreme Court, to which the author has given the misleading title of "The Consolidation of the Colonies." Our industrial progress, especially that of the Southern States, is agreeably set forth in *Lippincott's*, in connection with the New Orleans Exhibition, by Mr. E. C. Bruce, whose successful papers on the Philadelphia Exhibition our readers may remember. The *Atlantic* has two biographical articles, each good in its way, the one a continuation of the series on Madame Mohl, the other a résumé, by Mrs. C. B. Martin, of a Russian account of the mo-

ther of Turgeneff, written by her adopted daughter. It is singularly interesting and pathetic, reading not unlike one of Turgeneff's stories, and exhibiting, incidentally or accidentally, the state of human wretchedness from which was derived his sad disposition as well as the pathos of his tales. To the three horses, in the shape of serial novels, which the *Atlantic* has been driving abreast, is added, in this number, a fourth; for a novel, and not, as one would infer from the title, a series of Autocrat papers, the "New Portfolio" turns out to be. Dr. Holmes drops a hint that it is to have a distinctly psychological or physiological motive.

— The fight of the *Monitor* and *Merrimac* was so notable an event in the general history of naval warfare as well as in our own civil war that romantic associations gather easily about it. The story is admirably told on both sides in the *Century* by men who had prominent places in the engagement, and with a directness and modesty beyond praise. Lieutenant Wood gives us, from the Confederate standpoint, the easy triumph over the "wooden walls" —the *Congress* and the *Cumberland*—on the first day, and the awakening on the next to the fact that they had a "very hard nut to crack" in the *Monitor*. He thinks the sheering off by the national vessel after Captain Worden was injured, was evidence of a willingness to quit, and relieves the retiring of the *Merrimac* to Norfolk from the charge of retreating. He throws quite new light on the subsequent destruction of the vessel, by a detailed statement of the reasons which led first to lightening her till her unprotected sides below the armor plating were exposed, and then to abandoning her, when the pilots, at whose instance she had been put out of condition to fight, now refused to take her up the James River within the Confederate lines. Commander Green, of the *Monitor*, tells first of the perilous voyage from New York to Fortress Monroe, in which officers and crew were nearly exhausted in the effort to preserve a vessel made only as a harbor battery, and wholly unsuited to weather a heavy sea. He then gives the dramatic scene of her arrival in Hampton Roads in the midst of the dismay caused by the terrible *Merrimac* on the first day, and the all-night labor of the ship's company in preparing her for action. Thus reduced almost to the point of exhaustion, they fought their ship through the whole morning, having decidedly the advantage till the pilot-house was shattered and the wounding and blinding of Worden made a short interval before Mr. Green could fully assume command, during which the ship moved out of action. Heading for her enemy again, the *Merrimac* was seen to be retiring, and a few parting shots were sent after her. A novel and interesting point is Mr. Green's description of the turret during the fight, and the confusing effect of the revolving of the turret upon its occupants, whose means of outlook were so small that it was very difficult to tell at what point to stop the revolution and fire the guns. General Colston's article, describing the scene from the shore and from a small boat, helps to make up a very complete interior and exterior picture of the fight. The illustrations, without an exception, afford real helps to the reader in understanding the narratives, and a wholesome stimulus to his imagination. The "Recollections of a Private" also strike us as fully up to the standard of former numbers.

—The illustrations of *Harper's* include a number of portraits of the Royal House of Orange which illustrate what seems to be the growing tendency of our school of wood-engraving in work of this class—to sacrifice all the qualities of form to an imitation of texture. This might be appropriate to the reproduction of paintings, but would even there only represent superficial qualities. The vital facts of form and structure are more and more lost sight of in the pursuit of the secondary qualities which do not belong to nature, but to the technique of art. The style of cutting which represents well enough the values and textures of an oil portrait, is even employed in reproducing a photograph, where it has not the least excuse. The leading portraits of the *Century* fall under this same censure. The rotten texture which may well enough be supposed to represent the impasto of a vigorous brush, has no relation to the subtle gradations of a photograph, and translates nothing. This kind of work for portraits is all wrong, and grows worse year by year. The illustrations of General Colston's article on the Sudan will, however, restore the equanimity of the believers in our school of wood-cutting. In the "Open-letter" department Mrs. Van Rensselaer takes to task Dr. Coan for his ideas of Courbet as an artist, in a reply which only shows that she has no better idea of the artist than she conceived Dr. Coan to have had. Courbet was a "prime mover" in no revolution in art—he was an innovator only as every man of intense individuality is an innovator; but the idea of classing him and Millet together as the "first champions of what we call—rather vaguely and incorrectly—'realism' in art," shows total ignorance not only of the history of French art, but of the true character of the art of both Millet and Courbet. These men had almost nothing in common—in the motive of their art absolutely nothing—nor can they be placed in the same category of painters.

—The *Art Journal* for March is not, so far as its illustrations go, an advance on past numbers, which it must be to be good. An elaborate article entitled "In Arden" is based on the assumption that the forest of Arden, the scene of "As You Like It," is an English forest of that name, for which there is absolutely no warrant. The play is French in its story, and nothing points to an English locality, and even the only allusion to England—"and there they live like the old Robin Hood of England"—is foreign in its drift. The most interesting contribution, from the literary point of view, is one on Fuseli, by Wilfrid Meynell, in which excellent use is made of a copy of that painter's literary works owned by Dante Rossetti, and inscribed by him with marginal comments on the ideas of Fuseli. An article on Defregger, by Beavington Atkinson, is one of the commonplace attempts at apotheosis of the commonplace in painting; and another, by Frederick Wedmore, on Chardin, shows that the highest claims to technical distinction of that long-neglected painter (who, by the way, was a favorite of J. F. Millet), have entirely escaped his commentator, who makes simply a piece of padding of material apparently sifted from French authorities, and uninformed by any personal knowledge of the painter's work. The *Magazine of Art* has an account of the Ansidei Raphael—which will, to the general world, be known as the highest-priced picture in the world; and padding articles on the studio of Mr. Holl, and on Nicolas Poussin. More interesting is "Early Sculptured Stones in England," though the exactness of observation of the writer is not made evident by his description of a "Saxon dandy taking a sitting shot with a cross-bow," when there is no suspicion of a cross-bow in the illustration, but a good Saxon bow and arrow. How Signora Villari comes to say, in her "Temple and Tomb," "we all know how Dion the historian, writing in 729 B. C., tells us that Agrippa perfected the Pantheon in that year," is not easy to see; but it is clear that the magazine wants editing. The *Studio* picks up Mr. Gosse's kind approbation of our architecture in the *Critic* with a surprising mildness of comment. We should have expected something more pungent than this: "Mr. Gosse's remarks do not show much of the critical faculty." The *Portfolio* opens with a notable etching of a Street in Rouen, with a glimpse of the cathedral, by Lalanne; and the third etching, of Landseer's "King Charles Spaniels," well known by the engraving, is accompanied by an interesting study on Landseer by F. G. Stephens.

—The celebration, last August, of the 250th anniversary of the incorporation of the town of Ipswich, Mass., has produced one of the best of the numerous records of such occasions, now multiplying yearly. The publishers (Little, Brown & Co.) and the press (John Wilson & Son) guarantee the beautiful appearance of the pamphlet before us, which is, moreover, illustrated in the best manner with interesting and even charming photographic views of the town, of its founder (John Winthrop, jr.), of the older houses, etc. Ipswich was settled under the best auspices and with peculiar selectness, and besides its associations with the Winthrop family it points to Mrs. Anne Bradstreet, the first New England poetess: the Rev. John Norton, author of the first Latin book published in America; the Rev. Nathaniel Ward, author of the Puritan classic 'The Simple Cobbler of Agawam'; Richard Saltonstall, author of what a descendant is inclined to think the first anti-slavery petition on record; Nathan Dane, the father of the Northwest Ordinance; and Rufus Choate. Mr. Blaine was also "claimed" as a townsman by one of the poets of the anniversary, on the strength of his having married a descendant of two of the families among the original colonists. "Mother Ipswich" loquitur:

> "And thou, O Desire of the Nation, loved from the sea to the sea,
> High above stain as a star, still upward thy pathway be!
> By thy blood of the stately Midland, by thy strength of the Northern Pine,
> By the sacred fire bright on thy hearthstone, I name thee, and claim thee mine."

By a curious coincidence, Mr. Blaine's letter to the committee is followed by one from Commissioner Dudley of the Pension Bureau, whose maternal grandfather was an inhabitant of Ipswich in the last century.

—Great men are no longer bred in Ipswich any more than in most other New England towns, but the civic virtues have remained, and public spirit has grown at a faster rate than the slowly ascending population. Here, as elsewhere, one sees a native of the place making his fortune at a distance and sending part of it back in the shape of an educational endowment. Thus the old Latin School, founded in 1651, becomes the prosperous Manning School of to-day. Ipswich has escaped the great transformation which manufactures and the consequent influx of a foreign element have caused in other Massachusetts towns. It is still rural and picturesque, and easily cherishes its abundant old-time legends. The historical address of the day, by the Rev. John C. Kimball, sets all this forth very pleasantly, and in a style, both thoughtful and literary, above the level of similar performances. Mr. Leverett Saltonstall was also among the speakers, and recalled the fact that at the 250th celebration of Governor Endicott's landing in Salem (in 1628), there were present descendants of the four settlers whom Endicott found on the spot, who still lived in Salem and bore the name of their ancestors; as well as descendants of Governor Winthrop and Sir Richard Saltonstall, whom Endicott received in Salem in 1630. This is a good example of the endurance of the Puritan stock. As for Puritan longevity, Mr. Saltonstall could tell of having heard the late Thomas H. Perkins say, thirty or forty years ago, that "in his youth he had seen an old man who had conversed with Peregrine White, the first child born in the Plymouth Colony."

—M. Clermont-Ganneau, who, when the sharper Shapira was trying to delude the British Museum

into buying his wonderfully early codex of Deuteronomy, routed the wily Jew horse and foot, while the learned expert employed by the Museum was still occupied in getting his batteries into position, has published a book of more than three hundred pages on 'Les Fraudes archéologiques en Palestine,' in which he gives an account of those which he has unmasked. It is very entertaining reading, for M. Clermont-Ganneau has a bright style, and there is plenty of material to deal with. For there are even more false than true inscriptions in the Holy Land—only seven authentic inscriptions earlier than the taking of Jerusalem by Titus (six of them discovered by M. Ganneau himself); but M. Ganneau enumerates and describes the false stele of the Temple, the false inscription of Selovân, the seal of King David, the sarcophagus of Samson, the lamp of Barcochebas, to say nothing of the Moabite potteries at Berlin, the manuscript of Deuteronomy that came near being at London, and various Phœnician monuments to be found in the museums at Vienna, London, and Paris. The pecuniary reward of forgery is so great when successful, that it would be too much to hope that we have seen the end of it; but M. Ganneau's book will put the public a little more on its guard, show them some of the methods of detection, hinder somewhat the falsification of history, and prevent Syrian epigraphy from being entirely discredited.

—The undated globe-map containing the name "America" recently discovered by Baron Nordenskiöld has been issued in facsimile by the American Geographical Society (Bulletin No. 4, 1884), together with a translation of the article upon it which the discoverer contributed to the Journal of the Swedish Society of Anthropology and Geography. The map consists of twelve gores adapted for pasting upon a four-inch globe, and was probably compiled at Ingolstadt. The Old World is the same as in the Sylvanus-Ptolemy map of 1511. The New World is conceived as it appears upon the globes of Schoner of 1515 and 1520. It lies close against Japan, with the bulky island of South America separated from the strip that does duty for North America, by that famous strait which would have abrogated the Clayton-Bulwer treaty by anticipation, had the early map-makers had their way. Inscriptions are few. The discovery of South America is assigned to 1497, but no discoverer is named. *Terra Cubæ* is placed north of Florida, while Cuba is blank. The Stobnicza map (1512) first made this mistake, placing *Isabella* on the mainland. Schoner muddled matters still more in 1520 by restoring *Isabella* to Cuba, but placing *Cuba* on the mainland. Münster in 1532 agrees in error with the new map. Against San Domingo we read: *Spagnolla ins—in qua reperit—lignū guaiac—*.

—The first dated representations of the New World bearing the name "America" were the globe of Schoner and the map of Apianus in 1520. Prior to those, out of some forty maps and globes, "America" is found upon the following only, which are undated: The two Hauslab globes (1509?, 1513?); the Tross globe-map (1514?); the "Da Vinci" sketch (1513-14?, 1515-16?); the two Schoner globes (1515). Does the new map belong in this list? Baron Nordenskiöld thinks that it is "one of the very oldest maps where the name 'America' is to be found." Dr. Wieser, noting that the *Spagnolla* inscription is found on Apianus's map of 1520 and not elsewhere, assigns the new map to that geographer, and places it later than 1527. Against the latter view militates the fact that the delineation is quite different from that of Apianus. On the other hand, the medicinal properties of guaiacum wood (the lignum-vitæ of commerce) were first enlarged upon in Germany about 1517-1519. As this map-maker probably had a Spanish correspondent, the fame of the new drug may, however, have reached him by that channel. The termination of South America in a point about 45° S. lat. has no chronological significance. The most that can be said is, that the Nordenskiöld map was made up from the Sylvanus-Ptolemy map of 1511, and the 1515 globe of Schoner, or a like work, with some changes, good and bad (*e. g.*, Yucatan is a peninsula; Cuba has an inch-worm shape, quite *sui generis*). It may be safely assigned to the period 1515-1518; it may, with equal safety, be remanded to the second quarter of the century, as it is not a whit cruder than the map perpetrated by Münster in 1532. The names are printed with registered type. The first specimen of this practice is in the Sylvanus-Ptolemy map of 1511.

—We have been informed that Mr. Woodrow Wilson, whose 'Congressional Government' we lately reviewed, has accepted the Chair of History in the Bryn Mawr College for Women. Mr. Wilson, our readers may be pleased to hear, is a product of the new South, a nephew of the Rev. Dr. Woodrow of whom we have recently made frequent mention, a graduate of Princeton (class of '79), and an alumnus (not a graduate) of the Law School of the University of Virginia. While yet an undergraduate he contributed to the *International Review* in 1879 an article of considerable thoughtfulness on "Cabinet Government in the United States," which was followed by the article in the *Overland Monthly* for January, 1884, to which reference was made in our review. These were the precursors of the recently published book, but, in addition to these, Mr. Wilson has made occasional contributions to the newspapers and to college magazines. While attending the Law School of the University of Virginia he was elected editor of the Magazine, and wrote for it two articles, one on John Bright and the other on Gladstone, which established at once for him a high reputation at that institution, and came very near securing its most coveted prize—the Magazine medal. Subsequently, while engaged in the practice of his profession in Atlanta, Georgia, he furnished to the *Evening Post* several very valuable letters on Southern topics. He has now been for two sessions at Johns Hopkins, pursuing a course of History and Political Science. We understand that in Washington his book is being eagerly read by Congressmen, and that its study is generally urged by instructors upon their pupils.

—One of the prettiest stories in the 'Arabian Nights' is that in which the Fairy Maimouna and the Afrite Danhash dispute about the comparative beauty of their two protégés, Prince Camaralzaman and the Princess Badoura. The doubt is settled by bringing them together asleep, and alternately waking each to see which will be most inflamed with love at the sight of the other. Madame Y must have thought that she had been subjected to some such test when, on arriving home from a long, solitary railway journey, during which she had slept all night, her husband inquired with indignation how it was that one of her boots was a man's. She could give no explanation, and the end of a lively quarrel was an action for divorce on the part of the suspicious husband. At the very same time Monsieur X was vainly trying to get his wife to believe the story by which he attempted to excuse the presence on his right foot of a lady's boot, on his return from a night trip on the same railway. He asseverated in vain that on boarding the train from a way station he had been shown into a coupé occupied by a solitary lady asleep; that as his boots were painfully tight he had drawn them off and had gone to sleep himself; that on waking he found himself near his journey's end, hurriedly hunted up his boots, and put them on as best he could, but that he found it almost impossible to pull on the right one; that, although he succeeded and jumped out of the carriage, leaving the lady asleep, he found it impossible to make a single step with his right foot and had to ride home. His wife pooh-poohed the story, and another suit for divorce was the consequence. Luckily both plaintiffs applied to the same lawyer, who was honest enough to set the whole matter in its right light. The two couples were reconciled, and are going to live happily ever after.

—Dr. Hans Meyer, a son of the publisher of Meyer's 'Conversations-Lexikon,' has just published through his father's firm (Leipzig: Bibliographisches Institut; New York: Westermann) an attractive book, 'Eine Weltreise: Plaudereien aus einer zweijährigen Weltumsegelung 1881-1883.' The book seems to come up to Lady Montagu's standard for a book of travels, recently quoted in the *Nation*, giving "true intelligence from distant countries," as the author is one of "those who have passed [time in] them without a design of publishing their remarks." It is mainly a reprint of the author's letters to his family and friends, is privately printed but not published, and has all the charm of such communications, coming from an enthusiastic young man well equipped for observation and scientific research, and of a literary turn of mind. Starting by way of Vienna, down the Danube, our author stopped at Constantinople and Athens, passed through Syria and Egypt, touched Bombay, Ceylon, Java, Manila, and travelled extensively in the Philippine Islands to many places not hitherto trodden by the foot of Europeans. From the seaports of China and Japan he went to San Francisco, Mexico, Cuba; and, after visiting the East and West of the United States, sailed from New York to Bremen. The book is well written and handsomely illustrated by cuts from photographs taken by the author, and is altogether well worth reading. The obligatory remarks on things American are not, of course, wanting, nor is the characterization of the American lady, which is far from flattering; echoing, probably, the commonplace notions of some German friend. An amusing mistake (p. 476) may be noticed. Doctor Meyer describes how he loved to sit on one of the benches on Union Square opposite the Lincoln monument, musing over the famous inscription around its base: "With malice [toward none, with charity] for all." It so happened that the portion in brackets alone struck his eye, and, being short-sighted, he misread "toward" for "forward." Intent on giving the sentence "Forward none with charity" a meaning whether or no, and thereby making the excuse of a typographical error impossible, he translates it into German: "Help nobody along for charity's sake"—which, if a meaning it must have, is not so bad after all for "Old Abe."

—In the death of Peter Christian Asbjörnsen, which occurred on the 6th of January, at his home in Christiania, Norwegian literature has suffered a severe loss. He was born in that city on January 15, 1812, the son of a glazier, in narrow circumstances, who, however, appreciated his bright and gifted lad, and encouraged him to struggle to secure an education. Asbjörnsen succeeded in reaching the University of Norway in 1833, but was forced to leave, before taking a degree, to go up into the country as a private tutor, in order to replenish his slender purse. In 1837, however, he resumed his attendance, and, studying medicine, passed the so-called philological-philosophical examination. But it was more to his liking to study natural history, especially zoölogy, which science he taught to medical stu-

dents and also to classes in various schools. While thus engaged he published a 'Natural History for the Young,' so attractively written that it is supposed to have been influential in inciting to this study many of the most promising members of the present corps of Norwegian naturalists. He had delighted, even in his earliest manhood, and in his student days, in long foot-rambles through the forest regions, or up the mountain sides of his native country; and it was upon these journeys that he made the first accumulations of those "Norwegian Folk and Fairy Tales" which have made his name a familiar one in every civilized country, and which, as H. Gaidoz points out in the last number of *Mélusine*, have been translated into almost every cultivated language of Europe except the French. In 1842-43 he published his first series of stories; his friend the late Bishop Moe contributing to the volume the collection of similar stories made by him. It was the second edition of this work which Sir George Webbe Dasent printed under the title of 'Popular Tales from the Norse,' putting his own name upon the title-page, and nowhere in the book naming or referring to the real authors. From 1846 to 1853 Asbjörnsen's active labors were in the cause of science. It was during these years that he made various excursions to different parts of the coast of Norway, at the instance of the University, which paid him a stipend from its treasury; and his work was not without important results and valuable discoveries, especially in deep-sea life, in which field he was a pioneer explorer. But even while thus engaged he did not neglect any opportunity to gather from the lips of the country folk their beautiful stories; and many an excursion was undertaken solely for the purpose of adding to his collection. His delightful manner made him peculiarly successful in extracting from the shy peasants and boatmen their memorized tales, and he was aided greatly by his own power to tell a good story. His frequent journeys in different parts of Norway had given Asbjörnsen unusual opportunities to become impressed with the importance to his country of its great forest areas, and he was quick to see the need for systematized methods to prevent needless destruction and waste, and to encourage the cultivation of forest growths. His intelligent efforts to awaken interest in this direction were quickly recognized by the Norwegian Government, which twice sent him abroad, first to study the practical methods of forest culture in use in Germany and Austria, and second, to observe the methods employed in the preparation of turf for fuel in Denmark, Holland, and Hanover; and from 1856 to 1876 he was the active and responsible servant of the State in conducting the investigations and carrying out the measures instituted for the development and better utilization of forest products. In the latter year delicate health obliged him to tender his resignation, upon accepting which the Government allowed him a yearly pension of 800 crowns.

—The value of Asbjörnsen's work to Norwegian literature can hardly be overestimated. He uncovered the rich mine which has supplied the material so well used by the modern school of Norwegian writers, best known by its two great representatives Ibsen and Björnson. The latter has indeed said, when, as spokesman of the students' association, he addressed Asbjörnsen upon the occasion of his fifty-eighth birthday celebration: "Little should I have become, in truth, had you not existed." The effect of the publication of the several series of folk tales upon the literary language of Norway has still to be fully acknowledged, but it was great. It is as yet, perhaps, better appreciated by the philologist than by the mere man of letters. Professor Storm, in an elaborate article upon the present language movement in Norway, has said: "The real reformer who has brought the genuine, full-toned Norwegian style into the language of our literature, is the great story-teller Asbjörnsen. His whole tone is so truly that of the Norse people, and yet so pithy and natural, that every soundly constructed Norseman feels himself conquered and won by it. Ostensibly the form is Danish, but yet the whole, the *ensemble*, is genuine Norse." But the object nearest to Asbjörnsen's heart was the betterment of the condition of the common people of his native land, and the activity of his interest is evinced by the long list of distinct works and periodical contributions which he wrote, and in which he attempted to instruct his countrymen in the affairs of their daily life. How to care for their forests; how to plant their fruit trees; how best to cure their hay; how to prepare their turf for fuel; how to utilize their spare time in profitable wood-carving; how to cook their food sensibly—nothing was unimportant to the great-hearted philanthropist. Throughout the length and breadth of Norway his genial presence will be missed and his loss lamented.

—If we are not mistaken, there are now in the world an unusual number of still active and conspicuous scholars who have passed their eightieth year. The historians Bancroft and Ranke will occur to every reader. Hardly less known, at least to students of classical antiquity, is the Danish philologian and statesman, J. N. Madvig, who was born in 1804 and began to teach at the University of Copenhagen almost sixty years ago, in 1826. For several years now he has been almost entirely blind, and yet his labors continue. Three years ago (No. 868) we noticed the first volume of his new work on the Roman Constitution. That work is now complete, and an English translation of it has been, we understand, for some time in preparation. A sort of sequel to it has recently appeared in the shape of a third volume of the author's 'Adversaria Critica,' giving those corrections of Latin texts which occurred to him during the final revision of his constitutional studies. And within the past year have appeared almost simultaneously in French and in German new editions of his 'Greek Syntax.' This work, at the time of its first appearance—the preface of the first German edition is dated August, 1846—probably marked a greater advance at a single step than any other book of this century upon the same subject. The new edition shows changes mainly in detail: it was hardly to be expected of the author of such a system that he should deal roughly with it. German critics carp somewhat at small peculiarities in Madvig's use of German, but, none the less, his statements in German are marvellously clear. He must be a remarkable Hellenist who can learn nothing from the book. The new preface for the German edition gives expression, on the whole not very ungraciously, to the feeling that his work has been more used than praised in Germany, and perhaps even less used than it should have been. We are somewhat sceptical about the jealousy with which German scholars are often supposed to regard their brethren from the smaller neighboring states; but Madvig is not alone in his suspicion. Those who remember the old preface to the 'Greek Syntax' will regret not to find it reprinted in the new edition.

TAINE'S 'GOUVERNEMENT RÉVOLUTIONNAIRE.'

Les Origines de la France Contemporaine. Par H. Taine de l'Académie Française. La Révolution. Tome III.: Le Gouvernement Révolutionnaire. Paris: Hachette. New York: F. W. Christern. 1885.

TAINE'S 'Origines de la France Contemporaine' is sure to interest, and is equally certain not to satisfy, judicious readers. The importance of his work and the incompleteness of his theories need to be pressed with equal emphasis on the reading public. The importance of this elaborate treatise on the Revolution hardly admits of exaggeration. Taine's book, taken as a whole, is as thoroughgoing a piece of literary workmanship as human industry has ever produced. It is a repertory of facts which, by the mere force of cumulative evidence, not only smashes to pieces the wild exaggerations of the Revolutionary legend, but also irreparably damages the more sober but highly imaginative theory of the Revolution which was invented by the genius of Carlyle, and was spread far and wide throughout the English-speaking world by one of the most popular of the novels of Dickens. In the truth of the great dramatic work which the Scotch moralist put forward as at once a picture and a theory of the Revolution, no man who has read Taine with care can any longer seriously believe. Still less can any student of 'Le Gouvernement Révolutionnaire' look upon the 'Tale of Two Cities,' which is nothing more than a popular rendering of Carlyle's work, as a tale founded upon fact. The plain truth is, that Taine, who is neither an original thinker nor a powerful writer, has, by the mere strength of evidence, irreparably discredited the views of men who in intellect, and still more in imagination, are immeasurably his superiors.

We do not for a moment hold that Taine has spoken the last word, or anything like the last word, about the extraordinary epoch which he criticises. But we are absolutely convinced that he has spoken a word in season which must command the attention of every man of sense and honesty. Those of us who draw their ideas of the Revolutionary era directly or indirectly from Carlyle, will not find it necessary to accept all Taine's conclusions. Such men may even maintain (and with considerable plausibility) that Taine's pages give new proof of Carlyle's poetical insight into individual character. The chapter on Marat, Danton, and Robespierre, for example, contains very little but anecdotes which confirm the truth of the picture drawn by Carlyle of these Revolutionary leaders. But the moment you have mastered Taine, you feel that the Carlylean view of the Revolution, and still more the popular impressions derived from that view, must be revised. To see that this is so, one has little to do but to take the ideas which prevail among Englishmen as to the nature of the Revolution—notions not, perhaps, distinctly held by Carlyle himself, but nevertheless fostered by his teachings—and observe how ill they bear the tests of fact to which they and the like theories are submitted by Taine.

The assumption which lies at the foundation of the Revolutionary romance, whatever be the form or modifications of the legend, is that great crimes can only be committed by great criminals; that the Terrorists, though they must excite horror, yet must also command the respect or admiration due to men of colossal mould who, even in their errors, sin greatly. Now the first point proved by Taine, or rather by the evidence which he adduces, is, that meanness, cupidity, incompetence were the distinguishing marks of the Jacobin crew. Of their three leading men, Danton was the only one who possessed a claim to intellectual power. Their ideas were the worst notions of the *ancien régime*, pushed to an exaggeration to which they had never been carried by any King or minister. Oddly enough, the cruelty of the Revolutionists has saved their character for statesmanship. The horrors of the Reign of Terror—though, if Taine is not grossly mistaken in his figures, even these horrors are in modern days much underrated—have diverted attention from the meanness and incompetence

of the Terrorists. Of their moral meanness, Taine gives conclusive proofs, resting on a mass of details which, unfortunately, space prevents us from laying before our readers. The members of the dreaded Convention, the leaders of the Mountain itself, the men who sat in the committees of public safety, were themselves subject to the abject fear which they inspired in others. The surest evidence of this is the ease with which one section of Revolutionists after another forsook their leaders. The men who believed in Danton, in Hébert, and in Robespierre no sooner found that their hero was in peril than they betrayed and turned upon him. Cowardice does not necessarily imply corruption, but the Revolutionists of France appear in Taine's picture as corrupt as they were brutal and cowardly. We have read again and again the third chapter of Taine's third book, and, admitting as a candid critic must do, that Taine's attitude is rather that of an advocate than a judge, we are unable to deny that he in the main proves his charge that the Revolutionary administrators were influenced at least as much by greed as by ferocity. We would ask any reader who doubts this to read pp. 280-320, and especially the astounding account given at pp. 317-319 of the way in which one Parisian Revolutionary committee contrived to make (for the private gain, it would seem, of its members) somewhere about $30,000 a year out of a body of well-to-do prisoners, who were kept alive that they might be plundered. It is absolutely impossible to give the real force of Taine's evidence when one cannot produce the hundreds of details by which he carries conviction to all who will carefully study his pages. And we must ask our readers to take to a certain extent on trust the assertion that Taine does fully establish his accusation of corruption—not, of course, against every Revolutionist, but against an immense body of Jacobin officials and administrators.

True, men may be both cruel and corrupt, and yet not precisely mean. Nevertheless, the fact which the whole annals of the Revolution make abundantly clear is, that inhuman cruelty was, in the case of the Jacobins, constantly combined with even more astonishing abjectness. Macaulay pointed out years ago the incredible meanness of Barère; and persons who have not reflected on the demoralizing effect of revolutions, might well feel it almost past belief that one who had played a leading part in history, who had shared the Dictatorship of France, could sink into the meanest of detectives. Yet, though Barère was perhaps the most abject of a servile horde, a little knowledge of the history of the Terrorists shows that he was not so unlike his associates. Man after man among the Jacobins became the instrument of Napoleonic tyranny, and Taine gives instances of persons who had held the highest posts showing themselves willing, after a fall from power, to discharge the lowest of administrative functions. But "the great Terrorists," it will be said, "were men of a different stamp." Who can guarantee the truth of this assertion? Everything we know looks the other way. It was a mere chance who were to be the victors and who the victims in the life-and-death struggle between Robespierre and his opponents. There is not the least reason to suppose that the Jacobins who survived were essentially different from their companions who perished. Barère, David, and Fouché were, when Jacobinism was in vogue, thought stern patriots, yet they and hundreds more showed no repugnance to accept imperial honors, bribes, or charity. Victor Hugo's celebrated picture of the aged member of the Convention on his death-bed may possibly have been drawn from life. It were too grave a charge against human nature to believe that the Convention nurtured in its body nothing heroic. But one can confidently assert that it was a school not of Spartan virtue but of Greek suppleness. The aged representative of Republican virtue must, from the very fact of his having survived, have been forced to say with Sieyès, "J'ai vécu"; and no public man survived the rule of Robespierre who had not lived as a slave.

A second assumption of the Revolutionary legend, and one to which Carlyle has given the full weight of his authority, is that the reign of the Jacobins was at any rate the reign of men who, under the inspiration of passion, knew how to rule. The Terrorists might be devil-sent leaders, but yet, somehow or other, they were, it is supposed, true leaders of France. Now the slightest reflection shows that to the claim of violence to pass for strength there are patent objections. If the Reign of Terror saved France at all, it saved France at the cost of engendering a hatred of Republicanism fatal to the policy of fanatics who wished to found a Republic. The name not only of Danton but of every Republican leader was branded with infamy, and France was not made free. The broad fact, that the French somehow or other came out victorious in the contest with allied Europe—a fact to which, it must frankly be admitted, Taine does not give half the weight which it deserves—has so impressed popular imagination, that the world finds it difficult to believe that audacity and ill-doing were not in some way equivalent to statesmanlike sagacity. But Taine gives the gravest reason for doubting whether France did not triumph rather in spite of than through the violence of the Jacobins. That the men who composed the Jacobin faction were grossly ignorant, is past a doubt; and if we judge of the statesmanship of the party by the ordinary tests of political foresight, we shall be greatly tempted to believe that the criminality of a government gives no security against its incapacity.

To one point in Taine's criticism the attention of all intelligent students should be carefully directed. He examines with infinite care the economics of Jacobinism. The whole sect might have adopted as their motto a dictum of an English workingman, which some twenty years ago used to be cited as a proof of popular ignorance. "If political economy," said this intelligent artisan, "was against the workingmen, the workingmen would set themselves against political economy." Now, this is precisely the course pursued by the political zealots who decreed the *maximum*, and who attempted to keep Paris alive by robbing the country districts of food. If Taine is to be believed, the principles of political economy showed themselves as little complaisant toward the Jacobins as toward any other fanatics. The sum of his detailed investigation is, that the rural districts were plundered and that Paris was starved. Nor was this, according to our author, the effect of war or of bad seasons. Nature was kinder to France than its rulers; the harvest was plentiful, but the spirit even of the laborers was so broken that, for perhaps the only time in French history, French peasants refused to cultivate their land. Four strokes of good fortune—namely, the softness of the winter, the arrival of a corn fleet from America, the victories of the armies in Europe, and lastly the fall of Robespierre—saved France from destruction in 1794.

Another feature which marks all the current representations of the Revolution is the practical obliteration from the picture of the Directorial period. The opening scenes of the great Revolutionary drama, the tragedies of the Reign of Terror, the heroism of the volunteers, the triumphs of Napoleon, are all remembered; but the six years of the Directory have all but passed out of recollection. Their dreariness and their meanness have secured to them oblivion; yet no one can understand the Revolution who does not study the years which elapsed between the death of Robespierre and the commencement of the Consulate. It is one of the greatest of Taine's merits to have brought this forgotten era of bloodshed, fraud, and incapacity into view. The Terror did not end with Robespierre, it never came to a close till Napoleon's *coup d'état* put an end to the last vestiges of the Convention. Taine's pages make two features of this period so clearly visible that they can hardly ever again be overlooked. The first is, that the Convention retained by fraud and violence an authority which, if the voice of France could have been heard, would have been summarily abolished. The second is, that the voice of the French nation never, if Taine is right, was heard till a burst of applause hailed a military Dictatorship which at any rate restored a civilized form of government. Once and again the nation made an effort to enforce its will; one stroke of violence after another taught the whole people that, if Robespierre was dead, a clique as unscrupulous as, and rather meaner than, Robespierre and his followers were determined to keep power, whether by or against the will of France. The Directory was a continuation of Jacobin rule, and, according to Taine's view, the country took each year less and less part in public affairs, while the Government kept itself alive by a series of *coups d'état*, and by playing off the Jacobin mob against the Moderates. Whether this view of the time of the Directory is entirely correct, may admit of doubt. But the importance of the fact that contemporaries saw nothing of that break between the rule of Robespierre and the rule of the Directors which exists in the minds of modern readers, is, we take it, certain and of primary importance. It is worth noting that Burke's 'Regicide Peace' was written three or four years after the fall of Robespierre.

Taine's view of the Directory falls in with and strikingly confirms his general theory, which is, that the rule of the Jacobins was the rule of all that was basest and worst in the French nation. The Revolutionary storm came upon a country where despotism had deprived men of all experience and of all capacity in the art of government. The weakness of the King, the universal unpopularity of the existing régime, the prevalence of theories which were at bottom revolutionary, and other causes, destroyed the royal power. At last a few fanatics gathered round themselves all that was violent and vile in the nation. The very dregs of society were stirred and rose to the surface. This, as we understand it, is Taine's view of the Revolution. That it contains an element of neglected truth is certain; but a writer may tell you what is true and yet not perceive, and therefore not tell, the whole truth of the matter which he has in hand. In a future article we shall give our reasons for refusing to feel that Taine's work contains the final solution of the problem presented by the Revolution.

CHRISTIANITY IN INDIA.

Life and Work in Benares and Kumaon: 1839-1877. By James Kennedy, M.A. Cassel & Co. 1884.

CHRISTIAN bishops, even army chaplains, had, as is well known, a hard battle to fight before they could establish a lodgment in the Indian possessions of the Honorable East India Company. The Court of Directors, and not less the officials who governed in their name in India, were profoundly convinced that their Hindu and Moslem subjects would endure all things except the appearance among them of a duly ordained Christian minister. An invasion of the clerical order was an invasion which even those who had known what it was to be invaded by Tamerlane, Mahmud of Ghuzni, Nadir Shah, Portuguese,

Frenchmen, and, last but not least, the Honorable East India Company itself, could not be expected to endure without resistance. That, so it was said, would be the last feather on the camel's back—the spark that would cause an explosion of fanaticism more than sufficient to sweep the English out of the Peninsula. But the Government was not content with the simple exclusion from India of the clergy of all denominations. So careful were the officials of those early days not to offend the supposed susceptibilities of the native population, that they abstained from the public profession of any creed. English officials assisted at the celebration of Hindu and Moslem religious ceremonies; they carefully administered the endowments of temple and mosque; they even kept the account of the amount of oil consumed on the shrines of Hindu divinities; but they abstained with exemplary prudence from engaging in any religious rite on their own account. When an English army took the field it was unaccompanied by ministers of religion; and the ordinary substitute for religious worship on Sundays was to read the Articles of War to each regiment assembled for that purpose. It was a common belief among the natives, in those early days of British ascendency, that the English were an abnormal race of people, having no religion or spiritual beliefs of any kind. At last, by the direct action of Parliament, the Court of Directors was constrained to make public confession of its Christianity, and provide an ecclesiastical establishment for the English soldiers employed in its service. That being accomplished, it became impossible to exclude the missionaries.

But the English officials were very far from reconciling themselves to what they could not prevent, and for thirty years the missionaries had to strive against opposition and difficulties which more than account for the scanty progress they made. A native who had the courage to become a Christian was treated by the (Christian) Government of India as if he had committed a crime of the first magnitude. The Hindu or the Moslem law, according to the creed which he had previously professed, was allowed to be set in operation in order to strip him of whatever property or social position he was born to. At the same time to the English officials, the givers of all good things in India, a native could bring with him no such damnatory fact as the profession of Christianity. Although it was known to all English officials that it was not possible, under the laws as they stood, for any native to become a Christian except at the cost of very heavy sacrifices, it was customary to assert that conversions were caused by the promptings of a sordid self-interest. A native Christian was, in fact, a word of reproach; and native Christians were systematically slighted and spoken ill of by English Christians. The insurrection of 1857—so fruitful of change in a thousand other ways—put an end also to this harsh opinion of native Christians, which never had been anything but an ignorant and irrational prejudice. The English residents saw with surprise that wherever there was a community of native Christians, there also was a community loyal to the English rule. The native Christians not merely aided the English to the utmost of their ability, but there were not a few among them who endured martyrdom rather than apostatize from the faith for which they had already endured so much. Facts such as these could but bring about a change in the feeling with which missionary enterprise was regarded, and, at the present time, there are few thoughtful Englishmen in India who would care to deny that a good missionary is a very powerful friend and ally of the British Government. His value is not to be measured by his success in the work of conversion, but by the fact that he and his fellow-workers are the only Europeans who go to India, and who stay there, to *give* something to the people, and not merely to make a living out of them. The natives may not value the gift which the missionaries offer, but they see that, at any rate, they ask nothing from them. They are neither officials, tea-planters, indigo-planters, merchants, lawyers, nor judges. Their labors, so far as the natives are concerned, are altogether disinterested; and as one consequence of this unique position, a missionary who has mastered the native languages is, perhaps, the one Englishman in India who knows something of the people as they really are. In the presence of all other Englishmen they wear a mask.

The book under notice is an account by Mr. James Kennedy of his labors as a missionary, extending over a period of thirty-six years—at first in Benares, the religious capital of Hinduism, and latterly in the hill district of Kumaon. It is written in a lively, unaffected style, which carries the reader easily along; and the accounts of the religious life of the Hindus, the temples and bathing ghâts of Benares, and the great religious fairs at Allahabad, put the people and their surroundings very clearly before us. The author is too thoroughly a "Britisher"—too absolutely confident, that is, that everything British must be immeasurably superior to all things that are not British—to possess the insight of sympathy for the character of those among whom his life was passed; but this deficiency is not without instruction as indicating, perhaps, the most formidable hindrance to the Christianizing of British India.

The fact commonly pleaded to account for the little progress made by the various Christian missions in India is the immobility of the Asiatic character. But as regards the religious history of India this does not happen to be a fact. That continent has been the theatre of a succession of religious revolutions of the widest and most drastic character. Buddhism established itself on the ruins of Brahminism; then Brahminism recovered its ascendency, while Islamism continues even at this date to gather in an abundant harvest from among the lower castes of Southern India, and also in Eastern Bengal. Immobility as regards its religious convictions is the very last attribute that can be ascribed to the people of India; and if Christianity makes slower progress among them than did Islamism, the cause must be looked for in the character of the English rather than that of the native population. When this is done, the marvel, in our opinion, will be, not that Christian missions have effected so little, but that they have accomplished so much. The splendor and magnificence of the Mohammedan conquerors of India are still to be seen, all over the country, in their beautiful and stately mosques, palaces, shrines, tombs, tanks, aqueducts, and other public works; but that which most concerns us at present is the profound religious faith which, so to speak, is embodied in these grand edifices. They were all erected to the glory of Allah and his Prophet. The Faith, it is perfectly clear, was always the first thought in the Mohammedan mind; and an imaginative people like the Hindus could not fail to be deeply impressed by such a fact as this. Secondly, the Moslems were not, like the English, mere birds of passage. They made India their country in as absolute a sense as did the Hindus whom they found established there; and all their works were, in consequence, done with a view to the future ages, not, as with the English, in order to secure a clear balance-sheet for the next year's budget. Thirdly, a Hindu, on becoming a Moslem, acquired at once and as a matter of course all the privileges of the conquering race. He entered into a higher state, instead of having to endure the heavy sacrifices which the ingenuity of the Court of Directors had contrived for those misguided natives who were so lacking in worldly-wisdom as to become Christians. Lastly, there was no limit to the hopes which a Hindu becoming a Moslem might entertain. He might become the leader of an army, the Governor of a province, the chief minister of the whole mighty empire; but a Christian native can look forward to no such high possibilities. The ceremony of baptism cannot whiten his skin, and is, therefore, from the material point of view, quite valueless.

The English during the past quarter of a century may be said to have surpassed their Moslem predecessors in the matter of public works. They have built canals and constructed railways, but they do not pretend to have done these things for the sake of religion, but for pecuniary profit merely. Religiously, it cannot be denied that the English in India cut a very sorry figure when contrasted with their predecessors. The majority of the high officials are the merest Sadducees, who cannot be said to profess any religion at all. There are churches in India, but it is impossible to conceive of a more pitiful contrast than that between these mean and unsightly edifices and the magnificent structures in which Hindu Buddhist and Moslem gave expression to the faith that was in them. Judged by the Oriental standard in such matters, Englishmen in India may be said to treat their religion with insult and contumely; or their religion is rather to tolerate all religions than to believe in any one in particular. And the efforts of the missionaries are neutralized by the placid indifference of nearly every Englishman who does not happen to be a missionary.

The chief obstacle, however, which besets the missionary is that occasioned by the peculiar relation which exists between Englishmen and natives. The English are not merely the rulers of the country, but rulers in whose inner life, as individuals, the people are of no account—that is to say, the English in India form no attachments; no friendships, with the people of the country. A few among them may associate with the natives from a sense of duty; but for their mental and moral needs, their own countrymen are sufficient, and not one Englishman in a thousand, when the hour comes for leaving India for good, is sensible of a wrench, of a void being created in his life by the separation from any native whom he has known. No greater obstacle in the way of mission work can be conceived than a state of mind such as this. It denotes the want of that touch of nature which makes the whole world kin, and yet it is a defect from which the English missionary is, of necessity, as little exempt as the English official. It is painfully apparent in Mr. Kennedy's record of his thirty-six years' experiences. From the beginning to the end we are not introduced to a single native who stood to Mr. Kennedy in the relation of a friend. That title is reserved for application to men of his own race and language exclusively. Indeed, it is extremely seldom that an inhabitant of the country, Christian or otherwise, receives from Mr. Kennedy any more particular description than "a native." Contrast this attitude of aloofness with the feelings of the Apostle Paul toward individual members of the churches which he had founded, and we shall find little difficulty in understanding why Christianity in India does not spread and develop as in the days of Imperial Rome.

Stops: or, How to Punctuate. By Paul Allardyce. London: T. Fisher Unwin; Baltimore: John Murphy & Co.; Philadelphia: George H. Buchanan & Co.

We have not had the patience to read beyond

the comma in this little book. The treatment is neither lucid, logical, nor consistent; it is sometimes fatuous, as witness the rules for inserting points *before* "and" and "or." For lack of a few general principles, rules and exceptions are multiplied and long discussions entailed, which can only bewilder and mystify the student. Here is what comes of not having laid down the law of parenthesis and of the interchangeability of points:

"X. Words thrown in so as to interrupt slightly the flow of a sentence are marked off by commas."

After the examples, we read in a smaller type:

"Where the words thrown in make a very distinct break in the sentence, they should be pointed off by means of the dash or of brackets.

"The following are some of the words and phrases that come under this rule: *therefore, too, indeed, however, . . . all things considered.*"

The chances are that "this rule" will be taken to refer to the preceding clause about the employment of dashes and brackets, whereas not one of the words or phrases cited is at all liable to be pointed in this way.

We have space but for one other instance of the want of clearness in the author's own mind. Rule VIII reads as follows:

"When the subject consists of several parts, *e. g.*, of several nouns, a comma is placed after the last part."

The two examples cited under this involve a plural verb, as, "time, money, and friends, were needed to carry on the work." The author then disposes of "an apparent exception to it," viz., "Freedom, honor, religion was at stake." It will scarcely be believed that he accounts for the omission of the comma after "religion" on the ground that this noun sums up all the others, or marks the highest point of a climax. "When so great a thing as religion is said to be at stake, everything else is dropped out of sight or is held to be included. But write the three names as if they were of equal importance; the comma should then be inserted: Freedom, honor, and religion, were at stake." The simple truth is, of course, that there is a climax in both examples; and that the only reason for inserting a comma after "religion" in the second is in order to remove the appearance of a singular noun being the subject of a plural verb. This is a concession (by no means a necessary one) to the eye. A concession to the ear would be the insertion of a comma in the first example, to mark the rhetorical pause induced by the omission of the conjunction.

Recollections of Fly-fishing for Salmon, Trout, and Grayling, with Notes on their Haunts, Habits, and History. By Edward Hamilton. M.D., F.L.S., etc. Orange Judd Company. 1885.

Sampson Low, Marston & Co. have recently issued a large-paper edition of this book (of 100 copies), of which, except in size and Mr. Haden's name at the bottom of the beautiful mezzotint in the frontispiece, this is a reproduction. The paper is very slightly inferior, the print quite as good; and if the book was really produced by the American publishers, it is a most creditable typographical feat for this country. The literary part of the volume is equally deserving of commendation. Salmon fishing is first treated of, and much useful information is distributed through the eighty-five pages devoted to it, along with delightful narrations of personal experiences in angling. These, by the way, are met with throughout the book, except in the chapters devoted to the "Natural History" of the various fish, which are learned as well as interesting. Doctor Hamilton gives a good many valuable hints, which no doubt would prove as successful here as in the streams of Scotland and England, where he has practised them. For instance, on p. 40, under salmon fishing, he says: "When the water is very bright and clear in the pools many a fish may be hooked and landed by allowing the fly to sink as deep as you can and then slowly sink and draw, never bringing the fly near the surface. You see a movement in the water, a swirl and a twist, and your line tightens. You might fish all day in such times with the fly near the surface and never move a fish." The same plan often works well with trout.

We cannot, however, agree with Doctor Hamilton when he says, p. 16: "Many a fish [salmon] cast over never sees the fly," etc. We have too much faith in the unwinking vigilance of the fish, and have too often seen him shoot like a great streak of light at a fly passing half a dozen yards or more from his lair, to believe he cannot see anything he wants to that comes within ten yards or more of him in the clear streams he loves. Doctor Hamilton agrees with the more intelligent of modern icthyologists in holding that salmon do feed in fresh water, and take the fly because they want to eat it, and not through sport or emotional insanity. The book is both entertaining and valuable for its matter and its appearance. The preface states that Mr. Haden, as is the case with many distinguished Englishmen, "is a most observant and successful fly-fisher."

The Historical Reference Book, Comprising a Chronological Table of Universal History, a Chronological Dictionary of Universal History, a Biographical Dictionary, with Geographical Notes. For the Use of Students, Teachers, and Readers. By Louis Heilprin. D. Appleton & Co. 1885. 8vo, pp. 569.

Mr. Heilprin's 'Historical Reference Book' aims to give in a very condensed form those items of information which the student or general reader will be most likely to need. The three parts are of course to a certain extent complementary to each other: Part 2 may almost be called an index to Part 1, inasmuch as it contains largely the same events alphabetically arranged (but for the most part merely by titles), which are found chronologically arranged in Part 1. The chronological table, coming first in the book, may probably be considered its most important feature. Its peculiar value consists in its giving at a glance a synchronistic view of the events of any one year; each nation or group of nations having its annals in a separate paragraph, while non-political events come at the end of the year's chronicle. Thus for 1884 there are seven divisions—the United States, the French War in China, the Egyptian War, the Conference of the Emperors, the Crisis in Spain, the Russians in Asia, and an obituary line containing Mignet, Reade, Lepsius, Makart; the whole occupying a little over half a page. There is room in a book of this class for a wide diversity of opinion as to the events to be given; but we miss hardly anything that we should consider desirable, and we have not been able to detect a single mistake or misprint. We must, however, consider it a serious error of judgment to follow Rawlinson in early Roman history; for, whatever his rank in Oriental history, he has absolutely no authority in Roman, and his dates differ materially from those commonly accepted. Of course no dates for this period are to be taken as absolutely fixed; but when all authorities in Roman history like Mommsen give, for example, 494 for the First Secession, and 367 for the Licinian Law, it is an unnecessary source of perplexity to give the dates of these events as 492 and 364. It is true the accepted date is added in a parenthesis, but the reader cannot fail to get the impression that this is the date of the least authority. With the exception of this single feature, this book must be pronounced a remarkably accurate and convenient book of reference, and may be recommended as probably the best of its class.

Medallic Portraits of Washington. With Historical and Critical Notes and a Descriptive Catalogue of the Coins, Medals, Tokens, and Cards. By W. S. Baker. Philadelphia: Robert M. Lindsay.

This carefully prepared and handsome volume is a new indication of the progress which numismatics has made in the United States. It contains 651 numbers, arranged in classes according to the occasion of the striking of the medal whose history is given, and is believed to include all the medals struck with the head of Washington. In the preface the author attacks with justice the absurd prejudice which prevented the coinage of the United States from bearing the portraits of the successive Presidents. The introduction of the ex-Presidents with a certain delay would at least be one expedient to relieve our currency of the monotony of device which is one of its characteristics. It would, too, give at least a chance for now and then a fine coin, furnish a motive for the production of fine medallion heads, and a little encouragement to our artists in that genre.
